## "SO SHINES A GOOD DEED IN A NAUGHTY WORLD"

There was a man in our town, and he was wondrous rich;  
He gave away his millions to the colleges and sich;  
And people cried: "The hypocrite! He ought to understand  
The ones who really need him are the children of this land."  
When Andrew Croesus built a home for children who were sick,  
The people said they rather thought he did it as a trick,  
And writers said: "He thinks about the drooping girls and boys,  
But what about conditions with the men whom he employs?"  
There was a man in our town who said that he would share  
His profits with his laborers, for that was only fair,  
And people said: "Oh, isn't he the shrewd and foxy gent?  
It cost him next to nothing for that free advertisement."  
There was a man in our town who had the perfect plan  
To do away with poverty and other ills of man  
But he feared the public jeering, and the folks who would defame him,  
So he never told the plan he had, and I can hardly blame him.

New York Tribune

## I N B E R L I N

BY MARY BOYLE O'REILLY  
STAFF CORRESPONDENT IN EUROPE OF THE NEWS-PAPER ENTERPRISE ASSOCIATION.

The train crawling out of Berlin was filled with women and children, hardly an able-bodied man. In one compartment a gray-haired Landsturm soldier sat beside an elderly woman who seemed weak and ill. Above the click clack of the car wheels passengers could hear her counting, "One, two, three," evidently absorbed in her own thoughts. Sometimes she repeated the words at short intervals. Two girls tittered, thoughtlessly exchanging vapid remarks about such extraordinary behavior. An elderly man scowled reproval. Silence fell.  
"One, two, three," repeated the obviously unconscious woman. Again the girls giggled stupidly. The gray Landsturm leaned forward.  
"Fräulein," he said gravely, "you will perhaps cease laughing when I tell you that this poor lady is my wife. We have just lost our three sons in battle. Before leaving for the front myself I must take their mother to an insane asylum."  
It became terribly quiet in the carriage.

## REMARKABLE REMARKS

W. G. ROSE—Every doggerel has its day.  
WOODROW WILSON—This is a year of madness.  
GENERAL JOFFRE—Democracies do not want war.  
FRANCISCO VILLA—I know I shall be killed some day.  
DR. NING PON CHEW—China needs Colonel Roosevelt.  
AMY LOWELL—Pale violin music whiffs across the moon.  
VICE-PRESIDENT MARSHALL—I am willing to be a colonel.  
CARRIE CHAPMAN CATT—Half of Congress is owned by somebody else.  
MARY GARDEN—I love Theodore Roosevelt. He is so big and brave and noble.  
JOHN D. ROCKEFELLER, JR.—I am heartily back of every move by President Wilson.  
JAMES HUNEKER—I'm one of the few who haven't written a poem on Shakespeare.  
ADMIRAL DEWEY—The battleship is now and always has been the bulwark of our naval strength.  
AMBASSADOR THOMAS NELSON PAGE—Italy is doing her full part in the European struggle.  
GOVERNOR WHITMAN—I do not believe that Christianity is committed to any dogma of pacifism.  
DAVID LLOYD-GEORGE—No nation has reached the moral heights of moral grandeur of France during the war.  
CONGRESSMAN GARDNER—We Americans have been sitting like a set of overfed dowagers in the best seats of the opera.  
EX-ASSISTANT SECRETARY OF WAR BRECKENRIDGE—Universal military training is the only way to yank the hyphen out of America.  
ARCHDEACON STUCK—I prefer to drink from a glass that some one else may possibly have drunk from, rather than from an exclusive and greasy paper bag.  
THEODORE ROOSEVELT—The average doctor's wife has more time for the performance of political duties than the average doctor himself.  
SECRETARY BAKER—The Wilson Administration is the first since the Civil War that started out with a great central philosophy for the advancement of economic and industrial interests.  
LUKE MCLUKE—The old-fashioned man who used to get paid for going over Niagara Falls in a barrel now has a daughter who thinks it sport to sit on the rear end of a motor cycle.  
SAMUEL GOMPERS—In the last twelve years wages, hours of employment and conditions of labor have improved in the United States beyond any other period of any people in the history of the world.  
SECRETARY LANSING—If I were asked what was the chief cause of the new conditions and changing methods of land and naval warfare I would unhesitatingly answer the invention of the internal combustion engine.  
SENATOR BROWN, of Watertown, New York—I love, honor and respect woman. I recognize her in many ways as the superior of man. She peoples the earth with men, the heavens with stars, and the sea with living things.  
THE DUKE OF MANCHESTER—I believe that the energy expended by a society woman in society in one year is enough to lift Buckingham Palace nine and a quarter inches off the ground and hold it there for forty-three seconds.  
PROF. HENRY W. FARNAM—Whoever takes a broad view of the history of the seas during the past half century must be profoundly impressed by two shocking facts. One is the wonderful progress made by man in his domination of nature. The other is the lack of progress made by man in governing himself.

## "The Family Silver"

The family silver does not and need not always imply the possession of gorgeous silver services and ornaments.

Silver knives and forks and spoons and a tea service are not less "Family Silver" because they fulfill requirements rather than exceed them.

But what is important is that your silverware, however modest in extent, shall be of a calibre to deserve the name of "Family Silver."

*And that is another way of saying  
your silverware should be Gorham*

Gorham Silverware is used more and known better than any other silverware on the American Continent. It has been in the service of the American people for eighty-five years and may be fairly described as "The Family Silver of the Nation."

## MEXICO

**N**EITHER the American people nor the Mexican people want war. Mexico is rent with revolution. Business is at a standstill. The people are face to face with starvation.

The United States has no hunger for Mexican territory, no thirst for selfish aggrandizement. We know full well that once we engage in war with Mexico we can scarcely stop until the country is conquered. That will cost untold lives. Military authorities say that it will take half a million soldiers at least a year to do the job and the expenditure will not be less than a million dollars a day. Why then should we be drifting toward war. The answer is Carranza.

If Carranza forces us to fight him, the justification for our accepting his challenge is unquestionable. Our territory has been violated by lawless bands of invasion from Mexico. We must make safe our border against the possibility of such attacks. In pursuance of this righteous purpose we have sent an expedition into Mexico, with the consent of the de facto government, to punish the invaders of our soil, and the murderers of American soldiers and citizens. The legitimate operations of that punitive expedition have been interfered with by force of arms by the troops of Carranza. American soldiers have been killed in battle by Mexican soldiers; American soldiers have been taken prisoners

and are held in captivity. Carranza must release the prisoners, disavow the attack upon our troops, and agree to abstain from further interference with our forces in their proper and lawful activities in Mexico, or he must take the consequences.

If we are obliged to fight, who can foretell the end? What began as the mere pursuit of a bandit on a "hot trail" may develop by the inevitable logic of events into the great and overwhelming task of pacifying a whole country and establishing good order thruout all its borders.

To withdraw the American troops at this stage would be interpreted as weakness and cowardice on our part. But is there not some alternative to this other than downright war? Mexico is not a unit. It has at present no political organization, no fully established government. Many of the people do not sympathize with Carranza. Most of them are ignorant of what the United States desires and intends. Our administration of Vera Cruz was a recognized success. If we could simply assume control of the border provinces and coast towns and give them an orderly administration it would serve as an excellent object lesson. It would be better to convince the Mexicans than to conquer them, to win them than to whip them. We hope that it is not too late for something of this kind to be done.

## THE POLITICAL CAMPAIGN: THE PARTIES

**I**F American political parties divided themselves logically along the lines of radical and conservative, the distinctions between them would be easy to draw. It would not be a hard task to say why an American voter is a Republican or a Democrat if the Republican party were consistently the party of the established order, and the Democratic party consistently the party of the thirst for change—or vice versa. For all men are, in varying degrees, either radical or conservative. They either look forward eagerly to change as the salvation of the common good, or plant themselves firmly on the things which are as a refuge from the dangers of the unknown and the untried.

But the two great American parties are not respectively radical and conservative. Their line of cleavage cuts across this natural boundary and not along it. We must look elsewhere, then, for the difference between Republican and Democratic which leads one group of American voters to instinctive adherence

to the one and another group to equally instinctive adherence to the other. In the limits of an editorial article it is not practicable to present either a complete historical survey or a thoro present day analysis. We can only touch the high points which lie on either side of the dividing line.

The Democratic party is the party of the states; the Republican the party of the nation. The one would reserve to the individual "sovereign states" control of all those matters which are not inevitably national in their scope; the other would impose upon the nation the duty of dealing with everything that is in any substantial degree affected with a common interest. Centralization is good Republican doctrine; decentralization is logical Democratic doctrine. It is largely in these latter days a matter of emphasis; the Republicans incline in case of doubt to favor federal action, the Democrats to prefer state action. The lines, too, as time goes on tend to become blurred, till we have the Republicans declaring that

the question of woman suffrage should be left to the individual state, and the Democrats favoring a national child labor law. But the general tendencies remain substantially the same.

Historically the Democratic party was the party of those who championed the "rights of man" and were devoted to abstract principles of democracy and liberty; while the forerunners of the Republican party were composed of those who looked upon government not as a necessary but regrettable restriction on the liberties of the people, but as a positive and effective instrument for the general good. As an outcome of these tendencies the Democrats believed in a "strict construction" of the federal constitution, in order that government might not make new and unintended encroachments upon the popular freedom; while the Republicans held to a "loose construction" of the constitution, in order that government might be enabled to do anything for the common welfare not specifically forbidden by that document. In later times the democratic principles of Thomas Jefferson and the party which he founded have become the universally accepted ideals of American institutions, so that they can no longer be the monopoly of any single party; and the view of government as a proper instrument for doing whatever will be for the good of the people has received such common acceptance that no party can ignore it in practice. But in recent years the most aggressive and militant championship of popular rights and social regeneration has come from the Progressive movement, which began in the Republican party and now finds itself, after four years of separate existence, once more within the party borders. The Democratic party has been largely affected during the same time by the same tendencies, but it has been rather as a follower than as a leader. The most powerful single force in the last decade on behalf of popular rights and social regeneration has been the leadership of Theodore Roosevelt. The return of himself and his fellow Progressives to the Republican party and the nomination of Mr. Hughes, a truly progressive statesman, altho he has never worn the Progressive label, gives strong assurance that the party will display a practical devotion to the "rights of man" marked by high sincerity and real effectiveness.

The Democratic party clings with tenacity to the policy of no expansion beyond the confines of the American continent, and cherishes the splendid isolation, geographically the portion of the United States, as a valued possession not to be lightly bartered away. The Republican party believes that the developments of the twentieth century have inevitably narrowed the confines of the civilized world and made the United States, whether it will or no, a world power, with responsibilities and opportunities for service far beyond its continental borders.

The Republican party is traditionally the party of efficiency: the party that "gets things done"; the Democratic the party of doctrinaire enthusiasm and practical blundering. Under the leadership of Woodrow Wilson the Democratic party has largely belied its history of legislative ineptitude. But there are evidences that this is rather the result of effective party leadership on the part of the President than of a new birth of efficiency on the part of the party.

These distinctions between the two parties are not

clean cut. There are twilight zones along the border that separates them. But on the whole they constitute certain natural characteristics and instinctive tendencies. Out of them springs one of the reasons that impels The Independent in the present campaign to favor the election to the Presidency of Mr. Hughes. Other aspects of the campaign will be considered in successive issues.

## NO BINDING OF OUR HANDS

**W**E have gone into Mexico only as a stern duty to ourselves and to humanity. We have no purpose of conquest or aggression.

But we do not know what the future will bring forth. We cannot know what our duty will be when our immediate task in Mexico is done.

It is conceivable that it may become our destiny to extend the borders of the United States to the south—not for our own aggrandizement or profit, but for the sake of the people of those troubled regions, for the sake of the peace and good order of the Western Hemisphere, of which we are in a real sense the rightful guardians, and for the sake of civilization.

We must not by any ill-considered and Quixotic action now bind our hands for the future. We must leave ourselves free to do as occasion arises those things which our destiny and our duty demand.

When we went into Cuba we made the serious mistake of taking the opposite course. At this critical moment there should be no Platt Amendment.

## A CHANGE

**W**HEN we see the promptness with which the militia of the several states have turned out and the willingness to enlist which is being shown on all sides, we have reason to congratulate ourselves over the improvement in public spirit and patriotism that has taken place in the eighteen years since our last war. At that time the Seventh Regiment of New York and the Thirteenth of Brooklyn voted almost unanimously not to serve, and a Harvard professor advised his students not to enlist "in this inglorious war." And that was the war which freed Cuba and Porto Rico and the Philippines from the yoke of Spain and has given them such peace and prosperity as they had not known for the three hundred years of their history! Where would one find a more glorious war?

## THE RETURN OF MR. ROOSEVELT

**M**R. ROOSEVELT'S letter to the Progressive National Committee administers the *coup de grace* to the Progressive party. But it involves no desertion of the Progressive movement. Rather it constitutes the highest loyalty to the principles which the Progressive party was organized to champion. For, as Mr. Roosevelt says of himself and his fellow Progressives, "Our loyalty is to the fact, to the principle, to the ideal, and not merely to the name, and least of all to the party name."

No one need have any question of his sincerity when he declares, "With all my heart I shall continue to work for these great ideals"; no one has any reason to doubt the reality of his belief that "sooner or later the national principles championed by the Progressives of 1912 must in their general effect be embodied in the structure of

our national existence." There is no conceivable possibility that Theodore Roosevelt will cease to be progressive because he declines to become the candidate of the National Progressive party for President in the year 1916.

Mr. Roosevelt merely recognizes facts and adjusts his course of action to actuality rather than to abstract theories and lofty aspirations. The cold fact is, as he has long realized, that "the people under existing conditions are not prepared to accept a new party." His counsel to his fellow Progressives in the face of this fact is firmly based on practical wisdom and solid common sense. He says:

It is impossible for us Progressives to abandon our convictions. But we are faced with the fact that as things actually are the Progressive National organization no longer offers the means whereby we can make these convictions effective in our national life. Under such circumstances, our duty is to do the best we can, and not to sulk because our leadership is rejected. That we ourselves continue to believe that the course we advocated was in the highest interest of the American people is aside from the question. It is unpatriotic to refuse to do the best possible merely because the people have not put us in position to do what we regard as the very best. It remains for us, good humoredly and with common sense, to face the situation and endeavor to get out of it the best that it can be made to yield from the standpoint of the interests of the nation as a whole.

There is a refreshing sensibleness about this which is equally far removed from impractical idealism and from time-serving opportunism.

Mr. Roosevelt has been convinced for months that the best interests of the country demand "the alignment under one leadership of the forces opposed to the continuance in power of Mr. Wilson and the Democratic party." For he believes that the present administration has "been guilty of shortcomings more signal than those of any administration since the days of Buchanan." Indeed, he declares that "no administration in our history had done more to relax the spring of the national will and to deaden the national conscience." In his Trinidad statement last March Mr. Roosevelt proposed such an alignment against the Democratic party on a platform of "clean-cut, straight-out National Americanism."

Such a combination he now believes has been made possible by the nomination of Mr. Hughes. He regards Mr. Hughes as a man whose public record is a guarantee that he will not only stand for such a program before election, but will "resolutely and in good faith put it thru if elected." He will therefore "strongly support Mr. Hughes."

This pledge of strong support Mr. Roosevelt forthwith proceeds to make good by a scathing arraignment of the Wilson administration and by words of the most generous and unqualified praise of the Republican candidate:

Mr. Hughes has shown in his career the instinct of efficiency which will guarantee that, under him, the government will once more work with vigor and force. He possesses that habit of straightforward thinking which means that his words will be correlated with his deeds and translated into facts. His past career is the warrant for our belief that he will be the unfaltering opponent of that system of invisible government which finds expression in the domination of the party boss and the party machine. His past career is a guarantee that whatever he says before election will be made good by his acts after election. Morally, his public record shows him to be a man of unbending integrity; intellectually, it shows him to be a man of original and trained ability. We have the alternative of continuing in office an administration which has proved a lamentable failure, or of putting into office an administration which we have every reason to believe will function with efficiency

for the interest and honor of all our people. I earnestly bespeak from my fellow Progressives their ungrudging support of Mr. Hughes.

Mr. Roosevelt's frank and whole-hearted manner of returning to the party he felt constrained to leave four years ago should earn for him the respect and admiration of every right-thinking Republican, and lose for him the loyalty and regard of no sober-minded Progressive. His support should prove a tower of strength to Mr. Hughes in his campaign.

## SIX MINUTES IN SERVICE

SIX years ago the British determined to build a battle-cruiser that should be bigger and swifter and stronger than any afloat. Hundreds of skilled workmen labored for years in her construction. Ten and a half million dollars were spent on her. She was protected with armor plate of the hardest steel nine inches thick. She was propelled by the most efficient of steam engines, the turbine. She was armed with ten 13.5-inch guns, which could discharge a 1400 pound projectile every thirty seconds; also with sixteen 4-inch guns, twelve 6-inch guns and two torpedo tubes. The British, properly proud of her, named her after their queen. A thousand men were put aboard of her and she was sent into action on the last day of May.

The German warships opened fire and within six minutes the "Queen Mary" was torn asunder by a terrific explosion and sunk.

## THE ESSENTIALS OF NATIONAL INDEPENDENCE

ONE hundred and forty years ago the people of the United States of America declared their independence. But what they had in mind was, as they were careful to state, purely political independence. It was not then realized—and it is not wholly realized today—that economic independence is also necessary for true freedom. In the eighteenth century people were striving to throw off foreign administrative control and to secure self-government. In the twentieth century people are striving to throw off foreign commercial control and secure self-support. Our political independence was obtained in eight years, but 140 years have not sufficed to give us economic independence.

The chief lesson of the Great War has been the demonstration of the importance of a nation's being able to stand on its own feet. Unless a country can produce within its own territory everything needed by this complex civilization of ours it is sure to suffer for it somehow and the lack may prove fatal in case of an emergency like the present. As the old saying has it: "For want of a nail the shoe was lost; for want of a shoe the horse was lost; for want of a horse the rider was lost; for want of a rider the battle was lost, and so the kingdom fell." During the last two years thousands of lives have been sacrificed on one side or another because of a shortage of copper or zinc, of cotton or rubber, of milk or gasoline, of niter or quinine, of khaki dye or optical glass.

But the dependence that is fatal to a country in war may be injurious to it in peace. The war revealed to the United States as it has to the belligerent nations that some of its leading industries had been built up upon

foreign foundations. We discovered in 1914 that Germany had a virtual monopoly of aniline dyes and Great Britain of rubber. When Great Britain suddenly placed an embargo on these it threatened ruin to our textile and automobile factories. We were forced to ask the British Government to make an exception in our favor and allow us to import a sufficient quantity for our immediate necessities, which the British Government, being in a friendly mood, kindly consented to do.

Now we hope that such an emergency as this will never come again. At least we trust that wars will be so rare that it will not be necessary for a country to be kept so self-contained as to be ready to stand a siege at any moment. But if we suffer a foreign country to secure a monopoly of any of the necessities of life we are likely to pay that nation a yearly tribute which in the long run will amount to more than a war indemnity. It may not pay us to make all the dyes or grow all the rubber that we need, but we cannot afford to be altogether without dye factories and rubber plantations as a protection against extortion. All of the Allied powers in conference at Paris this month decided that they would never again become the commercial dependents of Germany. Since it is evident that the lines of nationality are to be drawn strictly in the future we should take account of stock to see how far we are from being and how near we may become free and independent states.

The main essentials of complete independence are the following:

1. *Political.* We won our political independence in two wars with Great Britain; the first to gain the freedom of the land, the second the freedom of the sea.

2. *Military and Naval.* This political freedom must be safeguarded by an adequate army and navy. The discussion of preparedness shows that this need is sufficiently realized if not yet properly met.

3. *Territorial.* A country that is small, or scattered, or poorly populated or limited to a narrow range of climate can never be fully independent. The United States is exceptionally fortunate in possessing a wide and continuous and well situated territory, while its dependencies stretch from beyond the Arctic Circle almost to the equator. We need no more room for expansion, tho we do need to have control of more tropical territory for the raw materials that it alone can furnish.

4. *Seaports.* As every household should be able to reach the street without passing thru another's yard, so every nation needs a gate opening upon the world's highway. Russia, Serbia, Bulgaria, Germany and Austria are now fighting for free access to the sea. The United States has a long coastline with plenty of ports on both oceans. We need nothing further except, perhaps, harbors nearer the entrances to the Panama Canal, say Magdalena Bay on the Pacific and St. Thomas on the Atlantic, both of which we could probably purchase.

5. *Shipping.* Here we come to the first great deficiency of the United States, and one not due to the caprice of nature, but to our own neglect. A nation like ours that has to rely upon foreign vessels for more than nine-tenths of its external trade cannot be called really independent. We feel the need of a merchant marine more than ever now when commerce is deprived of all the German and Austrian vessels and twenty per cent of the British.

6. *Financial.* The war has relieved us of any danger that our country would virtually come to be owned by foreign capitalists.

7. *Food.* Germany is suffering and England is worrying because of the insufficiency of home-grown food. The United States can raise enough and to spare tho there is a shortage of tropical products such as coffee, tea, cocoa and bananas.

8. *Fuel.* The United States is well supplied with the reservoirs of energy on which all modern industry depends. There is coal enough economically used to last for generations if not centuries. Our oil we are using up so fast that we soon shall feel like the five foolish virgins and be trying to borrow from Mexico.

9. *Metals.* We have all the metals in fair quantity except platinum, for which we have to depend upon Russia like the rest of the world.

10. *Fertilizers.* Our food supply is dependent upon the supply of plant foods to our fields. Of these we need only concern ourselves with three, phosphates, potash and nitrates. Phosphates we have in abundance. The only large potash deposits are in Germany and because of this we must continue to pay Germany an annual tribute of \$14,000,000 unless we can find some way of getting potassium salts from sea-kelp or feldspar. The only large deposits of nitrates are in Peru, but Germany under press of war has declared her independence of Peru and is making her own nitrates from the air. We may and should do the same.

11. *Industrial.* It is for reasons above mentioned unwise to allow any important branch of manufacture to pass altogether into foreign hands. For the maintenance of home industry two things are necessary, the materials and the skill. In most fields there is no lack of raw materials. All that is needed then is to see that local industries are kept alive and capable of expansion in case foreign supply is shut off or becomes extortionate.

12. *Artistic.* A nation cannot maintain its independence of spirit if it is dependent upon other countries or past periods for the forms of esthetic expression. In its literature the United States has in the course of the last fifty years shaken off its dependence upon British authors and models and is now contributing a fair tho not a proportionate quota to the literature of the common language. The American novelist or dramatist is under no serious handicap in comparison with his European rival. In painting and sculpture a national style has still to be developed. In architecture new forms are struggling to break thru the thick crust of traditionalism. To music we have contributed little except rag-time.

13. *Patriotic.* The United States has always been distinguished by its strong national spirit, indeed too violent in the early days of spread-eagle oratory. Nowadays it is more responsible and restrained, but none the less real. The war has shown that we are a more united people than we had thought we were. The proportion of the foreign-born will become continually less and the process of Americanization will be more rapid.

These then are some of the things that a nation must possess before it has the right to call itself "free and independent." The United States has been singularly favored in natural resources and the opportunity of self-development. Its duty now is to consider what it needs to make it self-reliant and able to follow out its own ideals without any foreign interference.

THE CITIZEN AS SOLDIER

An infantryman of the National Guard with all his equipment ready for the field

# THE STORY OF THE WEEK

## The Battle in Mexico

On Wednesday of last week a battle took place between two troops of American cavalry and seven or eight hundred Mexicans of the Carranzista forces. The Americans, eighty-four in number, were taken at a tremendous disadvantage and overwhelmed. They were Troops C and K of the Tenth Cavalry, a negro regiment. Thirty-nine of them have made their way back to the American lines, thirteen are reported to have been killed, seventeen are said by the Mexican authorities to be prisoners, and the rest are missing. There were three commissioned officers with the two troops; Captain Boyd of C Troop was killed leading a charge, nothing has been heard of Lieutenant Adair, and Captain Morey of K Troop, altho wounded, finally got safely back to the American lines. After our forces had been scattered by the superior numbers against them, and Captain Morey had been wounded, he was carried, with another wounded man, by three of his men about a mile from the scene of battle and hid in a hole. In spite of his suffering he wrote an account of the fight and ordered the three unwounded men to leave him and his fellow sufferer and carry the note back to the American lines. Reluctantly they obeyed his orders and were subsequently found by a detachment from their own regiment which was out scouting for survivors of the battle.

Captain Morey's note reads as follows:

Carrizal, Mexico,  
June 21, 1916, 9.15 a. m.  
To Commanding officer at Ojo  
Frederico:

My troop reached Ojo Santo Domingo at 5.30 p. m. June 20. Met C Troop under Captain Boyd. I came under Captain Boyd's command and marched my troop in rear for Carrizal at 4.15 a. m., reaching open field to southeast of town at 6.30 a. m.

Captain Boyd sent in a note requesting permission to pass thru the town. This was refused: stated we could go to the north, but not east. Captain Boyd said he was going to Ahumada at this time.

He was talking with Carranza commander. General Gomez sent a written message that Captain Boyd could bring his force in town and have a conference. Captain Boyd feared an ambush. He was under the impression that the Mexicans would run as soon as we fired.

We formed for attack, his intention being to move up to the line of about 120 Mexicans on the edge of the town. We formed, C Troop on the left in line of skirmishers, one platoon of K Troop on right of line and another K Troop platoon on extreme right, echeloned a little to the rear.

When we were within 300 yards the Mexicans opened fire, and a strong one, before we fired a shot. Then we opened up. They did not run. To make a long account short, after about an hour's fire, in which both troops had advanced, C Troop to position of Mexican machine gun and K Troop closing in slightly to the left, we were very busy on the right keeping off a flank attack. A group of Mexicans left town, went around our rear and led our horses off at a gallop.

At about 9 o'clock one platoon of K Troop, which was on our right, fell back. Sergeant said he could not stay there. Both platoons fell back about 1000 yards to the west, and then together with some men of C Troop who were there these men scattered.

I was slightly wounded. Captain Boyd, a man told me, was killed. Nothing was seen of Lieutenant Adair after fight started, so man I saw stated.

I am hiding in a hole 2000 yards from field and have one other wounded man and three men with me. MOREY, Captain.

It was four days before an accurate story of the fight was received by General Pershing in the shape of Captain Morey's note, and for a time there was uncertainty as to whether the responsibility for beginning hostilities actually rested upon the Mexicans. This doubt was set at rest not only by Captain Morey's report but by a communication to the American government from the representative of

General Carranza. This communication read as follows:

I am directed by my government to inform Your Excellency, with reference to the Carrizal incident, that the Chief Executive, thru the Mexican War Department, gave orders to Gen. Jacinto B. Trevino not to permit American forces from General Pershing's column to advance further south, nor to move either east or west from the points where they are located, and to oppose new incursions of American soldiers into Mexican territory.

These orders were brought by General Trevino to the attention of General Pershing, who acknowledged the receipt of the communication relative thereto. On the 22d inst., as Your Excellency knows, an American force moved eastward quite far from its base, notwithstanding the above orders, and was engaged by Mexican troops at Carrizal, State of Chihuahua. As a result of the encounter, several men on both sides were killed and wounded and seventeen American soldiers were made prisoners.

From this statement it is clear that the fight at Carrizal was brought about because the American troops did not obey the "orders" which Señor Carranza had given that they must not move away from the positions which they now hold.

The Carranza note met with a prompt and sharp reply from our State Department, which has all the nature of an ultimatum except the setting of a time limit for compliance with its demands. It reads thus:

The Government of the United States can put no other construction upon the communication handed to the Secretary of State of the United States on the 24th of June, by Mr. Arredondo, under instruction of your government, than that it is intended as a formal avowal of deliberately hostile action against the forces of the United States now in Mexico, and of the purpose to attack them without provocation whenever they move from their present position in pursuance of the objects for which they were sent there, notwithstanding the fact that those objects not only involve no unfriendly intention toward the government and people of Mexico, but are, on the contrary, intended only to assist that government in protecting itself, and the territory and people of the United States against irresponsible and insurgent bands of rebel marauders.

I am instructed, therefore, by my government to demand the immediate release of the prisoners taken in the encounter at Carrizal, together with any property of the United States taken with them, and to inform you that the Government of the United States expects an early statement from your government as to the course of action it wishes the Government of the United States to understand it has determined upon, and that it also expects that this statement be made thru the usual diplomatic channels, and not thru subordinate military commanders.

## THE RESPONSIBLE ONES

The Commander in Chief of the United States Army and his secretary of war watching a militia regiment go by

This note puts the matter bluntly up to the de facto government of Mexico. Upon the nature of its reply depends the question of war or peace.

**The Note to Carranza** The note which the Secretary of State sent to General Carranza last week in reply to his note demanding the withdrawal of the American troops from Mexico is an elaborate statement of the whole course of events which have led up to the present crisis. It is eminently reasonable and conciliatory in tone. But it minces no words. It leaves no room for doubt as to the intention of the United States Government to insist upon the preservation of American rights and the protection of American lives and property.

The note sums up thus the conditions in Mexico which have now culminated:

For three years the Mexican republic has been torn with civil strife; the lives of Americans and other aliens have been sacrificed; vast properties developed by American capital and enterprise have been destroyed or rendered non-productive; bandits have been permitted to roam at will thru the territory contiguous to the United States and to seize, without punishment or without effective attempt at punishment, the property of Americans, while the lives of citizens of the United States who ventured to remain in Mexican territory or to return there to protect their interests have been taken, and in some cases barbarously taken, and the murderers have neither been apprehended nor brought to justice.

It specifies in particular the recent events which have made the situation more and more acute:

During the past nine months in particular the frontier of the United States along the lower Rio Grande has been thrown into a state of constant apprehension and turmoil because of frequent and sudden incursions into American territory and depredations and murders on American soil by Mexican bandits, who have taken the lives and destroyed the property of American citizens, sometimes carrying American citizens across the international boundary with the booty seized.

American garrisons have been attacked at night, American soldiers killed and their equipment and horses stolen, American ranches have been raided, property stolen and destroyed, and American trains wrecked and plundered.

It ascribes to the de facto government of Mexico heavy responsibility for the continuance of these intolerable conditions.

The note replies with a categorical

Copyright Underwood

"WE HAVE AMERICANISM"

But Mr. Hughes is waiting to talk to the Colonel about his campaign plans

denial to the charge of the Carranza pronunciamento that the United States has been hostile to the de facto Government:

I can truthfully affirm that the American Government has given every possible encouragement to the de facto government in pacification and rehabilitation of Mexico. From the moment of its recognition it has had the undivided support of this government.

An embargo was placed upon arms and ammunition going into Chihuahua, Sonora and Lower California in order to prevent their falling into the hands of the armed opponents of the de facto government. Permission has been granted from time to time, as requested, for Mexican troops and equipment to traverse American territory from one point to another in Mexico in order that the operations of Mexican troops against Villa and his forces might be facilitated.

After reciting the long array of facts that demonstrate the danger to

American rights in the conditions prevailing across the border, and after fixing a good share of the responsibility for the continuance of those perilous conditions upon the de facto government, the note lays down in no uncertain terms what the United States Government believes to be its duty in the premises and the course which it proposes to follow in carrying out that responsibility:

Protection of American lives and property, then, in the United States is first the obligation of this government, and in Mexico is, first, the obligation of Mexico, and second, the obligation of the United States.

In securing this protection along the common boundary the United States has a right to expect the cooperation of its neighboring republic. . . . If the Government of Mexico cannot protect the lives and property of Americans exposed to attack from Mexicans the Government of the United States is in duty bound, so far as it can, to do so.

The United States has not sought the duty which has been forced upon it of pursuing bandits who, under fundamental principles of municipal and international law, ought to be pursued and arrested and punished by Mexican authorities. Whenever Mexico will assume and effectively exercise that responsibility the United States, as it has many times before publicly declared, will be glad to have this obligation fulfilled by the de facto government of Mexico.

The note closes with a stern warning that the United States does not propose either to relinquish its duty or to be deterred from carrying it out by a threat of armed retaliation.

The spirit of the United States Government is unmistakably mirrored in the note. It seeks friendship and harmony; but it will unflinchingly uphold its rights and firmly oppose any assault upon them.

**The Militia Mobilizing** Meanwhile, the citizen soldiery of the country is mobilizing in every state in response to the call of the President. The militia of three states, Texas, Arizona and New Mexico, are already in place upon the border and before the week is out, regiments of infantry, troops of cavalry and batteries of artillery from New York, New Jersey, Massachusetts and Connecticut will also have taken their places in the field. Sixteen thousand men will constitute this second instalment of the National Guard to go forward.

THE FIGHTING TENTH

Companies G and K under Captain Boyd were trapped by Mexicans in an ambush at Carrizal on June 21. Thirty-nine survivors have returned.

UNDILUTED AMERICANISM

## IT IS SERIOUS BUSINESS

The mobilization of the militia of the several states began with the greatest promptness and went forward with a rush. There were few laggards and almost none who refused to go when the call came. There was presented an interesting contrast with the condition in 1898, when whole regiments voted by large majorities not to respond to the call of the President for volunteers. Of course much of the difference may be the result of the new law upon the statute book, which empowers the President to order out the National Guard as a body and requires militiamen to obey the order or suffer severe penalties for insubordination. But there seems also to be a new spirit in the air, born of the two years' spectacle of war in Europe and of the steadily rising tide of public opinion in this country in favor of preparedness and Americanism.

## The Senate Naval Program

The great naval battle in the North Sea is almost certain to have a real effect upon the naval program adopted by Congress. The subcommittee of the Senate Naval Committee has prepared the draft of a bill to be substituted for the measure passed by the House. The lower house pinned its faith to the battle-cruiser, and provided for laying down five vessels of that class, completely ignoring the dreadnought. The proposed Senate bill would provide for four dreadnoughts and four battle-cruisers. The cost of the dreadnoughts is fixed at eleven and a half million dollars, and of the battle-cruisers at sixteen and a half millions. In both cases the cost is exclusive of armor and equipment. The difference in cost of the battle-cruiser is due to their more powerful engines, which are planned to give a speed of thirty-five knots an hour.

Other important concessions to the demand for preparedness relate to personnel and ammunition. Provision is made for 74,700 men instead of 54,000 as provided by the House bill, with authorization to the President to increase

the number in time of emergency to 87,000. The Marine Corps is increased from 9,000 men to 15,000, or 17,000 in time of need. The appropriation for ammunition is increased from eleven million dollars to nearly nineteen millions.

It is intimated that the change from five capital ships to eight, including four dreadnoughts, has the approval of President Wilson.

**Submarines in a New Role** The Spanish port of Cartagena was surprised last week when a German submarine, "U-35," bobbed up in the harbor at four o'clock in the morning. She made straight for the interned German steamer "Roma" and unloaded on her thirty-five boxes of medical supplies for the German refugees from Kamerun who are being cared for in Spain. Then the submarine, being ordered to come alongside the Spanish cruiser "Cataluna," did so, and salutes were exchanged with the cruiser and forts. The Germans in Cartagena, men and women, soon swarmed to the harbor bringing gifts for the crew and flowers to decorate the U-boat, and the crew went ashore to see the city. Her commander, Lieutenant von Arnault, notified the authorities that he had come to bring a letter from Kaiser Wilhelm to King Alfonso, and the Ambassador's secretary came down on a special train from Madrid to receive it. The missive is officially said to contain thanks for the kind treatment that the German soldiers and civilians from the German African colonies are receiving from the Spanish, but there are rumors that it also contained an appeal to the King of Spain to exercise his influence to put a stop to the war. It is hinted that a similar appeal for peace will be conveyed to President Wilson by a submarine.

The next morning the "U-35" left the harbor under escort of the cruiser. At the three-mile limit, beyond which the Allied warships awaited her, the

Germans gave cheers for Spain and then dived.

Another surprise of the week was the capture of the British steamer "Brussels" on the North Sea by German destroyers, which, instead of sinking the vessel as usual, took her into the Belgian port of Zeebrugge, now held by the Germans. The steamer was on her way from Rotterdam to Tilbury, carrying mail and passengers, chiefly Belgian refugees.

The American steamer "Seaconnet," carrying lumber from Archangel to London, was damaged by an exterior explosion about sixty miles off Yarmouth. The captain ran her ashore where she was completely wrecked. From fragments of metal found in her hull it is thought she was the victim of a mine rather than a torpedo.

## Greece Gives Way to Allies

The Greek Government sent a note of protest and appeal to the United States and other neutral powers against the violation of the neutrality of Greece by the Allies. The partial blockade of the Greek coast by the Allied fleet which was established on June 6 shut out the importation of food upon which the country is dependent. The Greek ships in French and British harbors were held up and ships coming to Greece were stopped on the high seas and taken to the naval bases of the Allies. Vessels flying the Greek flag were seized and taken to Algiers, where they were converted into transports for the Allied troops.

The Greeks held out against the demands of the Allies until there was only flour enough in the country to last five days. Finally the Allies brought matters to a crisis by threatening an attack upon Athens. An Allied fleet under Admiral Moreau cruised before the Piræus, the port of the capital, with landing parties ready for action. None of the neutral powers to whom Greece appealed for protection showed any disposition to lend her aid, even diplomatically, so she gave way, dis-

missed the Cabinet and yielded unconditionally to the demands of the Allies.

These demands include the immediate and complete demobilization of the Greek army, the deportation of German propagandists and the removal of the Chief of Police of Athens and other officials who are accused of suppressing popular manifestations of pro-Allies sentiment. A new election is to be held within forty days. In place of Premier Skouloudis, whose resignation was forced by the Allies, Alexander Zaimis, who is more favorable to the Allies, has formed a cabinet.

The Allies claim the right of interference by virtue of the London Protocol of 1827 in which Great Britain, France and Russia assumed the protection of Greece. The Greeks on the other hand claim that Greece is a free and independent state and that the Allies have no right to occupy Salonica and other Greek ports for their own military purposes.

**The Irish Question** After the Sinn Fein rising had been suppressed it was generally recognized on both sides that the time had come for a definite settlement of the Home Rule question, which had been a disturbing factor in British politics for the last thirty years.

The government turned over the Home Rule question to Lloyd George, in the hope that he could arrange an acceptable compromise, and this he seems to have done. The Nationalist Conference of Ulster, meeting in Belfast, approved his plan by a vote of 475 to 265, and the Ulster Unionist Council has also consented to accept it. But there is still bitter opposition from the extremists on both sides. The Protestant bishops have protested against it and three Unionist members of the Cabinet, Lord Lansdowne, Lord Selborne and Mr. Long, are strongly opposed. Lord Selborne has resigned.

The Lloyd George plan provides for putting home rule into operation at once, but excluding six of the Ulster counties, which are to remain for the present, if they prefer, under the Imperial Government, with the same rights as they have now. Three of the Ulster counties are included with the rest of Ireland under Home Rule. After

the war an imperial conference is to be held to consider the reorganization of the government of the entire empire.

**The Invasion of Bukovina** The Austrian crown-land of Bukovina, a province about the size of Connecticut, has been for the third time during the war overrun by the Russian troops. The situation of Bukovina, occupying as it does a sort of pocket in between Rumania and Hungary, renders it indefensible once the Pruth river has been crossed. The advance of the Russians along the northern side of the Pruth almost to Kolomea cut off the Austro-Hungarian troops in Bukovina from those in Galicia. Having accomplished this, General Lechitzky attacked the fort that protects the bridge crossing the Pruth to Czernovitz, the capital of Bukovina. After four days of furious fighting this bridge-head was taken and a thousand of its defenders made prisoners. This left the city of Czernovitz at the mercy of the invaders, but they did not stop with this. A rapid advance thirty miles down the railroad to Radautz cut in two Austrian troops which were retreating. At Radautz a thousand men and three machine guns were taken. The Russians then pushed on to the southern boundary of Bukovina.

The rest of the Austrian troops from Czernovitz, under General Pflanzer, retired to the southwest and have a chance of escaping into Hungary thru the passes of the Carpathians, tho since there are no railroads running from Bukovina into Hungary and the passes are over 5500 feet in altitude, the Austrians are likely to suffer considerable losses if they are closely pursued.

In Galicia the Russian campaign has not made as much progress as in Bukovina. General Brussiloff's aim is to capture the important railroad centers of Lemberg and Kovel. The capture of the fortress of Dubno opened the way to Lemberg and the capture of the fortress of Lutsk opened the way to Kovel. But the Russians have not yet been able to advance more than twenty miles beyond these fortresses along either road. Two German armies, commanded

#### THE RECONQUEST OF BUKOVINA

The Russian army that took Czernovitz has pushed on south thru Radautz to the Rumanian frontier and west almost to the Carpathian mountains. North of the Dniester the Russians have made little progress. Thru the joint efforts of Germans and Austrians the attempt of the Russians to advance between Kovel and Lemberg has been checked

respectively by General Linsingen and General von Bothmer, have been sent into this region to assist the Austrians in stopping the Russian advance and they seem to have succeeded, at least for the present.

According to Russian estimates the number of prisoners taken by General Brussiloff during the first fortnight of his campaign is 172,484, including 3350 officers.

**The African Campaign** In the article on "The Conquest of Kilimanjaro" on another page of this issue we give a map of German East Africa that will serve to show the progress of the invasion. A branch of the railroad from Mombasa to Kikuyu was constructed to Taveta in order to bring the army of General Smuts directly to Mount Kilimanjaro. The capture of Moshi, the mountain terminus of the German railroad, opened the way into the interior. From this

Copyright, Independent and Editor

#### THE MIDDLE WEST ANSWERS THE CALL

Over eight hundred a day, sent to the Illinois concentration camp at Springfield, Chicago's record

point the British army divided into three sections. One moved west to Arusha and is driving the Germans back toward Lake Victoria Nyanza. The second column struck straight overland to the south and reached Kondoa, where it stood off a strong attack from the Germans. The third column is fighting its way down the railroad which runs thru the mountains and over the tablelands to the sea. The head of this column has reached Wilhelmstal, the chief German town in this section and about a hundred miles from Moshi. Tanga, at the other end of the railroad, is now in the hands of the British, and the Germans cannot expect long to hold the section of the railroad that lies between.

In the northwestern corner of the colony the Belgian troops under General Tombeur have been making great progress. Those that entered from the Congo south of Lake Kivu have occupied the German towns at the head of Lake Tanganyika and cut the roads connecting Ujiji, the lake terminal of the central German railroad, with the German plantations on the southern shore of Lake Victoria Nyanza. Another Belgian column, entering north of Lake Kivu, has come into touch with the British column entering from Uganda. The British gunboats have captured the German islands in Victoria Nyanza. So now the Allies can concentrate from three directions upon this rich and densely populated region.

The Union of South Africa has spent on the war up to the last of March the sum of \$134,500,000. This includes the expenses of putting down the De Wet rebellion, of the conquest of German Southwest Africa and of the present expedition, except such part of it as has been paid by the English Government.

### THE GREAT WAR

*June 19*—Russians move south thru Bukovina. Italians repel Austrian attacks near Asiago.

*June 20*—Germans attack French in Champagne and British in the Somme. Allies in conference at Paris decide to boycott German goods after the war.

*June 21*—Zaimis replaces Skouloudis as Greek Premier. French aeroplanes bombard Treves, Karlsruhe, and Mülheim.

*June 22*—German submarine calls at Cartagena, Spain, with message to King. Arabs revolt against Turks.

*June 23*—Germans take Fort Thiaumont, two and one half miles from Verdun. German destroyers take British steamer "Brussels" to Zeebrugge.

*June 24*—Russians reach southern border of Bukovina. Ulster Nationalists agree to Lloyd George Home Rule plan.

*June 25*—Italian cruiser "Messina" and French destroyer "Fourche" torpedoed in Strait of Otranto. British casualties for the week 8070, of whom 1602 were killed.

#### German Gains at Verdun

Those who expected that the Russian offensive would soon relieve the pressure upon Verdun have reason to be disappointed, for the contrary effect has been produced. The German attacks during the week, according to the French accounts, were more vigorous than ever before, and besides this, the Germans extended their activity to the sectors of Champagne and the Somme. While keeping up their bombardment of 304 Meter Hill and Le Mort Homme west of the Meuse they concentrated their chief efforts upon the hills on the other side of the river. Here the city of Verdun is defended on the northeastern side by

two series of ridges and hills. The one nearest Verdun, about a mile from the city wall, is protected by Fort de Belleville and Fort de St. Michel. The heights beyond, about two miles out, are crowned by Fort de Thiaumont and Fort de Souville. Between them is the village of Fleury and to the west of Thiaumont the bluffs overlooking the river bear the inappropriate name of Côte de Froide Terre or Cold Earth Ridge.

Against this sector on a front of less than three miles the Germans brought six divisions or about 120,000 men. After an intense bombardment two Bavarian regiments, the Tenth Infantry and the King's Own, stormed the ridge of Froide Terre and captured the armored fort of Thiaumont and part of the village of Fleury. To the east of this the Germans also secured important positions in the wooded ravines that lie behind Fort Vaux. A counter-attack by the French recovered some of the lost ground but not Thiaumont.

In this advance the Germans took more than 2700 prisoners. The French claim, that the German gains are bought at too high a price, as the attacking troops lost from forty to fifty per cent of their men. The Germans, however, profess to be satisfied with the progress they have made, for they say that Joffre has had to send into action at Verdun more than fifty divisions, that is about two-fifths of all his mobile troops, including the reserves, the recruits of 1916 and the Moors and negroes from Africa. According to a Swiss estimate the French have lost in killed and wounded at Verdun 165,000 men. According to a London estimate the Germans have lost here 415,000 men.

THERE IS ALSO WAR IN EUROPE

# FROM STATE TO STATE

**ARIZONA:** President Wilson has signed a proclamation excluding 588,520 acres from the Dixie national forest in Arizona. Three-fourths of this area will be subject to settlement under the homestead laws from July 12 to and including August 8, and thereafter to disposition under any public land law applicable thereto. The excluded lands lie in the northwestern part of the state and are chiefly valuable for grazing.

**CALIFORNIA:** A committee of thirty appointed in 1913 to study the question of storage of flood waters on Kings River in the San Joaquin Valley, has made its report. It says that a great quantity of water is annually going to waste during flood stages of Kings River, damaging land along its course; that there is abundant storage capacity available for the conservation of more than 600,000 acre-feet at a cost of about \$10 an acre-foot, and that this would furnish ample irrigation for more than a million acres of land.

**COLORADO:** It is said that never before have so many persons been engaged in prospecting for minerals in this state as at present. The State School of Mines is unable to keep up with the demands upon it for analyses of specimens sent in, altho a very small portion of those received by the Commissioner of Mines ever get to the school, thousands being thrown out as clearly having no mineral value. Many specimens from districts which heretofore have not been regarded as having mining possibilities are said to be rich in minerals. Commissioner Carroll thinks that many of these new districts will soon attract capital for development.

**DELAWARE:** A decided effort is being made by the people of New Castle County to reform the method of collecting their taxes. According to a recent report to the Levy Court by its attorney the taxes for 1909 have not yet been fully collected, nor have any of those for the succeeding years, with the possible exception of 1911, on which the report is silent. Of the two other counties in the state, Kent reports that its 1915 taxes had all been collected before the first of June, tho the year does not expire until the end of that month. The third county, Sussex, has been able, thru prompt and full collections, to reduce the tax rate from 85 to 45 cents on the \$100.

**ILLINOIS:** The Young Men's Christian Association has just opened its new Chicago hotel, costing \$1,350,000, and having 1821 bedrooms in sixteen of its nineteen stories. The rates will be from 30 to 50 cents a day, the purpose being to furnish safe, wholesome and inexpensive temporary residence for young men in the city and to aid them in finding proper employment. It is expected that the hotel, when established, find other places of residence. The entire second floor is set apart for the

social life of the hotel, having reading, lounging and game rooms, including billiards, and a large rear lobby, where lectures, musical entertainments and motion pictures will be given.

**INDIANA:** Randolph County is a striking example of what is being done by school consolidation in rural counties of this state. In the last eight years it has abandoned ninety-six one-room schools and consolidated them in twenty modern buildings with manual training rooms, kitchens, shower baths, and large assembly rooms for community meetings. Eight years ago the county had one commissioned high school, attended by sixty-one pupils; now it has fifteen, attended by more than 600. In the eight years before consolidation from 21 to 50 per cent of eighth year pupils entered high school; since then over 93 per cent have entered; and 70 per cent of those who entered four years ago completed the four-years' course. In well heated and ventilated vans more than 2200 pupils have been taken to and from these schools at public expense this year.

**IOWA:** This state, which used to be best known for its corn crops, is now more widely celebrated for its high grade livestock. Of the thousands of horses purchased by European nations since the war began, many of the best have come from the farms of Iowa. At a recent sale of blooded cattle at Muscatine more than 600 buyers from a score of states and a number of foreign countries were present, sixty bidders making the trip from Texas in a special train. At this sale the average price of all the cattle sold was about \$750 a head. One lot of forty-six head brought \$35,000.

**LOUISIANA:** One of the most unpopular schemes of taxation in this state is that known as the occupation tax, or license, under which, in effect, a person is compelled to pay a tax for the privilege of working. The abandonment of this tax was one of the measures promised by Governor Pleasant in his recent campaign for election; and he is now seeking to carry out that pledge. But since the state of the treasury will not permit a decrease of revenues, and since the legislature seems to be hopelessly split over the question of what tax to substitute, it is feared that this one, which nobody appears to want, must remain. It is another example of the difficulty of abandoning a tax scheme once established.

**MAINE:** The example set by Bar Harbor's annual Good Roads Day is beginning to be followed by various other communities in the state, with the result that much road improvement is being made without the expenditure of public moneys. For three years the people of Bar Harbor have practically all turned out on a certain day and worked on some piece of road designated by a committee

appointed by them for the purpose. Not only do all the men join in the actual work, but the women of the town are present, giving the occasion the air of a social function. Dinners are served free of charge to all workers; and since no able-bodied person in the town is regarded as exempt, a really large amount of work is done.

**MARYLAND:** The State Olympiad, which recently closed in Baltimore, probably engaged the interest of more Marylanders than any other athletic event. Nineteen counties in the state were represented by some 700 boys ranging in ages from twelve to nineteen years, each a champion who had won the right to participate in the final contest by defeating all rivals in his special field at home. The Baltimore public, under the leadership of Dr. William Burdick, of the Public Athletic League, gave the visiting boys a hearty welcome, many of them being entertained in the homes of the city.

**MASSACHUSETTS:** The new law intended to prevent misstatements in advertising, which went into effect in this state May 25, prohibits untruthful statements of values in excess of advertised prices, false declarations that the advertiser employs, designated persons of established reputation, misstatements regarding securities offered for sale, misleading statements designed to induce the public into the establishment of the advertiser and other intentionally deceptive advertising. The retail trade board of the Boston Chamber of Commerce has organized an advertising vigilance association to see that this law is enforced.

**MINNESOTA:** After experimenting with many plans of attracting new manufacturing industries to their city, more than 200 leading business men of Minneapolis have subscribed \$300,000 toward carrying out what they have decided is the best method. They have bought a level tract of 200 acres, induced the city to locate streets thru it and provide water and sewer connections, and the belt line railway to lay spur tracks and build a joint freight house where less than carload lots can be assembled. In the future, instead of giving bonuses and factory sites scattered thruout the city, they will offer an ideal site to any concern that needs such help and seems to merit it.

**NEW HAMPSHIRE:** The throwing open this summer of the Federal forest reserve in the White Mountains to campers and pleasure seekers on thirty-year leases at nominal rentals has already attracted thousands of applications. It is expected that this summer will see many more vacationists in this state than were ever here before.

**NEW MEXICO:** Tourists from all directions are coming by thousands to see the interesting sights of the newly created Bandelier National Monument in the Rio Grande

Valley of this state, set apart last February by President Wilson in order that its antiquities in the form of pueblo ruins might be preserved. Explorations have gone sufficiently far to give the layman as well as the archaeologist an interesting view of the cliff dwellings and their contents. Of course, the wonderful scenery of the region adds greatly to the attraction.

**NORTH DAKOTA:** The Enforcement League of North Dakota, which in the seven years of its activities has closed more than 2200 illicit saloons, recently began suits against five liquor houses of St. Paul and Minneapolis under a new method of liquor prosecutions. The complaints are filed with the Federal grand jury under the national food act and allege improper labeling of goods shipped into North Dakota.

**OHIO:** Roland W. Guss, director of the department of school gardening of the Cincinnati public schools, has worked out a plan by which every child in the city will have an opportunity to preside over a garden plot. Already more than 10,000 school children have home gardens, and Mr. Guss says the work has just begun. Twenty-five schools have established gardens on school grounds or vacant lots, and many others have indoor and roof gardens. Under one of his plans children in the schools learn the more technical features of gardening by growing seedlings in paper drinking cups. These, at the end of the term, they transplant at home in gardens, window boxes and plots. The manual training departments of the schools make the window boxes for the tenement children.

**TENNESSEE:** Production of strawberries has become one of Tennessee's most important industries. In the last two years shipments of these berries have increased more than 61 per cent. A department bulletin recently issued from Washington puts Tennessee in the lead of all the states, with 17,496 acres devoted to strawberries; Louisiana next, with 16,540 acres; and Arkansas third, with 15,380 acres. Nearly 800 carloads were shipped in the month of May from what is known as the Tennessee district, comprising the Chattanooga and Knoxville sections. The average carload consists of about 400 crates, and the price to the grower is not far from \$2 a crate.

**UTAH:** In the hope of finding oil and natural gas in sufficient quantities to supply Salt Lake City, a company has been formed there with capital enough to make a thoro examination of the region between Great Salt Lake and the settlements of Centerville and Farmington. Machinery has been provided for going to a depth of 4500 feet if necessary. Oil was discovered in that region forty-five years ago, but machinery and methods were then so primitive that attempts to convey it to the city failed.

"I DID THE BEST I COULD"

*Drawn for The Independent by W. C. MORRIS*

# HEAT UP THE MELTING POT

BY MAJOR-GENERAL LEONARD WOOD

AMERICA must be a real melting pot, if we are to have a people animated by a strong national spirit. A melting pot in which the various ingredients fuse into one homogeneous mass; a mass which in cooling will not harden in layers which separate under pressure, but rather form a uniform mass.

Great masses of new peoples are coming into our land. We are doing far too little in the way of making them real Americans. Naturally they come in racial groups. Under the conditions which surround their early years in this country they go largely to race schools and only too often remain in racial areas and are fed upon a dialect press. They do not come into contact sufficiently with the older residents, with the native American, and as a result they do not have impressed upon them the fact that thru their reception and naturalization they have become an integral part of the American people. We do not do enough to impress this upon them, nor do we give them something which would impress upon them a sense of their new responsibilities.

Many of these newcomers enter our country with the idea that they have no specific obligation toward the state, especially no military obligation. They feel that this is a land of liberty, confusing only too often liberty with license. They feel that here they are under little restraint and that they may serve the nation in time of trouble or not, as

*Since the recent military developments in Mexico popular opinion has been increasingly looking to General Wood for leadership. He has held positions of responsibility in the United States Army for over thirty years, was made brigadier-general for his services at Las Guasimas and San Juan Hill in '98, and, as Commander of the Department of the East is in charge of the mobilization of the National Guard in the Eastern and Southeastern states.—THE EDITOR.*

they like. Many of them come here with a view of avoiding military service. They do not realize that under our Constitution and laws all males who are physically and mentally fit are liable for military service during a large portion of their lives, from 18 to 45.

What is needed is some kind of training which will put all classes which go to make up the mass which is bubbling in the American melting pot, shoulder to shoulder, living under exactly the same conditions, wearing the same uniform and animated by a common purpose. This "something" will be found in a system of universal training like the Australian or Swiss, where all classes of men, Jew and Gentile, rich and poor, Protestant and Catholic, upper and lower social classes, work shoulder to shoulder, animated by a common purpose, that purpose being to better prepare themselves to discharge their military duties in case

of trouble. With this training will come a better physique, a greater degree of self-control, habits of regularity, promptness and thoroughness, respect for law and the rights of others and a sense of individual responsibility and obligation for service to the nation in war or peace, all of which will make for national solidarity, and the building up of a stronger and better people, who, while made up from many diverse elements, will be single in purpose.

The military value of this training is only one of its advantages to the nation. Another is the result in the way of increased national efficiency which will come from a greater degree of national solidarity. Men will learn to think more in terms of the nation and less in those of the individual or the small community. It will also be an insurance for peace, because in the end we shall be the strong man armed. This we can do without fear of being either unjust or aggressive. If we are to meet successfully the conditions of life, we must be prepared to oppose the forces of wrong with the strength of right.

Neither moral excellence nor an upright national life will serve to protect us against aggression. Mere philosophizing will not take the place of deeds. While cherishing peace we must have convictions backed by a spirit of sacrifice which will give all, even life itself, in the cause of truth and right.

Governor's Island, New York

## MUSTERING IN THE GUARD

BY BRONSON BATCHELOR

VERY suddenly the touch of war came to New York. It came during a week end, reaching out into the country and to seashore resorts, pulling thousands back into the city. National guardsmen were ordered to report at once to their armories to prepare for service on the Mexican border, or in case of intervention, across with Pershing on the torrid Mexican plains.

From a holiday aspect the transformation of the city was swift. On a smaller scale scenes were enacted like those in European cities when mobilization was ordered in the first days of August, 1914. Khaki made its appearance on the streets; there was the tramp of marching men; an artillery limber rattled by, or a hastily transformed motor lorry.

It was very different, this mobilization, from those of France or Germany. There was none of the glamour and the romance with which Europe marched forth to war. There were few bands, no rifles decked with garlands, no streets strewn with flowers. Two years' impact thru the newspapers with the ghastly carnage abroad had changed all that. It was grim business, this upholding a nation's honor by getting ready to shoot other human beings, and at last it was recognized as such.

The whole psychology toward war, even among those preparing to engage in it, was changed. The spirit of adventure, the desire to measure one's strength against another man's, of course was still there, but for the pumping of machine guns and the

taking of life—if it should come to that—there was little enthusiasm. Nearly everybody felt sorry for Carranza and the misguided Mexicans.

Scenes at the armories, from that of the Seventh, the crack regiment recruited from New York's aristocracy, to the Twelfth on Columbus avenue, with its back door on "Hell's Kitchen," were much the same. Before the entrances sentries paced with bayonets fixed, while guardsmen, hastily drest, hurried in. Altho the regiments did not move for several days, they were held ready.

At the Seventh Regiment Armory, the drill floor, the scene of many brilliant balls, was a mass of heaped tents, cantonments, blankets, trenching tools, and bandoliers as yet empty of cartridges. Guardsmen stood

about in groups waiting orders from the officers' room where a council was in session. Women in the balconies fluttered handkerchiefs to husbands and friends on the floor.

That night most of the regiment slept on the floor of the armory. Accustomed to comfortable beds and all the luxury of cosmopolitan New York, the hardship was worse than nights in camp or on the Mexican border. At other armories men slept on the floor also, many of them recruits glad to exchange a park bench for a blanket and three meals a day.

Recruiting sergeants at all the mobilization points had a rush of applicants about their tents on the drill floor. At one of these a burly fellow with the build of a stevedore walked up.

"What's your occupation?" the sergeant asked.

"Ain't got none," was the reply, "been loafing for two months. That's why I want to join the army." And he was taken.

Another recruit, a dapper young fellow, not at all of the soldiering type, was asked what brought him into the regiment.

"Do you hate the Mexicans?" he was asked.

"Oh, no," he replied, "but they're a dirty lot. I'm pretty good with a rifle at the clay-ducks, and I'd like

to take a shot at some of those Villistas and Carranzistas on the run."

Among nearly a dozen regiments he was the most bloodthirsty soldier we saw. Indeed there were very few in the ranks it seemed who were there for the pure love of soldiering. The armories in New York, with their fine appointments, their gymnasium floors, tracks, tennis courts, and athletic teams of all descriptions, had been more like great men's clubs. But now that their real purpose was disclosed, the men, tho surprized, were game to see the adventure thru.

When the War Department's order came there was something like a panic in the Sixty-ninth—the "fighting Sixty-ninth" they are called, as brave a bunch of Irishmen as ever fought for Erin and the Shamrock. It was not a fear of bullets, but something even more insidious. The regiment had discovered it was short of cooks! So it hung out above the entrance a great sign which said:

IF YOU MUST FIGHT YOU MUST EAT  
Wanted Twenty-six Cooks for Regiment  
TWENTY MUSICIANS AND FIELD MUSIC

Apply to Lieut. M. E. Reidy,  
Batt. Q.M. Commissary.

The pall of this "unpreparedness" had spread itself over the whole armory. There was a hush of subdued expectancy about the company rooms, punctuated every now and then as a

private vented his feelings on a piano with a one-fingered version of "Home, Sweet Home." Cigaret smoke, like a German gas cloud, hung thick.

It was not until the Sixty-ninth and the Twenty-second Engineers, the first of the regiments to go to Camp Whitman, where militia of the state is mobilizing, paraded down Fifth avenue on their way to the train, that New York really realized the imminence of war.

The streets thru which the troops passed were packed with people. As rank after rank went by in perfect unison, not in dress uniform but in the stern khaki of service, each man carrying field equipment, cheers went up amid a tenseness that could not be misunderstood. Women on the curb wept openly. Then came the grim, gray wagons of the baggage train, and an ambulance or two, significant of the crueller side of war, still hidden away.

When the "gallant Sixty-ninth" went by the Cathedral there were the priests on the steps to bless the guardsmen as they passed. There were uncovered heads and a solemnity that transcended creed or sect. Then it was that New York, irrespective of what President Wilson or Carranza might do, felt itself at war.

*New York City*

"RECRUITING TO WAR STRENGTH"

# F A I T H

## BY MARJORIE HILLIS

Before you came, I only half believed—  
 First, in myself. What had I ever done  
 Half worth the doing? Or what battle won?  
 What had I given for what I had received?  
 Then in mankind—so much I saw of need,  
 So much of bitterness and sin and strife,  
 So little that was beautiful in life.

And last,—in God. My eyes were blind indeed!  
 And then you came—and now, beloved, I know.  
 Why should I doubt myself if it be true  
 That you delight in what I can bestow?  
 And how mankind, since in their midst you grew  
 And with them still you daily come and go?  
 Or God? He gave me life, and love, and you!

# MISSING THE KEYNOTE

BY CHARLES M. SHELDON

THE month of brides is also the month of orators. High school, college, state university, political convention—all offer themselves to floods of oratory, and like most floods they are more torrential than irrigational—much overflowing of banks and exhibition of drift wood, but not much clear drinking water or safe navigation.

The above was written after a perusal of some scores of commencement, ecclesiastical and political addresses. Ten out of twenty are as follows:

- Modern Culture.
- Physical and Mental Efficiency.
- Temperate Legislation.
- The World War.
- Youth's Mistakes.
- A Broken Civilization.
- Turning the Clock Back.
- Europe's Lesson.
- The Discipline of Failure.
- Salvage From the War.

Changing the metaphor from the flood to the flowerbed, culling posies from the great political conventions which have just bloomed and faded, I picked the following bouquet to lay on my desk:

- Preparedness.
- Tariff.
- Suffrage.
- More Preparedness.
- Criticism of the Other Party.
- America First.
- Adequate Preparedness.
- Favorite Sons.
- Sufficient Preparedness.
- Defense of Administration Preparedness.

Not a syllable from any speaker on the tremendous moral issue of National Prohibition. Not even a green bud of promise in all this red, white and blue variegated border of wild riot in words, giving a hint of any real need in this nation of a change of heart on the part of humans, before America can be happy and prosperous; just a promiscuous mixture of flowers of rhetoric put

*The author of "In His Steps," which ranks next to the Bible as a religious best-seller, puts his preaching into practise. He has applied the test-question "What would Jesus do?" to the editing of a daily newspaper as well as to his work as a clergyman, and has written over twenty books on practical Christianity.—THE EDITOR.*

together without moral meaning or ethical purpose.

In all the political effusions I cannot find a single reference to the real keynote of real human conduct. And could not help wondering what would have happened if some speaker at any of the Convention meetings had quietly said, "Men and Brethren, the keynote of the hour for America and the world is a change of heart, actual obedience to the great creed of Jesus, supreme Love of God, supreme Love to fellow man—that is the great need of this nation, that is the great issue of the hour."

I do not know just what would have happened if any of the wordy speakers or candidates for the presidency had said that, but I do know it would have been the one keynote necessary and all the other childish pounding on the selfish keys could not have silenced it or turned it into discord.

In a certain state of this union at a high school gathering I was about to speak to a thousand students when the principal, with some embarrassment, asked me to step into his room.

"I forgot to tell you," he said, "that you will have to be very careful about what you say. This is one of the states that has ruled the Bible out of the public schools. You will have to be very careful what you say about religion."

I had to ask him what he meant.

"How can a man speak to students on 'Some Results of a True Education' and leave out all mention of Religion, the basis of education?"

"That may be," said the principal, "but it won't do here."

Thereupon I begged to be excused from speaking on education and leaving out the one thing that makes it worth while.

Finally the Principal said:

"Well, go on. I'll risk it."

I went on and he "risked it" and I risked it, and said more about religion to that high school than I had said in a long time. It seemed to me they needed it there particularly.

If there has been any real moral, ethical or spiritual issue discussed by the great political conventions just held I have failed to note it. Speaker after speaker rose, filled his lungs, uttered words, words, words, was applauded—by the clock—and the printer's ink did the rest. But what for?

What keynote was struck? The keynote for the world lies right in the middle of the keyboard. It can be easily hit. But every one missed it. The biggest thing about the great conventions was the silence on vital issues. Or rather, on the one great issue of human conduct. God was ignored. Love was not mentioned.

"Tho the great political convention that cost \$100,000 to hold and takes barrels of printer's ink to report, has the tongues of silver orators and has not Love, it is only a brass band and a hard rubber record. And tho it talks long and loud of preparedness and tariff and the mistakes of the other party and has not Love, it profiteth nothing."

Is striking the keynote of life the minister's business alone? Is it not the business of the politician and the president maker as well?

"And now abideth Preparedness, Tariff, Woman Suffrage, and the rest. But the greatest of these is Love to God and man."

And they all missed it. It is not mentioned in the platforms.

What would Jesus do?

Topeka, Kansas

# THE SAGE OF POTATO HILL

Ed. Howe's Thoughts on Men, Women & the World

I HAVE a horse I do not need, and a man offered me \$65 for it. I said I would take that sum, but insisted on telling him all I knew about the animal. This action broke up the trade. I couldn't afford, for \$65, to have that man going about the neighborhood saying I had deceived him. In being fair with this man, I was not actuated by principle, but by selfishness; it is uncomfortable and unprofitable to tell a falsehood, or do a mean act. I cannot afford to make a dollar that causes me more than a dollar's worth of annoyance or humiliation. I want to be fair and square as a matter of comfort.

In the last hundred years there has been wonderful progress. We have had big decade after big decade of accomplishment; important and useful discoveries, one after another, have stalked into the world's history. Let these things be remembered as an offset to the little meannesses of which the men may be honestly convicted; for I take it as admitted that women's clubs have not accomplished the big results to which I point with pride.

Preachers say the people fight religion. It isn't true. The attitude of men toward religion is naturally friendly. Men not only think favorably about religion, but millions of them think it a sin to become hypocrites, and pretend to believe when they do not.

Theories and opinions are as numerous as the sands of the sea, but a Fact is always worthy of attention.

Before the Mexicans can be greatly helped they must be "bred up," as we breed up scrub cattle. The problem in Mexico is more intellectual than physical.

Everything in life—morals, health, business—is a matter of simple common sense. A lie disagrees with you, and renders you uncomfortable, as does a radish; you will hear from a dishonest action unpleasantly, as you will from a cucumber. We are as healthy as we are sensible, and it is said eighty per cent of the people have stomach trouble, to say nothing of other disagreeable complaints that might be avoided.

The radish has no food value whatever; not only that, but it is dangerous when introduced into the stomach. Yet every spring you will find a radish bed back of nearly every house, and the owner is as proud of it as he is of his belief.

Occasionally I hear a mean thing that has been said about me behind my back. And how it startles and humiliates me! And, as a rule, there is something in

the criticism. You can't fool people; they are free talkers, but they also give credit, not in as full measure as they should, perhaps, but they give credit when it is actually due.

The real questions of moment are hidden in the crime of overpraise or overabuse; the real news is covered up by means of sensationalism or prejudice. Formerly an American, when politics became so bad he could no longer stand it, might call his dog, put out his fire, and move out west, to make a new start; but the free land in the West has been taken up; the only thing to do now is to reform public affairs.

We only know that the good rules help every one; if they helped James J. Hill more than they helped Joe, his gardener, we must find consolation in the fact that Hill helped others more than Joe did. A half loaf is better than none; perhaps we all eat too much, anyway. A good gardener is better than an idler, and I will hoe my row as best I can.

We might as well call our children's school essays Literature as to refer to their piano playing as Music. A great many people say they do not greatly care for music because they never heard any; I never actually heard music until I was a man grown, a member of a country brass band, and an offender on the piano and organ whenever opportunity offered.

How universally we wear clothes! And "clothes" mean certain well-tested forms of utility we always carry out: collars, underwear, shoes, hats, stockings, etc. All are matters of experience. Whatever is better will appear in course of time, as a result of further experience. So it is with our morals, customs, laws; they are the best we can do. In the main there have been no changes in centuries; we have different "styles," but in the end a coat will afford so much protection, and no more, as a law will afford so much protection, and no more.

The fighting abroad will result in one desirable thing, at least: It will take some of the conceit out of our Old Soldiers.

At present it costs \$15,000 to kill a man in war, as against two dollars and a half in the time of Hannibal. This difference is too much of a tribute to pay science and modernism.

Are men as good looking to women as women are to men?

No amount of exercise will overcome over or fast eating; and every man is something of a sinner in one or both

these particulars. Golf won't afford relief if you are piggish; neither will tennis, walking, deep breathing, or bedroom exercises.

Sense is one thing, and genius another. Genius is an accident; sense a thing to be acquired and applied. You may acquire sense, but if the gods passed you by when genius was being given out, you are lost, so far as genius is concerned. But many wise men say clear common-sense is better.

Life is a great big argument; gentlemen argue about everything without coming to simple conclusions easily possible. Men sharpen their wits by arguing, as a cat sharpens its claws on a tree for a night's fighting.

An intelligent man is afraid of dishonesty for the same reason that he is afraid of fire. Do you keep your hand out of the fire because of principle, or because of sense and experience?

In our writing and talking we have overwrought spirituality, idealism, art, visions, progress, patriotism, liberty, justice; and we have unfairly criticized materialism, the truth, common sense, simplicity, and all the other plain virtues.

If an agent does not hope to rob us, why does he take the trouble to call on me?

If we prepare vast machinery for war, it will be just our luck that some fool will be in charge of us at a critical time, and use it on too slight provocation.

We Americans are threatening to prepare for war with the enthusiasm of Napoleon and the extravagance of Boss Tweed.

Probably there is not a man living outside of the insane asylum who would pay as much attention to a message received by telepathy as he would to a message received by telegraphy.

Every cry for eternal life is closely related to the cry for liberty, justice, fraternity; all are part of the same big program.

Everybody talks too much about "what might be done"; "what will be done in the future," instead of doing what can and should be done for selfish advantage in the present.

Many newspaper statements begin: "It is said—" And everybody knows anything may be said.

Many men able to cheer are unable to think.

# THE CONQUEST OF KILIMANJARO

BRITISH, BOERS, BELGIANS AND PORTUGUESE INVADE GERMAN EAST AFRICA

BY EDWIN E. SLOSSON

**T**HE complaint that war has lost its picturesqueness may be true of Europe, but it does not apply to the African campaign. Here nature provides the strongest contrasts of climate and contour and here primitive savagery is allied with modern science in the art of destruction. This is the last of the world's great game preserves. The ultimate survivors of the grotesque mammals of the Cenozoic era have found refuge in these forests and plains where they greet the shrapnel's shriek with a morituri salutation of roarings, bellowings and gruntings. Campaigning in German East Africa must seem like fighting in Hagenbeck's menagerie. Here is a recent despatch from the front:

Gen. Smuts and his staff were held up by lions near Kilimanjaro, German East Africa. They were obliged to sit in automobiles all night firing revolvers.

The invaders have difficulty in keeping up their lines of communication for the giraffes break down the telegraph wires by using them as neck scratchers and the elephants pull up the poles out of pure mischief. As the troops, on either side advance they drive into the enemy's lines herds of wilde-beestes and harte-beests, gemsbok and springbok, elands and buffaloes, zebras and ostriches. The soldiers complain that they cannot sleep because of howling of the jackals, the laughing of the hyenas and the grunting of wild pigs. Naval combats on the lakes between the British and German motor boats are made extra-hazardous by the crocodiles and hippopotami which lie in wait for the castaways.

German East Africa is the last and largest of the German colonies. It is nearly twice the size of Germany, but there are probably not more than four thousand Germans to defend it. For nearly two years they have been cut off from the Fatherland and surrounded by enemies, yet they are still holding out. At Tabora, on the highlands in the middle of the country they have constructed a stronghold and armed it by guns from the warships driven on shore by the British. Here the Germans will probably make their last stand, for the Allies are advancing from all sides toward this center.

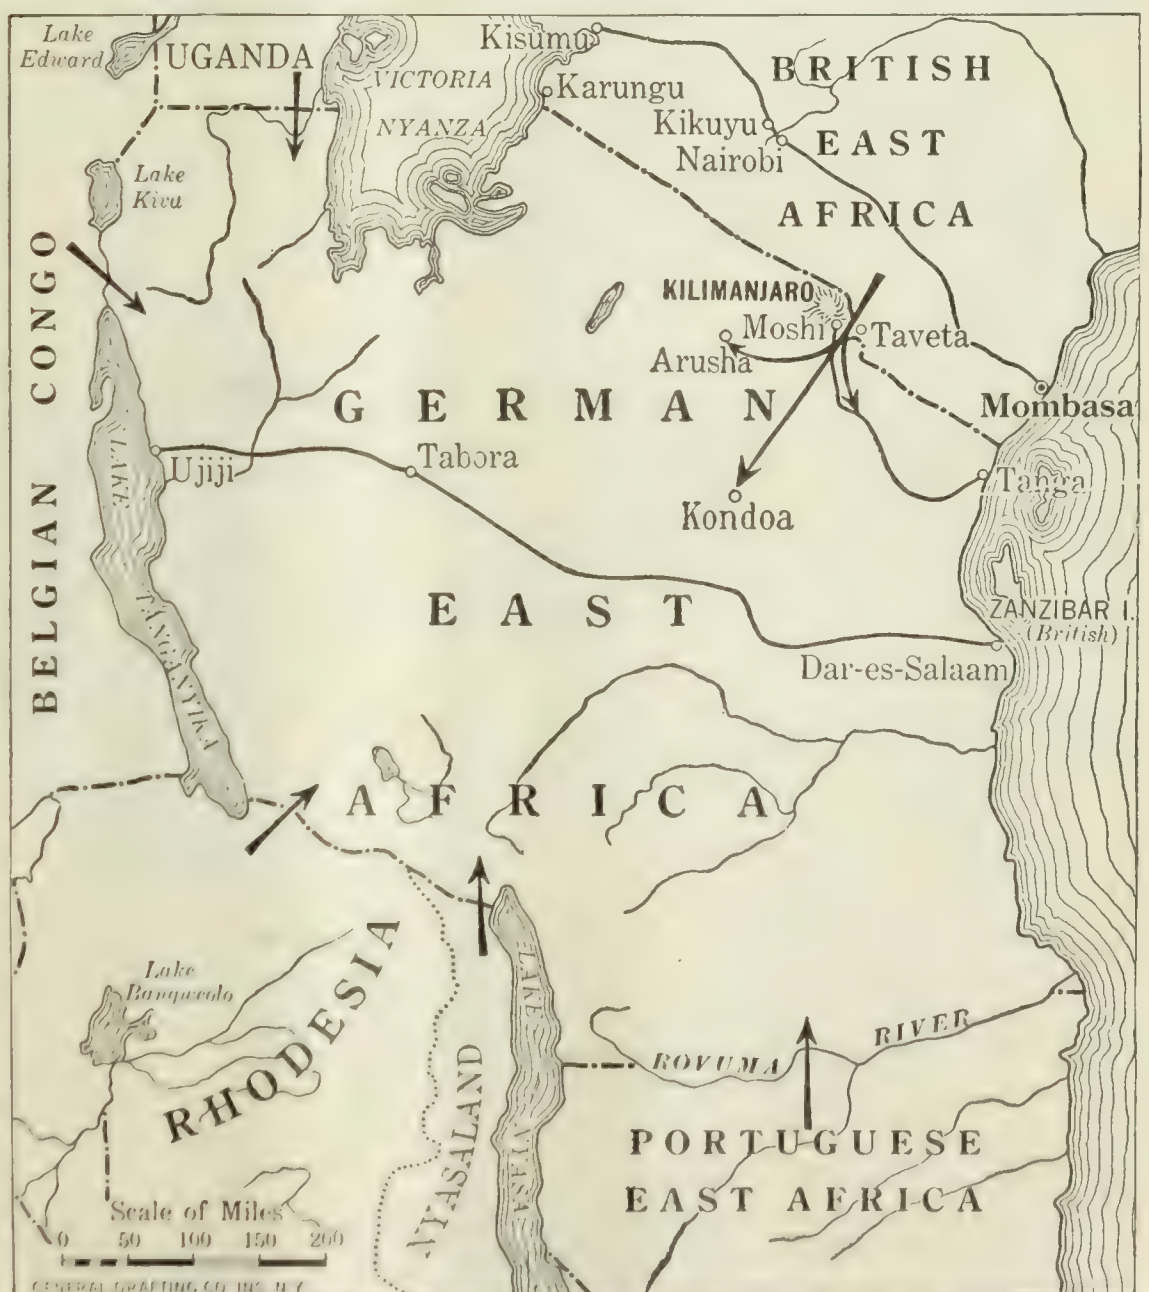

Portugal was brought into the war in March, so that Portuguese East Africa could be utilized as a base for the invasion of the country from the south. While the British fleet guards the coast line the allied forces have

entered German East Africa from all the frontiers. On the south Portuguese troops have crost the Rovuma River. Between Lakes Nyasa and Tanganyika British troops under General Northey have entered from Nyasaland and Rhodesia. The Belgians from the Congo have invaded the country on both sides of Lake Kivu and the British from Uganda are advancing west of Lake Victoria Nyanza.

But the chief point of invasion was just east of Mount Kilimanjaro. Here the British railroad running from Mombasa on the coast led right toward Taveta on the frontier, just as tho it were made for the purpose. The Germans on their side of the line had constructed a strategic railroad leading from Tanga on the coast to Moshi at the foot of the mountain. Earlier in the war the British tried to capture this railroad

from the seaward end at Tanga with the aid of the fleet, but their attempt met with disaster. The Germans likewise failed in their attempt to capture the British railroad from Mombasa by a raid over the border. Now the British are trying to get possession of the German railroad by beginning at the mountain end and working down to the sea.

The British began their campaign on March 9 with the recapture of Taveta, which the Germans had taken early in the war. Then General Smuts with his army of combined Boers and British crost the border and took Moshi, the head of the German railroad. Here the invading force divided into three columns. One swept westward around the base of Kilimanjaro, as far as Arusha, to get possession of the rich German plantations on the southern slope of the mountain. The second under General

THE LAST GERMAN COLONY

German East Africa is now being invaded from all frontiers by British, Boers, Belgians, Portuguese and their native auxiliaries. Altho it is not an island, naval battles have been fought on all four sides of it. The German forces are chiefly gathered at Tabora and along the line of the railroad from Dar-es-Salaam to Ujiji. General Smuts has entered from Taveta and after encircling Mount Kilimanjaro, has pushed on to Arusha, Kondo and Tanga.

Van Deventer marched south and defeated the Germans at Kondoa, only a hundred miles from the central German railroad. With the third and main force, General Smuts is driving the Germans before him down the northern railroad toward the sea. The German commander in chief, General von Lettow-Vorbeck, has most of his troops on the central railroad which connects Dar-es-Salaam, "the harbor of peace," with Lake Tanganyika.

A glance at the map will show that the boundary line between British and German East Africa makes a queer curve at one point, so that Mount Kilimanjaro is thrown into the German territory. This is because when the boundary was drawn in 1890 the Kaiser insisted on having the biggest mountain in Africa conceded to him. He already had the top of it on his desk as a paperweight, and he wanted the rest of it. Dr. Hans Meyer, who made the first ascent of Kilimanjaro in 1889 to the tiptop of the Kibo cone, 19,321 feet above the sea, named it "Kaiser Wilhelm Spitze" and put the pinnacle of the peak in his pocket for its godfather. The mountain had in fact been discovered in 1848 by a German, Johann Rebmann, who was sent out by the English Church Missionary Society to convert the natives. Perhaps we should say he rediscovered it, since it was known to Aristotle and Ptolemy as the Great Silver Mountain in which the Nile arose, a natural name since the cone of this extinct volcano is mostly covered by a perpetual ice-cap two hundred feet thick from which deep glaciers flow, altho it stands within three degrees of the equator.

English geographers scoffed at the German missionary for his alleged discovery and even after Baron von der Decken in 1861 had explored the mountain they were incredulous and wrote of it in this fashion:

Snow! in the hottest part of the year with the sun standing vertically overhead! It is easier to believe in the misrepresentations of man than in such an unheard-of eccentricity on the part of Nature.

Kilima-Njaro—to give its proper spelling for once—is not quite so high as our own Mount McKinley, but McKinley arises out of the Alaskan ice, while at the foot of Kilimanjaro one can pick bananas while feasting his eyes on the eternal snows above. This climate contrast, producing an island of alien vegetation, most struck our American traveler-poet, Bayard Taylor.

Hail to thee, monarch of African mountains,  
Remote, inaccessible, silent, and lone—  
Who, from the heart of the tropical fervors,

## An Income for Life

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.32 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

## MONROE DOCTRINE

A great debate in which Pres. Wilson, Sec. Lansing, Root, Tatt, Sydney Brooks and other leaders of thought take opposite sides. Extensive bibliography. DEBATORS' HANDBOOK SERIES. Cloth, \$1. each postpaid.

## MANUSCRIPT

Fiction, narratives, travel; historical and scientific matter in prepared MSS., 25,000 words minimum, receives our careful consideration for BOOK issue. Readings absolutely necessary, no charge.

Roxburgh Pub. Co. (Inc.), 61 Court Street, Boston

Liftest to heaven thine alien snows,  
Feeding forever the fountains that  
make thee  
Father of Nile and Creator of Egypt!  
I see thee, supreme in the midst of thy  
co-mates,  
Standing alone 'twixt the Earth and  
the Heavens,  
Heir of the Sunset and Herald of Morn.  
Zone above zone, to thy shoulders of  
granite,  
The climates of Earth are displayed, as  
an index,  
Giving the scope of the Book of Cre-  
ation.  
There, in the wondering airs of the  
Tropics  
Shivers the Aspen, still dreaming of  
cold:  
There stretches the Oak, from the lofti-  
est ledges,  
His arms to the far-away lands of his  
brothers,  
And the Pine tree looks down on his  
rival, the Palm.

But Kilimanjaro has attracted the  
gaze not only of the poet, the mis-  
sionary, the hunter and the states-  
man, but also of the Socialist,  
Dr. Theodor Hertzka, the Austrian  
economist, looking over the globe  
to see where he could best found  
his Utopia, selected the fertile  
and temperate plateau lying between  
Mount Kilimanjaro and Mount Kenia  
as the most suitable site. His "Free-  
land; A Social Anticipation," pub-  
lished at Vienna in 1889, is the most  
carefully worked out of all the com-  
munist schemes from Plato to  
Wells and allows greater freedom to  
the individual than is usual in  
utopias. The colony, according to the  
story, was founded by a German  
scientist, Karl Strahl, who furnished  
the ideas, and an American girl,  
Ellen Fox, who provided the capital.  
A Freeland society was founded to  
make the romance a reality, but so  
far as I know the colony was never  
started and "Eden Vale" is still un-  
tenanted. Perhaps this was because  
Ellen the Angel failed to appear; per-  
haps it was because England got  
the country north of Kilimanjaro.

The country south of it for which  
England is now fighting was more  
than once offered to her as a gift by  
the Sultan of Zanzibar and was re-  
fused! Even as late as 1884, when  
Germany had become aware of the  
future value of tropical territory,  
England was still but half awake and  
allowed German agents to gain con-  
trol of a large part of East Africa.  
Dr. Karl Peters, then 28, and the  
author of a philosophical treatise on  
*Willennuelt und Weltwille*, disguised  
himself as a mechanic and with two  
companions made his way from Zan-  
zibar into the interior, where he per-  
suaded the chiefs to give him their  
signatures for a collection of auto-  
graphs that his Imperial master was  
making. These autographs were  
made on a bundle of blank treaties

## Every Minute Guns Salute This Wondrous Food Invention

In our Puffed Grain mills, night and day, guns are constantly kept booming.

Each contains kernels of Wheat or Rice.

And these grains are shot out—puffed to eight times size—in the form of these toasted bubbles, flaky, thin and crisp.

### Perfect Foods for Millions

These bubble-grains then go to millions of homes, to bring them the right form of Wheat and Rice.

They bring them the whole grains—not an element missing. And every atom is fitted to feed, for every food cell is exploded.

Think of these facts when you look at these dainties. They are more than enticing.

Each is created by Prof. Anderson's process, by which every granule is blasted.

Digestion is easy and complete. Here every food cell feeds a bodily food cell. Nothing is missing and nothing is lost.

Any doctor will tell you—any food expert—that these are the supreme forms of wheat, rice and corn.

Puffed Wheat	Except in Far West	12c
Puffed Rice		15c
Corn Puffs—Bubbles of Corn Hearts—15c		

For breakfast serve with sugar and cream, or mixed with any fruit. Serve a different grain each morning.

Float them in your bowls of milk.

Garnish your ice cream with them.

Let hungry children eat them dry.

All day long—especially in summer—there are uses for these savory morsels which never tax the stomach. Keep a package of each on hand.

**What will my skin be like ten years from now?**

Perhaps your skin is clear and fresh now, but what will it be ten years hence? Will it still be naturally beautiful, or will you have to use artificial means to cover up the effects of age and neglect?

Resinol Soap is not the "Fountain of Youth," but its regular use for the toilet will usually preserve the delicate texture and coloring of the complexion far beyond the time when most women lose them.

Even if the skin is already in bad condition, the soothing, healing medication in Resinol Soap is often enough to bring out its real beauty again, especially if used with a little Resinol Ointment.

Resinol Soap and Ointment are sold by all druggists. For a sample of each, free, write to Dept. 5-A, Resinol, Baltimore.

**Resinol Soap**

that Dr. Peters happened to have with him so when he returned to Berlin he was able to show the Kaiser the title deeds to some 60,000 square miles of African real estate. The Kaiser promptly declared a protectorate over this territory and Peters proceeded to found the German Colonization Society and the German East African Company.

About this same time Sir Harry Johnston was getting the same chiefs to sign treaties ceding the same territories to the King of England. But the British Government in those days at least was not begrudging Germany "a place in the sun" and so did not give Johnston the backing that Peters got from his government. A still greater lack of foresight was shown in 1890, when the rival claims of England and Germany to African and Pacific territory were settled by mutual agreement. At that time Lord Salisbury in a fit of generosity or absentmindedness threw Heligoland into the bargain! Germany in exchange recognized the British protectorate over Zanzibar. The island of Heligoland has only 130 acres, while the island of Zanzibar has a thousand square miles, so the British press chuckled at the idea that Germany had "traded a coat for a button." But the loss of a button is inconvenient at times and England would probably now be willing to pay a million dollars a day for Heligoland which buttons up the Kiel Canal.

Dr. Karl Peters was put in charge of the Kilimanjaro district, but his treatment of the natives was so brutal that it shocked the German Government and he was dismissed in disgrace. The wholesale execution of women as a deterrent measure was one of the charges against him. When Dr. Dernburg, a business man, was put into the colonial office, much to the disgust of the junkers he upset precedent by going to East Africa to see for himself how things were going and an era of reform was inaugurated. The natives were treated more leniently, Hindus were imported and set to raising peanuts. The railroad from the ocean to Lake Tanganyika has been completed since the war began, so now German troops can be shipped from the eastern side of the country to the western over a route which used to take the caravans sixty days. Ujiji, the lake terminus of the railroad, is where Stanley met Livingstone. The German Government has been spending about \$1,250,000 a year on East Africa, but the money invested is likely to pay big dividends to whoever owns it in the future. An English review, rejoicing in the prospective acquisition of the German colonies, makes the

### For the Boys and Girls

"I consider The Independent one of the best sources of reliable information concerning current events. Its position as a weekly enables it to see things in a proper perspective. It eliminates the trivial and the transitory. It sifts out the essential incidents of the week, puts them in concise form, and disseminates information to its patrons before it becomes stale. I value it most highly not as a news gatherer, but as a sane interpreter of the vital movements of American life."

amusing admission that it is lucky that Germany has had them hitherto for they have been explored and developed scientifically as England would never have done.

It was expected that "opening up the country" would mean opening it up to Christianity, but on the contrary it has turned out to be opening it up to Mohammedanism. In spite of earnest missionary work the natives of both German and British East Africa are rapidly becoming Moslemized. Mombasa, which means appropriately "the island of war," was an Arab stronghold in the fourteenth century, as those of our readers who know their "Paradise Lost" by heart will remember. The east coast natives speak Swahili, a hybrid of Arabic and Bantu.

In order to unite the Christian forces to meet the advancing wave of Mohammedanism the Bishop of Mombasa, Dr. W. G. Peel, organized a series of joint conferences of the missionaries in East Africa with a view to organizing a federation of churches. In the conference held at Kikuyu in June, 1913, he went so far in his Christian zeal as to admit the Presbyterian and Methodist pastors to the Lord's Table. For this he was denounced as a heretic by the Bishop of Zanzibar and a fierce theological controversy raged in the Church of England up to the beginning of the war. But the good Bishop of Mombasa died a few weeks ago of typhoid fever and the Christian forces are more divided than ever. The Christian converts who were gathered at communion in Kikuyu are now armed to fight one another by their Christian kings. From both sides we hear complaints of the brutal treatment of white men, women and children by their negro captors.

East Africa is the greatest prize the Allies have yet to gain from Germany. If the British conquer, the gap between Rhodesia and Uganda will be closed and the Cape-to-Cairo railroad may become a reality. If the Germans win in the war they will doubtless annex Belgian Congo and so get a thru route east and west from one ocean to the other. If neither side obtains a complete victory it is hard to see what can be done. For in any bargaining for peace Germany will insist upon the return of her colonies as the price of evacuating Belgium, France, Luxemburg, Serbia, Montenegro, Albania, and Russia. But the union of South Africa will never willingly consent to giving up German Southwest Africa which Botha has conquered or German East Africa which Smuts is likely soon to conquer.

## If You Lived As The Cave Man Lived

*Your health would take care of itself*

The cave man ate coarse food and lived a strenuous life in the open. His digestive apparatus was suited to that kind of an existence.

You inherit from the cave man the same internal mechanism, but you eat different food and you lead a different kind of a life. Hence the almost universal prevalence of constipation and its constant menace to health.

Your problem is to adjust that "cave man" internal mechanism of yours to the sedentary life and concentrated food of civilized man. NUJOL accomplishes this adjustment by preventing the bowel contents from becoming hard, thus making natural movements easy. It doesn't upset the ordinary processes of digestion and it doesn't form a habit.

NUJOL is sold in pint bottles only, at all drug stores. Refuse substitutes—look for the name NUJOL on the bottle and package.

## The Highest Choice

DO not let it be merely a question of initial cost when you make your choice of pianos. The matchless music of the Steinway has lifted it above the "price" atmosphere for all time.

It is true, the Steinway does cost a little more. But no one who owns a Steinway has ever a shadow of regret for the price paid. It is but little higher than the cost of other pianos, and the Steinway carries within its perfect mechanism the guarantee of a satisfaction beyond all price.

For more than three-score years it has been the ideal of the greatest music masters of their day. So the Steinway must command your respectful attention before your choice is made.

Write for illustrated literature about the

## The New Books

### JUST CONVERSATION

The Pennells have but to dip wise pens into their memories to bring forth welcome entertainment for their public. If this seems to envious onlookers "easy writing" it is certainly not "hard reading." The sole drawback to the present volume, *Nights*, by Mrs. Pennell, is that so worth while, so restful a bit of light literature deserves lighter paper and a handier shape. These *Nights* were passed in Rome, Venice, London and Paris. The Italian evenings came when the Pennells were yet newcomers themselves among the artist and writer folk, but in London their rooms were the center of a group that included Henley and his "young men," Beardsley, Harland, Bob Stevenson; and in Paris they were a part of the excited, hard working band of art critics bent on enlightening the world as to the precise value of each salon.

Mrs. Pennell does not repeat herself. Whistler and the Pre-Raphaelites figure mostly as background, and her stories of the "Fighting Nineties" are not only new, but good natured and discreet. By means of a host of amused and happy recollections she shows the spirit that animated the younger artists, writers and critics in England at the close of the last century, and above all her pages brim over with the sense of youth,—enthusiastic, intolerant, tragically, absurdly in earnest, childishly gay hearted, omnipotent youth.

*Nights*, by Elizabeth Robins Pennell. Philadelphia. Lippincott. \$2.

### SATIRES—BUT HARDLY SONGS

"Spoon River Anthology" should naturally have followed Edgar Lee Masters's later book, *Songs and Satires*. The earlier collection is definitely the exploitation of a particular and limited sort of verse, as tho a writer had found his forte; *Songs and Satires* gives one the impression that its author is experimenting in all the kinds of verse he can think of, hitting some extraordinarily well and doing very ordinary stuff the rest of the time.

It would have been better to leave "Songs" out of the title. Mr. Masters is not lyrical and there is very little of the singing quality that dozens of young poets possess. Nor is the strength of the book in the poems that display a fantastic imagery and vague thought, nor in the catalog realism of *The Loop*. The best things are the verses in the "Spoon River" mode—character studies with a great deal of life about them, such as *The Cocked Hat*, an analysis of Bryanism, and *So We Grew Together*. Sex is by no means so monotonously overemphasized as in the "An-

thology," but it still looms large in the author's interest. Mr. Masters has almost a Freudian taste for discovering a "soul in a hidden fault," but his gift of portraiture is turned mostly to kindlier uses in this volume, and in Marcia is pleasantly applied to child poetry.

Mr. Masters in satirical mood ranges from bitterness and harshness to a rather unexpectedly exalted melancholy. And occasionally he strikes a really high imaginative note. But the book as a whole is undisciplined, uneven, and scattering.

*Songs and Satires*, by Edgar Lee Masters. Macmillan. \$1.25.

### TOWARD DEMOCRACY

Americans have been accustomed to think of their government as a more or less perfect form of democratic rule, the first example in history of a democracy on a large scale. However, scholars have long emphasized the fact that, while the makers and early interpreters of our Constitution were steadfast in the determination to secure liberty, they were no less convinced that too much authority should not be placed in the hands of the people. They intended that the intellectual and propertied classes should do the ruling, and it has remained mostly for very recent times to make progress in the direction of popular control.

While there is perhaps little new in Edward Elliott's *American Government and Majority Rule*, the book fully justifies itself, being both concise and comprehensive. Its purpose is to show that our form of government has actually hindered the people in "the attainment of democracy, or the rule of the majority." What is now needed is the modification of the form of government in the direction of greater simplicity.

The most encouraging thing about our system is the fact that, however complete the failure to get government out of the hands of the bosses and increase its efficiency, these attempts are sure to be renewed. When the early caucus failed to draw out the will of the people, the nominating convention was tried, and when this fell completely into the hands of a few men and became a mere machine, the direct primary was brought in. In more recent times two attempts have been made to solve the ever-recurring problem—the initiative, referendum and recall, and the commission form of city government. The author finds that the former movement has failed to justify the hopes of its originators in those states in which it has been tried and that it offers no reasonable hope for the future. But commission government has been much more successful, and in it is to be found a hint for reform in at least the state governments. The placing of responsibility in the hands of a governor and cabinet will result in the concentration of responsibility and in added effectiveness. One house of the state legislatures should be abolished, since no real difference underlies the basis of representation in the two houses. The executive should have the power to frame

# The Crimes We Commit Against Our Stomachs

By Arthur True Buswell, M.D.

A MAN'S success in life depends more on the co-operation of his stomach than on any other factor. Just as an "army moves on its stomach" so does the individual. Scientists tell us that 90% of all sickness is directly traceable to the digestive tract.

As Dr. Orison Swett Marden, the noted writer, says, "the brain gets an immense amount of credit which really should go to the stomach." And it's true—keep the digestive system in shape and brain vitality is assured.

Food is the fuel of the human system, yet some of the combinations of food we put into our systems are as dangerous as dynamite, soggy wood and a little coal would be in a furnace—and just about as effective. Is it any wonder that the average life of man today is but 39 years—and that diseases of the stomach, liver and kidneys have increased 103% during the past few years?

And yet just as wrong food selections and combinations will destroy our health and efficiency, so will the right foods create and maintain bodily vigor and mental energy. And by right foods we do not mean freak foods—just good, every day foods properly combined. In fact, to follow Corrective Eating it isn't even necessary to upset your table.

Not long ago I had a talk with Eugene Christian, the noted food scientist, who is said to have successfully treated over 23,000 people without drugs or medicines of any kind, and he told me of some of his experiences in the treatment of disease through food.

One case that interested me greatly was that of a young business man whose efficiency had been practically wrecked through stomach acidity, fermentation and constipation resulting in physical sluggishness which was naturally reflected in his ability to use his mind. He was twenty pounds underweight when he first went to see Christian and was so nervous he couldn't sleep. Stomach and intestinal gases were so severe that they caused irregular heart action and often fits of great mental depression. As Christian describes it he was not 50% efficient either mentally or physically. Yet in a few days, by following Christian's suggestions as to food, his constipation had completely gone although he had formerly been in the habit of taking large daily doses of a strong cathartic. In five weeks every abnormal symptom had disappeared—his weight having increased 6 lbs. In addition to this he acquired a store of physical and mental energy so great in comparison with his former self as to almost belie the fact that it was the same man.

Another instance of what proper food combinations can do was that of a man one hundred pounds overweight whose only other discomfort was rheumatism. This man's greatest pleasure in life was eating. Though convinced of the necessity, he hesitated for months to go under treatment believing he would be deprived of the pleasures of the table. He finally, however, decided to try it out. Not only did he begin losing weight at once, quickly regaining his normal figure, all signs of rheumatism disappearing, but he found the new diet far more delicious to the taste and afforded a much keener quality of enjoyment than his old method of eating and he wrote Christian a letter to that effect.

But perhaps the most interesting case that Christian told me of was that of a multi-millionaire—a man 70 years old who had been traveling with his doctor for several years in a search for health. He was extremely emaciated, had chronic constipation, lumbago and rheumatism. For over twenty years he had suffered with stomach and intestinal trouble which in reality was superaciduous secretions in the stomach. The first menus given him were designed to remove the causes of acidity, which was accomplished in about thirty days. And after this was done he seemed to undergo a complete rejuvenation. His eyesight, hearing, taste and all of his mental faculties became keener and more alert. He had had no organic trouble—but he was starving to death from malnutrition and decomposition—all caused by the wrong selection and combination of foods. After six months' treatment this man was as well and strong as he had ever been in his life.

These instances of the efficacy of right eating I have simply chosen at random from perhaps a dozen Eugene Christian told me of, every one of which was fully as interesting and they applied to as many different ailments. Surely this man Christian is doing a great work.

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally that he has written a little course of lessons which tells you exactly what to eat for health, strength and efficiency.

These lessons, there are 24 of them, contain actual menus for breakfast, luncheon and dinner, curative as well as corrective, covering every condition of health and sickness from infancy to old age and for all occupations, climates and seasons, including special summer menus which enable you to withstand the heat and retain winter's vigor.

With these lessons at hand it is just as though you were in personal contact with the great food specialist, because every possible point is so thoroughly covered and clearly explained that you can scarcely think of a question which isn't answered. You can start eating the very things that will produce the increased physical and mental energy you are seeking the day you receive the lessons and you will find that you secure results with the first meal.

If you would like to examine these 24 Little Lessons in Corrective Eating simply write The Corrective Eating Society, Department 47, 460 Fourth Ave., New York City. It is not necessary to enclose any money with your request. Merely ask them to send the lessons on five days' trial with the understanding that you will either return them within that time or remit \$6.50, the small fee asked.

and advocate measures in the legislative assemblies. It is more important still that districts should be abolished so that representatives may be elected at large.

Professor Barnett's book on the *Operation of the Initiative, Referendum and Recall* might be called a handbook on the Oregon system. It is the most recent and authoritative work on the subject. Some of the most unsatisfactory features of popular initiative are the frequent intrusion of local interest, log-rolling, and even blackmailing; powerful lobbies not forced to reveal their identity; multiplicity of candidates and measures; and the great expense of conducting the extra elections. Some of the defects have been remedied by amendments and Professor Barnett suggests many other amendments, but to outsiders some of the evils will appear impossible to eradicate. In the seven years during which the recall has been in operation seventeen recall elections have been held, involving thirty-four officers, only nine of whom escaped recall. The author concludes that the experience of Oregon with the recall is yet too limited to justify any positive conclusions as to its merits.

*American Government and Majority Rule*, by Edward Elliott. Princeton University Press. \$1.25. *The Operation of the Initiative, Referendum and Recall in Oregon*, by J. D. Barnett. Macmillan. \$2.

## HOW DIPLOMATS MAKE WAR

Is it likely that if the United States were in the throes of a struggle for national existence, there could be found an American statesman who would publish a book, anonymously and under the cloak of a specious general argument patently deliver a stab in the back at his own country? Could we even imagine such an act on the part of Colonel Roosevelt or Mr. Bryan? Certainly not! If either felt criticism of the government would serve their country's cause, we know they would out with it fair and square in the open, as would any American statesman worthy to be ranked as such.

The English are as open, and *How Diplomats Make War*, by a British Statesman, should be read bearing in mind that it is inconceivable any British statesman such as Bryce, Morley, Curzon, Redmond, Dillon, John Burns—select from what political party you please—would, for an instant, lend his hand without his name to the authorship. We emphasize this American and British quality of personal honor because of the seductive cleverness with which the book is written. While disclosure of the chicanery of all foreign policy is the benevolent pretext offered to the reader, it presently becomes evident that it is British diplomacy in particular at which the author's battery is aimed. This appears to be based on the principles of Machiavelli, with a special brand of British selfishness thrown in. Thus with France cajoled into war mischief, and Russia as the gun toter of the international gang, the Allies stand revealed by this "British states-

Please clip out and mail the following form instead of writing a letter, as this is a copy of the official blank adopted by the Society and will be honored at once.

## CORRECTIVE EATING SOCIETY

Department 47, 460 Fourth Ave., New York City

You may send me prepaid a copy of Corrective Eating in 24 Lessons. I will either return them to you within five days after receipt or send you \$6.50.

Name ..... Address .....

man" in a deliberate plot to smash progressive and unsophisticated Germany.

Prussian militarism and Junkerdom are skilfully kept from the scene. Ingenious is the method by which Nietzsche and von Tirpitz are utilized to serve the author's end. Also curiously significant is the omission of the parts played by Canada, Australia, New Zealand and South Africa in rising to the defense of the empire. Yet the author is said to be a British statesman! By many touches we are able to detect the work of an Englishman, or at least one who by long residence in England has acquired a distinctively English expression of thought. Mr. Frank Harris is, of course, not a British statesman. Excluding him on this count, who, then, is the author? But the question of authorship is not important, for the value of the book lies not in its supposed authority, but in its citations of diplomatic documents and other references that show what a tangle Europe had got into before the Gordian knot was cut by the sword.

*How Diplomats Make War*, by a British Statesman. Huebsch. \$1.50.

#### THE HOME RESPONSIBLE

*Religious Education in the Family*, by Henry F. Cope, is a valuable study of a neglected field. By reason of the exclusion of religious teaching from our public schools, and to a large extent from our private schools also, a grave responsibility rests upon the home to supplement or supersede the work of the Church in the religious training of childhood and youth. Mr. Cope's book ought to be in the hands of all parents who take the task of moral and religious instruction seriously. He discusses the family in relation to other institutions, the meaning of religious education, the child's religious ideas, and the methods of developing the moral life available for use in the home. His chapters on the manner of dealing with moral crises are helpful. This book shows clearly how necessary it is for the home to cooperate with the school and the Church and other social organizations if moral training is to be effective.

*Religious Education in the Family*, by Henry F. Cope. Univ. of Chicago Press. \$1.25.

#### FROM AN AFRICAN MISSION

A most unusual book is the collection of letters from a missionary in West Africa, some of which were published in the *Atlantic Monthly*, some in *Woman's Work*, and which are now brought together under the title of *Black Sheep*.

The author, Jean Kenyon Mackenzie, was, from 1901 to 1913, a member of a Presbyterian mission on the West Coast of Africa. She lived in the "bush" in Kamerun, she lived by the beach, she traveled thru miles on miles of forest in hammock or chair. She taught school and held meetings and made visits.

Much that was charming and lovable she found in the simple, gentle black people, also very much that was pathetic and saddening. Her letters have a remarkable degree of literary excellence, an originality and fineness of phrasing, almost a rhythm, but they

## You Take No Risk

This Razor is  
GUARANTEED FOR LIFE

This Shumate "Barber" razor is so good that we dare guarantee it to you for life. Here's the reason—the blade is made from Tungsten Alloy Steel, which takes a keener edge than any ordinary steel can—and it holds it. You can use it for years without honing. The secret of this wonderful steel is *ours alone*, and we guard it jealously.

Here's our *unqualified guarantee*: Buy a Shumate "Barber" razor and use it—not once, but as long as you like. If you say after an exacting trial that you don't like it, we'll exchange it *without a word*.

Sent postpaid, **\$2.00**

In remitting, mention your dealer's name, and a chamois lined, rust-proof case will be included with your razor.

State whether you want light, medium or heavy blade. Heavy blade for very strong beards.

Established 1884  
Capacity 6,000 razors daily

Shumate Razor Co., 700 Locust St., St. Louis, U.S.A.

## How YOUNG Are You?

Years do not fix your age. Some people are *old* at thirty—others *young* at seventy. Your *actual* age is the level of your *usefulness*. What can you **DO**? What do you **KNOW**? Whatever your walk in life, it is your *patriotic duty*, as well as your selfish *interest*, to keep *young*, keep "*fit*" and keep *learning*. Don't think you're *too old*—don't think you're *too young*.

The *judgment* of age and the "*ginger*" of youth are alike indispensable. But, let youth *remember this*—to acquire the mature judgment of age you must *learn, learn, learn* and keep learning. And let *riper* age remember *this*—keep learning and you'll keep *young*.

### NOW, HOW ARE YOU GOING TO BEGIN?

First, *fill out* and *mail* the request blank at the bottom of this page. It will bring you, *without cost* or *obligation*, convincing proof that you *need* the help of the *latest encyclopædia* in your business, your profession, your reading and your conversation. The *only* encyclopædia that will meet your requirements is the

## New International Encyclopædia (Second Edition)

The Latest, Most Comprehensive General Reference Work in the English Language

### It is Being Published NOW!

It is **NEW** from cover to cover. It is *edited* by Frank Moore Colby and Talcott Williams, encyclopædists of international reputation. Its *contributors* are scholars of *highest authority* in their varied fields. It contains *all that the world knows* on all subjects, arranged *alphabetically* by subjects, so that *no cumbersome index* is needed. The *saving* of time and annoyance thus effected is *tremendous*.

### It is Made in America for Americans

It contains 80,000 articles—20,000 more than any other encyclopædia, due largely to the vast amount of *new material* incorporated, the large number of *up-to-date subjects* treated—subjects not found in older encyclopædies (the encyclopædia next in lateness to the New International being five years old).

It consists of 24 volumes, containing the latest authoritative information of science, manufacturing, engineering, agriculture, law, politics, economics, education, sociology, biography, bibliography, military and naval science, art, literature, archaeology, chemistry, electricity, submarine and aeronautic warfare, medicine, surgery, religion, transportation by land and sea, etc. Each important article is followed by a bibliography giving a complete list of the newest and best books on the subject discussed therein. There is a valuable accompanying volume—*Course of Reading* and

*Study*—which provides the foundation for a liberal education.

### 124 Sets Bought by New York Public Libraries

After a most critical examination of the revision of the New International Encyclopædia, New York City, although thoroughly equipped with the first edition, placed with us an order for 124 sets. Practically all our large cities have ordered a proportionately large number for their public libraries.

### A Splendid Piece of Book Making

The work is printed from new, *special* type that is unusually clear and legible. The paper is thin, light, tough, opaque, and was made *especially* for this work. It has *no equal* for its purpose. There are thousands of *new illustrations* and hundreds of *excellent maps*. The volumes are almost as *light* and *convenient* to handle as a standard magazine.

### To Progress You Must Have This Encyclopædia

You can't be without it and *hold your own*. Your duty is plain—get it **NOW**. We have made it easy to buy **NOW** by means of a *low introductory price* and *easy terms* of payment. To take advantage of this concession, you must *act immediately*. For many reasons,

### An Increase of Price is Due Soon

So mail the coupon *today* for information which enables you to secure this *indispensable* work at the *lowest price* at which it will be sold.

An 80-Page Book Sent Free—or we'll send you a volume of the work for examination. Fill out coupon.

Dodd Mead & Co., 449 Fourth Avenue, New York City. Send me full information regarding your Second Edition of the New International Encyclopædia, with details of special price, sample pages, etc.

### Stain Your Bungalows

Don't paint them. Stain them all over, roofs, siding and trimmings, with

### Cabot's Creosote Stains

The glossy "painty" effect does not harmonize with the bungalow idea, but the soft, deep colors of our stains suit perfectly. They are rich and transparent, bringing out the grain of the wood and increasing its natural beauty. They cost only half as much as paint and only half as much for labor to apply. If your bungalow is in the woods, where skilled labor can't be had, you can do your own staining with perfect results. Our stains are made of the strongest and finest colors, ground in linseed oil, and specially refined Creosote, "the best wood preservative known."

Cabot's Stains are sold all over the country. Send for stained wood samples and name of nearest agent.

**SAMUEL CABOT, Inc., Mfg. Chemists**  
18 Oliver St., Boston, Mass.

## Keep Out the Wind

KEEP  
OUT  
THE  
DUST  
AND  
DIRT

KEEP  
OUT  
THE  
NOISE  
AND  
SMOKE

Showing strips used for sides of sliding windows. The construction is so simple that handcraftsmen insure perfectly fitted sash, allowing windows to slide without friction.

Real comfort in your home can only be secured when you keep out the wind, dust, noise and smoke. Ordinary building construction does not permit this, but the trouble can be overcome by the use of Chamberlin.

Windows and doors equipped "The Chamberlin Way" mean increased efficiency of your heating plant, and reduced cost in fuel consumption. The Chamberlin service is not a luxury, it is an economy and a necessary part in building. As an investment, it will pay for itself many times over in smaller fuel bills.

Chamberlin Metal Weather Strip is a positive guarantee against the letting in of cold air, dirt, dust or soot. And windows never rattle. Can be fitted to sliding or hinged windows or doors with equal effectiveness. Chamberlin Metal Weather Strip is made of metal—nothing to wear out.

Write for booklets on "The Chamberlin Way"

**CHAMBERLIN METAL WEATHER STRIP CO.**  
109-111-113 Third Ave., DETROIT, MICH.

are curiously impersonal, curiously undetailed.

In one of them she speaks of seeing, "in such a perceptive fashion as fatigue produces—I mean so objectively perceptive." This objective perceptivity is constantly evident. The intense interest in vivid personal experiences usually to be found in letters is wholly lacking. The book has a strangely illusive quality. It rouses interest but does not quite satisfy it.

*Black Sheep*, by Jean Kenyon Mackenzie. Houghton, Mifflin, \$1.50.

### HOW TO DO IT

Robert B. Gridland's *Practical Landscape Gardening* gives much attention to different sorts of walks. The chapter on lawns is uncommonly thoro. The garden plans are detailed and varied. (New York: De La Mare, \$1.50.)

The A. B. C. of *Home Saving*, by L. A. Farmer, does not enter into the question of proportionate use of income, but is devoted to practical suggestions for economies in household living on from \$50 to \$150 a month. (Harper, 50 cents.)

Any one about to build a real bungalow should look over the plans in *Ideal Homes in Garden Communities*, a book planned for California, but with ideas that will adapt to other regions. Prices range from \$600 (only one) to \$6000. (McBride, \$1.)

Persons interested in *Small Boat Building* will find this new Outing handbook unusually valuable. Written expressly for the amateur by H. W. Patterson, a veteran boat-builder, it is terse, clear, and profusely illustrated with diagrams. (Outing, 70 cents.)

J. Parmly Paret has followed his "Methods and Players of Modern Lawn Tennis" by a less technical, very plainly written and clearly illustrated book, *Lawn Tennis for Beginners*. Its warnings of how not to play will be especially useful. (Macmillan, \$1.25.)

How to run your water-craft is explained in *Small Boat Navigation*, a handy little textbook in the Outing series, by F. W. Sterling, a retired naval officer. It is simple, brief, and practical. The mysterious nomenclature of the sea is made understandable to the land-lubber. (Outing, 70 cents.)

### ALL SORTS OF STORIES

*The King's Men*, by John Palmer, is one of the new crop of post bellum books dealing with the mental conflict of volunteering and the rise of the war spirit. (Putnam, \$1.35.)

*Captain Margaret*. John Masfield's first novel is, in plot, an adventure story of the Spanish War; but the interest lies mainly in the odd group of delicately drawn characters. There are sea descriptions as fine as those in the poems and nervous dialog. (Macmillan, \$1.35.)

The initial story of *The Daughter of the Storage*, by William Dean Howells, begins a volume of tales, poems and sketches written with the assured artistry that has never disappointed the expectation of the readers who have enjoyed it for fifty years. (Harper, \$1.35.)

In *Father Bernard's Parish*, Florence Olmstead tells simply and well a story of a part of New York comparatively new to fiction, Columbus Avenue with its innumerable delicatessens, lunch rooms and butchers' shops, where people of all nationalities work and live and love. (Scribner, \$1.25.)

*Chapel*, by Miles Lewis, is a character study of a father and son spurred on to success by the traditions of their old Welsh

## The Interlaken School

A preparatory school of high scholastic standards. Prepares for all universities. Small classes with individual instruction. Teachers are university-trained men. The mathematics, physics and chemistry of the classroom are applied in practical work. Character, thorough work and responsibility. Older boys act as leaders on work assignments, develop initiative and executive power. Daily constructive use of a boy's liking for mechanics and his fondness for nature and animals. The school, located on a 700-acre farm with its own electric light, power plant, wood and metal shops is a small city, a miniature laboratory of the larger world. Trips are made to factories, city institutions, farms and other neighboring points of interest.

### SUMMER CAMP MID-JUNE TO SEPTEMBER FIRST

Let your boy spend an active, healthy, happy summer at Interlaken. Land sports hikes and camping amid the sand dunes. Boating, fishing, swimming. 70-acre lake. Ponies. Boy government under men counselors. Boys build their own huts, their own boats. Have opportunity to make things in the Interlaken School shops. Interesting experiences of haymaking, threshing, harvesting, on the Interlaken farm. Registered dairy herd. Sheep. No extra charge for tutoring.

Address Director of Camp,  
Box 128, Rolling Prairie,  
La Porte County, Indiana  
Chicago Representative  
Phone Kenwood 4375

## Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence is removed from the hospital, is homelike and ideally located.

**Requirements:** At least one year of high school or equivalent. Age limit—18 to 35 years.

**Contribution:** \$10.00, \$12.00 and \$15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

family traditions which exert over them a power almost inconceivable to an American. The book is well done, tho the characters excite more interest than sympathy. (Doran, \$1.35.)

*The Real Motive*, by Dorothy Canfield, is a collection of short stories of varied notes but all embodying some undercurrent of thought or feeling with its element of surprize when it emerges into consciousness. (Holt, \$1.40.)

Don Marquis, the inimitable *colyumist* of the *Evening Sun*, has written a clever newspaper story and called it *The Cruise of the Jasper B.* The plot while wildly bizarre, is woven with much technical skill and no little aplomb. Its very improbability is a compelling feature of the book. (Appleton, \$1.30.)

*Jaunty in Charge*, by Mrs. George Wemyss, is a fairly interesting story of two young girls in an English village who were brought up by an absent-minded father and a "confidential butler." Some of the characters are rather well done but the style of writing is annoyingly silly. (Dutton, \$1.35.)

*The Red Horizon*, by Patrick MacGill, Rifleman No. 3008, London Irish, author of "The Rat Pit," etc., is a vivid account of trench warfare from the private's point of view; a somewhat hastily written but effective narrative of the every day facts of war; horror, humor, pathos and courage strangely mingled. (Doran, \$1.25.)

Nowadays the heroine must always leave a happy home to earn her economic independence in New York, preferably after a triumphant social career and before a satisfactory marriage. But, tho Olive Higgins Prouty follows this formula closely, she has made *The Fifth Wheel* a very entertaining—and not too improbable—story. (Stokes, \$1.35.)

## CHILDREN AND MOTHERS

*Painless Childbirth*, by Carl Henry Davis, of the Rush Medical College, discusses the various methods now being tried and especially considers the results of a varied experience in the use of nitrous oxid-oxygen analgesia, which he considers the safest treatment. (Chicago: Forbes, \$1.)

The revised edition of *The Child*, by W. B. Drummond, contains a new chapter on the Montessori method and one on children of retarded and arrested development. This book is practically a condensation of the "Introduction to Child Study," and is an excellent work for beginners in this field. (Dutton, \$1.)

Dorothy Canfield Fisher is rapidly qualifying as a child-expert. Her latest book, *Self-Reliance*, contains valuable suggestions as to methods of making children self-helpful, and finds ways of developing independence and initiative even in an apartment hotel, incredible as it seems. (Bobbs-Merrill, \$1.)

*Health and the Woman Movement*, by Dr. C. D. Mober, medical adviser to women at Leland Stanford University, is a most valuable, suggestive, and hopeful discussion of this topic. It is worth reading by all whose work is among girls and young women. (Nat'l Pub. Bd., N. W. C. A., 25 cent.)

Annie Riley Hale really believes the pretty compliment "The hand that rocks the cradle rules the world." Armed with the cradle she has no use for the vote, and in *The Eden Sphinx* tilts fiercely at the very same womanhood that from the opposite side courage the feminist. (New York, 16 West 5th, 16th Street, \$1.25.)

*Your Boy and His Training*, by Edwin P. Lee, former president of the Scout Masters Association of St. Louis is a sane guide to parents in the perplexing but fascinating business of bringing up a boy. It does not deal with morbid exceptions but with the average troublesome, promising lad commonly found in American homes. (Appleton, \$1.40.)

## TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. ### INCREASE IN FIRE WASTE

Experience thus far indicates a heavy increase in losses by fire this year as compared with 1915. The figures for the first five months of 1916 for the United States and Canada, as compiled by the *Journal of Commerce and Commercial Bulletin*, show a total destruction of property to the value of \$113,528,920, as against \$81,497,050 in the same period of 1915, an increase of \$32,031,870. The year 1914 was a bad one as a whole, but its record for the first five months, \$103,670,250, was more favorable by about \$10,000,000 than that made this year to date. The figures for May, 1916, are \$15,973,500; those for May, 1915, \$11,388,450, a gain for May, 1915, of \$4,585,050. If 1916 maintains the average established during its first five months, the total for the year will reach \$270,000,000, about \$90,000,000 higher than 1915 and \$35,000,000 higher than 1914.

### PREVENTION AND CURE OF CANCER

That deaths from cancer have been steadily on the increase for many years past is a fact fully recognized by the medical profession and life insurance statisticians. There are two organizations actively at work in this country devoted to a study of the disease, its causes and progress, and to the gathering, classification and compilation of statistics—the American Society for the Control of Cancer and the American Association for Cancer Research. The chairman of the Committee of Statistics of the last named organization is Mr. Frederick L. Hoffman, statistician of the Prudential Insurance Company. Mr. Hoffman has lately completed, and the Prudential has published, an 800-page work, "The Mortality from Cancer Thruout the World," which should be a valuable contribution to the noble work a comparatively small number of devoted individuals are doing to stay the ravages of this horror.

It is startling to learn that the mortality from this disease in the continental United States exceeds 80,000 a year, and that the rate of mortality from it is increasing approximately 2.5 per cent per annum, results due, says Mr. Hoffman, in part, at least, to public ignorance and neglect.

Lack of space prevents any review of the book; my main object on this occasion being to present a few practical suggestions that will be of value to the public. I gather the following observations and advice from "Instructions on Prevention of Cancer," issued by the Borough of Portsmouth, England,

found in the appendix of Mr. Hoffman's work, pages 781-2:

The only known cure for cancer is early and complete removal; if neglected and not removed early, it is practically invariably fatal. Early recognition is of paramount importance. In its early stage it causes no pain nor other symptom of ill health, but its signs are conspicuously manifest. In females over forty any swelling in the breast requires immediate medical examination. The most trivial hemorrhage after the climacteric is suspicious, as it may be cancer in the early stage, but is curable; if neglected until pain occurs it is nearly always fatal. Every irregular bleeding should be submitted to a doctor's investigation.

Any wart or sore on the lower lip of a male over forty-three is likely to be cancer; if removed, recovery results; if neglected, is fatal. Any sore or swelling on the tongue of a man forty-five should be immediately examined microscopically. A large proportion are cancerous and curable. Any hemorrhages, suspected as hemorrhoids, in persons forty-five years and older, should have prompt attention. A large proportion are cancer and curable.

All warts, moles or other growths on the skin which are exposed to constant irritation should be immediately removed. Avoid irritation of the tongue and cheeks by broken teeth and of the lower lip by clay pipes. Altho there is no evidence that cancer is communicable, it is desirable that rooms occupied by a person suffering from the disease should be cleaned and disinfected at regular periods.

R. W. H., Eugene, Ore.—On January 1, the assets of the Western States Life of San Francisco were \$2,067,624; it has \$1,000,000 capital and a net surplus of \$70,023. The company writes non-participating insurance only, is doing a good business and seems to be properly managed.

G. A. C., Charleston, W. Va.—The Crescent Life Insurance Company, of Indianapolis, Indiana, was incorporated March 2, 1914, with an authorized capital of \$100,000, but at the time this was written had not commenced to write insurance. As the result of a preliminary examination of the company made by the Indiana Insurance Department the latter ruled that it had not sufficient stock subscribed to qualify it to do business. The company claims total assets of about \$175,000, the principal items of which are: Checks, \$21,000; notes, \$84,000; industrial securities, \$67,000. Upon this statement of facts it would be difficult to predict the company's future if it succeeds in qualifying to do business.

R. J. M., Winthrop, Minn.—The Prudential and Provident Life and Trust are both strong, thoroughly reliable companies. The relativity of assets and insurance in force is governed by the age of the company and the energy expended in getting new business each year; assets are the product of age; insurance in force the product of effort. The Prudential is not weak at any point. I should say that while the 15-payment, 30 year endowment is an excellent policy, average circumstances indicate the 30 payment the better. I don't think there would be any charge for converting a whole life into a 20 year endowment, except the additional premium and interest for past years. I think it would be injudicious to exchange a monthly income policy for an endowment. In the matter of books: write your company's superintendent of agents to recommend a course.

## A REVIEW OF FINANCE AND TRADE

### THE INVESTOR'S SERVICE

*The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.*

### CAREFUL INVESTING OF JULY FUNDS

July 1 is a date when very large disbursements are made by corporations either in the form of interest on bonds or dividends on stocks. We have been passing thru a period of almost riotous speculation in motor stocks and perhaps a word of warning is opportune to the small and inexperienced investor. The hardened speculator will not be interested in any advice that is given here because he intends to sell out, on the way up, to the small unsuspecting investor.

In the past few years many fortunes have been made by munitions manufacturers, agents, dealers and speculators in stocks of munitions corporations. Some small investors have made money but not enough to attract attention, while thousands who sank their savings in war stocks at top prices rued the day when they began to drop, and dropped ten, twenty, thirty or more points. With the passing of Bethlehem, Crucible, Submarine, Midvale, etc., came the motor stocks and the wild speculation caused many small savings to be placed in these stocks at high prices.

The moderate investor cannot afford to play the market because in the first place there is too much risk for the possible profit involved and because a small gain may make an inveterate stock gambler out of him and eventually cause him to lose all of his savings and original paper profits. If a man has a few thousand dollars and no visible means of support, he might try to make money by trading in stocks. He may make a living or he may lose every cent in a comparatively short time. But the salaried man has had to work for his savings and had better invest them carefully with a view to receiving a fair return rather than that of doubling his money in six months or a year.

From the many letters received by the editor of "The Market Place" it is gathered that the important requirement set forth by readers who wish to invest is *safety*. Of course, there is no absolutely safe investment. Municipal bonds are rarely in default, but there

have been cases in the remote past. The last few years have given us many instances of losses in principal and interest on railroad and industrial bonds; even savings banks fail, tho the cases are extremely rare.

We have received inquiries like this: "How do farm land bonds compare with municipal bonds as regards security and returns"; "Is it a safe investment to buy stock in this mine?" One inquiry was about a rubber company stock which was offered by an investment company with glowing remarks. The advertisement reminded the reader of the vast profits that stockholders in other similar companies had made in the past few years and how men living in Akron, Ohio, who made \$2.50 per day a few years ago, are now millionaires and live in "palaces costing more than a king's ransom." The advertisement tells of \$800,000 paid in dividends to stockholders of rubber tire companies in January, 1916, and how \$100 originally invested in the stock of the B. F. Goodrich Company is today worth \$12,900. The inference is that what happened in this case and others must necessarily happen in the case of the stock advertised.

Investors are easily influenced by cleverly worded advertisements. Stress is always laid on how much money is being earned or has been earned by *other* companies. Mention is also made of what the company's future will be. Generalities are indulged in without being supplemented by actual figures. The statement is often made that investors should get in on the "ground floor" and buy before the stock advances in price, or that no stock would be sold at the low price after a certain date. Obviously, that is pure humbug.

The people who have made the most money in the recent motor stock speculation sold their stocks at the high points. During a wave of prosperity there is always the incentive for a number of companies doing an allied business to consolidate. In the consolidation considerable stock-watering is in order and new stockholders are buying stock at high prices on the basis of large

current earnings that may not continue at the same rate. Therefore, such stocks cannot be classed as safe stocks.

Then, inquiries are made regarding mines which produce so little ore that operating expenses can hardly be met and no dividends are paid. When a reader asks if such a stock is considered safe, we unqualifiedly write him to keep away from all mining stocks. There are good mining stocks but they are not going begging at a few cents a share. Mining is a legitimate business, but holders of good mining stocks should always remember that when it costs more to mine than the metal sells for, operation ceases, and that mines give out and dividends are really disbursements from capital and not profits.

Sound railroad and municipal bonds can be purchased to yield as high as 5 per cent; good industrials and public utilities yield up to 5½ per cent. When one gets beyond 6 per cent, the element of safety of principal and interest begins to be questionable. A bondholder is a creditor of a corporation. He has a charge on the assets prior to general creditors and stockholders. A stockholder is a partner; if there are profits to disburse and the directors decide that the corporation is in condition to pay a dividend, one is declared; otherwise not. Bonds are naturally safer than stocks.

Bonds and stocks are at a much higher point today than they were in August, 1914, but that is because of the great wave of prosperity that has past over practically the entire country, resulting in increased railroad earnings in every section and an overwhelming supply of money. With money at low rates, it is obvious that bond prices should have risen. They will not rise forever and while bond prices are not at the top, they are probably pretty near it. Nevertheless, idle money is better invested in bonds at 5 per cent than in the bank at from 2½ to 4 per cent. With money in the bank, there is always the temptation to spend—for pleasure, an automobile, diamonds, fine clothing, etc. While securities are easily convertible, there is more pride attached to the ownership of a bond or share of stock than to a bankbook.

At this writing market conditions are rather unsettled, due to the Mexican situation, the possibility of a government bond issue, continued liquidation of American securities held in Europe, the railroad labor situation, etc. On the other hand the country is prosperous. Investors should not allow ordinary fluctuations to influence them against purchasing good bonds and stocks. If bought on recessions and bought with extreme care, securities purchased even at this time will yield considerably above the savings bank rate and if bought outright, as they should be, the small investor need not worry.

## July Investments

Securities suitable for the varied requirements of individuals, trustees, savings banks and other financial institutions.

The selection comprises municipal, railroad and public utility bonds yielding from 4.00% to 6.00%.

## PEBBLES

Pronunciation is the thief of rhyme.—*Life*.

"Why do you work so hard?"  
"I'm too nervous to steal."—*Puppet*.

The peace between Italy and Germany is a peace that passeth all understanding.—*Philadelphia Inquirer*.

How like those efficient Germans to put the entire question of food supply in the hands of the Minister of the Interior.—*Boston Transcript*.

Katie has a piano  
About which she brags:  
But everybody knows she got  
It with tobacco tags.—*Houston Post*.

Park Policeman—Get off the grass, there. Can't you see the notice?  
Small Boy—I ain't walkin' on yer old grass. I'm steppin' between it.—*Tit-Bits*.

### A BIT OF A BOOST FOR L. E. WILLIAMS

Mrs. L. E. Williams has returned from Mulberry, where she has been visiting her husband. She was well pleased with her trip.—*Jacksonville (Fla.) Metropolis*.

"They say Tennyson frequently worked a whole afternoon on a single line," said the literary enthusiast.

"That's nothing," said the poor clod seated beside him. "I know a man who has been working the last eight years on a single sentence."—*Ladies' Home Journal*.

Two militiamen in front of the armory. Solemn faces. Vehement gestures.

"Patriotic boys!" thought I. "How bravely they respond to their country's call. How earnestly they discuss her welfare!"

I approached.  
"Ought to be shot!" said one.  
"Worse than that," replied the other.  
"Why, if he hadn't muffed that ball, the Giants would a'won!"—*New York Tribune*.

### A DAMPER

The late Prof. Lounsbury, of Yale, was a foe to the purist and pedant.

On his summer holiday the professor gazed out across the lake one gray and sultry afternoon, and remarked:

"It looks like rain."  
A pedant was seated in a rocking chair near by.

"What looks like rain, professor?" he chuckled. "Ha, ha! I've got you there. What looks like rain?"

"Water," Professor Lounsbury answered coldly.—*Tit-Bits*.

A Londoner who was staying in Scotland recently had need of legal assistance. He went up to a sensible looking man in the street and began: "Pardon me, sir; but are you a resident of this town?"

"Weel," was the cautious reply, "I've loosed here a matter o' fifty year."

"Ah! then perhaps you can help me," went on the visitor. "I'm looking for a criminal lawyer. Have you one in this town?"

The Scotsman dropped his voice to a confidential whisper as he answered:

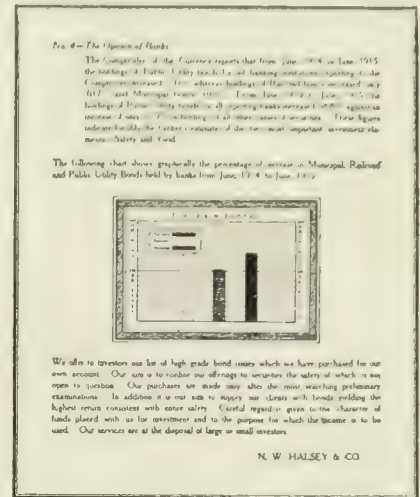

"We hiv, but we hanna been able to prove it against him yet. He's ower sharp."—*Tit-Bits*.

"Did you make any money on your last novel?" asked the writer's close friend.

"Did I make any money?" echoed the great novelist. "Well, I should say I did! I sold that description of the Palisades in Chapter 3 to the Quebec Railroad for \$5000. My tribute to the Plaster de Paris Hotel in New York, in Chapter 10, brought me \$3000 from the hotel people, and the United Resorts Limited paid me another thousand for my rhapsody on the sunset in the Unpegog Mountains in Chapter 30, where the hero takes her in his arms. What's left of it I beat down into a short story and got \$10 for it. Did I make any money? Well, now!" —*The Ladies' Home Journal*.

H. E. TENER, President.  
GEORGE B. DUNNING, Secretary.**UNITED FRUIT COMPANY**

DIVIDEND NO. 68

A quarterly dividend of two per cent (two dollars per share) on the capital stock of this Company has been declared, payable July 15th, 1916, to stockholders of record at the close of business June 24th, 1916.

The transfer books do not close.

JOHN W. DAMON, Assistant Treasurer.

**AMERICAN TELEPHONE AND TELEGRAPH COMPANY****Four Per Cent. Collateral Trust Bonds.**Coupons from these bonds, payable by their terms on July 1, 1916, at the office of the Treasurer in New York, will be paid by the Bankers Trust Company, 10 Wall Street.  
G. D. MILNE, Treasurer.**AMERICAN TELEPHONE AND TELEGRAPH COMPANY**

A dividend of Two Dollars per share will be paid on Saturday, July 15, 1916, to stockholders of record at the close of business on Friday, June 30, 1916.

G. D. MILNE, Treasurer.

**MR. PURINTON'S EFFICIENCY QUESTION BOX**

271. Prof. G. C. H., Kansas. "May I inquire how to take an efficiency vacation trip? Kindly make suggestions as to the preparations, mode of travel, stop-overs, and sightseeing for a tour of several weeks."

Engage a national travel bureau, such as Thomas Cook and Son, or Bertha Ruffner, to arrange itinerary with railroad and hotel accommodations. Read up ahead on historic places. Don't take a trunk; limit baggage to hand valise and one or two suitcases. Don't hurry, leave plenty of time to catch trains, but also to miss a train occasionally without fretting. Carry a good dollar watch, pencils and notebook, pocket drinking-cup, pocket fan, plenty of small change, with large bills or express checks pinned in inside pocket or money-pouch. Have rubber heels on shoes, and take cushion slippers for hotel use, between tramps. Wear low collars, light-weight pulley suspenders. Leave space in suitcase for souvenirs. Provide clothes for changes in temperature. Drink bottled water. Eat less than usual. And whatever happens—look pleasant.

272. Inquirer from Michigan. "I wish to build up a private school, and need counsel as to ways and means. How can I find names of men in towns nearby who have boys of school age, and would be likely to send them to a private school? Is there a census available of children of school age in various cities; how could it be procured?"

The society and club directories, obtainable in almost every large town; and lists of corporation officials in your state (ask a lawyer how to secure these), would probably serve you best. Write the secretary of the School Board in each town or city for particulars of a school census, whether published and how procurable. Engage a bright boy or girl in each important locality to prepare a list of parents with boys of school age and adequate means; pay your representative a small amount for each ten names listed. Have your school written up in a local newspaper, or large city daily or weekly (the latter preferably), with the most unique and attractive features fully described; reprint article, use it in your advertising campaign. Hire a good publicity expert. Study school advertising in high-class magazines.

273. Mrs. C. H. S., Maryland. "I have read with much interest your recent article on *The Efficient Home*. In it you speak of (a) liquid wall finish and of (b) colorfast, reversible, moth-proof rugs. Will you kindly refer me to companies, giving details?"

(a) The Alabastine Company, Grand Rapids, Michigan; John Lucas &amp; Company, Inc., Philadelphia, Pennsylvania; The O'Brien Varnish Company, South Bend, Indiana; Berry Brothers, Detroit, Michigan; Pratt &amp; Lambert, Inc., Buffalo, New York.

(b) Western Rug Company, 212 Fifth Avenue, New York City; The Congoleum Company, Department of the Barrett Company, Boston, Massachusetts.

274. Prof. W. N. C., New York. "What kind of exercise is best for a person who is run down nervously, from anxiety and overwork? I have answered several advertisements in health magazines, but am confused because of the diversity of methods and appliances offered to the public. What system would be the right one for my condition?"

Before advising you personally, we should require examination and diagnosis from an experienced physician, to determine state of heart, lungs, brain, kidneys, and other vital organs. If you are sound, merely depleted, some of the best forms of exercise would be golf, croquet, swimming, rowing, horseback riding; all in moder-

**YOUR BODY IS HUNGRY FOR FRUIT VIGOR**

Although you may not know it

It needs Fruit-Vigor's upbuilding salts of fruit to keep it healthy. Most ailments arise because the ordinary daily food lacks these vital salts. The morning drink of Fruit Vigor—refreshing and invigorating—frees the body from ailments and from the misery of taking physic, pills, mineral waters, oils or enemas. Makes pure blood, restful sleep, sound digestion, wholesome skin, and a clear brain.

By mail—1 jar \$1—4 jars \$3.50—6 jars \$5.00.

**DIVIDENDS**

**THE UNITED GAS AND ELECTRIC CORPORATION**  
61 Broadway, New York.

June 22, 1916.

The Board of Directors has this day declared a dividend of one and three-quarters per cent (1 3/4%) on the Second Preferred Stock of this Corporation, payable July 1, 1916, to the holders of record June 22, 1916. Dividend checks will be mailed.

**H. J. PRITCHARD, Treasurer.**

**THE MANHATTAN SAVINGS INSTITUTION**  
47-49 Broadway, New York.

**130TH SEMI-ANNUAL DIVIDEND**

June 15th, 1916.

The Trustees of this institution have declared interest on the 130th Semi-Annual Dividend at the rate of THREE AND ONE-HALF PER CENT (3 1/2%) on all deposits and accounts exceeding \$1,000 remaining on deposit during the three or six months ending on the 15th inst., payable on or after July 15th, 1916.

Deposits made on or before July 15th, 1916, earn interest from June 1, 1916.

**JOSEPH BIRD, President**  
**C. M. BIRD, Secretary**

ation, with slow and gentle manner of execution. If not now strong enough for these, try some of the exercises in bed from Sanford Bennett's book, "Prevention and Cure of Old Age." Deep, slow, rhythmic breathing is good. Massage for the head, spine and nerve tracts would likely be best of all for a time, but only when given by an expert operator.

275. Mrs. J. A. M., Minnesota. "I am specially interested in your efficiency service, and should like information regarding your plan, as I want to prepare a paper for our missionary society. I think most of the churches need re-establishing on lines of efficiency."

The general scope of our work is indicated in my book "Efficient Living," obtainable from the Efficiency Publishing Company, Woolworth Building, New York City; in the list of 1916 articles printed on inside front cover of The Independent for January 10, 1916, in the special announcement on page 445 of The Independent for March 27, 1916; and in previous articles and Question Box answers. We suggest that you obtain as many of these items as your interest may warrant, then keep in touch and watch for developments.

If you have a specific problem of church efficiency, we will gladly endeavor to help you solve it.

276. A Teacher in Pennsylvania. "I am a school principal, but do not wish to make a profession of teaching. Have had in mind the traffic department of some railroad, or the United States Consular Service. (a) Which work would be better? (b) Are there reliable schools to which I might write for information? (c) I have seen schools advertised, calling attention to the opportunities for traffic managers, and claiming to fit one for this field. Are these claims exaggerated?"

(a) Chances are greater, and we consider better, for a really good man as a traffic expert. In consular service there is too much politics and too little ambition.

(b) We never guarantee the reliability of any institution. A well known school with a traffic course is La Salle Extension University, Chicago, and there is American Commerce Association, Chicago.

(c) Many prospectuses of correspondence schools are exaggerated, unintentionally, of course. Get a balanced view by studying general literature on the subject. See Question Box answer No. 245 (d) in The Independent of April 24, 1916.

277. Miss L. J. F., Ohio. "I am a girl of eighteen and a high school graduate. I very much need to earn some money all my own, and I have a certain talent for short-story writing. (a) How should I submit stories for publication? (b) Whom should I address? (c) Should a brief letter accompany the story? (d) What is the usual magazine price for ordinary short stories?"

(a) See Question Box answer No. 242, issue of April 24, 1916. (b) Address simply the Editor. If his name appears in the magazine, address him by name also. (c) Enclose a brief note, with stamped, self-addressed return envelope, and request payment at usual rates or return of manuscript. (d) From \$10 to \$150, depending on size of magazine, length of story, fame of author. If in every ten magazines to which you submit story, one accepts it, and pays \$20, you will be fortunate.

We would suggest that you earn money in clerical, secretarial, or other work, and make your literature the outcome of your life. To write for profit is to write from experience.

278. A Teacher from Alabama. "I wish to ask you if the diet served at my boarding house is suitable for one whose work is sedentary. Breakfast: fried eggs (hard), soft biscuit, rice, fried meat, syrup; dinner: greens, fried meat, biscuit, candied sweet potatoes, cheese, potato pie; lunch: fried eggs, fried meat, biscuits, rice. Every morning I feel dull and disagreeable. Have requested fruits, cereals and poached eggs, but rarely get them. Please advise me what to do."

We marvel that you are alive. Such fare is suicidal for a brain worker, and it would stir up a Mexican rebellion in the gastronomy of a longshoreman. The eggs should be soft, and the biscuit hard; the worst meat is fried meat, and there should be none at all for breakfast; eggs and

## This Job Needs a Trained Man

You've reached your limit. You can't expect to step into a job that pays a big salary until you've prepared yourself for it.

It's a serious question, this problem of getting ahead. There is only one solution—you must have training; you must be able to do work that others can't do, or your pay will stay on a level with theirs.

The business of the International Correspondence Schools is to help just such men as you to get good positions and hold them.

Right now over one hundred thousand ambitious men are preparing themselves through I. C. S. courses for the bigger jobs ahead. Last year nearly five thousand reported increased pay as the result of I. C. S. training. These men got their training in spare time and in their own homes. What the I. C. S. have done for others they can surely do for you. But you must make a start—the same start that they made—and the way has been made easy for you. Mark and mail this coupon.

**I. C. S., Box 4515, Scranton, Pa.**

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4515, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

# Select Your Boat From this Catalog

## Products of 225 Leading Boat-Builders to Choose From

3 Books  
On Request

More boats are shown in the 1916 boat-builders' catalog than you can see at any motor boat show. This book is published by the Gray Motor Company in conjunction with the 225 leading boat-builders throughout the United States and Canada. It shows every class of boat from the little 16-ft fishing launch to the most handsome express runabout, or a snug, safe, roomy cruiser with all the comforts of a home.

### Boats a Girl Can Operate

These boats are powered with guaranteed Gray Motors, which can be equipped with self-starters, and are operated the same as any motor car, nothing exposed but instrument board and controls. This book tells you where you can buy the kind of boat you want at the price you want to pay—it also gives you the name of the leading boat-builder nearest your locality.

### Gray Marine Motors

The new marine engine catalog shows a complete line of both 2 and 4 cycle marine motors, 3 to 90 H. P., 1 to 6 cylinders, with every feature you have ever hoped for in a marine motor.

### The Gray Book of Boats

A new and effective idea, full of authoritative information on boats and engines—just what its title explains it to be. A book that will solve hundreds of the little problems that confront everybody considering a hull or a power plant. *No theory here—all actual practice.* Not the opinion of one man but the boiled down experience of thousands of boatmen in all parts of the world.

These three books sent free to anyone writing for them.

**GRAY MOTOR CO.**

756 Gray Motor Building, DETROIT, MICH.

20-24 H. P., 4-Cyl., 4-Cycle Model 'D',  
Other Grays, 3 to 90 H. P., 1 to 6 Cylinders.

meat do not belong at the same meal; rice and biscuit together mean too much hot starch.

Your boarding house lady is too besotted to reform; work out your own salvation. Omit breakfast or lunch at the table, and eat a small health meal in your room; such as fruit juice or a hot drink, or fresh fruit and whole-wheat crackers, or a good flaked cereal and cream with prunes, figs or berries. Read "The No-Breakfast Plan," by Dr. E. H. Dewey; also books of Horace Fletcher and Eugene Christian.

279. Miss H. S. W., Maine. "I want information regarding the Gary System, and to know if a high school graduate can learn it."

The best man to inform you on the Gary Plan is doubtless the originator—Superintendent Wirt, Public Schools, Gary, Indiana. Write also the United States Commissioner of Education, Washington, D. C., for data concerning recent evolution of Gary Plan in schools thru the country. Possibly the secretary of Judge Elbert H. Gary, care of United States Steel Corporation, 71 Broadway, New York, might refer you to published matter of interest. Read "Schools of Tomorrow," by John and Evelyn Dewey. (Dutton, \$1.50.)

Obtain a list of the schools following the Plan, and a position as teacher in one of these. You might qualify later as an organizer, but only on the basis of actual experience.

280. Prof. G. L. J., Ohio. "Can you help me decide what I am best fitted for? Am 25 years old, six feet tall, one of seven in family, and their chief support. Have taught elementary and high school, worked on a farm, in lumber camps and blast furnaces, sold pianos, sewing machines and life insurance. Am now teaching, but want to earn more, and do more for those dependent on me. Feel sure I can but don't know where nor how to begin."

You have already begun—you believe in yourself! A man so energetic, democratic and versatile should succeed anywhere.

Obtain from Efficiency Publishing Company, Woolworth Building, New York, a list of modern books on vocational guidance, and names of character analysts. Get two or three of the books, if necessary a personal reading by mail, and find what work you could do best. Look up the Correspondence Schools teaching that subject; also technical journals in that line (directory in almost any newspaper office). Then study in spare time, holding present position till you secure another.

Consult also the Vocational Guidance Department of the International Correspondence Schools, Scranton, Pennsylvania, and read my article, "Choosing a Life Work," soon to appear in these pages.

281. Inquirer from Connecticut. "I am a young college graduate greatly interested in the woman movement. Can you recommend books giving sane discussion of woman's function? It seems to me that neither the suffragists nor the 'antis' understand this. Why should a woman's chief career be motherhood any more than the man's should be fatherhood? Why should the father be permitted to shift all the responsibility on to the woman? After a few years, why isn't the woman entitled to a career as well as the man? Should not marriage be of the same importance to both?"

Every woman should have a career, selecting it, preparing for it, looking at it the same as a man. And every man should be taught the principles of real parenthood, the same as a woman. But this equality may not be preached until women learn to be efficient mothers, going to school to a teacher like Mrs. Winifred Sackville Stoner. The entire "woman movement" is transitory, evolutionary, chaotic. Of the many books on the subject some of the best are: "What Women Want," by Beatrice Forbes-Robertson Hale (Stokes, \$1.25); "Woman and Labor," by Olive Schreiner (Stokes, \$1.25); "The Business of Being a Woman" (Macmillan, \$1.25), and "Ways of Women" (Macmillan, \$1), both by Ida Tarbell; "Meditations on Votes for Women," by S. M. Crothers (Houghton, Mifflin, \$1). Some of your questions we attempt to discuss in our Independent article on the "Efficient Man at Home," to which we refer you.

The leading Life Insurance Companies are the largest investors in

## FARM LOANS

and they select the safest and most attractive field.

They are all represented in our loan field, and have millions invested because diversified crops, reliable borrowers, fertile soil, equable climate and ample rainfall are all combined here as nowhere else.

We are among the oldest farm loan companies in this section, and our business is conducted along the most conservative lines. We invite correspondence with those who are looking for safe investments that can be depended on.

Our booklet will tell you who we are and something about our loan field.

## J U S T A W O R D

The militiamen photographed on the cover of this issue are armed with the newest type of machine guns—invented by an American and tested and found effective by the British army in the present war. The gun was first offered to the United States, but our experts did not find it satisfactory, so Great Britain was given the next opportunity of trying it out—and it proved very valuable. It has the distinction of being a “one-man” machine gun—that is, it can be easily carried by one man and fired without a standard. It has met successfully difficult tests for accuracy and rapidity of firing. This photograph was taken by the Central News Service.

## THE MILITIA SAYS GOOD-BYE

“They can weep on the manly bosoms till the train rolls out.”

Colonel Bates, of the Seventy-first Regiment, made this promise, and he lived up to it nobly. For two hours the regiment waited, no one knew exactly why, unless it was the colonel, who had an eye on those mothers and sweethearts all the time he was pretending to be busy with unromantic things like ammunition and baggage.

There was a little woman beside me with a two months' old baby in her arms. She was really just a young girl, drest in one of those brave little silk dresses that try so hard to be fashionable. The baby was all drest up, too, with a tiny flag in its bonnet, in honor of its soldier daddy. The whole tragedy of war was there, in that picture; the woman silent, uncomplaining, but grim, waiting with the baby which would be the impediment and at the same time the necessity for her going back into the business world to earn her own living again. However, she was not thinking of the trouble ahead. She was only wondering if she would see Carl as he passed by.

She shivered a little when the bugle blew and the ranks began to creep past. Line after line went by. There were flags and tears and shouts from everybody else on the corner, but the little woman with the baby was still straining forward, silent, when the last line came into sight. Then she saw him on the far side of the column.

“Carl!” she shrieked. He did not hear.

“Carl!” again, and then she recognized one of his mates. “Arthur, tell Carl.”

Arthur rose to the emergency, bless him. And Carl, too, proved himself a man to be relied on. What cared he for the blaring bugle or the fact that his regiment was on the march? Carl gave one quick look at his captain, and then he bolted. Straight thru the ranks he dashed, and there wasn't a dry eye on the corner when he grabbed his little family in his arms.—*New York Tribune.*

## REMARKABLE REMARKS

LADY RANDOLPH CHURCHILL. It is a woman's war.

WOODROW WILSON—I have not the least regard for logic.

GEORGE BERNARD SHAW—Why not give Christianity a trial?

MARY PICKFORD—I love to see a wind-blown dandelion meadow.

H. G. WELLS—I help to stir the remarkable salad called public opinion.

BISHOP J. F. BERRY—Evangelists are usually men unable to fill charges.

GENERAL BRUSILOV—One of the greatest inspirations to an army is hatred.

ED. HOWE—You are a whited sepulcher, and I know you know I am another.

MAXIMILIAN HARDEN—Ideas are the only conquerors whose work lasts.

EMPEROR WILLIAM—Providence has so willed that we should be still here.

ELIHU ROOT—Constitutional freedom does not come and remain of itself.

RUDYARD KIPLING—Germany is winning all the victories and the Allies are winning the war.

GENERAL PERSHING—I take orders only from my government; make that plain to Carranza.

CHANCELLOR BETHMANN HOLLWEG—Our aim is the lasting rescue of the European Continent.

ATTORNEY-GENERAL WESTCOTT—Wilson will live forever as the emancipator of the commercial slave.

THE DUKE OF MANCHESTER—Dukes and Duchesses now patronize the movies instead of the theaters.

IGNACE PADEREWSKI—The player-piano holds out the possibilities of real art to the conscientious performer.

LUKE MCLUKE—What has become of the old-fashioned man who always had cotton stuffed in his ears?

JOHN D. ROCKEFELLER, JR.—The Colorado situation according to my latest reports is much improved.

CHAMP CLARK—The Monroe Doctrine is the only political proposition that the American people ever did agree on.

W. J. BRYAN—With us Democrats it should be the open season for Progressives from now until next November.

HUDSON MAXIM—If there is any business in this world that should receive high honor, it is the manufacture of munitions of war.

J. EDGAR PARKS—The essence of the gospel! We used to think it was the Sermon on the Mount. Now we are told it is the whip of small cords.

BILLY SUNDAY—I can skin a hypocrite and tack his hide on the barn door, before you can pucker up your lips to spit on the whetstone to sharpen your knife to begin skinning.

THE EMPEROR OF JAPAN—May the heavenly spirits of our ancestors, to whom we owe so much, witness our determination that we will fulfill our mission by diligently laboring day and night.

PREMIER HUGHES OF AUSTRALIA—This war has saved us from moral, aye, and physical decay, for we were slipping down with increasing velocity into the very abyss of degeneration.

## STOP DRIFTING

**W**HAT is the fundamental purpose and the paramount duty of the United States in regard to Mexico? Until that question is frankly and fully answered, there is no firm basis for a plan of action in regard to the chaotic land across the Rio Grande.

Last week President Wilson put this problem before the public in a speech to the New York Press Club:

Of course, it is the duty of the government, which it will never overlook, to defend the territory and people of this country. It goes without saying that it is the duty of the Administration to have constantly in mind with the utmost sensitiveness every point of national honor.

But after you have said and accepted these obvious things, your program of action is still to be formed. When will you act, and how will you act? The easiest thing is to strike. The brutal thing is the impulsive thing. No man has to think before he takes aggressive action, but before a man really conserves the honor by realizing the ideals of the nation he has to think exactly what he will do and how he will do it. Do you think the glory of America would be enhanced by a war of conquest in Mexico? Do you think that any act of violence by a powerful nation like this against a weak and distracted neighbor would reflect distinction upon the annals of the United States? Do you think that it is our duty to carry self-defense to the point of dictation in the affairs of another people?

The President is right; our program of action is still to be formed.

The Administration apparently has no definite, positive, clean cut purpose or plan in regard to Mexico. The President either does not know, or he is unwilling to tell the American people, what our duty in relation to Mexico is and along what broad lines we should attempt to discharge it.

He has declared and has followed with sporadic and spasmodic exceptions a general policy which he has described as watchful waiting. Four times he has departed from that policy with unfortunate results.

An American fleet and an American army were suddenly sent to Vera Cruz to demand from President Huerta a salute to the American flag. The salute was never given because Huerta was driven from power by the revolutionists.

The fleet and the army captured and occupied Vera Cruz because a cargo of arms destined for Huerta was about to be landed. The arms were subsequently landed at another port unmolested. The ships and soldiers came home.

An American army crossed the border into Mexico in pursuit of Villa and his fellow bandits, who had invaded the United States. Villa vanished into thin air and the

American army remains entrenched and inactive in Mexico.

When Carranza ordered the American troops in Mexico not to move in any direction but north, we sent out patrolling parties to the east. As a result, thirteen American soldiers were killed and twenty-three made prisoners in the fight with Mexican troops at Carrizal. We thereupon demanded from Carranza a disavowal of the action of his troops the release of the prisoners, and a statement as to what he proposed to do in the future. The prisoners were promptly released and the other demands ignored, leaving us just where we were before—except for our dead.

After all these departures from the policy of watchful waiting, what are we going to do about Mexico? What is our purpose? On what fundamental principles are we basing the acts which we are committing in relation to Mexico every day?

The entire available mobile army of the United States is in Mexico and on the border. Practically the entire National Guard of the country is mobilizing and entraining for the border.

What for? What do we esteem it our duty to do in regard to Mexico?

Merely to protect our border against invasion?

Merely to catch Villa?

Or is there behind and above all these temporary and incidental obligations a solemn, far-reaching and inclusive responsibility to humanity, to international orderliness and decency, to civilization?

We believe that there is such a responsibility. We believe that such an obligation goes far beyond the mere duty of self-defense. We believe that waiting and watching, however they may be punctuated by impulsive and inconclusive action, are not the way to discharge this obligation.

Fronted by such a problem, we should act, not spasmodically or hastily, but deliberately, firmly, consistently. Action does not necessarily mean war; it does not inevitably mean violence. There are other ways of action that should come first. Has the President no plan of action that is not negative? We commend to his consideration and that of the American people the proposal of Washington Gladden:

What I should like to see is a great delegation of our best known and most influential men sent down there, men like President Taft and President Eliot and Cardinal Gib-

bons and Judge Parker and Mr. Bryan and Judge Brandeis and Secretary Baker and Samuel Gompers—a dozen or more men of all parties—men of such fame and standing that all Mexico would have to sit up and take notice, saying: “Here are men who have a right to speak for America; let us listen.” Such a delegation could make the Mexicans understand that we have no sinister purposes; that our deepest interest is that they should be at peace; that we have no wish to dictate how they shall settle their differences, but that we are ready, as soon as they can come together and make peace, to come to their aid with the most liberal subventions for rebuilding their railways and their factories and reopening their mines and getting the tides of prosperity once more flowing.

I believe that such an embassy of our greatest and best citizens, nominated by the President, authorized by Congress, and bearing such a message could go to the city of Mexico and get a hearing. I have no doubt that they could make the Mexican people believe in the sincerity of our friendship, and that the proffer of it in this impressive and authoritative way would awaken a sentiment among intel-

ligent Mexicans which would force the quarreling factions to come together.

This is a fine suggestion. It could be carried out without interrupting in any degree what we are now doing for purposes of self-defense. Such a High Commission could give to the Mexican Government and the Mexican people firm assurances of our friendship and good will. It could offer them our help in their great trouble. It could impress upon their leaders that we esteem the condition of Mexico to be our own responsibility hardly less than theirs, and that if they ultimately cannot rescue their country from chaos and anarchy we must undertake the task.

Such a plan might avail nothing. But until we have tried it or something like it, we have not done our best. It is time to stop drifting.

## THE POLITICAL CAMPAIGN: THE PLATFORMS

THE party platform in this year of grace is a curious phenomenon. Its frank and unblushing purpose is to catch votes. There is nothing in it of the quality of Martin Luther’s defiant “Here I stand; I can do no otherwise.” Reading paragraph after paragraph of either of the two platforms one is easily convinced that the drafter of them wrote with a dual hope; that the voter naturally inclined to vote with the party putting it forth would think that it meant one thing, while the voter of different inclination would not think that it did not mean the opposite. So the party platform of today is a thing of splendid generalities and noble phrases of ambidextrous elusiveness.

If a student of political problems were to be dropt into our midst from a distant star, and were to be handed the Democratic and Republican platforms for perusal, his first reaction would probably be one of astonishment. We can imagine him saying, “Why are these two parties fighting one another? They have so many things in common.” His surprise would be well founded. Here are five paragraphs from each of the two platforms. Which is which?

The . . . party . . . favors the extension of the suffrage to women, but recognizes the right of each state to settle this question for itself.

We favor the conservation and development of the natural resources of the country thru a policy . . . which shall not withhold such resources from development, but which, while permitting and encouraging their use, shall prevent both waste and monopoly.

We reaffirm our approval of the Monroe Doctrine.

We favor . . . the enactment and rigid enforcement of a federal child labor law.

We . . . favor the maintenance of an army fully adequate to the requirements of order, of safety, and of the protection of the nation’s rights, the fullest development of modern methods of seacoast defense, and the maintenance of an adequate reserve of citizens trained to arms; . . . and a fixed policy for the continuous de-

We recommend the extension of the franchise to the women of the country by the states, upon the same terms as to men.

We believe in a careful husbandry of all the natural resources of the nation—a husbandry which means development without waste, use without abuse.

The Monroe Doctrine is reaffirmed as a principle of . . . faith.

We favor the speedy enactment of an effective federal child labor law.

We must have a sufficient and effective regular army and a provision for ample reserves, already drilled and disciplined, who can be called at once to the colors when the hour of danger comes. We must have a navy so strong and so well proportioned and equipped, so thoroly ready and prepared, that no enemy can gain com-

velopment of a navy worthy to support the great naval traditions of the United States, and fully equal to the international tasks which the United States hopes and expects to take part in performing.

Could any one blame the visitor from the Dog Star if he were puzzled? He would be still more puzzled if he were told that one of these platforms is that of the party of Nationalism, the other that of the party of States’ Rights. We venture to say that if any American voter who has not read the party platforms should now try to assign these passages to the proper document he would be likely to make at least two mistakes out of five.

The outstanding fact about the Republican and Democratic platforms is their similarity at many points. They parallel each other, not only in the passages quoted above, but on the subjects of the protection of the rights of American citizenship at home and abroad; Pan-American solidarity; rural credits; civil service reform; economy and a national budget; government of territories; a tariff commission.

At all these points, however, as well as everywhere else, the method of approach is diametrically opposed. The Democratic platform vibrates with joyous approval of the record of the Wilson administration; the Republican drips bitterness over its shameful failure. Both parties express their belief in Americanism; the Democratic party believes that President Wilson is a high exponent of that doctrine, the Republican party that he has failed to maintain and defend it.

But there are several important subjects on which the two parties do not even pretend to see eye to eye. They are the tariff, the Philippines, the control of business, the regulation of transportation, merchant marine.

Both parties favor the establishment of a tariff commission; but for different purposes. The Democratic party continues to believe in a tariff for revenue only; the Republican in a tariff for protection to American industries and American labor. They would each use the tariff commission for securing the necessary information as a basis for revising the tariff in accordance with their respective underlying theories. The Democrats assert that the Underwood tariff law has been proved to be a striking success. The Republicans declare that it has only been saved from utter failure by the adventitious conditions created by war.

On this question of the tariff The Independent concurs with the Republicans. As a remote ideal the conception of free trade among the nations of the world has all the attractiveness of the thought of the ultimate substitution of internationalism for the parochial spirit of nationalism. But both these fine ideals are for the distant future. In the present day world we must have tariffs; under existing conditions of the differing standards of living here and in foreign countries, we believe with the Republican party that we should have tariff duties levied with a view to the protection of American industries and American workingmen.

The Democratic party endorses the declaration of the preamble of the Philippine government bill promising ultimate independence to the Islands. The Republicans approach this important problem from a different angle when they say:

We accepted the responsibility of the Islands as a duty to civilization and the Filipino people. To leave with our task half done would break our pledges, injure our prestige among nations, and imperil what already has been accomplished.

In this matter The Independent holds with the Republican position.

The Democratic platform presents no proposals for new legislation to deal with the problem of the regulation of business, but commends the establishment of the Federal Trade Commission with the statement that "fair competition in business is now assured." The Republican platform declares the party's belief in the "rigid supervision and strict regulation of the . . . great corporations of the country" and in the encouragement of American business, asserting at the same time that "business success, no matter how honestly attained, is apparently regarded by the Democratic party as in itself a crime."

Again The Independent finds itself in agreement with the Republican position.

Closely related to this question of the regulation of business is that of the control of transportation. On this point the Democratic platform is again silent while the Republican platform says:

The entire transportation system of the country has become essentially national. We, therefore, favor such action by legislation or, if necessary, thru an amendment to the Constitution of the United States as will result in placing it under exclusive federal control.

This commends itself to The Independent as essentially sound doctrine.

Lastly the Democrats favor a government owned and operated merchant marine. The Republicans are "utterly opposed" to this policy and declare in favor of "the payment to ships engaged in the foreign trade of liberal compensation for services actually rendered in carrying the mails and such further legislation as will build up an adequate American merchant marine."

The Independent prefers the Republican position in this matter to the Democratic.

As a political document the Democratic platform is a finer and more statesmanlike production than the Republican platform. It discusses the great questions before the country with better temper, with more definiteness, and with greater frankness. But on the important issues which we have just set forth we believe that the Republican position is essentially the sounder. We therefore find in the party platforms one more reason for favoring the election of Mr. Hughes.

Next week we shall continue our treatment of the political campaign with a consideration of the personalities of the Presidential candidates.

### A CIVIC OATH

THAT was a most admirable form of oath taken by 206 graduates of the New York City College. We are used to college secret societies in which the members pledge themselves to be true to each other for their mutual advantage, but this oath was of a higher sort. It was not a pledge of devotion to the class nor to the college, but simply and solely to the great city of New York which had educated them: "We take this oath of devotion to our city." "We will never bring disgrace to her." "We will fight for the ideals and sacred things of the city." "We will revere and obey the city's laws, and transmit a more noble and beautiful city to successors." It was all for the city.

Such a pledge of devotion would be fitting not only for New York graduates, but for the youth that pass out annually from the high schools of our towns. The educated young men and women of any village or city could thus unite for all good ends.

An extremely interesting outlook into the future is presented by an examination of the names of these 206 students. The first honors were taken by Kaplan, Grablowski, Graham, Lamm, Viscardi, Waldheim and Wolfe. They suggest the composite nature of the city's population and the earnestness with which the youth of foreign parentage are taking advantage of their privileges.

### CHANGE PARTNERS

BRITISH, French, Italians and Russians are now fighting the Turks in order that Russia may get Constantinople. Sixty years ago British, French, Italians and Turks were fighting the Russians in order to prevent Russia from getting Constantinople. In those days the Russians firmly believed that the United States would come to their aid. "They spoke of the help they were to receive with as much assurance as if a treaty had already been signed on the subject," writes an Englishwoman in Russia during the Crimean War. The Russians expected that the American fleet would enter the Baltic and attack the Allied fleet from the west while the Russian ships attacked it from the east. Yet the Russians were rather ashamed of their supposititious allies from over the ocean, for they "always spoke of the United States as a half savage country and of the American as half civilized." But the English were regarded by the Russians as more than half savage on account of their treatment of prisoners and the use of long range guns and "asphyxiant balls." "It is a perfect disgrace to any people to invent such and it is cowardice and baseness to make use of them."

Ten years later things were reversed. Then the Americans looked to Russia for help if the English and French should combine to attack the United States. Altho no treaty to that effect has been disclosed, it was firmly believed that the Russian warships in Boston harbor were under sealed orders to take the side of the United States in case Great Britain openly espoused the cause of the South.

In 1900 France, Germany and Russia were denouncing England for crushing the little Boer republics and treating the women and children with frightful cruelty.

Minister Delcasse had great difficulty in preventing French officers from enlisting to fight the British. Kitchener, then execrated by the French on account of Fashoda and by the Boers because of the concentration camps, is now honored and mourned by French and Boer alike. The present administration in Washington, now accused by its opponents of being pro-British, is the same party which in its platform of 1900 vigorously espoused the cause of the South African republics against the British.

Two years ago Great Britain refused to concede the Belgian annexation of the Congo. Now the British are aiding the Belgians to defend the Congo against the Germans. Twenty-two years ago the English press was fiercely and not without reason denouncing the "Japanese atrocities" in China, thirteen years ago the "Serbian atrocities" in Belgrade and "Russian atrocities" in Kishinev, ten years ago "Belgian atrocities" in Africa, and five years ago the "Italian atrocities" in Tripoli. Twelve years ago Russia and Japan were fighting each other, now they are on the same side. Four years ago Serbia and Bulgaria together were fighting Turkey. Three years ago Serbia and Turkey together were fighting Bulgaria. Now Turkey and Bulgaria are on the same side and Serbia on the other. Fifty years ago Prussia and Italy were fighting together against Austria. A hundred years ago Prussia and England were fighting together against France.

So it goes. Friends today and foes tomorrow. Alliances form and dissolve. Countries shift and recombine as tho the map were a kaleidoscope. What will be the next rearrangement?

## TWO TRAITORS AND TWO TRIALS

AT the same time courts in London and Berlin were conducting trials for high treason. There was no doubt as to the action or attitude of either of the accused. Both men were undeniably sincere and, in their own way, patriotic. Both were engaged in futile and fanatical enterprises from which no good could be foreseen. Both men were found guilty. Sir Roger Casement, the Irish Nationalist, was sentenced to be hanged. Dr. Karl Liebknecht, the German Socialist, was sentenced to thirty months of penal servitude. But Liebknecht was only charged with "attempted treason" and his offense, taking part in an anti-war demonstration, would in London have involved no more than a police court penalty. Casement, too, could not be called guilty of more than "attempted treason," for he had merely landed in Ireland and had not even time to wave his green flag or shout "Erin go bragh!" when he was captured. But there is no question but that his intent was to overthrow British rule in Ireland, while there is no evidence that Liebknecht intended anything so serious.

As to form of trial, the British court appears to better advantage than the German. Liebknecht's trial was a secret court-martial and the newspapers were forbidden to publish anything but the bare verdict. Casement was given a public trial by jury altho he protested that since they were not Irishmen they were not his peers. His final speech was cabled to America. The other Irish insurgents have met with short shrift, some of them being shot after a secret court-martial and some being shot without it. But Casement was a knight, and a British court thinks twice before damning a man of his quality.

Both sentences may be called just in the sense that they were in accordance with the law of the land. Both men were rash if not wicked. Yet both will be regarded as martyrs by those who sympathize with the cause for which they suffered, the one for Irish independence and the other for German freedom. Casement hanged may be more dangerous to the King than Casement alive and Liebknecht in prison may cause the Kaiser more worry than Liebknecht in the Reichstag.

## MUNSEY TAKES OVER "THE SUN"

THE announcement that Frank A. Munsey had acquired a controlling interest in *The Sun* and *The Evening Sun* of New York City is of more than local interest, for no metropolitan paper has been better known thruout the nation than *The Sun* since Charles A. Dana became editor of it in 1868. The price of *The Sun* will be reduced from two cents to one like all of the New York dailies except *The Herald*, which costs three cents. Mr. Munsey's morning paper, *The Press*, will be merged with *The Sun*, which will by this means acquire the Associated Press franchise instead of having to support its own independent news service, as formerly. The political importance of the change may be surmised from the fact that *The Press*, under Mr. Munsey's management, was the only New York City daily supporting Mr. Roosevelt in the campaign of four years ago.

## THE EDUCATION OF YOUNG CHINA

AMERICA has reason to be proud of the active part that the young Chinese she has trained are taking in the establishment of the republic and the development of its resources. For our government to return half of the indemnity that had been levied upon China as penalty for the Boxer outrages was not only a generous act, but also a wise stroke of diplomacy and a good piece of business. From this fund of \$12,700,000 there are now being educated in this country 303 picked students. Altogether the Chinese who are being trained in our schools, colleges, universities and technological institutions number 1461. Among these are 130 women who are enlarging their feet and their brains in the freedom of America. The Chinese, unlike the Hindus, take to practical subjects mostly. Engineering is the favorite, followed by chemistry, commerce, medicine, industry and economics. They have formed a Chinese Students' Alliance, which holds national conventions and which publishes an English monthly and a Chinese quarterly.

These young men and women carry back to their people American ideas of democracy and business and will be most competent to guide China safely thru the dangerous transition stage between the old régime and the new. While we are educating them they are educating us. As we watch these polite, neat and diligent young men about the campus, capturing in fair competition more than their share of prizes and college honors, it is hard to realize the conception of the "hay-then Chinese" that the American public of a generation ago had formed on the basis of coolies and laundrymen. With these fellow alumni, who know us and whom we know, in control of the new China, the prospect for a good understanding and profitable intercourse between the two countries in the future is very bright.

# THE STORY OF THE WEEK

## The Mexican Crisis

The attack on Troops C and K of the Tenth Cavalry at Carrizal by Mexican regulars, and the sharp ultimatum sent by the American Government to Carranza demanding the immediate surrender of all American soldiers captured in the battle, brought the two countries nearer to the verge of war than they had been at any time since the occupation of Vera Cruz. Spokesmen of the Mexican Government considered an armed conflict inevitable. General Aguilar, on behalf of the Department of Foreign Relations, directed a message to the other Latin-American republics, maintaining that "the American Government has ordered the immediate concentration of its army on our border, with manifest hostile attitude, to force a war," and appealing for sympathy on the ground that "the proceedings against Mexico affect all other countries of the continent." The pessimism at Washington was equally marked. All but four of the American Consulates in Mexico were abandoned and arrangements were made for placing the interests of American residents in hands of British diplomatic officers in case of war.

The international situation, already sufficiently grave, was further complicated by another bandit raid. Early Tuesday morning a band of Mexican brigands crossed the border and attacked a ranch house thirty-five miles from Hachita, New Mexico. William Parker, the owner, and his wife, Mrs. Alice Parker, were killed. A detachment of cavalry and a civilian posse failed to overtake the marauders.

## THE MEXICAN SITUATION

*June 18*—President Wilson calls out the National Guard.

*June 19*—United States naval officers at Mazatlan fired at by Mexicans. United States Pacific fleet sent to Mexico. Yucatan and Sinaloa declare war on United States.

*June 20*—Carranza's demand for withdrawal of United States troops in Mexico refused. Our purpose of border defense, but not intervention, reiterated.

*June 21*—Troops C and K of United States Tenth Cavalry attacked by Mexicans at Carrizal—thirteen killed, twenty-three taken prisoner.

*June 22*—United States sends note to each of Latin-American governments justifying our punitive expedition into Mexico.

*June 23*—At General Funston's request Secretary of War Baker orders state militia sent to border.

*June 24*—Carranza admits responsibility for Carrizal attack.

*June 25*—United States demands immediate release of troopers captured by Mexicans at Carrizal. Militia mustered into Federal service to start at once for border.

*June 26*—Latin-American representatives urge Carranza to comply with United States demands.

*June 27*—1500 militiamen entrain for Mexico.

*June 28*—Carranza frees United States prisoners.

*June 29*—Pending arrival of Carranza's reply to United States demands, we refuse Latin-American offer of mediation.

*June 30*—Carranza makes statement blaming United States attitude toward Mexico.

The Mexican Government lost no time in mobilizing its available forces. Large bodies of soldiers were concentrated south of the Arizona frontier with the probable intention of making a counter invasion in case the American forces penetrated farther into the interior of Mexico. Andres Garcia, Mexican consul at El Paso, boasted that his country could put into the field at least two hundred thousand trained veterans. Assurances of loyalty to the de facto government came from all parts of Mexico and even from Mexicans resident abroad. The chief Villista officers have already offered their services to fight against an American invasion. Our intervention has at least served to unite the warring factions of Mexico, if only on the basis of a common dislike of the United States.

But in spite of the warlike preparations in both countries, hope of a peaceful settlement was revived when the Carranza government determined to release the prisoners captured at Carrizal. On Wednesday, the twenty-eighth of June, twenty-three negro troopers of the Tenth Cavalry were released, and on the following day were brought to the border and turned over to the American authorities. The British consul at Chihuahua City testified that the soldiers had been humanely treated while captive. The soldiers complained, however, upon their return to the American lines that their captors had robbed them of their valuables, and in several cases of their clothes, and that quarter had been refused to the wounded on the field of battle. With the surrender of the Americans the immediate crisis

THE REGIMENT IN COLUMN, YOU CAN HEAR THE QUICKSTEP PLAY

These troops happen to be from Mexico, but they typify the prompt mobilization of militia all over the country

#### ALL IS QUIET ALONG THE BORDER

was passed; but the main issue of the right of American forces to police Mexican soil to secure the safety of the border remained unsettled and the danger of war was only postponed.

**Carranza Still Defiant** The Carranza Government, in spite of its acquiescence in our demand for the surrender of the American soldiers taken at Carrizal, is apparently in no mood to relax its insistence on the immediate evacuation of Mexican soil by the American expeditionary forces. A statement given to the public on Friday by Foreign Minister Aguilar disputes many of the statements made in President Wilson's

note and reiterates the demand that the American Government confine itself to protecting its own border:

It is not true that the Mexican Government or its authorities protected or covered the criminals who are claimed to have committed these depredations and crimes in territory of the United States. This can never be proved by the American Government.

The Constitutional Government has done all in its power and has gone beyond all efforts to protect the foreigners, who are to be blamed to a great extent for persisting in remaining in places where conditions were not normal, altho their own government on various occasions has asked them not to remain there.

The Mexican statement then proceeds to consider in detail the allegations against Mexico contained in the note. It contends that with the dispersal of the Villista bands that raided Columbus all excuse for the presence of an American force on Mexican soil disappeared and that subsequent attacks upon American soldiers were due to their imprudence in entering towns where they had no right to go. The blame for continued raids across the American border is placed on the American authorities for their failure properly to police it. The statement complains bitterly that the American embargo upon shipment of arms and munitions has prevented the Carranza government from crushing the bandits and assuring peace thruout Mexico.

**Efforts to Avert War** The Latin-American republics other than Mexico have studied the international crisis with the keenest interest and sympathy. Señor Don Ignacio Calderon, the Bolivian minister to the United States, was authorized by his government to offer his good offices to compose the difficulties between the American and the Mexican governments, but after a consultation with Secretary Lansing he let it be known

that the present was not an opportune time to do so. The American Government, while sincerely desirous of peace, did not feel that mediation could lead to any useful result while the Mexican Government still held the prisoners captured at Carrizal and while the safety of the American army was still menaced. Minister Calderon at a second conference with the Secretary of State said that he would renew his tender of good offices after the Carranza government had answered the American note.

In many of the republics there were popular demonstrations of sympathy for the Mexicans. In the Brazilian Chamber of Deputies an opposition deputy attacked the United States for submitting to lawless acts on the part of Germany while taking a vigorous stand against those of Mexico. The Brazilian Government, however, offered no encouragement to any of the criticisms of the course of action taken by the American Government and refused to promise mediation. There is a strong disposition among the public men of the more progressive republics to consider the troubles of Mexico as largely of her own making. The press of Latin America is divided in sentiment. All deplore the possibility of war, but many are inclined to believe that President Wilson has done all that he could to avert it.

An unofficial body of peace lovers under the auspices of the Union Against Militarism attempted to hold a mediation conference with a representative number of public-spirited Mexicans at El Paso. William Jennings Bryan was invited to be one of the number, but he declined with some emphasis to serve on such a conference unless it was assured of the sympathy of the Washington Administration. David Starr Jordan went down to El Paso, but local feeling on the Mexican

#### REPRESENTING CARRANZA

As Ambassador Designate of Mexico Mr. Eliseo Arredondo's position is difficult. He has attempted to relieve the strained relationship of the two governments by explaining that the present Mexican situation "is due entirely to the predetermined intention of an irresponsible criminal"

International Film

SO LONG AS THESE MEN HOLD THEIR FIRE

question was so strong that he left the city upon the advice of the police. The conference will probably take place at Washington, D. C.

**The National Guard** Thru out the week there have been active preparations in every state of the Union to prepare the militia for service on the Mexican border. The willingness with which busy civilians have sacrificed their private interests to serve the nation in its need has been most gratifying. Very few guardsmen have failed to take the oath of allegiance to the Federal Government which marks the merging of the state militia into the active army. But while men are not lacking, the authorities in many states have been much disconcerted by the lack of necessary equipment. Cavalry were found provided with everything needful except horses; frequently there was a lack of sufficient clothing and accoutrements for a long campaign; the New York guardsmen complain of a shortage of cooks. Moreover, the number of regiments which have been adequately seasoned for the hardships of war is so small that practically the entire National Guard have been detained at training camps and concentration points to fit them selves for active service before proceeding to the border.

In the meantime the military authorities are preparing to utilize the militia to the fullest extent upon its arrival at the seat of trouble. A detachment of guardsmen from New Mexico have already been sent across the border to strengthen General Pershing's lines of communication. This is a significant indication that in case of war the duties of the militia will not be confined to the defense of American soil, but they may be used as freely as the regulars to occupy any part of Mexico.

Colonel Roosevelt completes ex-

changing his time-honored title for the higher distinction of "General Roosevelt." It is understood that in case of war he would undertake to raise and lead in person a force of twelve thousand volunteers. It is uncertain whether he will be called upon to do so or not, but there is little fear that he would find difficulty in raising the requisite number of troops if it should become necessary for him to act as recruiting officer. His secretary, Walter J. Hayes, reports that Colonel Roosevelt has already received so many letters and telegrams from would-be volunteers that the task of answering them individually has become impossible.

**Arming the Nation** The largest military budget in the history of the United States passed the House of Representatives on Monday, the twenty-sixth of June. The original bill called for an expenditure of \$157,000,000, but the mobilization of the National Guard and other expenses made necessary by the active employment of a portion of the regular army in Mexico made even this unusual appropriation inadequate. An urgent deficiency appropriation measure which passed the Senate on Thursday increased the total budget by more than twenty-seven millions. The Senate military committee added more than sixty millions to the estimates presented by the House, and the War Department has requested a special appropriation of fifteen millions for air service. Some senators believed that the total military appropriation would in the end amount to nearly three hundred million dollars. The naval estimates have also been very greatly increased. As reported to the Senate the bill will carry a total of \$304,000,000, more than double the sum in any previous naval bill. President Wilson favors the increase.

The Hay resolution to draft the National Guard into the active army passed the Senate on June twenty-sixth by a vote of 45 to 30. The House provision for the relief of guardsmen's families was struck out, but national guardsmen with dependent families were allowed to obtain honorable discharge from the service. The House of Representatives rejected the Senate amendments and the bill was taken into a joint conference. As a result of the conference both the proposed appropriation for guardsmen's families and the exemption of members of the guard who had others dependent upon them for support were struck out and the measure went to the President for

#### CANADA'S NEW GOVERNOR

The Duke of Devonshire who has just been appointed to succeed the Duke of Connaught as Governor-General of Canada, brings to his new position political experience, democratic theories, wealth, and a cordial personal relationship with King George of England.

## IT WILL BE A CLEAN FIGHT

If any further assurance than the personalities of candidates were necessary to convince the country that the presidential campaign will be conducted on the highest plane of fairness and decency, it is afforded by the men they have selected for campaign chairmen—William R. Willcox, former chairman of the New York Public Service Commission, and Vance McCormick, of Pennsylvania

his signature shorn of both features. Chairman Hay of the House Committee on Military Affairs has introduced a separate measure appropriating two million dollars for the relief of dependent families of guardsmen called into national service.

#### The Progressives Endorse Hughes

On Monday, the twenty-sixth of June, the National Committee of the Progressive party filled the vacancy at the head of their ticket by substituting the name of the Republican candidate, ex-Justice Charles E. Hughes, for that of Theodore Roosevelt. Colonel Roosevelt's resignation forced the party to abandon the attempt to keep a third ticket in the field or else find another leader willing to run independently for the presidency. The radicals on the committee offered a motion to substitute for Roosevelt the name of Victor Muddock of Kansas. The motion was lost by a vote of 31 to 15. The vote to endorse Hughes was 32 to 6, with nine members not voting. John M. Parker of Louisiana, Progressive nominee for vice-president, led the fight against the merger with the Republicans.

On the same day that the National Committee endorsed the Republican candidate, Roosevelt came out with a personal statement which was virtually the obituary of the Progressive party. He paid high compliment to his fellow partisans but intimated that the Progressives had already rendered all the service that they could render to the country as an independent party, and that the paramount duty of the present was to rescue the nation from the peril of another four years of Democratic administration, which had been in his opinion the worst administration since the days of Buchanan.

The majority of Progressive leaders

in every part of the country echoed the sentiments of their leader and promised unstinted support to the candidacy of Mr. Hughes. A few local organizations refused to abide by the action of the National Committee, and the Democratic managers are hopeful of inducing these men to support Wilson. Mr. McCormick, chairman of the Democratic National Committee, assured the public that he was confident of "sufficient Progressive support to make the re-election of President Wilson certain."

#### Boycott by the Allies

An event that may prove to be of more far-reaching influence in the world's history than any battle yet fought is the decision of the Allied Powers to combine against German and Austrian commerce. Eight nations were represented at the Paris Economic Conference, Great Britain, Russia, France, Italy, Japan, Belgium, Serbia and Portugal, and they reached their agreement on June 17 as to the policies they would recommend to their respective governments. These measures are of three kinds: first, those to apply during the war; second, those during the reconstruction period, and, third, those to be permanent.

In the first case a complete boycott of the enemy countries during the war was decided upon. No merchandise originating in or coming from an enemy country is to be imported. No commerce will be allowed with inhabitants of enemy countries of whatever nationality or with enemy subjects wherever resident. Exportation to neutral countries to be so regulated that none of the products reach the enemy countries. All dominions, colonies and protectorates come under the same restrictions.

The transitory measures for the period of reconstruction after the war

are aimed especially to prevent Germany from regaining her commercial ascendancy in any of the territory controlled by the Allies. In the new treaties enemy countries are not to be accorded treatment equal to the most favored nation. On the contrary, their products are to be prohibited or to be so restricted as to prevent dumping. The Allies will provide trade channels among themselves to the exclusion of their enemies. The countries that have been the victims of destruction, spoliation and unjust requisition will be specially favored and aided in the restoration of their industry and commerce. Enemy subjects are to be prevented from establishing in Allied territories industries affecting national defense or economic independence.

As a permanent policy it is recommended that the Allies take vigorous measures to make themselves completely independent of enemy countries as regards raw material and necessary manufactured articles. The measures suggested to accomplish this are government subsidies, government control, payments to encourage scientific and technical research, the development of industries and natural resources, customs tariffs and the temporary or permanent prohibition of the importation of enemy goods. The Allies are to improve their mutual means of transportation by land and sea and of communication by mail and telegraph. A uniform system of patents and trademarks is recommended.

**Casement Sentenced** Sir Roger Casement was convicted of high treason in the court of the Lord Chief Justice, Lord Reading, and sentenced to be hanged. An appeal will be taken to the Criminal Court of Appeals and finally to the House of Lords. If unable to change the verdict, Sir Roger will claim the right to be be-

headed, the historic penalty for treason, instead of being hanged.

The prosecution showed how Sir Roger Casement had been found on the night of Good Friday upon the western coast of Ireland, where he had been landed with two companions from a German submarine. They were provided with revolvers, ammunition, maps of Ireland and a large green flag. This was about the same time as the insurrection in Dublin. Witnesses were introduced to prove that Sir Roger had visited the Irish soldiers in the German prison camps and tried to enlist them to fight against the British in Ireland as soon as the Germans should get command of the sea and take them there.

In his defense, Sir Roger Casement denied that he had ever asked an Irishman to fight for Germany or any country but Ireland. As to the charge of being in the pay of Germany, he said "that not one penny of German gold went to finance it."

His attorneys offered only a feeble and formal defense and Sergeant Sullivan, who made the chief speech in his behalf, fainted away in the middle of it. The jury brought in a verdict of guilty after an hour's deliberation.

**Casement's Plea** When Sir Roger Casement was pronounced guilty of high treason and asked what he had to say for himself, he delivered an eloquent speech, from which, since it was address more to America than to the court, we must quote somewhat at length:

If we Irishmen are to be hanged as murderers, shot as rebels and imprisoned as convicts just because we love Ireland, then I am proud indeed to stand here in the traitor's dock, proud to be a rebel, glad to give my last drop of blood for the rebellion.

Irishmen are told to die for Flanders, Gallipoli, or a patch of desert in Mesopotamia, with the promise that they may get home rule after their death. But if they are willing to lay down their lives for their own native land they are called traitors.

I protest against the jurisdiction of this court, which is not a court of my countrymen. I protest against the use of a 565 year old English statute which seeks to deprive an Irishman of his honor and life for adhering to his own people.

That is the condemnation of English rule in Ireland of English made law—that it does not rest on the will of the Irish people, but exists in defiance of their will; that it is a rule derived, not from right, but from conquest. Conquest gives no title; it can exert no empire over men's reason and judgment and affections. It is from this law of conquest, without title, to the reason, judgment and affections of my countrymen, that I appeal.

We have seen the constitutional army refuse to obey the constitutional government, and we were told the first duty of Irishmen was to enter that army. If small nations were to be the first consideration I saw no reason why Ireland should shed any blood for any people but her own.

If that be treason, I am not ashamed to avow it here. If the Unionists chose the road they thought would lead to the good side, I knew my road led to the dark side. Both of us proved right. So I am prouder to stand here, in a traitor's dock, than I would be to fill the place of my accusers.

Self-government is our right. It is no more a thing to be withheld from us or denied out to us than the right to life or light or sunshine or spring flowers.

**Liebknecht Sentenced** Dr. Karl Liebknecht, the socialist leader, son of the more famous Wilhelm Liebknecht, was convicted by court-martial at Berlin of attempted high treason, gross insubordination and resistance. The maximum penalty is fifteen years penal servitude; the minimum is thirty months. The court imposed the minimum penalty. He is to be dismissed from the army, but will not forfeit his civil rights or lose his seat in the Reichstag.

Previous to the war the representatives of the Social Democratic party in the Reichstag had consistently opposed all militaristic measures, but during the war most of them have given their support to the government and voted for the army appropriations. But Dr. Liebknecht and a few of his followers refused to obey the party caucus and have become increasingly antagonistic toward the government. On Labor Day, May 1, a peace demonstration was held in Potsdam Platz, at which shouts of "Down with the Kaiser!" were mingled with "Down with the war!" A circular distributed by the Liebknecht socialists contained such seditious language as the following:

Poverty and misery, need and starvation are ruling in Germany. Belgium, Poland and Serbia, whose blood the vampire of imperialism is sucking, resemble vast cemeteries.

Forward, let us fight the government, let us fight these mortal enemies of all freedom. Let us fight for everything which means the future and the triumph of the working classes, the future of humanity and civilization.

The police broke up the May meeting and arrested, among others, Dr. Liebknecht, who, it appears, offered resistance to arrest. The Reichstag voted by 229 to 111 not to claim parliamentary immunity for him.

The Berliner Tageblatt, one of the leading Liberal papers, was recently suspended for "disturbing the uniformity of patriotic enthusiasm" by

printing an article claiming that the trusts would like to continue the war in order to make more profits.

#### Italians Recover Ground

The Austrians, who have for the last six weeks been steadily advancing down the valley of the Astico, are getting back to the mountains on the run. Within two days after their counter-offensive had begun, the Italians had regained a large part of their lost ground and the Austrians were driven almost to the frontiers of the Trentino.

The Austrian offensive began on May 15 with an attack upon about thirty miles of the front between the Adige and the Brenta rivers. Some 300,000 picked and well equipped troops had been assembled in the Trentino mountains for this purpose, many of them drawn from Serbia and Russia. An astonishing amount of artillery was brought to bear upon the Italian lines, over two thousand guns being used, or a hundred to the mile, for most of the front. Among these were some sixty of the 30.5-centimeter (12-inch) howitzers from the Austrian Skoda Works, which have really played a more important part in the war than the better known Krupp 42's. These were mounted, in spite of their immense weight, on trucks and caterpillar wheels so as to be able to move over mountain roads. It is estimated that the Austrians fired over a million shells in the first fortnight.

Before this terrific onslaught the Italians retired from the mountain peaks and passes that they had captured on the frontier. The Austrians swept down the slope into the valley of the Astico River, taking the fortified frontier towns of Asiago and Asiero, and it was feared for a time in Italy that they would reach Vicenza, only 20 miles beyond, and even reach Venice and the Adriatic.

But while the Italians had been pushed

#### INDEPENDENCE DAY—BUT NOT THE FOURTH

In Buenos Aires the glorious 9th of July is Independence Day, celebrated much like ours, with orcas, illuminations, parades and all the rest.

back in the center along the Astico River, they had kept their hold upon the Brenta River on their right and the Adige River upon their left, so finally when they recovered and were able to make a stand they were in good position to take the offensive. General Cadorna came from the Isonzo front to take the place of the incompetent Italian commander. Troops and guns were rushed to the threatened sector. A new government came into power and a new spirit pervaded the army.

The Allies are now working in co-ordination instead of independently, as in the first year of the war. As soon as it was seen that the Austrians were pressing the Italians the Russians launched a powerful offensive on the Austrian front that drove them out of Bukovina and threatened the reconquest of Galicia. Whether this actually caused the withdrawal of any Austrian troops from the Italian front or not is uncertain, but at least it prevented the sending of any reserves, and the Austrian line crumpled up before the Italian attack.

The Italian Alpine first troops stormed a peak on the right flank near the Brenta on Saturday, and this taken, the Italians were able to sweep down behind the Austrian lines, compelling them to abandon their advanced positions. On Mount Cengio, a peak of 4500 feet overlooking the Astico River near Asiero, the Italians concentrated 700 guns of all calibers and kept up the bombardment for three days and nights without cessation. Early Sunday

### THE GREAT WAR

*June 26* Italians regain Asiago. Allies decide to boycott German trade in future.

*June 27* Italians regain Asiero. Arab rebels take Medina.

*June 28* Dr. Karl Liebknecht sentenced to penal servitude for treason. President Wilson demands reparation for Austrian attack on the "Petrolite."

*June 29* Sir Roger Casement sentenced to hang for treason. British Government altogether abandons Declaration of London.

*June 30* French regain Thiaumont. Italians start offensive on Isonzo River.

*July 1* Russians take Kolomea, a railroad center of Galicia. British firing a million shells at German lines.

*July 2*—British and French smash German lines north and south of Somme River, gaining two miles and taking 10,000 prisoners.

morning, June 25, the Austrians abandoned Mount Cengio and retreated thru a narrow gorge toward Asiago. The rout of the Austrians was so complete that the Italians were able to use their cavalry with terrific effect in following them thru the foothills and woods.

**The British Attack** It was commonly assumed by the outside commentators on the war that the British, having had a year and a half to raise and equip an army in France, would make a vigorous effort in the early spring to drive the Germans out of France and Belgium, and there has

been considerable criticism of the British in the same quarter for their supposed reluctance to do their share in the war. But the criticism was doubtless unjust, for the operations of the Allies in all fields are now under one general management and the time when each shall begin its offensive has been settled by conferences of the general staffs. The British forces in France constitute an independent command, but so closely coördinated with the French as to be virtually under the orders of General Joffre.

It looks now as tho the appointed time for a combined attack upon the Central Powers from all sides had come at last. The Austrians are being driven back into Trentino by the Italians and into Galicia by the Russians. There are rumors of an attack upon Bulgaria by the French and British at Salonica and by the Rumanians from the other side. The French, while holding their own at Verdun, are attacking the Germans in Champagne. Last and perhaps most important of all, the British have begun an energetic bombardment of the German lines in front of them from the sea to the Somme.

It remains to be seen whether this is the prelude of a drive or is designed to divert the German forces to this field. No infantry assaults on a large scale have yet been undertaken, so it is impossible to say at what point on the sixty mile line between Ypres and Albert the British intend to strike, but their shell fire has been extremely searching and severe, covering not merely the front lines, but the reserves.

AN AEROPLANE VIEW OF THE GREATEST BATTLE IN THE WORLD'S HISTORY

Here on the hills about the old historic fortress of Verdun the battle has raged for seven weeks with unprecedented expenditure of ammunition. More than half a million able-bodied men have been killed or crippled for life. This photograph of the battlefield near Fort Douaumont was taken from a French aeroplane when the French were preparing an infantry attack on the German lines in the distance. The French trenches and their zig-zag approaches occupy the hills in the foreground from which the woods have been thinned out by the German shells. The puffs of smoke in the distance are from the French shells exploding in the German lines.

# FROM STATE TO STATE

**ALABAMA:** Other cities throughout this state have been watching with interest the outcome in the courts of the case of the "liquor inspection ordinance" of Birmingham. This ordinance, passed by the City Commission last February, required that every package of liquor shipped into Birmingham be taken before the City Liquor Inspector, who was to charge 50 cents for inspecting it. The Supreme Court of the state has now decided against the ordinance, holding that it conflicts with the policy of the state as expressed in the laws which permit the importation of certain stipulated quantities of intoxicants, inasmuch as the trouble and expense of inspection would lay an additional, if not prohibitory, burden upon the importer.

**CONNECTICUT:** Litigation has brought out the fact that the tungsten mine at Trumbull is producing from \$2000 to \$4000 worth of this mineral daily and that for the first time since the mine was opened, some eighteen years ago, it is paying a profit. There are many other known deposits of tungsten in Connecticut, and land owners in various parts of the state are digging around in the hope of getting into the game while the stakes are high. Tungsten is now worth about \$6000 a ton.

**DISTRICT OF COLUMBIA:** Altho the alleys of Washington have been paved, provided with sewers and water mains and are cleaned and lighted as the streets of the city are, it has been found that the disease and death rates remain exceptionally high among the dwellers in the small, ill-ventilated alley buildings. Congress has therefore enacted a law providing that after July 1, 1918, no alley building in the District of Columbia may be used as a dwelling. To meet the needs of people now living in these buildings the Ellen Wilson homes are to be built by a company limited to 5 per cent dividends. The houses will be not only sanitary, with abundant light and air, but will be attractive in appearance and homelike in arrangement.

**FLORIDA:** Reports concerning the municipal market which was recently opened in Jacksonville with a grand celebration are not very encouraging. It is said there are too few truck farmers near the city to create very sharp competition, and that many of them have regular city customers who take their entire product. Besides, many farmers say the time spent in waiting for customers at the market and the trouble of dickering with them are not recompensed by the difference between the retail prices and those paid to them by the dealers. Moreover, many consumers are willing to pay a little more for the convenience of having their dealers come for orders or take them by telephone and deliver the goods.

**GEORGIA:** The Georgia peach, which is regarded by many as the best in the world, was little known away from home until the Georgia Fruit Exchange,

incorporated in 1912, began its systematic efforts to create new markets for it. Last year the exchange had not only trebled the number of its customer cities, but had sold 4500 carloads in competition with 25,000 carloads from Alabama, Arkansas, Mississippi, Oklahoma and Texas. It is reported that ninety per cent of the peach growers in Georgia will be members of the exchange this year.

**KENTUCKY:** The longest continuous train service route in the world is contemplated by the connection of the Nashville, Chattanooga & St. Louis Railroad with the Chicago, Burlington & Quincy at Paducah, in this state. These railroads have jointly petitioned the city for right of way to make the connection and to build shops, yards and terminals there. When the connection is made continuous service will be established between Jacksonville, Florida, and Seattle, Washington.

**MICHIGAN:** Other cities in this state are deeply interested in Detroit's effort to control its own public utilities. The Michigan State Telephone Company recently applied to the State Railroad Commission for permission to install metered service in Detroit, whereupon the Detroit Common Council, acting on advice of Corporation Counsel Dingeman, passed an ordinance fixing rates which the telephone company may charge in the city. Now the question as to the city's right to do this is to be taken to the courts. It is said that if Detroit wins its case every city in the state will follow its lead, leaving the state commission with very little to do and hardly any power.

**MISSISSIPPI:** Most people in that large area of this state which is subject to inundation from the Mississippi River are rejoiced by a recent decision of the United States Supreme Court, holding that the construction of levees is not to be classed as the reclamation of private lands, and that therefore the government can freely take such lands as are necessary for the construction of levees. The case went up from Mississippi, but the decision affects many other suits from Louisiana, Tennessee and Arkansas, aimed at the Mississippi River Commission, in which damages are claimed for the value of lands so taken.

**MISSOURI:** Rivalry between what are known as the "College Route" and the "Southern Route" is developing two excellent highways across this state from St. Louis to Kansas City. The more northerly route, which passes thru St. Charles, Fulton, Columbia, Boonville, Fayette, Marshall and Lexington, was originally chosen by the National Old Trails Road Association as the Missouri link of the great transcontinental trail, but the people along the Southern route, which passes thru Clayton, Jefferson City, California, Sedalia and Warrensburg, claim

to be working faster and making a better highway. They have therefore petitioned to have theirs declared the official route.

**MONTANA:** Not only every city, but nearly every town and village in this state, has a well organized commercial club or chamber of commerce, each working to push its community ahead of some rival. The result is that many improvements are being made thruout the state. A number of the clubs have secured the services of experts, not only because of what they know about community building, but also because it has been found that people respond much more readily to the suggestions of an outsider than to those of their neighbors.

**NEBRASKA:** Many manufacturers in this state have closed their factory doors against investigators sent out by the numerous "welfare" organizations. The State Labor Bureau makes ample provision for the inspection of factories, and the manufacturers say they have been gracious to these investigators as long as they can afford to be, since their visits have become so frequent as to disturb the orderly process of manufacturing.

**NEVADA:** A decided movement is noticed in this state toward the breaking up of large holdings of land for farming and the adoption of more intensive methods on smaller acreage. It used to be said that no one could support a family on less than 100 acres, but the European farmers who have settled in various parts of Nevada have shown that this is a long way from truth. A notable example of the intensive method is that of a Belgian who, on a single acre of land near Reno, has, for eighteen years, made an average annual net profit of more than \$1700, rearing and educating a family of eight children besides supporting his father-in-law and mother-in-law. The American farmers here are beginning to learn these better methods.

**OKLAHOMA:** As a result of Governor Williams' insistence, loans are now made to farmers from the school land department in from five to ten days after the filing of the applications. Formerly it took from three to six months. Since it is now accomplished in about the same time required by most loan agencies, the state has become a formidable competitor, its money being lent at lower rates of interest than those demanded by the private agencies.

**OREGON:** Before the European war began this state appropriated \$50,000 for experiments in flax production. The first of these was made on state land, prisoners from the penitentiary producing several hundred tons of flax. Last winter the flax was tested at a plant erected by the state, the result being so encouraging that several commercial bodies have joined in planting 300 acres this year under the supervision of a Belgian flax expert. This year, too, the state, instead of

using its own land and convict labor, is employing its fund to pay a fixed amount per ton to farmers who contract to raise flax. It is expected that with this coöperation of the state, the commercial interests and the farmers, a definite commercial production will be established by next year.

**SOUTH CAROLINA:** Definite steps are being taken for the establishment of large ship-building yards in Charleston. For many years it has been the dream of business men of that city that opportunity would be presented for the upbuilding there of some manufacturing industry which would at once promise profit to its investors and give employment to large numbers of skilled workmen. It is now believed that opportunity has come. It is said that every ship-building establishment in this country is turning away orders, and that the demand for ships is just beginning. Charleston's location on the coast, her beautiful harbor and her proximity to materials which enter into ship-building give her exceptional advantages for the establishment of such an industry.

**VERMONT:** Officials of this state and those of New Hampshire are busy preparing for the case to be taken up by the United States Supreme Court in July to determine the boundary line between the two states. This controversy has been going on ever since the year 1792. It became acute when the New Hampshire Boundary Line Commission reported to the New Hampshire Legislature last winter, fixing the boundary at high water mark on the west bank of the Connecticut River, which would give to New Hampshire much valuable property now paying taxes in Vermont. The Vermont contention is that the line should be at the western edge of the water at its average and mean stage during the year.

**WISCONSIN:** The Supreme Court of the United States has declared that the Wisconsin law revoking the charters of foreign corporations which remove cases from the state courts to those of the United States is unconstitutional. The particular cases involved were those of the Philadelphia & Reading Coal & Iron Company and of the Western Union Telegraph Company, which state officials had appealed from adverse decisions in Federal district courts.

**WYOMING:** The people and officials of this state are greatly exercised over an ultimatum said to have been issued by the distributing agents of the Midwest Refining Company to the effect that "Wyoming can take the grade of gasoline we care to give or go without." It is claimed that the gasoline distributed in Wyoming is far inferior to the requirements of the state laws. It is predicted that one of the first acts of the next legislature will be the establishment of a state-owned refinery, to reduce prices and to improve quality.

# FORBEAR OR FIGHT?

BY DAVID STARR JORDAN  
AND JOSEPH G. CANNON

## SOMETHING BETTER THAN INTERVENTION

BY PRESIDENT JORDAN

THE situation in Mexico today is about as bad as it can be. It admits no exaggeration. Lawlessness, murder, robbery, starvation, ignorance, hatred, national bankruptcy, military arrogance, priestly domination, intemperance, lust, disease and vice are rampant and unchecked. Conditions could grow worse only by intensification of some one or more of these evils.

Of the various Mexican leaders, our Administration, acting in connection with South American authorities, has chosen to recognize one as the de facto head of the national government. How firmly seated this first chief may be is shown by the fact that the national paper money of Mexico is rated at two cents per peso, single dollar bills at five cents.

In so far as Carranza has any authority at all it is derived from his recognition at Washington and elsewhere. His pledges can be worth little while his life is at the mercy of the soldiers who command him.

It is natural that some of these variegated evils should overflow across the long boundary which joins

Mexico to the United States. It takes the form of vice and misery, which we do not notice, and of robbery and murder, which we do. The attack on Columbus, led by an untamed Indian, with potential power and potential virtues, but now crazed and irresponsible, stirred the whole nation. Minor atrocities on both sides had not been wanting, but this one stood out supreme. The story of the pursuit of Villa, the encounter at Carrizal, and the well foreseen futility of Carranza are matters of common knowledge.

The attacks on our border are not due to Mexican arrogance or power, but to ignorance and weakness. If our sole purpose is to put an end to these, it will require no great increase of armament and no dependence on the coöperation of Carranza. It would be largely a police matter, though on a big scale. What is our duty toward Mexico as her next neighbor and nearest friend? First, it is plain that in whatever we do we must consider first the welfare of Mexico, and second, the welfare of humanity, without a suggestion of profit or revenge. If we decide that some form of intervention is necessary for the salvation of Mexico, we should carefully consider the possible methods. There are other methods better than military intervention. This of itself does not lead anywhere and it is never possible to dissociate it from atrocities, from swashbuckling, and from military glory, that sham of the ages, already rearing itself in our national councils.

To intervene in behalf of humanity demands a clean heart on the part of the nation. It must be made clear that we seek no Mexican territory, no indemnities, no concessions, no feeding of the vultures which already swarm along the feverish border.

I am not convinced that intervention by force of arms is necessary. I am not convinced that it can be avoided, but I have a growing conviction that it can be. I see many signs of a coming regeneration when armed bands cease to oppress, schools arise, and there are movements toward agrarian freedom and release from cruel exploitation. All this to be effective must be without violence. Force means only the killing of young men, enough that the rest may be terrorized or paralyzed. In itself it will accomplish nothing. Schools, sanitation, justice, science must follow close behind it, as in the Philippines, else it represents mere waste and brutality. Mexico needs all these elements. The lack of them is the cause of her evil plight. It is obvious that we should not "make war" on Mexico except as war may come as an incident in higher purposes. It is clear that we should not seek a pretext for war nor make war on any "pretext." Only the largest need would justify intervention, and the aim and method is not to fight, but to intervene. Should war ensue it should be because we cannot help it, not because we trust it as a method of civilization.

We should not make war on the Mexican people because of the crazy raid on Columbus, nor on account of the clash at Carrizal, nor on account of the spirit of revenge, justifiable no doubt, of refugees along the border, nor on account of the "feeling" at El Paso, nor because Carranza, impotent and impecunious, disappoints us by word or deed when our troops without sanction of international law are encamped in Mexico

Drawn for The Independent by W. C. Morris

DOING HIM GOOD—PACIFIST STYLE

Our duty is to guard our own border, to guard our own actions, to respect the spirit of our own "cooling off treaties" and to make no instantaneous plunge into war. If we must send our soldiers to Mexico City we should not excuse ourselves by mention of Carranza or Villa, and we should allow no local pretext to serve as our justification.

As the present evils in Mexico can hardly be exaggerated, so with the perils and difficulties of an attempt to correct them by force. This would confuse our political and social life for half a century. It would involve interminable difficulties, and if we failed to remember our loftiest purpose, it would not rise above the level of the first Mexican war, which has stood as a blot on the history of the republic for the past seventy years.

And, further, whatever our action we should seek the approval and sympathy of the great republics of South America. Our duty in Mexico is, in a degree, their duty as well. The arbitration treaty with Mexico in 1848 provides that in all justiciable disputes arbitration offered by either nation shall be accepted with no reprisals, aggression or hostility till the government regarding itself aggrieved shall have considered maturely the matter of arbitration.

Have we lost our heads under the spell of mobilization? Shall we too make scraps of paper of solemn agreements? "The repudiation of treaties inconvenient to keep," said William the Silent, "leaves nothing certain in the world."

*El Paso, Texas*

## WE ARE AT WAR WITH MEXICO

BY SPEAKER CANNON

**I** BELIEVE that the sooner we stop calling the present situation between Mexico and the United States an emergency, and recognize that there is now and has been for months a state of war, and that the sooner we say so in plain words and go in there and clean the situation up by restoring peace and order, the better off we will be.

From newspaper reports it appears that shipload after shipload of ammunition is still going into Vera Cruz and other Mexican ports; and under international law we cannot stop such shipments from other countries than our own without a declaration of war and a blockade of Mexico, but such shipments should be stopped at whatever hazard because, under whatever name or recognition, the de facto government is anarchy in fact.

Before a great while I apprehend that Congress will adjourn, and I hope to God before we do adjourn that action will be taken by this Congress—positive action, manly action—that will tend to wipe out the present conditions of Mexico on our southern border; and not only soothing syrup, not only procrastination, but, as we have to risk the lives of our young men and patriotic people, it will be done thoroly so that we will not have to meet a similar condition twelve months from now, or twelve years from now.

The present situation is this: There are eighteen hundred miles—two-thirds of it, substantially, being the southern boundary of the state of Texas—that need protection. It is absolutely patent that things have been going from bad to worse down there since Huerta was put out of Mexico. It took a year to put him out with a copartnership between the President of the United States and Villa and Carranza. Finally they put that bandit out, and inasmuch as it took that long to put him out I guess he had some red blood in his veins. When he was put out then the copartnership was dis-

*Drawn for The Independent by W. C. Morris*

### DOING HIM GOOD—MILITANT STYLE

solved, and in the fullness of time, after great consideration, Villa became the unworthy bandit and the other bandit, Carranza, was recognized as the de facto government and we have gone from bad to worse from that day until this. They are just bandits there, whether it is Carranza, or Zapata, or Villa.

I mean that I would go in there for the benefit of civilization, for the benefit of the whole world, for the benefit of that unfortunate population in Mexico, for the benefit of the people of the United States and for our peace and comfort. If I had supreme power I would go into Mexico, not as an excuse. I would go into Mexico and have the manhood to say that we cannot have permanent peace, that you cannot be protected in Mexico, that we cannot be protected in the United States, until there is set up in Mexico a government, a military government, a government of force to start with; and then after setting up a government of that kind, let it be administered until a Mexican is found who is strong enough to maintain order in that country. I would support that government, for we have got to keep law and order; and I would see that there is written into their government law the assurance that when in the fullness of time—God knows how long—they are competent for self-government they shall have it; that if they do not maintain law and order the United States shall maintain law and order. I would have this war proceed in Mexico until we can have permanent conditions that will guarantee their protection and security.

I would have action now that would protect so far as we can protect the Regular Army and the militia, over one hundred thousand strong—our best blood, going in there not properly armed—to meet the bandits who have been buying our munitions to shoot our boys with.

*Washington, D. C.*

# FOUR WHALES

BY ROY CHAPMAN ANDREWS

It has been said that the first duty of a whale is to be large—the blue whale is, then, the most successful whale, for it is the largest creature which has ever existed on the earth or in its waters. Even those extinct giant reptiles, the Dinosaurs, which splashed along the borders of the inland seas of Wyoming and Montana 3,000,000 years ago, could not approach a blue whale either in length or weight.

In 1903 a blue whale was weighed in sections at Newfoundland. The animal was seventy-eight feet long, thirty-five feet around the shoulders, the head was nineteen feet in length and the tail sixteen feet from tip to tip. The total weight was sixty-three tons. The flesh weighed forty tons, the blubber eight tons, the blood, viscera and baleen seven tons, and the bones eight tons. Exaggerated accounts of the size of blue whales are current even in reputable books on natural history, but the largest specimen which has yet been actually measured and recorded is one hundred and eighty-seven feet long, stranded a few years ago upon the coast of New Zealand; it must have weighed at least seventy-five tons.

Whales are able to attain such an enormous size because their bodies are supported by the water in which they live. A bird is limited to the weight which its wings can bear up in the air. A land animal, if it becomes too large, cannot hold its body off the ground or readily move about, and is doomed to certain destruction. But a whale has to face none of these problems and can grow without restraint.

Because whales live in a supporting medium their young are of enormous size at birth, in some instances the calf being almost half the length of its mother. I once took a twenty-five foot baby which weighed about eight tons from an eighty-foot blue whale.

Whale meat is coarse grained and tastes something like venison, but has a flavor peculiarly its own. I have eaten it for many days in succession

*The American Museum of Natural History has recently sent its Assistant Curator of Mammals, Mr. Andrews, already famous as a naturalist and explorer, at the head of a new expedition into western and southern China. Two years ago Mr. Andrews made a similar exploration of the Korean jungle, discovered an unknown lake in central Korea, and was gone so long that his death was reported in this country. He has twice circled the globe in his search for trophies for the Museum. His most famous exploit was the discovery and capture of the killer whale of the Orient. Mr. Andrews contributed an article on "The Shore Whalers" to The Independent for December 13, 1915.—THE EDITOR.*

and found it not only palatable but healthful. In fact, a chemical analysis shows it to contain about 98

per cent of digestible material, whereas ordinary beef has seldom more than 93 per cent.

It is most unfortunate that prejudice prevents it from being eaten in Europe and America. It could not, of course, be sent fresh to the large cities, but canned in the Japanese fashion, it is vastly superior to much of the beef and other tinned foods now on sale in our markets.

Since a whale breathes air, when it is below the surface the breath must be held, for if water should be taken into the lungs the animal would drown. Thus as soon as a cetacean comes to the surface its breath is expelled and a fresh supply inhaled before it again goes down. The breath which has been held in the lungs for a considerable time under pressure is highly heated and, as it is forcibly expelled into the colder outer air, it condenses, forming a column of steam. A similar effect may be produced by any person if on a frosty morning the breath is suddenly blown from the mouth.

That whales spout out of the blow-holes water which has been taken in thru the mouth is probably more widely believed than any other popular misconception. As a matter of fact such a performance would be impossible because a whale's nostrils do not open into the back of the mouth, as do those of a man, and the animal is not able to "breathe thru its mouth" as can ordinary land mammals.

Whales are classified into two groups: those with teeth, of which the sperm whale is a good example, and those which have "whalebone," or baleen, instead of teeth. The whalebone consists of thin, horny plates and hangs from the roof of the mouth in two parallel rows; it is a growth from the skin much like the claws, finger or toe nails of land mammals. Each plate is roughly triangular, being wide at the base and narrow at the tip, and has the inner edges frayed out into long fibers; these hair-like bristles form a thick mat inside the mouth and thus the small shrimp and other minute

WHEN A BLUE WHALE IS BORED

DUELIST'S SCARS ON A SPERM WHALE'S HEAD

food upon which the baleen whales feed are strained out and eaten.

All the baleen whales eat small crustaceans and especially a little red shrimp, about three quarters of an inch long. These minute animals float in great masses, sometimes near the surface, but often several fathoms below it, and the movements of the whales are very largely determined by their position and abundance.

In feeding, the whale starts forward at good speed, then opens its mouth and takes in a great quantity of water containing numbers of shrimp, turns on its side and brings the ponderous lower jaw upward, closing the mouth. The great, soft tongue, filling the space between the rows of baleen, forces out the water in streams, leaving only the little shrimp which have been strained out by the bristles on the inner side of the whalebone plates. The quantity of shrimp eaten by a single whale is enormous.

Probably no animal of ancient or modern times could equal the strength of a blue whale. I have heard many stories of the almost incredible way in which these animals can pull, but was at first inclined to doubt them. Later, when I saw a blue whale which had a harpoon buried between the shoulders drag the ship, with engines at full speed astern, thru the water almost as tho it had been a rowboat, I began to listen with more respect.

The finback, closely related to the blue whale, has been called the "greyhound of the sea," for its long, slender body is built on the lines of a racing yacht, and the animal can surpass the speed of the fastest ocean liner. Its upper parts are dark gray, shading into beautiful light gray on the sides, and pure white below. It is a widely distributed species and is frequently seen from the deck of transatlantic steamships.

Like the finback, the humpback is one of the most abundant large whales, and to me is the most interesting of all, partly because its habits can be more easily studied than those of the other members of the family. Its maximum size is under fifty-five feet, but its body is thick

and heavy, with enormous side fins or flippers, which are invariably encrusted with barnacles and crab-like crustaceans called "whale lice."

The humpback is a very playful whale, and there is never a dull moment when one is being hunted, for it is impossible to foretell what the animal's next move will be. He may dash along the surface with his enormous mouth wide open, stand upon his head and "lobtail," throwing up clouds of spray with smashing blows of his flukes, or launch his forty-ton body into the air as tho shot from a submarine catapult. This, which is called "breaching," is probably his most spectacular performance.

The first time I saw a whale breach was while hunting off the Vancouver Island coast. We had "raised" a humpback's spout half a mile away and ran up close before the animal sounded. It seemed certain that he would rise again and, with engines stopped, the ship rolled slowly from side to side in the swell. The silence was intense and our

nerves strained to the breaking point.

Ten minutes dragged by; then, without a sound of warning, the floor of the ocean seemed to rise and a mountainous black body, dripping with foam, heaved upward almost over our heads. It paused an instant, then fell sideways to be swallowed up in a vortex of green water.

With the camera ready in my hands I stared at the thing. It might have been an eruption of a submarine volcano or a water spout—I would as soon have thought of photographing either. Even the nerves of Sorenson, the harpooner, were shaken, and he clung weakly to the gun without a move to use it. The whale had dropt back scarcely twenty feet away; if it had fallen in the other direction the vessel would have been crushed like an egg-shell beneath its forty tons of weight. Never since then have I known of a whale breaching so close to a ship, altho they have frequently come out within a hundred and fifty feet.

But of all strange animals in the sea, the sperm whale is one of the most extraordinary. Its head,

which occupies one-third of the entire body, is rectangular in shape and contains an immense tank filled with liquid oil known as "spermaceti." It is only necessary to cut an opening in the "case," as this portion of the head is called, and dip out ten or fifteen barrels of oil. Ambergris, used as a fixative for perfumes, is found in diseased sperm whales.

The sperm whale is a lover of warm currents which favor the giant squid and cuttlefish upon which it lives. The squid reaches a length of twenty feet or more, and the whale sometimes has terrific battles with its huge prey, the tentacles of which, armed with deadly suckers, tear long gashes in the skin of the head and snout, leaving white scars crisscrossed in every direction. But no creature that swims is a match for the sperm whale's seventy tons of bone and flesh and its great lower jaw armed with heavy teeth. Even the killer whales, the "wolves of the sea," leave the sperm unmolested.

# A TOWN THAT CARES

WHAT THE SPIRIT OF THE MIDDLE WEST MEANS IN ONE IOWA TOWN

BY MARY LEAL HARKNESS

I AM put down on programs and hotel registers as a resident of a city far removed geographically and spiritually from the Middle West; but the place which my heart still calls home is a town in south-eastern Iowa. I return to it for a part of every summer, and among its many good things—what I think the superlative of them all—is the fine spirit of the Middle West.

A distinguished New York editor who visited Fairfield last summer, expressing great admiration for the town, asked me if it were not an unusual one. It is not so unusual, especially in its "improvements" and general comeliness of appearance, as he imagined in his surprise at its difference from what, I regret to say, even the most civilized New Yorker or New Englander expects to find everywhere between Ohio and the Sierras. There are numerous middle western towns where he would have found pavements, jitneys, electric lights, city water supply, charming homes and beautiful shade trees. (Yes, *trees*, dear Bostonian.) He would have met, too, college men and women, persons who have traveled, men who play golf, and ladies who give afternoon teas with quite the metropolitan frills—to guests arriving in the ubiquitous automobile. For all these things are manifestations of the spirit of the Middle West, and it pervades all that goodly land.

BUT that spirit is not present in the same degree in all its towns and cities, and I think it not too much to claim for Fairfield its presence at its best and fullest. It used to be jokingly said that everybody in Fairfield's "Who's Who" was a Presbyterian from Pennsylvania. The early history of Fairfield seems permeated with the spirit of men and women of brains and high ideals. And their descendants have shown a wonderful faithfulness in perpetuating the spirit of their fathers.

Thirty years ago I suppose a Fairfield citizen who was writing it up as a model town would have mentioned among its claims that it was the home of a United States Senator and a Congressman; that it was the seat of a college whose students stood first in the state oratorical contests oftener than certain rival institutions; that it was the seat of a county library of remarkable quality for days when libraries had to be born and grow without millionaire attention; and that it was the first small-

ish town in that part of the country to install electric lights. Today its Senator and Congressman are but an honored memory, altho their visible gifts to the town still keep that memory fresh. The old Parsons College, with every loved memento of its earlier students, went up in flames on a summer night in 1902, and its oratorical boys—and girls—are scattered over the earth. The Jefferson County Library occupies a handsome building of its own, and the electric light tower of which our fathers were proud has long been replaced by the improved system of street lighting.

I N growing, Fairfield has most happily escaped the too frequent fate of growing ugly, and this, I feel sure, has been due to the plenitude of the spirit within her. For her growth has come very considerably from the successful introduction of what most often makes for ugliness—numerous factories. Fairfield does an astonishing amount of manufacturing for a town of a little over six thousand inhabitants. What is equally astonishing, the factories have not brought in their train a sordid and hideous residence section or the class of persons who habitually dwell in it.

In spite of her industrial preëminence over most towns of her size, I suppose that Fairfield is never thought of as a manufacturing town. If you were to ask the outsider what he knows her for, or the resident what he likes her for, he would almost infallibly mention first her care for the humanities. Fairfield, as far back as I have known it, has always been not only a town of many churches, but a town in which religion has been a vital thing. There was a day, well within my memory, when no lady, however "society" and pleasure-loving, planned a social entertainment for Wednesday night, the universal church prayer meeting evening. If that day has largely past, the respect for the church and its observances has grown no less, I think. It has taken on some new forms, as, for example, the spirit which has transformed the discarded C., B. & Q. passenger depot into the wonderfully alive "New Chicago Mission."

You pass the fine hospital which Fairfield's citizens founded and maintain on your way out to the really handsome country club house, opened last summer as a successor to the picturesque old log cabin where the members of the unpronounceable (and I dare not even spell it with-

out the aid of the Fairfield postmaster) Golf Club had gathered for a good many years. What impresses me as most characteristic of the town is that the same men and women who take you out to the new golf club in their motors were also the leaders in building the hospital—and that they built the hospital first.

The spirit is evidenced, too, in the Historical Association (a thing of significance when found in a town dating back only to 1839), the Old Settlers' Park Association, which had preserved in this park the first log house, if I mistake not, built in the county; the Ladies' Improvement Association, which of its many deeds has done none more creditable than its recent work upon the park adjoining the pretty new Burlington railway station, which makes the first glimpse of Fairfield to travelers arriving on that road a joy forever; the Political Equality League, young but vigorous; the Chautauqua Association, which took possession of a Billy Sunday Tabernacle, moved it to a wooded hill in the lovely park already secured, and established permanently such a well equipped and managed Chautauqua that it surprises me that some one did not write that up for The Independent as Fairfield's "Best Thing."

BUT if I were to select some one thing to stand as the visible type of what I am trying to express of Fairfield's claim to be a "model" among Iowa towns, I think I should choose the Old Settlers' Association, in which the few surviving pioneers and their loyal children and grandchildren unite with the later comers to celebrate in a charming autumn pageant the prosperity of the Fairfield that is and to preserve with loving appreciation the interest of the Fairfield that was. For in that pageant they never fail to show that the ideal and the intellectual in their town's life has been as valued a possession as its material achievements. It is characteristic of what the town cares for that this year's celebration was crowned with a recital by Madame Schumann-Heink, when the big Chautauqua auditorium was filled to its outmost edge. "What the town cares for"—that, after all, is the one determinant of the "good" town or its reverse, and rarely have I found a community where caring for the best in life's *real* things has been so conspicuous a characteristic.

# BREAD AND CIRCUSES

BY JOYCE KILMER

AUTHOR OF "SUMMER OF LOVE," "TREES AND OTHER POEMS"

IT was in 1914 that Helen Parry Eden's first book of verses first began to find its circle of readers. It was called "Bread and Circuses." Soon the whole world was echoing in angry response to the tread of the German feet that crost the soil of Belgium. And there were few who could hear the clear, sweet music of this new English poet.

But she did not therefore become silent. Readers of the *Englishwoman*, the *Westminster Gazette*, and the *New Witness*—that most brilliant of all London weeklies—have grown accustomed to look for the deftly turned stanzas, now radiant with humor, now vibrant with religious devotion, or patriotism, or love of children, which bear the signature of Helen Parry Eden. And the readers of *Punch*—long aware that this venerable hunchback is a discriminating judge of poetry—can recognize Helen Parry Eden's poems even tho they are unsigned. They recognize them by their charming blend of tenderness and whimsicality, by their candid simplicity, and—to put it bluntly—by their excellence.

"Bread and Circuses" is a most felicitously named book. For therein may be found such poems as *Sorrow* and *A Purpose of Amendment*, which competent critics consider the noblest devotional poetry written since the death of Francis Thompson, and such irresistibly mirth-compelling things as *A Lady of Fashion* on the Death of Her Dog, and *The Vegetarian's Daughter*. And there are also the poems—indeed they make up most of the book and are most characteristic of its author—which consist, I may say, of both bread and circuses, poems which have as their inspiration and theme childhood. When Mrs. Eden writes of childhood, she writes of no abstract quality or idealized state; she writes out of the fullness of her own knowledge. There is a certain Betsey-Jane, to whom these verses are address, or about whom they are written. She is a real child—of this fact there can be not the slightest doubt—and therefore she is, in her way, ridiculous, and therefore, in her way, divine. So Mrs. Eden's child-poems express beautifully what must ever be the understanding poet's attitude toward the child—a love which is made up of amusement and awe. I think that the power I have been trying to describe is clearly shown in the lines called *To a Little Girl*. I take them from "Bread and Circuses," published by John Lane Company.

You taught me ways of gracefulness  
And fashions of address,  
The mode of plucking pansies  
And the art of sowing cress,  
And how to handle puppies,  
With propitiatory pats  
For mother dogs and little acts  
Of courtesy to cats.  
O connoisseur of pebbles,  
Colored leaves and trickling rills,  
Whom seasons fit as do the sheathes  
That wrap the daffodils,  
Whose eyes' divine expectancy  
Foretells some starry goal,  
You taught me here docility—  
And how to save my soul.

For a woman to contribute to *Punch* is unusual, for her to write for it regularly is almost unprecedented. But there is a quality in Mrs. Eden's poetry which distinguishes her from her contemporaries, and tho precedent is strong, genius is stronger. Particularly interesting are the few war poems which Mrs. Eden has published in *Punch*. She leaves to other poets the task of celebrating the glories and exhibiting the horrors of warfare; what she reveals, with beautiful realism, is the way in which the war affects the simple, tender, wholesome life of a normal English family. And to do this she uses, as she does in nearly all her poetry, the personality of her little daughter, Hilary-Joan in point of fact, but for literary purposes Betsey-Jane. In the course of a rather close study of the poetry which the war has called into existence, I have found very little more real, more poignantly intimate in its appeal, than Mrs. Eden's *Ars Immortalis*. The whimsicality of the first few stanzas makes the pathos of the conclusion all the deeper. I quote by the special permission of the proprietors of London *Punch*:

Betsey, when all the stalwarts left  
Us women to our tasks befitting,  
Your little fingers, far from deft,  
Coped for an arduous week with knitting;  
And tho the meekness of your hair,  
Drooped o'er the task, disarmed my strictures,  
The army gained when in despair  
You dropt its socks to paint it pictures.

I, knowing well your guileless brush,  
Urged that there wanted something subtler  
To put Meissonnier to the blush  
And snatch the bays from Lady Butler;  
And so your skies retained their blue,  
Nor reddened with the wrath of nations,  
To prove at least one artist knew  
Her public and her limitations....  
...Daily your brush depicts a home  
Such as our duller pens are mute on,  
Squanders Vermillion, Lake and Chrome  
And Prussian Blue that furious Teuton;

Paper beneath your fingers calls  
For forms and figures to divide it,  
Colors and cock-eyed capitals  
And kisses cruciform to hide it,

Till, brushes sucked and laid apart  
And candles lit and daylight dying,  
And you asleep, your works of art  
Ranged on the mantelpiece and drying—

We elders (older when you're gone)  
Muse on our country's gains and losses....

Ah, Betsey, is it you alone  
Who send your kisses shaped like crosses?

Helen Parry Eden is the wife of Denis Eden, an artist of high standing. She is the mother of two children, Hilary-Joan, the Betsey of fame, and Peter, a very little boy in whose career her readers are beginning to take considerable interest. It was for him that she wrote *Peter Pigeon*, from which I quote by special permission of the proprietors of London *Punch*:

The pigeons brood in Battersea; while  
yet the dawn is dark  
Their reedy aubade ripples in the plane-trees 'round the park,  
They light upon your balcony, a brave and comely band,  
Till nights decoys their coral feet, their voices low and bland;  
But Peter, Peter Pigeon, his feet are in my hand.

The Edens live at Burford, in Oxfordshire, and their home has the pleasant name Waterfall House.

In some of her poems Mrs. Eden is profoundly religious, bringing to the reader's recollection the great mystical poems of Crashaw and Southwell. Her poem in memory of Father Anselm, of the Order of Reformed Cistercians, has by competent critics been called the noblest elegy of our time. In her humorous verse she shows love of democracy and the power of satire—rare qualities in a woman! But in these days when so many writers seem to find it necessary to separate their intellectual lives from their domestic lives, Mrs. Eden is conspicuous for her ability to make poetry out of her home, or rather, to put into words the poetry that is in her home. Her children are the inspiration and theme of her best poetry; it almost seems as if she would not be a poet were she not a mother. Labels are dangerous things, but I know of no poet in Europe or America, in our own generation or that which came before us, who has Mrs. Eden's claim to the lofty title of Laureate of Motherhood.

New York City

# MOSTLY ABOUT BETSEY

THREE POEMS BY HELEN PARRY EDEN

## "EFFANY"

*When elm-buds turn from red to green  
And growing lambs more staidly graze  
And brighter nettle-tops are seen  
Along the hedge-rows' rambling ways;  
When leaves unclothe where late the hail  
Rustled in naked hawthorn twig,  
April comes laughing up the vale  
And Effany comes round to dig.*

*Aloof among her nursery toys  
From her high casement Betsey sees  
His vellum-colored corduroys  
Stirring behind the apple-trees;  
Clutching her trowel she descends,  
With unimagined projects big,  
For Effany and she are friends,  
And she helps Effany to dig.*

*Deep in the flowering currant-rows  
The robin twitters gentle mirth  
Where Effany with Betsey goes  
Triumphant o'er the new-turned earth;  
And the wind wanders out and in  
As doubting which it loves the best—  
The grizzled stubble round his chin,  
Or her be-ruffled golden crest.*

*His coat, lined with carnation red,  
Hangs in the plum-tree's forked boughs,  
Till sun is low and the day sped  
And Betsey called into the house—  
He scrapes his spade, her trowel she,  
She looks and lingers loath to start  
With little earth-bound feet to tea,  
He takes his coat down to depart.*

*Half musing on the little maid  
He trudges toward the coming night,  
Stooping beneath his shouldered spade,  
To where across the curtained light  
With leaves upon its fiery fold  
His wife's thin shadow falls alone—  
For she and Effany are old  
And all their little ones are gone.*

—From "Bread and Circuses," published  
by John Lane & Co.

## THE DISTRACTION

*Betsey, 'tis very like that I shall be—  
When death shall wreak my life's economy—  
Repaid with pains for contemplating thee  
Unwisely out of season. With the rest  
We knelt at Mass, not yet disperst and blest,  
Waiting the imminent "Ite missa est."*

*And I, who turned a little from the pure  
Pursuit of mine intention to make sure  
My child knelt undistracted and demure,*

*Did fall into that sin. And ere the close  
Of the grave Canon's "Benedicat vos . . . . ."  
Had scanned her hair and said "How thick it grows  
Over the little golden neck of her!"  
So doth the mother sway the worshipper  
And snatch the holiest intervals to err.*

*Nor piety constrained me, nor the place;  
But I commended, 'gainst the light's full grace,  
The little furry outline of her face.*

—From The New Witness.

## RECRUITS ON THE ROAD TO OXFORD

*They passed in dusty black defile  
Along the burning campaign's edge  
Where English oaks for many a mile  
Dripped acorns o'er the berried hedge,  
With valorous smiles on faces soiled  
Out of the autumn's heat and light  
Those who on English earth had toiled  
Came forth for English earth to fight,  
Round their descending flank out-spread  
The country like a painted page—  
God's truth, a man were lightly dead  
For such a golden heritage!*

*But these, the surging centuries' wrack  
Beyond all tides auspicious thrown,  
Doomed with bowed head and thread-bare back  
To till the land they might not own,  
Left of the swallow's tranquil lease,  
Left of the scrap-fed robin's dole—  
How have these reared in starveling peace  
This flaming valiancy of soul? . . . .  
O England, when with fluttered breath  
You greet the victory they earn  
And when with eyes that looked on death  
The remnant of your sons return,*

*On your inviolate soil repent  
And give the guerdon unbesought—  
To these whose lives were freely lent  
Some share of that for which they fought!*

—From the Westminster Gazette.

Patrick Henry Addressing the First Continental Congress, Philadelphia, 1774

## One Nation; One People

WHEN Patrick Henry declared that oppression had effaced the boundaries of the several colonies, he voiced the spirit of the First Continental Congress.

In the crisis, the colonies were willing to unite for their common safety, but at that time the people could not immediately act as a whole, because it took so long for news to travel from colony to colony.

The early handicaps of distance and delay were greatly reduced and direct communication was established between communities with the coming of the railroads and the telegraph. They connected places. The telephone connects persons irrespective of place. The telephone system has provided the means of individual communication which

brings into one national family, so to speak, the whole people.

Country wide in its scope, the Bell System carries the spoken word from person to person anywhere, annihilating both time and distance.

The people have become so absolutely unified by means of the facilities for transportation and communication that in any crisis they can decide as a united people and act simultaneously, wherever the location of the seat of government.

In the early days, the capital was moved from place to place, because of sectional rivalry, but today Independence Hall is a symbol of union, revered alike in Philadelphia and the most distant American city.

## Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence is removed from the hospital, is homelike and ideally located.

**Requirements:** At least one year of high school or equivalent. Age limit—18 to 35 years.

**Remuneration:** \$10.00, \$12.00 and \$15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

## PEBBLES

A dollar now buys more foreign money, but less beefsteak and potatoes.—*Wall Street Journal*.

When the empty dinner-pail is needed to carry the wages home it is of no use to the Republicans.—*Philadelphia Record*.

Quickest way to overawe old Carranza would be to threaten to send a regiment of barbers after him.—*Columbia State*.

Another surprize of the war is the Central Powers' craftiness in delaying this Russian drive with Austrian prisoners.—*Boston Herald*.

I hereby warn potato bugs  
Who on my tubers dote,  
That if they don't decamp at once  
I'll send them a sharp note.  
—*Kansas City Star*.

Will the lady who engaged me to plough her garden this week kindly drop me a card? I have forgotten who she is. Harry F. Kenyon, Mexico.—*Mexico (N. Y.) Independent*.

How many rainy Sundays have come in succession we fail to remember, but this we know: there can be no such calamity during a Republican administration.—*New York Tribune*.

Anna has a lovely chair  
Marked Chippendale; but pish!  
That thing was turned out last year  
At old Grand Rapids, Mich.  
—*Columbia State*

### THE VITAL QUESTION

In 1915—"How many miles will it go an hour?"

In 1916—"How many miles will it go on a gallon of gasoline?"—*Cornell Widow*.

"Of course, you want to serve your country," said the patriotic citizen.

"Yes," replied Senator Sorghum. "But I want my constituents to have first helping, as far as possible."—*Washington Star*.

The boys of Wallace University School were playing baseball on a vacant lot in Nashville, Tennessee, when the game was interrupted by an old negro woman crossing the lot, and a small boy called out, "Game called on account of darkness!"—*Harper's Magazine*.

Said the teacher to the little Hebrew boy:

"Ikey, is the world flat or round?"

"It ain't needer vun, teacher," said Ikey.

"But what is it, Ikey," asked the teacher in surprize, "if it is neither round nor flat?"

"Vell," said Ikey with conviction, "mine fader he says it vos crooked."—*Ladies' Home Journal*.

A strange man had been sent to polish the floors. His manner was anything but energetic, and the lady feared he would not polish them properly.

"Are you quite sure that you understand the work?" she inquired.

His indignation was tremendous.

"You know Colonel B.'s folks, next door but one?" he said. "Well, I refer you to them. On the polished floor of their dining room five persons broke their legs last winter and a lady slipt clear down the grand staircase. I polished all their floors!"—*New York Times*.

A Chicago violinist who gives concerts thruout the West was bitterly disappointed with the account of his recital printed in an Iowa town paper.

"I told your man three or four times," complained the musician to the owner of the paper, "that the instrument I used was a genuine Stradivarius, and in his story there was not a word about it, not a word."

Whereupon the owner said with a laugh: "That is as it should be. When Mr. Stradivarius gets his fiddle advertised in my paper under two dollars a line, you come around and let me know."—*Los Angeles Times*.

*More than a year ago, we said:*

*"The Eight-Cylinder Cadillac will, we believe, prove itself to be the most constant and the most enduring car this company has ever produced."*

The Cadillac in its record run from Los Angeles to New York in 7 days, 11 hours, 52 minutes, was subjected to a more severe trial of stamina and endurance than the average car undergoes in ten years of service; yet it emerged from the ordeal virtually as good a car as when it started.

*This fully equipped, standard Cadillac Roadster travelled the entire distance of 3371.8 miles, without requiring so much attention to its motor as the cleaning of a spark plug. After the finish, not a single adjustment or replacement could be made that would improve its running condition.*

## Gasoline Saver

Cuts Gasoline Cost  
5c. to 10c. per gallon

The Vapo-Humidifier produces a 100% combustible mixture at all times by injecting clean air and vapor from the radiator into the manifold and not dusty, gritty air from under the hood.

It produces the same results in all weather, wet or dry, night or day, giving 25% to 50% more mileage power and speed.

## Read What These Auto Owners Say About VAPO-HUMIDIFIERS

Froehling & Heppel, 212-216 N. State St., Chicago, dealers in Wholesale and Retail Meats, write as follows: "Having used your VAPO-HUMIDIFIER Gasoline Saver on our Truck, also our 6-cylinder, we find that it shows a saving in gasoline of about 25 per cent."

W. C. Doebler, Coroner of Lemhi County, Salmon, Idaho, writes: "The VAPO-HUMIDIFIER is working fine wouldn't do without it."

Fred J. Silhanek, 1541 Cleveland pl., Denver, Colo., writes: "The VAPO-HUMIDIFIERS have been tested and found satisfactory. We get more mileage than with the

instrument of similar construction. Please make us your proposition for State of Colorado."

O. J. McDonald, manager Midwest Distributing Co., car-lot distributors Fruits and Produce, Davenport, Iowa, writes as follows: "I cannot see how any car owner can afford to do without your VAPO-HUMIDIFIER. The minute I would turn on the VAPO-HUMIDIFIER I could plow through the mud six inches deep on high. I have also made a gasoline test, and find about 30 per cent. saving. I would not part with the instrument for many times the cost."

George Stidman, 287 E. Illinois St., Chicago, writes: "I cannot refrain from writing you and telling you of the satisfaction given me by your Vapo-Gasoline saver, which I purchased from you about a year ago. I have a 1913 ——— and find that the VAPO-HUMIDIFIER not only saves gasoline, but gives me more speed, and makes my motor run very much smoother."

Frank D. Bryant, Grand Rapids, Mich., says: "The VAPO-HUMIDIFIER has received a thorough test, and I wish to congratulate you on such a wonderful invention."

## HIGH-CLASS SALESMEN WANTED

The largest real estate concern in the world is planning a National advertising campaign to advertise their New York real estate as the best investment opportunity in the country. We control \$10,000,000 of property on subways projected, or now in operation, and are planning to take on a few high-class salesmen. Positively no applications considered from men who cannot maintain their own personal expense while demonstrating their ability, but to such as are able to fulfill the requirements, a liberal contract will be made similar to the one under which our representatives are making as high as \$25,000 a year, and none under \$1,000. Every assistance given to men capable of making good, in the shape of a liberal individual advertising appropriation, and personal help in getting started.

WOOD, HARMON & CO.,

Dept. A. F. 2. 261 BROADWAY, NEW YORK.

## Romeike's Press Clippings

are used nowadays by every modern up-to-date business man; they bring you in constant touch with all public and private wants, and supply you with news bearing upon any line of business. We read for our subscribers all the important papers published in the United States and abroad. If you have never used press clippings, drop us a postal and we will show how they can be of advantage to you. Write for booklet and terms.

ROMEIKE, INC. 106-110 Seventh Ave., New York City

# The New Books

## THE RED CROSS IN RUSSIA

*The Dark Forest*, by Hugh Walpole, is not only a story of the Great War but it is a great story. A group of surgeons, nurses and orderlies serving behind the Russian lines, men and women, stand out sharply against the murk of battle; not Red Cross automata doing a merciful but impersonal work, but full of human hopes and fears; pre-occupied with their own personal experiences quite apart from the grim work under their hands; they have rivalries, jealousies, friendships, antipathies and loves.

There is no reason for us to expect a bloodless impersonality in doctors and nurses, yet the characters of *The Dark Forest* are so startlingly alive that there is a sense of surprize if not of shock, as we follow them from hospital to field and into the depths of the sinister forest fatal to them all in different ways.

Mr. Walpole writes of the Russian army with sympathy and comprehension, and he has caught somewhat of the directness and passionate truth of the Russian novelists. Yet there is here a lift to the spirit even in defeat and disaster, a triumph over death itself, that we never find in Tolstoi. The people of *The Dark Forest* have found something, have proved themselves; they won courage out of terror if nothing more, and that makes it a brave book.

*The Dark Forest*, by Hugh Walpole. Doran. \$1.35.

## THE PRESIDENCY

It is doubtful if there be another writer in the country who could in equal space contribute so much to the general knowledge of the office of President of the United States and so stimulate interest in it as can ex-President Taft. Just from the press come two books of lectures by him on the Presidency.

The first, a series of three, delivered before the University of Virginia, gives, aside from the clear outline of duties, powers and limitations of the office, illustrations from history and from the author's own experience, and comments and suggestions concerning the improvements of our system. Here, in fact, both books have high worth, tho the Columbia series is preferable. Among these suggestions Mr. Taft urges a commission for appointments now Presidential, and, by way of corollary, the taking away of patronage from judges; the widening of the civil service; the submission without Senate approval of proper questions to arbitration under treaty; and the appearance of members of the Cabinet before

Congress. Mr. Taft's anecdotes, always pertinent, are uncommon, good, and sometimes there is an acid touch that cuts clean.

The Columbia series, to cite an example of its greater fulness, gives fair credit for our threefold system of government to Montesquieu, whereas Dr. Hannis Taylor of Georgia has been at some pains to attribute the idea to one Pelatiah Webster. Another instance is where Mr. Taft describes the political and personal factors twined with the case of Marbury vs. Madison, which, tho directly involving only a small matter of the plaintiff's official commission, yet brought to settlement so great a principle that Mr. Taft judges it the most important case in the Supreme Court's history. In a yet larger book on the Presidency which, we trust, he will give us, he may in a footnote speak of those patriotic business men who show impatience with the little jury cases which often involve principles which they do not care about, but do not involve money which they do care about.

*The Presidency*, by William Howard Taft. Scribner. \$1. *Our Chief Magistrate and His Powers*, by William Howard Taft. Columbia University Press. \$1.50.

#### THE POSSIBLE AFTERMATH

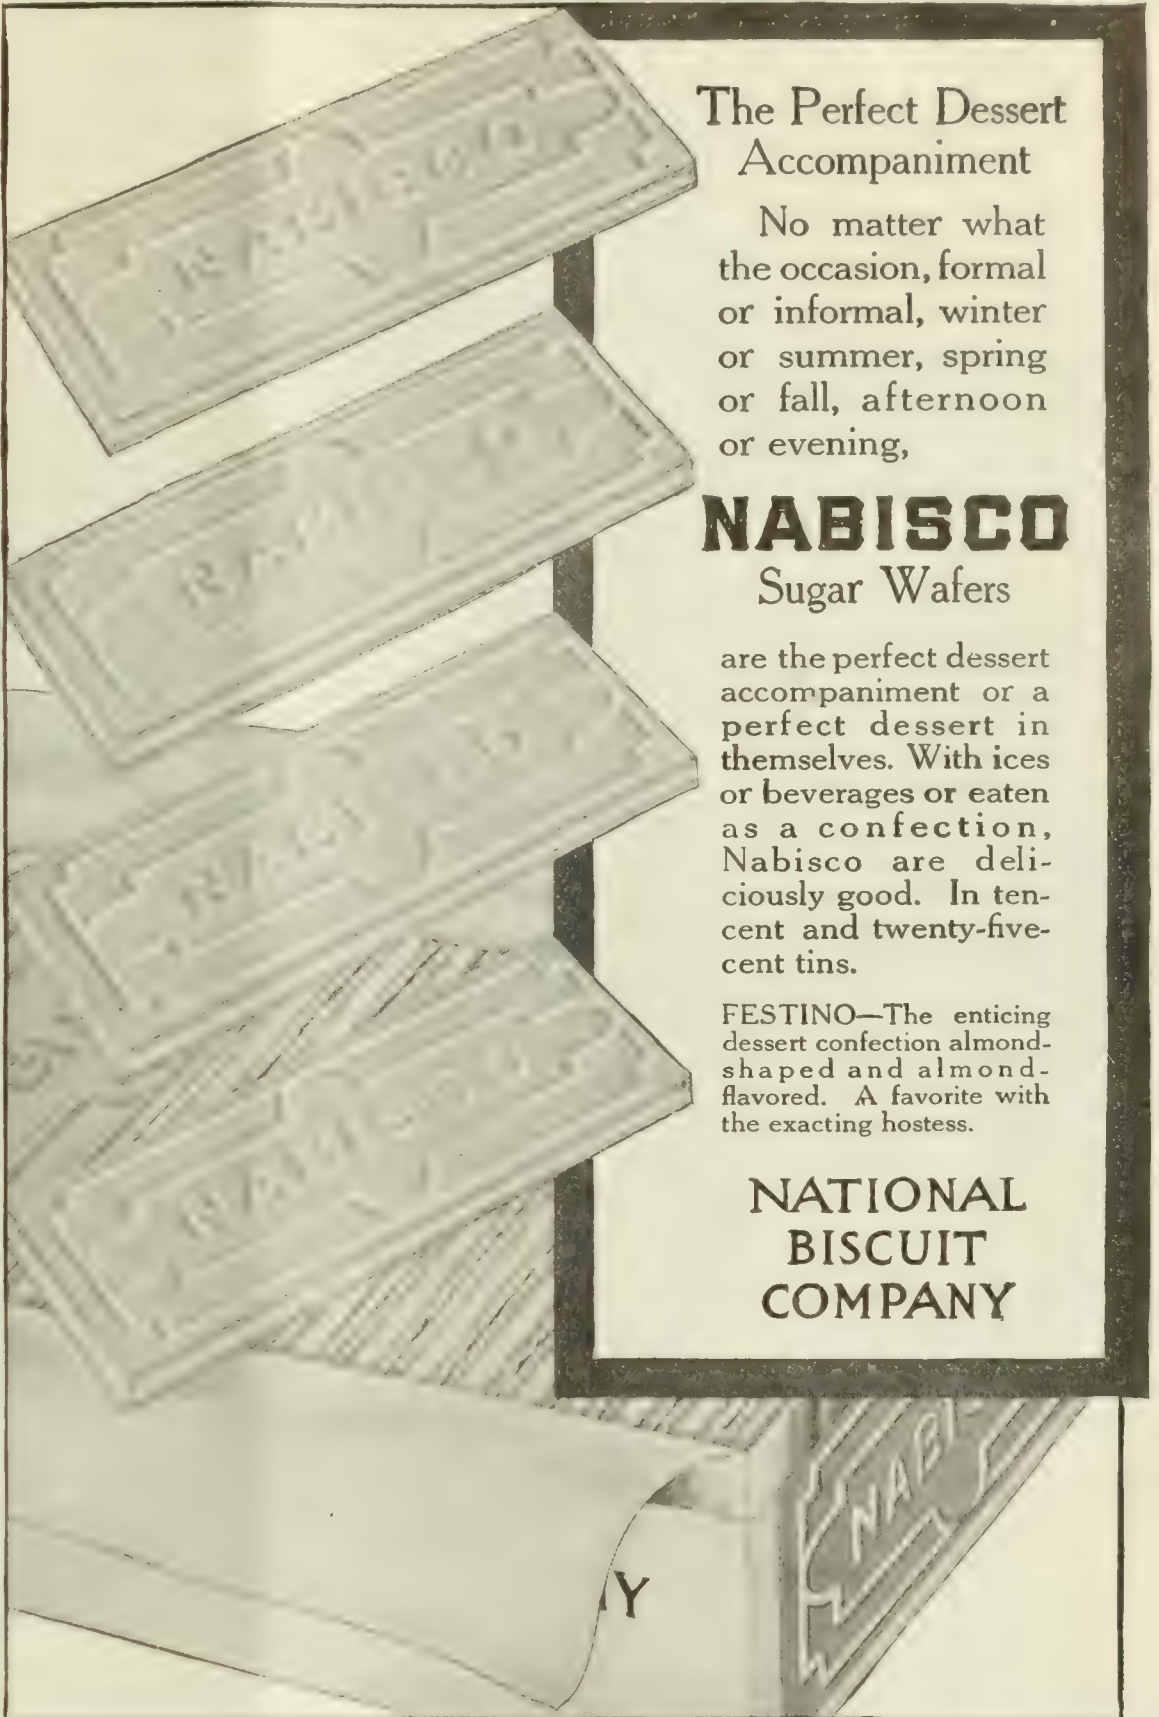

The crushing effect of war upon the moral and intellectual life of the nations engaged is well illustrated in Paul Sabatier's volume, *A Frenchman's Thoughts on the War*. This noted writer struggles hard with the spiritual problems which have arisen thru the impact of this cataclysm upon civilization. His chapters are imbued with a splendid optimism in spite of the gloom and depression which are so evident thruout the book. Years of residence near the Alsatian border have furnished the writer with a clear understanding of the ideals and also the problems of the people of that long disputed province. M. Sabatier writes with reserve but deep conviction upon these border questions and the possible fruits of this calamitous struggle in religious union, and the cementing of international friendships.

*A Frenchman's Thoughts on the War*, by Paul Sabatier. Scribner. \$1.25.

#### DOES INDIA CHANGE?

From out the mists enveloping remote legendary fables R. W. Frazer in *Indian Thought, Past and Present*, traces the gradual formation of Hindu religious and social principles. Much in the early stages of Hindu development is conjecture, but it is fairly accurate to say that the Hindus have for thirty centuries brooded over the problems of the Universe, and today the American tourist can witness a "holy man" sitting upon a bank of the Ganges similarly brooding over some infinite philosophical problem, more venerated than all the rulers and military and industrial commanders of the world.

Yet Mr. Frazer strives to demonstrate that the present war has deeply stirred the people of India to a oneness with the British Empire, that a "new" light has come to them. Why a new light should break upon the Hindus

**The Perfect Dessert Accompaniment**

No matter what the occasion, formal or informal, winter or summer, spring or fall, afternoon or evening,

**NABISCO**  
Sugar Wafers

are the perfect dessert accompaniment or a perfect dessert in themselves. With ices or beverages or eaten as a confection, Nabisco are deliciously good. In ten-cent and twenty-five-cent tins.

FESTINO—The enticing dessert confection almond-shaped and almond-flavored. A favorite with the exacting hostess.

The pupil forms lifelong associations, absorbs traditions and develops definite habits of thought and work that are invaluable. Certificate admits to leading colleges. General course of five years. Two-year course for high school graduates. Course in domestic science. Address

LAURA A. KNOTT, A.M., Principal

out of this war any more than out of the terrible wars of conquest that have swept over them is hard to follow. If a drawing nearer together of the British Anglo-Indian ruling caste and the subject Hindu people is implied, it is unquestionably to be hoped for. To that fortunate end Mr. Frazer holds that the adverse power of the Brahmins is slowly but surely being broken by Occidental influence. Sir W. W. Hunter, the eminent author of "The Indian Empire," wrote of the stability of Brahmin power: "The Brahmins of the present day are the result of probably 3000 years of hereditary education and self-restraint, and they have evolved a type of man quite distinct from the surrounding population. He is an example of a class becoming the ruling power in a country, not by force of arms, but by the vigor of hereditary culture and temperance. One race has swept across India after another, dynasties have risen and fallen, religions have spread themselves over the land and disappeared. But since the dawn of history, the Brahmin has calmly ruled, swaying the minds and receiving the homage of the people, and accepted by foreign nations as the highest type of Indian mankind."

Probably were this authority still living he would hold that, in view of the immense weight of contrary past evidence, it is too early to judge how far the power of the Brahmins is threatened by British influence, but Mr. Frazer has produced a scholarly work, displaying careful, painstaking effort to reach that region most difficult of access—the philosophical Hindu mind.

*Indian Thought, Past and Present*, by R. W. Frazer. Stokes. \$3.

## A BELATED ELIZABETHAN

A new Elizabethan poet has appeared, not dug up out of an old library by some scholar anxious for a Ph.D., but bobbing up spontaneously in the mind of a St. Louis lady and writing with a ouija board. *Patience Worth* is her name, or so she says. There is no evidence that any such woman lived in the time of Shakespeare or any other time but she seems very much alive now and she pours out poetry, proverbs, plays, and witty conversation with astonishing rapidity in an archaic dialect. Many of her words and usages are so obsolete that they have to be hunted for in etymological dictionaries. Some are not to be found there and may be her own inventions. Not often does a word appear that is less than three centuries old. As a whole her language seems as good an imitation of the antique as, say, Maurice Hewlett's, and it is doubtful whether he could carry on such a rapid repartee with a roomful of people without committing more anachronisms.

But whether *Patience Worth* be a secondary personality of Mrs. Curran's or a fabrication she is a real personality and an interesting personality at that. For the most part the stuff turned out by planchettes, ouija boards and automatic pencils or typewriters or spoken by the mouths of mediums is the dreariest twaddle, tho it professes to

come from Shakespeare or Homer, but *Patience Worth* can write real poetry and has a sense of humor that is rare in ghosts or secondary personalities. At any rate she is quite a relief from "Imperator," "Rector" and all the other bores with whom Mrs. Piper is now obsessed.

*Patience Worth, A Psychic Mystery*, by Casper S. Yost. Holt, \$1.40.

### SONS AND DAUGHTERS

In *Sons and Daughters*, Mrs. Gruenberg departs somewhat from the method of her earlier work, "Your Child Today and Tomorrow." Sixty-five problems of child and family life are presented each in three or four pages written in popular style. The sections are grouped so that the continuity and organization of thought will be evident to the more careful reader, but the material can be used and enjoyed as well by fathers and mothers who get most help from a direct, brief, easily understood "story" of the better newspaper type.

The writer shows a rich experience from her contact with her own and other children. The anecdotes and illustrations used are unusually well chosen. This fact, with the excellent psychology underlying the plan, are the strongest features of the work.

*Sons and Daughters*, by Sidonie Matzner Gruenberg. Holt, \$1.25.

### IN THE UNITED STATES

The second and final volume of W. B. Bryan's *History of the National Capital* is just issued. This work is largely drawn from official records, is detailed, thorough and authoritative. (Macmillan, \$5.)

The sixth volume of *The Writings of John Quincy Adams*, edited by Worthington C. Ford, contains the letters from 1816 to 1819. These take in his last year as Ambassador to Great Britain and the first years as Secretary of State; years that saw the acquisition of Florida and the beginnings of the Monroe Doctrine. (Macmillan, \$3.50.)

*The Revolution in Virginia*, by Dr. H. J. Eckenrode, contains the narrative of the part played by the Old Dominion in the struggle for independence. The book devotes especial attention to the internal politics of the colony during the years of war, the conservatism of the planters and the radicalism of Jefferson and Patrick Henry. (Houghton, Mifflin, \$2.)

*Notes of a Busy Life* is the title of ex-Senator Joseph Benson Forster's autobiography. The two thick volumes contain notes and comments on his political activity, and numerous letters. Few of the letters are of much importance except perhaps as mementos, for here and there are bits of information not printed elsewhere. (Cincinnati: Stewart & Kidd, 2 vols., \$5.)

*Scandinavian Immigrants in New York*, by Prof. Johan O. Egeen, is an account of all that is known of the Norwegian, Danish and Swedish individuals who settled in New York during the years of Dutch rule. It contains much valuable first hand material, primarily genealogical but incidentally giving the reader intimate glimpses of Colonial life. (Minneapolis, Minn.: Holt, \$2.50.)

*The Administration of President Hayes*, by John W. Burgess, is a series of eulogies, the lectures delivered at Kenyon College, of which President Hayes was an alumnus. Of the disputed election of 1876 the author concludes that no President had ever had a more complete title legally to his office than did Mr. Hayes, but most of the book is devoted to the constructive work of the administration, the complete restoration of

**SPIRIT OF SCHOOL**—A kindly, cheerful self reliance under Christian motives from the great universities. Personal attention given to each boy.

**LOCATION**—In the country, on the western slope of the famous Gettysburg Valley, one of the most beautiful and healthful spots of America.

**EQUIPMENT**—Modern and complete. New Gymnasium. Water for bathing. Address Box 15.

William Mann Irvine, LL.D., Headmaster, Mercersburg, Pa.

home rule in the South, the furtherance of civil service reform, the President's courageous championship of a sound currency. (Scribner, \$1.)

Every American history refers in an off-hand way to William Walker's invasion of Nicaragua on the eve of the American Civil War. Those curious for the whole truth about this advance agent of "manifest destiny" will find the story adequately set forth in *Filibusters and Financiers*, by Prof. William Scroggs, of Louisiana University. (Macmillan, \$2.50.)

No detailed account of the machinery of the lower House of Congress and of the noteworthy contests that have arisen over its rules and functions could well be more compact and comprehensive than Dr. De Alva Alexander's *History and Procedure of the House of Representatives*. Students will welcome the appendix containing the list of speakers and chairmen of important committees from the first Congress to the present day. (Houghton, Mifflin, \$2.)

## FANCY AND FACT

*Domestic Life in Rumania* is too broad a title for these experiences of an English woman in a wealthy Hebrew household in Bukarest. The book is much taken up with the Goldsmith's very questionable French governess and other matters not characteristic of Rumania alone. (Lane, \$1.50.)

*A Diplomat's Wife in Mexico* may well attract even those who do not care for books about our troublesome neighbor. Mrs. Nelson O'Shaunessy makes daily incidents and people vivid, and she was keenly alive to the meaning of the events of 1913-1914 whose interest centered in Mexico City. (Harper, \$2.)

*The Night Cometh*, from the French of Paul Bourget, is an unusual, extremely interesting book. It is a discussion of the spiritual versus the material interpretation of the universe in the form of a dramatic love story, the scene of which is a Paris hospital during the present war. (Putnam, \$1.35.)

*Prince and Boatswain* is a group of anecdotes from our navy set down by J. M. Morgan and J. P. Marquand from the recollections of Rear Admiral Clark. These good sailor yarns concern "Savey" Read, Cushing, Admiral Jouett and other picturesque figures of the Civil War. (Greenfield, Mass.: Hall, \$1.)

*Leaves from the Log of a Sky Pilot*, by William G. Puddefoot, give a breezy account of the varied life of the author. From Kent to London, and thence to Canada before the Civil War, and finally to a settlement and stirring missionary career in the States, is the outline story of this autobiography. (Boston: Pilgrim Press, \$1.)

If there is such a person as a cadess, she is the heroine of *The Proof of the Pudding*, by Meredith Nicholson. We find Nan Farley first at the Country Club giving a cruel imitation of her foster-father and benefactor. But in spite of her vulgarity her story is interesting. She marries the best man in the book and they are happy ever after. All of which surprises the reader. (Houghton, Mifflin, \$1.35.)

A notable effort to overcome rare prejudice by the founding of a Cosmopolitan Club in a mid-Western college is the theme of Charles M. Sheldon's latest novel. It is earnest, eloquent, persuasive and reasonable, but as prejudice is unreasonable the story may not reach those who need it most. *Of One Blood* should influence all fair-minded young men. (Small, Maynard, \$1.25.)

The fascination of far-away lands on the outskirts of empire pervades all of Beatrix Grimshaw's novels. The coast of New Guinea with "its hard, gaudy loveliness like the loveliness of the tiger" and a pearl island of fabulous richness are the scene of *My Lady of the Island*, a stirring romance, closing with the dramatic surrender of German New Guinea to the English. (Chicago: McClurg, \$1.25.)

# The Market Place

## THE STOCK MARKET

In the market for securities a controlling influence has been exerted by the condition of our relations with Mexico. Many extra dividends declared by mining and manufacturing companies, or the very favorable reports of railroad earnings, have not prevented a decline. Net losses for railroad shares in the week ending on June 24 were from 1 to 3 points. For copper stocks they were from 4 to 10 points, and all the war order securities were deprest. In the succeeding week there was a waiting market until the 29th, when news of the release of the American troopers by Carranza, indicating that war would be averted, caused a stampede of speculators who had sold for a decline, and there was a substantial recovery, net gains for railroads ranging between 1 and 2 points. So far as railroad shares are concerned, the effect of continuous British liquidation and of the menacing controversy with employees must be taken into account. Some were saying that war with Mexico would check or delay the filling of munition orders for the Allies; others express the opinion that the steel companies would gain something from such a conflict. The prices of copper and spelter have declined, because foreign buying has been halted, and the output of the copper mines is greater than ever before. Shares of the Corn Products Refining Company, which makes glucose, were sharply deprest by the decision of the Federal Court, ordering dissolution of the company for violation of the Anti-Trust law. This decision was unforeseen because many expected that severe action would be suspended, as in the similar case against the American Can Company. About 50 per cent of the Corn Products Company's business recently has been on foreign orders.

There is a long list of new extra dividends or increases of rates. In the first part of June 45 companies declared extras in cash or stock, made initial payments, or announced rate additions. The more recent changes have been an extra of 10 per cent by the Lackawanna Coal Company, a resumption of dividend payments by the Ontario & Western Railroad Company, after an interval of three years; an increase by the Anaconda Copper Company, making \$5 this year against \$1.75 in 1915; an increase by one subsidiary of the Pennsylvania Railroad system, with resumption by another, and the payment

## SCHOOLS AND COLLEGES

(CONTINUED)

NEW YORK

### The Manlius Schools And Summer Military Camp.

**St. John's School, Manlius,** offers the most successful application of the military principles to preparation for college, technical school or business. Fifteen buildings, 120 acres, 11 miles from Syracuse.

G. D. MILNE, Treasurer.

### PACIFIC GAS AND ELECTRIC CO.

#### COMMON STOCK DIVIDEND No. 7.

A quarterly dividend of \$1.25 per share, upon the Common Capital Stock of this Company, for the three months ending June 30, 1916, will be paid on July 15, 1916, to shareholders of record at 3:30 o'clock P. M. June 30, 1916. The Transfer Books of the Company will not be closed. Checks for the dividend will be mailed.

PACIFIC GAS AND ELECTRIC COMPANY.

A. F. HOCKENBEAUMER,

Vice-President and Treasurer.

San Francisco, California, June 30, 1916.

United States Realty & Improvement Co.

111 Broadway, New York, June 26th, 1916.

The Coupons on this Company's Twenty-year Debenture 5% Bonds, due on July 1st next, will be paid on July 1st upon presentation at the Company's office, Room 1408, Trinity Building.

B. M. FELLOWS, Treasurer.

### D. C. HEATH & COMPANY, BOSTON.

#### PREFERRED STOCK

The regular quarterly dividend of ONE AND THREE-QUARTERS PER CENT, has been declared by the Directors of this Corporation, payable July 1, 1916, to preferred stockholders of record June 24, 1916. Checks will be mailed.

WINFIELD S. SMYTH, Treasurer.

## E. W. BLISS COMPANY

Borough of Brooklyn, New York.

June 29, 1916.

The Board of Directors of this Company has this day declared an extra dividend of 100% on the Common stock of the Company, to be paid from the accumulated net earnings of the Company on July 14th next, to holders of the Common stock of record on the books of the Company at the close of business July 10th. Transfer books will be closed July 11th to 14th, both dates inclusive.

HOWARD C. SEAMAN,

Secretary and Treasurer.

### LIGGETT & MYERS TOBACCO COMPANY

St. Louis, Mo., June 29th, 1916.

The Transfer Books of the Registered 5 per cent Bonds of Liggett & Myers Tobacco Company, will close at 3 o'clock P. M., July 15th, 1916, for the payment of interest on said bonds, due August 1st, 1916, and will reopen at 10 o'clock A. M., August 2nd, 1916.

T. T. ANDERSON, Treasurer.

of 30 per cent of arrears on the preferred stock of the Colorado Fuel and Iron Company, leaving 29 per cent still due. It will be recalled that this company has been affected by a labor war. Recent profits are said to have been due mainly to work on orders from France and Russia.

### LOANS AND WAR ORDERS

It is expected that a loan of \$100,000,000 to the French Government will soon be announced. Probably it will be based upon the securities of neutral countries which are now held in France, an American company issuing bonds or debentures secured by this collateral. This company, a new one organized for the purpose, will be controlled by prominent financial institutions and bankers here. Subscriptions to the new Russian loan or credit of \$50,000,000 were completed two weeks ago. Reports from Russia say that the loan is regarded with much satisfaction there, because it may lead to more intimate financial and trade relations with the United States. It is asserted there that a branch of the National City Bank of New York will soon be established in Petrograd. Italy seeks a loan here. Three commissioners representing the Italian Government have arrived in this country, with \$20,000,000 worth of securities to be used as collateral.

There may soon be announced a loan of \$20,000,000 or \$30,000,000 to China. It is understood that our State Department has been asked to "use its good offices" in behalf of such a transaction. The new American International Corporation, recently formed to promote our foreign trade and the use of American capital in foreign undertakings, has loaned \$5,000,000 to be used for the improvement of the Grand Canal and for reclamation projects involved in the plans of the Red Cross for preventing floods and famine in China. Lee, Higginson & Co., the well known bankers, have been made the fiscal agents of China here.

The British Government has three ways of paying its debts in this country—by gold, by the proceeds of loans, and by the sale or other use of American securities brought under its control in accordance with the mobilization plan. There is no new British loan, but the sale of American securities in our market continues, and recent shipments of gold have attracted much attention. Nearly all of this gold has come from Canada, but about \$10,000,000 in bars, filling 318 boxes, arrived from England last week on the steamship "St. Paul." These bars, added to the receipts from Canada, make a total of \$116,000,000 since May 1.

Large quantities of rolled or forged steel, to be used abroad in the manufacture of explosives, have recently been bought here by the Allies. In one week 500,000 tons were ordered. Russia has placed contracts for 350,000 tons of steel rails, about half of which will be made by the independent steel companies; for 165,000 tons of barbed wire, and for nearly 1000 locomotives.

Boston Garter

### Take Home A New Pair!

Hurried on in the morning—tossed off at night—your garters are perhaps not so carefully scrutinized as are other articles of apparel. They shouldn't be the last things you think of. Follow your natural impulse and keep them fresh and lively. The added comfort repays you.

We will pay you the highest price for any quantity of—diamonds, gold, silver, platinum, etc. Nothing too small for us to handle. We will give you the possible price of your old jewelry. We will also give you the best of this kind of service. Send for our free valuation card. We will return it to you at once. Liberty Refining Co., 432 C Wood St., Pittsburgh, Pa.

She also is negotiating for 5000 freight cars. France has taken 100 locomotives and 100,000 tons of rails. Italy has bought 30,000 tons of Bessemer iron and 38,000 tons of rails. An order from Japan for 10,000 tons of ship-plates is reported. Japan, having cheap labor, is said to be underbidding our manufacturers now on orders for shells. The execution of large orders placed here last year consumes much time. For example, final shipments on the British \$65,000,000 order for shells, given to three companies about a year ago, will not be made until the middle of August.

#### MORE TAXES OR BONDS

Secretary McAdoo said to the House Committee on Ways and Means in the first week of June that an increase of the national revenue by the addition of \$150,000,000 would be sufficient. The effect of our controversy with Mexico's de facto government was not then foreseen. Prepared in accord with his statements and the pending defense measures, the committee's revenue bill provided for receipts amounting to \$240,000,000, including an addition of \$100,000,000 to the income tax, about \$50,000,000 of inheritance taxes, and \$50,000,000 or \$60,000,000 of taxes on munitions.

But it appears now that there must be \$100,000,000 more, because of recent additions to the defense program and the urgent appropriations required for mobilizing the militia, with other expenses due to the attitude of Carranza and his people. Therefore the proposed taxes must be largely increased, or our government must issue bonds. It is said that President Wilson opposes a bond issue. Up to the present time the only tax change proposed is a still greater increase of income taxes, with a lowering of the exemption limits. Some desire to avoid legislation of this kind because of its probable effect in a presidential campaign upon the party responsible for it.

Appropriations already made, or soon to be made, for the coming fiscal year amount to \$1,500,000,000. The exact total, announced by Mr. Fitzgerald, chairman of the House Appropriation Committee, on June 28, is \$1,499,330,479. Appropriations for the current fiscal year were only \$1,114,937,000. And Congress has recently authorized the expenditure of \$257,000,000 in years to come. The problem that confronts the Ways and Means Committee is one that cannot easily be solved.

The following dividends are announced:

*E. W. Rice Company, common stock, 100 per cent, payable July 14.*

*Oil Separator Company, preferred, quarterly, \$1.75 per share; common, \$1.25 per share, both payable July 15.*

*Pacific Gas and Electric Company, common, quarterly \$1.75 per share, payable July 15.*

*American Telephone & Telegraph Company, 27 per cent, payable July 15.*

*United Fruit Company, quarterly, 2 per cent, payable July 15.*

*Wells Fargo & Company, 3 per cent, payable July 15.*

*The Recovery Savings Bank, semi-annual, 2 1/2 per cent per annum, payable July 15.*

*Loose Savings Institution, semi-annual, 4 per cent per annum, payable July 15.*

## BETTER THAN A VACATION FOR YOU

### Man or Woman

**YOU** are tired, nervous, listless, lethargic—mentally and physically inefficient. Your appetite is fickle, sleep does not refresh, you cannot concentrate on your work.

How can you remedy that condition?

"What you need is a vacation," your friends tell you. But will a vacation cure your ills? Idleness and inactivity frequently irritate, rather than soothe. If your pursuit of "recreation" leads you into unaccustomed physical exertions you are likely to return from a vacation more weary, nerve sore and "run down" than when you went away.

**Dr. Virgil A. Davis has something much better than a vacation for you!** Without the use of medicines or drugs, without the loss of an hour from your business and social engagements, and at a cost to you that is negligible, he will restore to you abounding Vitality, Strength, Energy and Mental Vigor. In a short but complete course of weekly instructions, adapted to **your** individual needs and sent you by mail, he will teach you how to practice in your own home

## The Simplified Science of Living

give you radiant health, permanent freedom from brain fog, irritable nerves, languor in body and mind, abnormal fatigue. He will give you no torturous, monotonous exercises, no difficult dieting, no great inconvenience of any sort, no extra expense, nothing mysterious or theoretical.

The Dr. Davis Method is scientific, sensible, sane—devised and perfected by a master of the natural laws of physiology and psychology and the foremost authority on longevity. His discoveries years ago transformed him from a nervous invalid into a robust, dynamic personality, vibrant with vitality. What he did for himself he has since done for hundreds of the best known business and professional men and women in America. He will do the same for **you**. He absolutely and unconditionally **guarantees** satisfaction in every case.

It will cost you only a stamp to learn the details of this remarkable system of Rejuvenation—to obtain a copy of his new **FREE** book, "Supreme Living," which tells in plain language how you can profit by his knowledge of the care of the body. Will you spend that much in the interest of your health and happiness?

Arise to this exceptional opportunity—**write TODAY for this book.**

### TEXAS INVESTMENT LAW

Reports from Texas lead to the conclusion that public sentiment in that state in favor of the repeal or material modification of the law regulating investments by "foreign" life insurance companies, is steadily increasing. This provision, popularly known as the Robertson law, requires, among other things, that outside life companies transacting business in the state shall invest not less than 75 per cent of the reserves of their Texas policies in securities designated by the state authorities; that is to say, the stocks and bonds of Texas enterprises. The enactment of the law some eight or ten years ago was followed by the prompt withdrawal of twenty-one leading life insurance companies, the directors of which were unwilling to permit a state government to select the securities in which their funds were to be invested.

The absence of these powerful competitors left an open field to such local companies as were there operating, and induced the organization of new ones.

The withdrawal of the large outside companies contracted the supply of loan money in the state, and the average interest rate went up. In the neighboring state of Oklahoma the rate is from one to two per cent lower. This is the point at which the shoe pinches the Texas farmer and business man.

Last year an effort, supported by the Governor, was made to repeal or substantially to amend the law, but without success. At present the advocates of the law are working for its retention. As nearly as I can make out the contest is mainly between the politicians and the business interests, the latter striving for unconditional repeal, the former "standing pat." There are no indications of interest on the part of the life companies which withdrew.

We get some light on the situation from a letter written by Frank Eckles, Sr., a business man of Tyler, Texas, an uncompromising advocate of repeal, who repudiates any obligation to Texas life companies, adding:

Most of the home life insurance companies have grown rich on high interest that they made our people pay. This old song that they have been singing, 'Keep Texas Money in Texas,' has made lots of us Texans sick when we know that this home money goes into the pockets of about 2 per cent of the Texas people and the other 98 per cent of our people have made them rich. If our next legislature does the right thing it will repeal the Robertson law, knock it clear out and tell outside companies to come in and if our home companies cannot compete with them, let them get out of the game. Let them rent out their skyscraper buildings to some outside companies who will let our people have cheaper money.

### This Job Needs a Trained Man

You've reached your limit. You can't expect to step into a job that pays a big salary until you've prepared yourself for it.

It's a serious question, this problem of getting ahead. There is only one solution—you must have training; you must be able to do work that others can't do, or your pay will stay on a level with theirs.

The business of the International Correspondence Schools is to help just such men as you to get good positions and hold them.

Right now over one hundred thousand ambitious men are preparing themselves through I. C. S. courses for the bigger jobs ahead. Last year nearly five thousand reported increased pay as the result of I. C. S. training. These men got their training in spare time and in their own homes. What the I. C. S. have done for others they can surely do for you. But you must make a start—the same start that they made—and the way has been made easy for you. Mark and mail this coupon.

# JOHN KENDRICK BANGS

Presents THE GENIAL PHILOSOPHER

BLESSED stillness brooded over all. The Fourth of July had come and gone, and the Genial Philosopher, nursing a wounded thumb, sacrificed not so much on the altar of patriotism as in pursuance of certain grand-paternal duties, gazed stolidly out of the window.

"Well," he said, "I suppose I should be happy. It's all over, and I am still all here. A scorched thumb and a singed eyebrow are all I have to remind me of the terrors of Independence Day."

The Cynical Sciolist snorted.

"Independence of what?" he demanded.

"That's just what I have been asking myself," said the Genial Philosopher, reflectively, as he gazed out of the window and watched a traffic policeman impede the smooth flow of the vehicles of commerce on the avenue. "*Independence of what?* A very pertinent if not impertinent question, Brother Sinnick? Is there such a thing as real Independence in a world full of hopelessly Interdependent human bipeds? I wonder. Those wise, but somewhat unimaginative specialists who write our dictionaries for us tell us that Independence is a *state of freedom from dependence on others for guidance, government or financial support; a spirit of self-reliance, or freedom from subordination to others*. Wonderful dream! Exquisite abstraction! But what does it all amount to? Freedom from dependence on others for guidance presupposes a condition of such maturity and ripened wisdom that no need for guidance shall ever arise in the day of the said Independent party which he cannot meet for himself, unaided; and who on this, or any other known earth, has ever discovered that animile? Take myself, for instance. If I could have myself set up in type and published in limp leather binding, on Japanese vellum rice-paper, with deckled edges, and gilt tops, as a Compendium of Miscellaneous Information, I should have all the Cyclopedias ever published beaten to a frazzle, and even at that, my friend, *I should still have to look to others for guidance*. To my Cook for instructions as to how many pounds of corn-starch it takes to make a quart of Sunday School Ice Cream. To my Doctor for suggestions as to how best to untangle the knotted skein of inner circumstance that invariably follows overindulgence in my favorite luncheon of potted lobster and strawberry short-cake. To my Lawyer to tell me how on earth I can possibly escape the charge of being a criminal with forty-eight separate and distinct State

Legislatures, and one central Government Owned Law Factory at Washington, working overtime, inventing new statutory offenses. Even to my Garbage Man must I look for guidance to know what to do with such byproducts of my household as the said household is unable to assimilate. The man does not live who is free from the need of guidance by others.

"And then that freedom of dependence on others for Government—that truly makes me laugh. When the comic papers fail me I turn to that for humor, and never in vain. The only creature in this world who enjoys that kind of freedom is a Bandit like our good friend Villa, enjoying temporary independence of all restraint in the canyons of Mexico. Are you and I independent of Government by others? Try it once! Go outside there now on the street, and climb up to the top of that lamp-post on the corner, and from that lofty height try to address the surging Proletariat upon *The Influence of the Imagiste Poetry of the Fijis upon the Vers Librists of the Third Punic War*, and see how free you are from Government by others. I'll bet you a red apple against a vote for the Socialist Ticket that before you have finished with your first period a big burly bluecoat from the ferny brakes of Killarney will have you lying flat on your back on the sidewalk, studying purely optical astronomy, with a thirty day period of rest and relaxation on the breezy shores of Blackwell's Island in the offing. And on the broader scale where do we stand in respect to this matter of Government by Others and our freedom therefrom? You and I are directly or indirectly taxpayers. What we dodge in direct taxes comes up and hits us on the rebound somehow, somewhere, and a portion of every cent that is paid out by Congress for any purpose whatsoever comes out of our pockets whether we wish it to or not. When Congressman Blitherhead, of Tuscumbambia, Alabammy, demands and receives an appropriation of \$150,000 to build a \$25,000 post-office building in his town, with a population of eight hundred and fifty-seven people, ninety per cent of whom can't read or write, what have *you* to say about it? Where is *my* boasted freedom from Government by Others when the tax-gatherer comes around and presents his bill? We may be independent of China, and Senegambia, in matters of Government. We may *think* we are independent in matters of Government of Great Britain, France, Russia, Germany and Japan, and Italy and Mexico, but as a matter of fact *we are not!* We may be beyond their jurisdiction, but we are not beyond the sphere of their influence. We may not have to do the precise thing they tell us to do, but we have got to do something we wouldn't otherwise have had to do if

they hadn't told us to do that precise thing. The fact is, Mr. Sinnick, that in this world of neighborly relations, and unneighborly quarrels, no people are, ever will be, or ever can be independent of others in the fullest sense."

"Stop spilling the milk of destiny by imagining yourself free and independent. You are nothing of the kind. For every egg that you eat in the morning you are *dependent* on some Hen somewhere, and that Hen is *dependent* on some Farmer somewhere, who in turn is *dependent* on some railroad somewhere to get his product to market, which railroad is *dependent* on some guiding mind somewhere, that is *dependent* upon the operation of some law somewhere, that was devised under the impulse of some ideal somewhere."

"Wherefore," sighed the Cynical Sciolist, "the Day we Celebrate is a hollow mockery and a sham!"

"It needn't be," said the Genial Philosopher. "On the contrary we can make it a joy forever. If we were to drop our silly prattle about Independence, so false, so misleading, and devote the day to the Celebration of Our Interdependence instead, it would serve a useful and inspiring function—the first step in the direction of a period of devotion to an ideal of Universal Service based upon the interrelation of all human beings, and a realization by all of their individual responsibility for each other's welfare. When I eat my matutinal egg this realization of my Interdependence will require that I think of the Hen that laid it, and just as she has done her best by me, so should I seek to promote Social Justice for her, and all who have brought her service and my need together. When I put on my clothes, this spirit of Interdependence will compel me to think of the needs of the sheep, the herder, the shearer, the farmer, the thread-maker, the needle-maker and the tailor—the tailor particularly, aye, even unto the third and fourth generation of half-starved workers in the sweat-shops, so that my Interdependence, unlike my so-called Independence, shall not in the end prove to have been a mocking delusion and a selfish snare."

"Well, so long," said the Cynical Sciolist, reaching for his hat.

"Off? So soon?" asked the Genial Philosopher.

"Yes," said the Cynical Sciolist, with a grin. "Your Declaration of Interdependence has awakened within me a sense of duty. I have just been thinking of my matutinal egg, and I'm off to see the Hen that laid it."

"Good," said the Genial Philosopher. "Going to take her a nice package of popcorn?"

"No," said the Cynical Sciolist. "I'm going to take her a nice sharp little axe. It's a poor Interdependence that won't work both ways."

## REMARKABLE REMARKS

THEODORE ROOSEVELT—I am out of it.	
SAMUEL GOMPERS—Mr. Debs is no friend of the workers.	
CHAMP CLARK—We never will arbitrate the Monroe Doctrine.	
ED. HOWE—Topeka is hypocrite headquarters of the United States.	
KING LUDWIG—Farming can only prosper when practised intensively.	
MARY GARDEN—I am in a frenzy because women cannot go to war.	
GENERAL BRUSILOFF—Observe the bayonet's glitter and its slender contour.	
THEDA BABA—I am more widely known on the screen than any other person.	
ARCHDEACON STUCK—I have always had a sort of dread of trained sociologists.	
ELIHU ROOT—For the Democratic party the government is a cow to be milked.	
MARY PICKFORD—We do not spank children to make them cry in the movies.	
CHANCELLOR VON BETHMANN-HOLWEG—The German never hesitates to say what he thinks.	
MAJOR GENERAL LEONARD WOOD—No wolf was ever frightened by the size of a flock of sheep.	
CAROLYN WELLS—What makes a book a phenomenal success? Much bad, much pad, and much ad.	
WOODBROW WILSON—There is nothing either in the theory of free trade or the theory of protection.	
BISHOP GREER—The proportion of good husbands as against bad husbands is greater than it has ever been.	
ADELINE W. STERLING—Why should the married woman be listed on her tombstone as "Jane, wife of John Smith."	
THOMAS MOTT OSBORNE—Only three per cent of the total charged with murder in the first degree are convicted.	
PRIMA DONNA BORI—Comparatively few beauty seekers realize that grace means first of all child-like abandon.	
PRESIDENT JOHN GRIER HIBBEN—There has been too much talk in times past in our country of the rights of man.	
MRS. VERNON CASTLE—I don't think I have ever seen so many handsome men in my life as there are now in London.	
BILLY SUNDAY—I expect to fight until hell freezes over, and then I'll buy a pair of skates and tackle them on the ice.	
LILLIAN RUSSELL—As the eye mirrors the soul, so also the complexion reflects the condition of the digestive apparatus.	
ARTHUR BAER—The aviators who are going to fly around the world will find the walking very poor in the Sahara Desert.	
ARNOLD BENNET—Often there is a clearer vision of the truth during the intervals of a classical concert than on a death bed.	
CHARLES E. HUGHES—By prompt and decisive action (on the part of the Administration) the "Lusitania" tragedy would have been prevented.	
VICE PRESIDENT MARSHALL—There are hundreds of men in America walking around the streets who are dead but have not yet been buried.	
GRAND ADMIRAL VON KOESTER—When the advocate of humanity and justice, President Wilson provides an enemy with munitions we are entitled to use U boats.	
GEORGE BERNARD SHAW—The cathedral of Rheims is not spoken of since we came within an ace of bombarding the Acropolis to force Greece to relax her neutrality.	

GENERAL NELSON A. MILLS—The placing of an army on American soil is the last thing any European government would attempt—it could never be reëmbarked.

LUKE MCLURE—The reason why men make poor chambermaids is because they haven't sense enough to hold a pillow in their teeth when they are putting on a clean pillowslip.

SENATOR NEWLANDS—If you cannot have more than ten Senators in the Chamber at any one time and you want to get the attention of ninety Senators, it will be necessary for you to repeat your speech nine times.

## THE HOUND OF TWENTY-EIGHTH STREET

In Twenty-eighth street, there before  
An old antique shop's cluttered door,  
A lean and friendly hound, he stands;  
His nose worn golden by the hands  
Of passersby who, as they go,  
Caress him. Not the cherished toe  
Of Rome's Saint Peter smoother shows  
Than this bronze dog's inviting nose.  
And he who dreamed the hound and made  
Him, for his toil were overpaid  
Could he but pass that way and see  
His handiwork's free masonry,  
The kindness of those reaching hands  
Caressing their bronze friend who stands  
In Twenty-eighth street, there before  
The old antique shop's cluttered door!  
—Gertrude Knevels in the New York Sun.

## RUSSIAN PEASANT-CRAFT

The Russian Ministry of Agriculture has opened a number of avenues in American commercial circles whereby the unique hand-made articles of the peasant, made in the snowbound izbas during the long Russian winter, will be placed within reach of Americans. The Imperial Government's purpose in this is partly to extend Russia's trade, but mainly to furnish a means of livelihood for the tens of thousands of wounded and crippled men, forced to return to their peasant homes as a result of the Great War.

This true peasant handiwork, hitherto uncommercialized, is the most original that has been seen in modern times. In these peasant izbas is being made a lace not less beautiful in design and fineness than the famous laces of the Middle Ages. Russia is a land of linens, and the manner of their preparation and careful weaving, by hand, produces textures unlike those of any other country.

The government has been careful to perpetuate the original ideas of each of these Koustar centers, and every region in Russia is marked by some typical and self-expressive industry. From the Caucasus come rough ornaments and exquisitely chased silver works; from the north comes a whole industry of unique wood work made in the richly grained Russian birch; from Little Russia come some of the most beautiful laces and linens. In modern trade, where almost every avenue of production has been commercialized to enable the easy supply of popular demand, this opening to America of the hitherto unknown peasant handiwork of Russia is the entrance to unsuspected beauties in the common things of life.

A Journal of Civilization

## THE BIG WAY WITH MEXICO

**T**HE conciliatory tone of the Carranza note is gratifying. It indicates that the de facto government of Mexico does not want war with the United States. Neither does the United States want war with Mexico or with any part of Mexico. What we want is peace and good order in Mexico for the sake of our own safety, for the sake of the well being of the Mexican people, and for the sake of the cause of civilization in the North American continent. So on that side of things it is well.

The Carranza note renders a critical situation less acute. But it does little more. Those who have hailed it as the beginning of the end of all our troubles in Mexico are more optimistic than clear headed. The problem is much bigger than that of avoiding war with Carranza.

The sudden revival of the Villista revolution under the rumored leadership of the mysterious and elusive Villa himself at once puts a new face on the matter. Rather it reveals again the old face with the demoniac grin that the Mexican situation has worn ever since the murder of Madero.

It raises again the searching question: Has the United States any other duty toward Mexico than a negative one? Does it consist merely of the obligation not to interfere with the Mexican people in their pathetic efforts to work out their own salvation and not to permit their frantic struggles to spill over our border and damage life and property in American territory?

The President seems to think we have no other more positive responsibility. The Independent does not believe that Mr. Wilson sees the situation in true perspective.

The spirit in which he approaches the problem is high and noble. It breathes of deep sympathy for the people of Mexico and of abiding belief in democracy. But no concrete, definite, farsighted plan of action seems to flow from it. The President knows how the American people ought to feel—and, we believe with him, does on the whole feel—toward the Mexican people. But he does not seem to know what the American nation ought to do about the Mexican situation. We believe that he ought to set about finding out and then proceed to do it.

We commend again to his earnest consideration the proposal for a High Commission, to be composed of the biggest and finest citizens of the United States, which shall be sent on an embassy of good will and helpfulness and friendly counsel to the de facto government of Mexico, and more important than that, to the Mexican people.

That High Commission should assure the people of Mexico that we have no ulterior motives of aggression and exploitation. It should make a frank and generous proffer of help out of their difficulties. It should kindly but inflexibly make it clear to them that their disorders and their anarchies are not merely their own affair but the business of the world, and in particular of their big neighbor to the north.

To create such a High Commission would be to attack the problem in the large instead of making spasmodic and ineffective efforts to meet its shifting phases as they arise from day to day. The attempt might come to nothing. But every individual effort we have thus far made has met the same sad fate. We have tried plenty of little expedients. Let us try the big way now.

## OUR FRIENDSHIP FOR MEXICO

**J**UST now, when the Mexicans appear to regard their republic as threatened by the United States, it may not be improper to remind them that if it had not been for the United States there would now be no republic of Mexico. Like all the twenty republics south of us, Mexico has been under the protection of the Monroe Doctrine. This doctrine has been often questioned by European powers, but only once has a serious attempt been made to violate it. This was between 1851 and 1865, when the United States was engaged in internecine warfare that imperiled its very existence. Just as soon as the rebellion broke out the warships of England, France and Spain set sail for Mexico and took possession of Vera

Cruz. Secretary Seward notified the three allied powers of our deep concern and anxiety for the security and welfare of the Mexican republic and that our fleet would be stationed in the Gulf of Mexico to look after our interests. England and Spain soon withdrew, but it became evident that Napoleon intended to commit a second crime and overthrow the republic of Mexico as he had the republic of France. A fictitious empire was forced upon Mexico by French troops and an Austrian archduke, Maximilian, was selected as the puppet sovereign. The French invasion was directed against all the republics of the New World. It was prophesied in Paris that in ten years every South American republic would be

converted into a monarchy and the United States into a dictatorship.

The hands of the American Government were tied, but the voice of the American people could not be silenced. In the midst of the Civil War when war with England seemed imminent, the House of Representatives risked a war with France by passing by a vote of a hundred and nine to nothing that

it does not accord with the policy of the United States to acknowledge any monarchical government erected upon the ruins of any republican government in America under the auspices of any European power.

Nothing more could be done at the time, but just as soon as the Civil War was over General Grant proposed to organize an army of combined Union and Confederate soldiers who would volunteer to march to the City of Mexico and expel the Austrian emperor. He selected General Schofield to enlist troops for service on the republican side in Mexico. The War Department gave General Schofield a leave of absence for a year with permission to go beyond the limits of the United States and to take with him any of his staff officers that he wanted. In the meantime Grant sent Sheridan to the Rio Grande with 50,000 troops, which were distributed along the frontier, where they threatened the French lines.

But fortunately force was not necessary. The show of force was sufficient and Schofield was sent to Paris to negotiate for the retirement of the French troops instead of into Mexico to drive them out. The Secretary of State notified Napoleon in November, 1865, that the United States "still regarded the effort to establish permanently a foreign and imperial government in Mexico as disallowable and impracticable." As the Emperor of the French did not seem disposed to pay any attention to this Mr. Seward set a definite date for the withdrawal of the French troops.

The Mexican republicans under Juarez had been keeping up a brave fight for freedom, altho Maximilian had ordered all of them shot whenever caught, without trial or the possibility of pardon. As soon as the United States had compelled the withdrawal of the French the republicans were able to overcome the imperialists with no official assistance from the United States. Their victory was marred by the unnecessary execution of the would-be emperor in spite of the interposition of Secretary Seward.

But the United States had to say "Hands off!" to Austria as well as to France. Rather than have an Austrian archduke ignominiously dismounted from the throne it was planned to ship 10,000 Austrian troops from Trieste to Vera Cruz. But our minister at Vienna, Mr. Motley, was told by Secretary Seward that if Austria allowed a single soldier to embark for Mexico, the United States would break off relations at once. The Austrian Government saw the point and prohibited the shipment of the troops enlisted for Mexico.

The effect of the action of the United States in preventing the establishment of an empire in Mexico was not confined to the New World. As M. Thiers said in the *Chambre des Deputies* in 1867, the failure of the Mexican expedition paralyzed France in Europe and permitted Prussia to aggrandize herself. His words were truer than even he could imagine, for only four years later he was pleading with the inexorable Bismarck for the life of France.

Mexico was then not ungrateful for what America

had done for her. Seward was awarded the title of "Defender of the Liberty of the Americas" when he visited Mexico two years later.

Our purpose in recalling this bit of history now is not to claim more gratitude from the Mexican people, but to assure them that the purpose and policy of the United States are today just what they were fifty years ago. We stand as the protector of the Mexican republic equally against foreign foes and internal enemies, against monarchy and anarchy, against an imperial usurper like Maximilian and a presidential usurper like Huerta. It makes no difference to us what government Mexico has so long as it has a government. But what should we have to reply now if Europe said to us: "You drove out Maximilian. Do you think that the state of Mexico under such an empire as he would have founded could be any worse than it is now?"

We have assumed before the world the responsibility for the behavior of Mexico under the republic. We must see to it somehow that Mexico is at least as orderly and prosperous as if she were ruled by a successor of Maximilian and under the protection of France.

## THERE IS NOTHING NEW

ON the 4th of July, 1653, in his opening speech to the Little Parliament, Oliver Cromwell said in reference to the treaty that "was endeavored with the King": "They would have put into his hands all that we had engaged for, and all our security should have been a little piece of paper." The famous phrase, "A scrap of paper," which has been quoted so many thousand times during the past two years, was not, it appears, so new as it seemed, being, as a matter of fact, 261 years old.

## "SOFT"

A CANDIDATE for the Presidency is credited with having expressed the apprehension that after the Great War it will appear that the people of the United States are "soft." We suppose that he means that they will be so enervated by ease and peace and wealth that they will lose their ideals and not be willing to sacrifice themselves for patriotism as do the nations which have learned virility in war.

But what is it to be "soft"? Is it to hate fighting; to be unwilling to kill and be killed; to value the life and comfort of one's sons and brothers? War is the most horrible of evils, and if we detest it, it is as well to be "soft."

An old couplet often repeated, says:

Ill fares the land, to hastening ills a prey,  
Where wealth accumulates, and men decay.

But there is a great fallacy implied in it. There is no nation and never was one in which wealth induced decay. Wealth comes only by labor and sacrifice and suffering, by sweat of muscle and brain, and that gives strength, never decadence. The really "soft" are the impoverished who are so poor-spirited that they prefer the pothouse to the shop; for it is poverty that causes decay, improvident poverty. It is true that a millionaire's son may inherit wealth and make of himself a worthless, wrist-watched dude, but his undeserved wealth comes by the hard labor of a thousand men in farm and factory who are the people, not he. It is true that there may be here and there a misplaced town from

which the enterprising youth have fled to the city for better conditions and left a Deserted Village to the less competent and less ambitious. But they are not the people. The land belongs to the thousands who create wealth, and those who fail to create wealth find themselves replaced by more virile immigrants from Europe and Canada who add more riches.

It is a hundred years since Goldsmith wrote his famous couplet, and during the century England has multiplied her wealth ten times, and greatly increased her population and no one would venture to say that there is any decay in English moral fiber since the day when, as Thackeray said:

When the Fourth to hell descended,  
Heaven be thanked, the Georges ended.

And if war corrects "softness" the readiness with which our people responded to the Mexican threat may give us hope that we are not yet too "soft," and we may yet claim the blessing to peace-makers who are called the Children of God. And we have the right to add the further benediction, Blessed are the "soft" for they shall inherit the earth.

### CONTRASTS

EVER since the war broke out German and Austrian subjects living in heathen Japan have proceeded with their affairs unmolested. They have carried on trade and enjoyed the intercourse of their Japanese neighbors just the same as tho their native countries were not at war with Japan. Even the German banks in Kobe and Yokohama have been kept open for business as usual and with no lack of funds either.

In the United States, however, such free intercourse is considered too dangerous. Orders, we understand, were given to our troops entraining for the border not under any circumstances even to speak to a Mexican. Incidentally the United States is not at war with Mexico.

### THE ENTENTE IN ACTION

THE cordial understanding which began to take shape some ten years ago came to a climax at 7.30 a. m. on July 1, when ten miles of Frenchmen and ten miles of Britishers sprang from their trenches and charged the German trenches together. Tho the northern half of the line sang "Tipperary" and the southern half of the line sang the "Marseillaise," the two armies kept step and struck the foe as one. From the days of William the Conqueror France and England have been frequent foes and rarely friends. In 1854 they united in a reasonless raid upon Russia, but in 1898 they were at sword's points again over the partition of Africa.

The French general, who pinned on his breast the red carnation of revenge with the remark, "This flower will wilt in the German trenches," showed that the spirit of Boulanger still dominates the army. Thirty years ago the red carnation was seen in thousands of buttonholes, for it was thought that "the man on horseback" had come at last to lead France to *la gloire et la revanche*.

But, fortunately for France, the war upon Germany was postponed until the alliance with Russia and the entente with England gave her the needed strength on land and sea. During the first year of the Great War the French and British lost ground thru their failure to work together, but now General Foch and General

Haig are almost equally under the command of Generalissimo Joffre. The entente has become an alliance and the alliance an army.

### KIPLING AMONG THE PROPHETS

IT was seven years ago that Kipling wrote "With the Night Mail." It was a fantastic story of the marvelous developments in air traffic that have come about by the year 2000. Somehow it does not seem quite so fantastic today as it did the day we read it first.

Just the other day another one of its outlandish prophecies came true with a bang. In the story the airship that carries the night mail from London to Quebec in ten hours passes thru a night of atmospheric disturbance and meteorological high-jinks. As the morning comes with fair skies and relaxed tensions, the crew and passenger look down upon the sea:

A big submersible breaks water suddenly. Another and another follow with a swash and a suck and a savage bubbling of relieved pressures. The deep-sea freighters are rising to lung up after the long night, and the leisurely ocean is all patterned with peacock's eyes of foam.

A wanton flight of fancy—until that U-boat broke water off the Virginia capes last Sunday with a cargo of freight.

Well prophesied, sir!

### SELF-CENTERED AMERICANISM

THE world events that have filled the two years which will be rounded out on the thirty-first of July have changed the American people for good or for ill. It is commonly assumed that they have brought this nation into world politics on the big scale, and that they have lifted American thinking to a higher level? Have they?

Is it not quite as possible that they have narrowed and intensified our nationalism, rather than broadened it? Is it certain that our desire to keep out of entangling alliances has not been strengthened? Are we quite sure that we are less self-sufficient, less self-satisfied, less self-centered than we were?

These skeptical questions are not to be escaped as we review the Wilson Administration and reflect upon the reactions which it has started in public opinion. They stand forth insistently in the proceedings of the Republican convention at Chicago, and, above all, in Mr. Hughes's letter of acceptance.

It is true, undoubtedly, that millions of individual Americans, especially on the Atlantic seaboard, have been awakened by the European war and have entered into the tremendous experiences of a world consciousness as never before in their lives. They have felt and have understood the full significance of the mighty clash between two antagonistic civilizations. They have realized that democracy, liberty, all of the ideals and hopes that center in the responsible state, are in a life and death grapple with militaristic absolutism. They have seen that now, or later, the United States must itself become militaristic if absolutism can run amuck in the world, devastating, conquering, annexing, and can get away with the goods. Have the people of the United States as a whole seen this? Do they see it now?

Millions of them it is certain have not seen it and have not as yet any realizing sense of it. They are satisfied with their crops and their profits. They have approved of the Wilson Administration not because it has

asserted American rights, not because it has proclaimed that life is more sacred than property, but because it has kept us out of war. It hails the Republican platform and the Hughes statement not because of anything found in the one or the other which asserts the duty of America to stand forth as a leader among the nations in a stalwart attempt to bring them into a new and higher organization for the maintenance of peace and civilization. It hails them rather because they proclaim in both old and new phrases the time-honored shibboleth, "America for Americans." What have we to do with abroad?

This is the disappointing aspect of our new reactions. It compels us to face the question whether, after all, we have appreciably developed intellectually or morally under the shock of a world catastrophe.

A nation, like an individual, must observe the rule of minding one's own business. Its first duty is to be self-reliant and self-supporting. But the individual who does not go on from self-adequacy to participate in the achievements of his community and his generation is not a great man; and the nation that is content to amass wealth and play no part in the evolution of world civilization cannot expect to stand forth among the supremely great nations in the pages of history. To avoid quarrel and offense is dignified and worthy. To be provident and blameless is commendable; but when great duties call and great efforts are demanded to preserve, to enrich and to hand on the civilization which the nations that have preceded have transmitted to us, it is not a noble part to stand aloof enjoying one's own security and prosperity, feeling nothing of the thrill of opportunity and of adventure, and knowing nothing of that sterner and more glorious morality which can sometimes forget self in a great devotion.

The mightiest task that man has ever undertaken is at this moment confronting the nations. The world cannot go on in the false security of the years before 1914. A way must be found to prevent the utter destruction of all that civilization has thus far achieved. Is the United States to lead in this greatest of undertakings, or is it merely to "stand pat"? The roll call has begun. What is our answer?

### THE CHURCH AND SERVICE

WHILE the Presbyterian Assembly at Atlantic City was creating divisiveness by its strong emphasis upon intellectual standards and creedal statements, the General Conference of the Methodist Episcopal Church at Saratoga was laying the foundations of union with other sections of Methodism by their exaltation of the tasks to be accomplished by the Church and the needs of the world which call for consecration and service. It is a pointed lesson for leaders in the movement for Church union. Traditional, creedal, ritual and theological inheritances destroy broad sympathy and enthusiasm, divide and weaken effort. The vision of service, the call of the harvests waiting for the sickle, and the prospect of the triumph of the Gospel applied to the social life of the world give the thrill of inspiration, the strength of cohesion, and the courage of victory. Divisions are accentuated by dwelling on the past. They are forgotten in the enthusiasm inspired by the hope of the future and the determined assumption of the tasks of the present. The road to union lies not in clearing up the mists and misunderstandings of bygone days, but thru gen-

erous coöperation and common planning for moral conquests yet to be made. Religious unity is not a base of operations to which we must return for needed supplies, but a spiritual goal to be achieved by joint campaigns for society's salvation.

### NEXT?

AN American city has declined a helping of "pork"! The chunk was already out of the barrel. It had been presented to the community on a silver salver. But the citizens put patriotism above pork-hunger, and begged that it be salted down again. Incredible!

Ripon, Wisconsin, has a proud place in American political history. It saw the birth of the Republican party. But today it wears a brighter crown.

Congress had voted \$75,000 for a new post office in Ripon. The city was naturally delighted. They always are. But the Mexican crisis came on, and Ripon realized that national preparedness costs money. So its common council, its Commercial Club and hundreds of its citizens have petitioned Congress to take back the \$75,000 and use it for defense.

It is a brave example to the cities and towns of America. Which one will be next?

### DECISION DAY

IT is noticeable that the practice is becoming more general in our Sunday schools of observing what is called "Decision Day." It is also well to notice that this indicates a change in view in our non-liturgical churches as to the attitude of young people to the Church.

On Decision Day superintendents and teachers are expected to direct the attention of their pupils to the duty and privilege of becoming communicants. They are told they are old enough to take on themselves the vows of the Christian life, and to show their earnestness by definitely connecting themselves with the Church. They are not asked to work up any strange or impossible religious experience, but simply to pledge themselves then and there with divine help to be disciples of Christ. And we are told that the fruit of such quiet resolution appears in sane and steady Christian life. Of course, those who make this decision receive special instruction and in due time are taken into full membership. In the Lutheran Churches and the Protestant Episcopal Church children are instructed to become communicants in their early teens, and much is made of their "confirmation." The Catholic Church goes further, and at the age of seven children receive the sacrament of the Eucharist. The late Pope gave special instructions on this matter, believing that many were lost to the Church by waiting for their confirmation day.

Whether called Confirmation Day or the Consecration of the Christian Endeavor or the Decision Day of the Sunday school, the virtue of the day consists in the resolve which gives permanent value to life, with serious purpose, rather than the excitement of a pious passion. It finds its expression in Wordsworth's "Ode to Duty":

Thru no disturbance of my soul  
Or strong compunction in me wrought,  
I supplicate for thy control,  
But in the quietness of thought . . .  
Give unto me, made lowly wise,  
The spirit of self sacrifice,  
The confidence of Reason give;  
And in the light of Truth thy bondman let me live

# THE STORY OF THE WEEK

## The Anglo-French Drive

The snake-like line that has dangled down from Belgium thru France for the last twenty-one months has at last been shifted eastward. The long-awaited Allied offensive on the western front has now begun. The actual distance advanced during the first week is not much greater than was gained by the British at Neuve Chapelle in March and the French in the Champagne in September of 1915, but the prospect of success is thought to be better than last year, for the largest army that England has ever had in all her history has been put into this field and both the French and British forces have been for the first time supplied with artillery and ammunition on a scale at least equal to their enemy. Altho the French have lost heavily at Verdun, the Germans must have been weakened still more, not only by their greater losses there, but also by the men they have been compelled to sacrifice during the year on their various other fronts in Russia, Galicia, Serbia and Turkey.

Altho the German commanders, like the rest of the world, anticipated an attack in July upon their western front, they seem to have been kept somewhat in the dark as to the exact time and place selected for the Allied offensive. At any rate, the Allies took every precaution to prevent the secret from leaking out. Troops were so far as possible brought forward to their new positions at night. Batteries were concealed near the line, but their guns were never allowed to give voice until the determined day. The soldiers were kept in ignorance of the plans and the

officers were ordered not to mention them at mess.

During the week preceding the attack the guns were going at a lively rate all along the line from the Somme to the sea, and frequent infantry raids compelled the Germans to keep their trenches well protected at all points. At the same time the French and British aeroplanes did what they could to break up the communications by dropping bombs upon railroad stations and supply depots.

**The Charge** The attack for which France and Great Britain have been preparing for over a year was launched on the morning of the first day of July.

All thru the night the fire of the long range artillery had increased in intensity and at 6.20 the rapid-fire trench mortars were brought to bear upon the first German line. Ten minutes later they were raised to the second line and at that moment the French and British troops jumped out from their shelters and charged along a front of twenty miles.

The gunfire had been so thoro and searching that in some places the German trenches were reduced to a mere furrow and their bomb-proof shelters were found filled with dead.

Some of the German redoubts which were expected to offer a stout resistance were discovered, when reached, to be so completely demolished as to be easily occupied. Finding the fortifications less formidable than they had anticipated, one body of British troops took in rapid succession the first, second and third line of trenches, then

## THE GREAT WAR

July 3—French take Curlu. Russo-Japan treaty of alliance signed.

July 4—British take La Boisselle and Thiepval. Russian Cossacks enter Hungary.

July 5—French take Estrées. German repulse French attack on Vaux and Damloup, near Verdun.

July 6—Turks drive Russians from Kermanshah, Persia. French take Heure.

July 7—Germans fall back from Kolki. British take Contalmaison.

July 8—British and French Governments renounce Declaration of London. Germans attack Thiaumont, near Verdun.

July 9—Merchant submarine "Deutschland" arrives in Baltimore. Russians cross the Stokhod River, toward Kovel.

advancing farther than had been planned they ran out of bombs and failing to receive support were obliged to surrender. The same blunder of getting too far ahead was committed on a larger scale at Neuve Chapelle and Gallipoli.

The French advance was made in a more systematic way and gained more ground. At the end of the week the British had taken about 6000 prisoners and the French more than 8000. The British report the capture of twenty cannons; the French seventy-six. The British have advanced about two miles; the French about four.

**Where and How** The point chosen for the Allied offensive in France is where the French and British forces join. This is between the Somme and Ancre rivers, just east of Albert. Both these streams run across the lines from the German side into the territory held by the Allies to the west.

The failure of the local attempts to break thru the German line last year showed the necessity of a wider offensive front so that troops cannot be readily shifted to the endangered point. This time the Allies have chosen a sector of about twenty miles for their advance, the northern half of which is held by the British and the southern by the French.

The British left rests upon the river or rather the creek of Ancre and from this point the British line runs first south along the Ancre and then east curving around the German salient directed toward Albert. In this angle are the villages of Thiepval, La Boisselle, Ovillers, Fricourt, Mamety and Montauban, all of which were captured by the British in the first week of July. The British movement is directed toward Bapaume, a railroad center, twelve miles northeast of Albert.

The French objective is Peronne, a

WITH HELMET AND LANCE

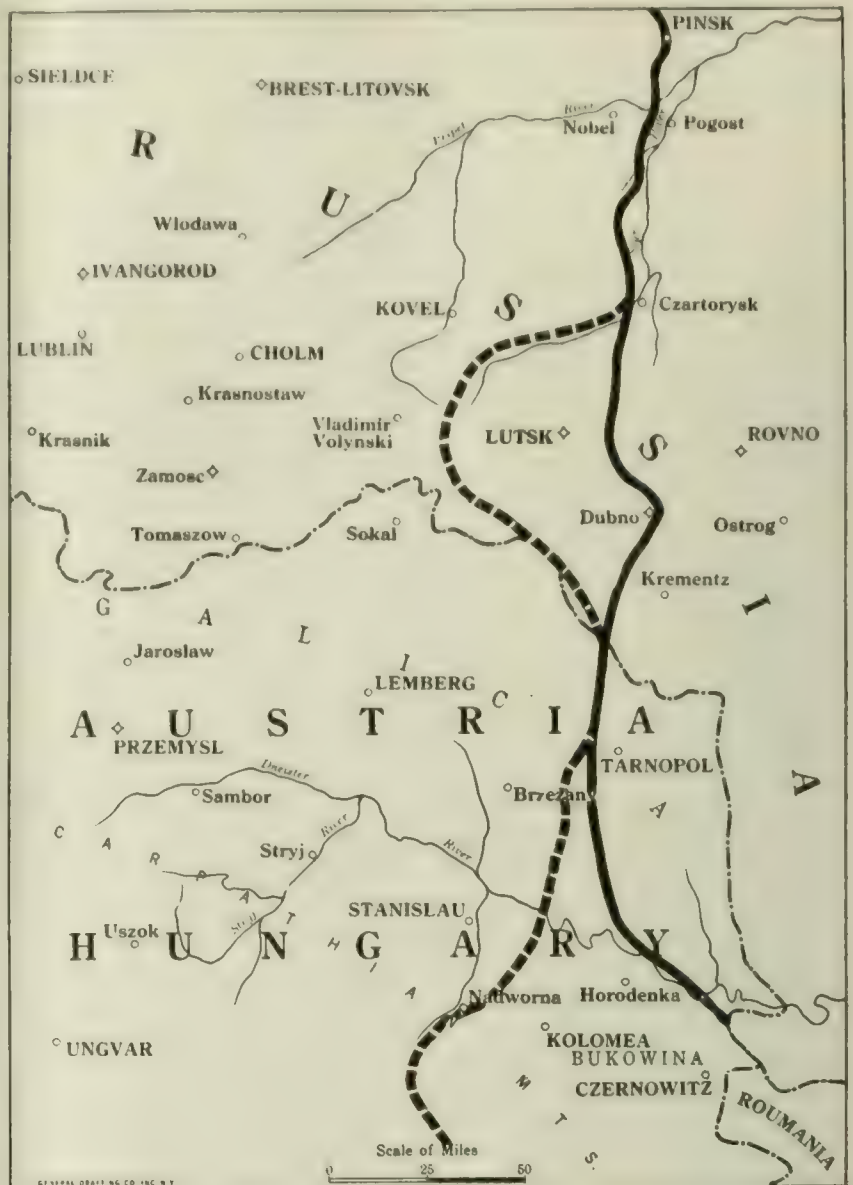

These are not "house maids," but the French cavalry in their new uniform and equip with rifle, bayonet, sword, lance and steel war-horse. If the Germans are dislodged from their trenches they may take an active part in driving them out of the country.

THE WESTERN FRONT

The Anglo-French drive which began the first of July has swept over the indicated territory in the above map. The British in the northern half of this sector are striking toward Bapaume; the French in the southern half are striking toward Peronne

THE EASTERN FRONT

The Russian drive which began the first of June has swept over Bukovina and the territory indicated in the above map. The Germans on the north are trying to hold the Russians back from Kovel; the Austrians on the south are trying to hold them back from Lemberg

more important center, six miles east of their original line and less than a mile ahead of the point they have now reached. In advancing toward Peronne, the French are following up the Somme, and clearing the Germans from both banks as they go. Since the French lines were on the start farther advanced than the British and since their gains during the week have been greater, they now occupy a pronounced salient and it would be dangerous to advance much farther until the British line on the north can be brought up even with the French. The Germans are already taking advantage of the advanced position of the French to attack them on their right flank near Estrées.

The Germans apparently overestimated the strength of the British offensive and underestimated the French, for after the first impetus of the British had been checked they moved troops from the British front to halt the more threatening offensive of the French.

The country where the fighting is going on consists of rolling hills thru which the Somme cuts a deep channel. The Germans had dug their shelters into the chalk beds, sometimes forty feet under the ground. Their batteries were so well hidden that the Allies were surprised at the emergence of

German soldiers from ground over which they had swept long before.

In most cases the Germans were found well protected by reinforced concrete casements from which they could only be reached by bombs or bayonets. But in other cases they met the charge of the Allied infantry by coming out on the parapet and using their machine guns in the open to rake the advancing lines.

**The Russian Advance** All along the eight hundred mile front from the Gulf of Riga to the frontier of Rumania the Russians have kept their enemies occupied, and in the southern sector of this line they have made considerable gains. The Austrian crown land of Bukovina is now altogether overrun by the Russians, and the Cossack cavalry have even followed the retreating Austrians thru the passes of the Carpathian mountains and have raided the railroads on the Hungarian side. The remnants of General Pflanzer's army were forced against the eastern frontier of Bukovina and managed to escape capture only by crossing the border into Rumania, where they are interned.

The capture of Czernovitz and the collapse of the Austrian defense in Bukovina enabled General Letchitsky to push westward along the Pruth to

the Carpathians. This enabled him to cut the railroad leading from Hungary thru the mountains into Galicia at this point. The two important railroad centers in this region are Kolomea and Stanislaw. The first has been taken and the second is threatened.

This westward movement south of the Dniester River brings the Russians back of the right wing of the Austrian army resting upon that river. Consequently, General von Bothmer has been obliged to withdraw from the Strypa River, where he has hitherto held the Russians in check, and to fall back upon the Zlota Lipa River, the next tributary of the Dniester, some twenty miles west.

General Brusiloff made his greatest advance in the Russian territory lying north of the Galician boundary. Here he pushed forward about fifty miles from the old Russian line, and after taking the fortress of Lutsk, he seemed likely soon to reach Kovel and so to cut the railroad connecting Brest Litovsk with Lemberg.

But General von Linsingen came to the rescue with 200,000 German troops and struck the Russian line right where it begins to bulge forward at Kolki and Czartorysk. This angle the Germans were able to hold for several days by dint of hard fighting, but they have now been driven out of

it and forced to retire toward Kovel.

The Russian War Office claims that during the month of June 217,000 Austrian and German prisoners were taken. Ten thousand more were reported on July 4 and 5. The Austrian War Office asserts these claims are grossly exaggerated and points out that if their killed and wounded are in the usual ratio to this they would not have a single soldier in that region.

**Russo-Japanese Treaty** The two powers which were brought together at Portsmouth have been growing closer ever since until finally they have been joined in a treaty of alliance. This was signed at Petrograd on July 3 by Sergius Sazonoff, Russian Minister of Foreign Affairs, and Baron Ichiro Motono, Japanese Ambassador. The treaty is said to consist of two articles in substance as follows:

First—Japan will take part in no arrangement or political combination directed against Russia. Russia will take part in no arrangement or political combination directed against Japan.

Second—In case the territorial rights or special interests in the Far East of one of the contracting parties which are recognized by the other contracting party are menaced, Japan and Russia will consult with each other on measures to adopt with a view to supporting or extending assistance for the safeguarding and defense of these rights and interests.

This combination of the two great powers on the Asiatic side of the Pacific will doubtless have a great influence on the future of China, in which the "special interests" referred to may be presumed to lie. The measure is said to be designed especially to prevent the extension of German influence in China after the war, but is likely to affect the interests of other commercial powers in some degree.

For some years Russia and Japan have been pursuing plans in harmony. When Russia asserted her claims to outer Mongolia, Japan strengthened her hold upon Manchuria and extended her control into inner Mongolia.

During the present war the Japanese

have been actively engaged in making arms and ammunition for the Russians, and it is said that Japanese officers are assisting the Russians in their Galician campaign.

#### U-Boat Reaches Baltimore

The first merchant submarine the world has ever seen arrived in Baltimore harbor early Sunday morning, July 9. She reported to the pilot boat off Cape Henry as the "Deutschland" of Bremen, Captain Kairig. She had left Heligoland June 23 and had escaped by diving from the British cruisers that patrol the seas. For two days the "Deutschland" has been playing hide and seek with the

British warships which, warned by rumors of the voyage of the submarine, were scurrying up and down the Atlantic coast in search of her.

The "Deutschland" is 300 feet long and thirty feet wide. She is propelled by two Diesel engines of 600 horse power. She carries a cargo of about a thousand tons of aniline dyes, medicines and mail, and will take back rubber, nickel and other materials most needed by the German army. It is proposed to establish a regular line of these submarine merchantmen, for altho their cargo capacity is small, they will afford an opportunity to convey mail and money between Germany and the United States, which is now impossible on account of the British blockade. The "Deutschland" carries no arms except two small rapid fire guns for defensive purposes such as are allowed by our government to merchant vessels.

#### Carranza Answers Our Note

The long awaited reply of the de facto Mexican Government appeared on July 4. It softens the earlier demand that American troops immediately evacuate Mexican soil to a suggestion for the patrol of the frontier by American and Mexican forces, each keeping to their own side of the boundary line, and a proposal for mediation by other Latin-American republics. The note reads in part:

This government is disposed now, at it has always been, to seek an immediate solution of the two points which constitute the true causes of the conflict between the two countries, to wit:

"The American Government believes reasonably that the insecurity of its frontier is a source of difficulty, and the Mexican Government, on its part, believes that the stay of American troops on Mexican territory, aside from being a trespass on the sovereignty of Mexico, is the immediate cause of conflicts. Therefore the withdrawal of American troops, on one hand, and the protection of the frontier, on the other, are the two essential problems the solution of which must be the directing object of the efforts of both governments."

This government proposes to employ all efforts that may be at its dis-

posal to avoid the recurrence of new incidents which may complicate and aggravate the situation. At the same time it hopes that the American Government on its part may make use of all efforts to prevent also new acts of its military and civil authorities of the frontier that might cause new complications.

**Events in Mexico** Next to the diplomatic negotiations between Carranza and the American Government, the renewed activity of the Villista forces is the most important factor in the Mexican situation. There are persistent rumors that Villa himself is in command of a considerable army near the town of Jimenez, in southern Chihuahua. The Carranzista general, Ignacio Ramos, attempted to clear up the country to the southwest of Jimenez. At Corral ranch, fifteen miles from the city, a Villista band, the strength of which has been placed as high as three thousand, overwhelmed the Carranzista detachment and the general and most of his command were killed.

The outbreak is indirectly a serious peril to Carranza, for the rebels may attack American soldiers and civilians now in Mexico and possibly make new raids across the American border, in which case the United States will probably demand a free hand in overtaking and punishing the raiders; a demand which Carranza would hardly dare to concede in view of Mexican patriotic sentiment, and could not refuse without risking war. Therefore the Mexican Government is anxious to avoid any incident which may endanger friendly relations between the two countries. Carranza has ordered the return to General Pershing of the arms, ammunition and horses captured at the Carrizal fight, and he has released three-fourths of a store of 200,000 ounces of silver bullion seized from an American mining corporation at Parral, the rest being held for taxes.

## Preparing for War and Peace

The Mexican Government, while apparently anticipating peace, is not neglecting any of the precautions that would be necessary in case of war. The railroads are being utilized to full capacity in transporting guns and ammunition to the armies now mobilized in the north. The federal board of health has issued a call for men and women with experience as physicians and nurses to form a medical corps which would be ready for service upon a declaration of war. General Obregon, minister of war, has expelled from the country Juan Cabral and Ramon Sosa, because, as they were recently Villista generals, their loyalty to the existing

government was in doubt. It is thought that the same policy will be pursued with other rebel leaders who have surrendered to the Carranzistas.

The mobilization of the National Guard has already resulted in a triple benefit to this country. It has visibly impressed the Mexican military authorities; the more conciliatory attitude of the de facto government is proof of that. It has given the militia a more adequate training than they could possibly have acquired without experiencing in some degree the hardships of actual campaigning. Finally, it has revealed all the defects of personnel, equipment, organization and leadership which might otherwise have remained undetected until the actual outbreak of a war. In many states from thirty to sixty per cent of the guardsmen have been rejected as physically unfit for active service. The lack of equipment at first reported has been largely remedied by this time, but this and other causes have delayed mobilization to a serious degree. At present there are about ninety thousand American troops guarding the border; two-thirds of them militiamen, and the rest soldiers of the regular army.

The forces of pacifism have not been idle during the crisis either in Mexico or in the United States. An unofficial peace conference consisting of three Mexican and three American delegates met at Washington, D. C., on the 5th of July to discuss the best methods of relieving the strained situation. A delegation of Mexican labor leaders captained by Carlos Loverira of Yucatan attended a meeting of the leaders of the American Federation of Labor, also held in Washington. The officials of the Federation and the labor delegates from Mexico adopted a joint statement urging the working classes of both

#### THE LIFE LINE

So long as the United States forbids the shipment of ammunition into Mexico, Carranza withholds permission for our troops to use Mexican railroads. There are now no available aeroplanes at the border, and the safety of General Pershing's troops depends upon these motor trucks.

countries to exert themselves to prevent it.

The question of national preparedness, particularly in relation to proposals for military training in the public schools, was the chief controversial issue discussed at this year's meeting of the National Education Association, held during the first week of July in New York City. The chief speakers for the pacifists were William Jennings Bryan and David Starr Jordan; while the leading advocate of ample preparedness was General Leonard Wood. The majority of those who address the association as a body or spoke before its branch conferences opposed, on pedagogical as well as pacifist grounds, the attempt to make military training part of the school curriculum.

**Congress and National Finance** On Monday, the third of July, Senator Chamberlain, Chairman of the Senate Military Committee, reported the Army Appropriation bill carrying appropriations of \$328,000,000 for the current fiscal year. This is an addition of \$146,000,000 to the bill which passed the House of Representatives. To meet the extraordinary burdens which the new military and naval programs have put upon the resources of the Government, an additional revenue measure has been introduced into the House designed to provide two hundred million dollars from an increased surtax on incomes, a tax on inheritances, and a tax on profits from war munitions. The expense of mobilizing the National Guard and preparing in other ways for the security of the Mexican border, estimated at

#### THE MEXICAN SITUATION

**July 2**—Premier Romanones of Spain tenders the good offices of his government to help solve the controversy between the United States and Mexico.

**July 3**—General Ignacio Ramos killed in battle with Villistas at Corral. Two Villista generals expelled from Mexico by Carranza government.

**July 4**—Carranza replies to the American note and suggests mediation by other Latin-American governments.

**July 5**—American army headquarters reports that only half the militia is in readiness for service. Unofficial peace conference meets in Washington.

**July 6**—Villa reported to be raising a new army to fight the United States.

**July 7**—The American Government expresses gratification at the tone of Carranza's reply to its note.

**July 8**—General Arrieta reported in conflict with Villistas at Las Nieves.

**July 9**—Refugees claim that Villa is at the head of a large army of rebels at Durango.

The Treasury Department has made public the income and corporation tax returns from the various internal revenue districts. The yield of the individual income tax amounted to \$67,957,488.50; that of the corporation tax totaled \$56,909,941.78. One-fifth of the corporation tax and more than one-third of the tax on individual incomes was paid by the first and second New York districts, embracing New York City.

**Infantile Paralysis** Early in June there occurred in the Italian quarter of Brooklyn, New York, a perplexing outbreak of infantile paralysis. Until the coming of hot weather at the end of the month the number of cases was small and almost wholly limited to the Borough of Brooklyn. During the last week in June, however, there were fifty-nine deaths from the disease, and during the first week in July more than 110. The death rate has been alarmingly high, amounting to nearly one-fourth of the cases reported.

Dr. Emerson, the New York Health Commissioner, has taken very drastic measures to stamp out the epidemic. Not only have the infected districts been rigidly quarantined, but the reading rooms of the public libraries and all of the moving picture theaters have been closed to children under sixteen. The disease has spread to other parts of the country. Sporadic cases have been reported from nine other states and even in Montreal, Canada. The health authorities express no hope of checking the progress of the epidemic entirely before the end of the summer.

WILL SOME DISTANCE TO GO

# WHY I AM FOR PROHIBITION

BY WILLIAM JENNINGS BRYAN

**S**OCRATES says that before people can reason together there must be an agreement upon some fundamental proposition which can be taken as the basis of argument. In discussing the liquor question the most elementary proposition deals with the effect of alcohol upon the human system. Those who believe in legislation, whether in the nature of restriction or prohibition, start with the declaration that alcohol is a poison which, taken into the body, weakens the physical strength, impairs the mental vigor and undermines the morals.

If this proposition is false, the whole argument in favor of restraint upon the sale of liquor falls to the ground. If it can be shown that the use of alcohol is an advantage to either the body, the mind or the morals, those who favor its use will have no difficulty in opposing any interference with its sale or use. If, on the contrary, the evil effect of alcohol is admitted, it is difficult, if not impossible to make a logical defense of its manufacture or sale.

It is worth while, therefore, to consider this basic question. From the time when Daniel, a Hebrew captive, insisted upon testing the relative virtues of alcohol and water as a matter of diet and by his test vindicated the claims of water, down to the present day, the tests have all been on the side of those who abstained from alcoholic liquor.

**T**HE testimony against alcohol based upon scientific experiment and demonstration, is accumulating and has already exerted a powerful influence upon the public mind.

The test can be made today. Let 100 young men be selected in any country or clime; let them be divided into two groups—one group using alcohol and the other abstaining from its use and those who do not use alcohol will win the honors in school and the prizes on the athletic field. The same result will be shown if these two groups are tested in target practice, at typesetting or at any other work that requires accuracy.

The social statistics show that the number of accidents is greater among those who use alcohol and the life tables prove that the average expectancy of those who use alcohol is much less than the expectancy of those who do not use it.

The business world confirms the testimony of the scientists and the students of sociology. There is an increasing tendency in all large corporations to forbid the use of alcohol to men in irresponsible positions.

#### MR. BRYAN TODAY

Mr. Bryan and Dr. George W. Kirchwey, warden of Sing Sing Prison during Thomas Mott Osborne's suspension, and now appointed confidential advisor to the New York State Prison Department. This photograph was taken on July 4, when Mr. Bryan spoke before the Mutual Welfare League at Sing Sing

If any one believes that even the moderate use of intoxicating liquor is an advantage to a person seeking employment, there is a very easy way to test it. Let him secure from a friend the strongest recommendation possible and then add three words, in red ink so that they will be sure to be seen, "and he drinks." What will be his chance of employment?

The brewer, the distiller and the saloonkeeper are too well informed as to the effect of such a statement to write those words upon the recommendation of any friend for whom they desire to secure a place. If, then, the man who makes money out of the manufacture or sale of alcoholic liquor would not jeopardize the prospects of a friend by embodying such a statement in a recommendation, why should any one else doubt that the use of alcohol is indefensible from the standpoint of health, safety or business advantage?

If we may now advance a step further, we find that all legislation on the subject is a recognition of the injurious effects of the use of alcohol. The sale of alcoholic drinks is, in every state of the Union, separated from other businesses and put in a class by itself. If a man wants to

open a place of business for the sale of food or clothing or any other articles of ordinary use, he is welcomed in any community. Not so with the man who wants to open a saloon. He is met at the city limits and notified that, while others can engage in business without a special tax, he must pay a large sum for the privilege of selling his wares, that sum being constantly raised. More than that, he is notified that, while the butcher may open as early as he pleases, the saloonkeeper cannot open until a certain hour in the morning; that, while the restaurant can keep open as long as it pleases, the saloon must close at a certain hour in the evening; and that, while any other merchant may sell anything else to anybody else, he can only sell the stuff which he handles to those who are over-age and under-drunk. The law, found everywhere, forbidding the sale of liquor to minors is proof that the effect of alcohol is understood; and the provision against selling to drunkards is equally conclusive proof that alcohol has an established reputation for harm.

If as all of these restrictions show, the public recognizes that the use of alcohol is injurious, why is that sale permitted? Many illustrations have been used to emphasize the absurdity of licensing an evil and then fining those who suffer from it. The licensing of saloons, for instance, and the fining of those who get drunk, has been likened to a policy under which a city would license the spreading of the "itch" and then collect fines from those who scratched.

Comparisons have also been made between our care of domestic animals and our indifference to the welfare of human beings. No county, for illustration, would license the spread of any disease such as hog cholera. Why, then, should a community place a price upon the physical health, the economic usefulness and even the morals of its citizens, and give to those who conspire against them the right to spread ruin at will?

**T**HE discussion of legislation on the liquor question is turning more and more upon the unit of control. In a number of states the city or village is the unit, in some the precinct. In many the county has been made the unit, and nineteen states have enlarged the unit and made it include the entire commonwealth.

There is no reason why weight should be given to the arguments which are advanced for and against

any proposed unit. It might as well be understood that those who are interested in the liquor traffic favor the *lowest* possible unit, and that, as a rule, those opposed to the liquor traffic desire the *largest* possible unit, the side taken in the discussion of a particular unit depending entirely upon the size of the existing unit as compared with the size of the proposed unit.

If, for instance, the existing unit is the precinct and the proposed unit the county, those who represent the brewer, the distiller and the saloon-keeper will dwell upon the advantages of the precinct over the county, while the prohibition advocates will just as strenuously advance the arguments in favor of the county unit as against the precinct. If, after the county unit has been adopted, an effort is made to substitute state prohibition for the county unit, the very men who argued strenuously against the county unit, when the choice was between it and the precinct unit, will eloquently present the advantages of the county unit; while, on the other side, the very men who won the fight in favor of the county unit will be quick to point out its disadvantages when they have an opportunity to make prohibition binding thruout the state.

It is not worth while, therefore, to spend much time on the arguments that may be advanced for or against a particular unit. It is just as well to recognize at once that the arguments on either side have very little to do with the case; the real test is whether one favors the sale of liquor or opposes it.

**I**N all discussions of the liquor question there is one powerful argument on the side of those who favor the prohibition of the liquor traffic, whether the prohibition is applied to a large area or a small one, namely, that *the man who opposes the sale of liquor is asking nothing for himself except relief from injury at the hands of the others, while the man who insists upon the sale of liquor is asking something for himself which cannot be granted without injury to others.* This distinction between the reasons of those who favor and those who oppose prohibition is the basis for the discrimination that was formerly the subject of criticism, altho the criticism is scarcely ever heard now, namely: That a "wet" victory in any unit does not carry with it the right of sale in a subdivision of that unit, while prohibition in a large unit excludes sale in any subdivision.

The tendency is everywhere toward the increasing of the unit. The

city unit is giving way to the precinct or county unit, and the county unit is giving way to the state unit. And it is only a question of time when the state unit will give way to the national unit. Already the National House of Representatives has recorded a majority in favor of the submission of a prohibition amendment to the Federal Constitution. While a few may have voted for the amendment on the theory that the people ought to be allowed to vote upon any subject, it will be found that that argument has very little influence with the average Representative. If he is himself opposed to prohibition he is not likely to favor submitting the matter to a vote. The prohibition movement, therefore, must find its support entirely among those who themselves favor prohibition or who make their votes conform to the wishes of their constituents.

**A**NOTHER argument which receives a great deal more attention than it deserves in the discussion of national prohibition is the doctrine of states' rights. When the prohibition amendment was before the House, some very eloquent speeches were made against the resolution on the ground that it would interfere with states' rights. An examination of the votes, however, will prove that in nearly, if not quite, every case the man who opposed national prohibition on the ground that it would interfere with states' rights was, by a coincidence not at all strange, opposed also to state prohibition. When the vote was counted it was found that a considerable majority of the Congressmen from the section in which the rights of the state are most emphasized voted for national prohibition. Why? *Because their constituents favored prohibition.* Those who favor prohibition do not, as a rule, draw any nice distinctions between the prohibition of the liquor traffic by states and its prohibition by the nation. They do not surrender their belief in states' rights, but they are perfectly willing to trust the protection of states' rights to sober people. They are not deluded by the argument that the driving of alcoholic liquors out of the United States will jeopardize the rights of the states in matters in which it is important for them to act independently.

My own belief is that national prohibition will not enter into the campaign of 1916, but this belief may depend to some extent upon my desires. I hope to see the campaign this year fought upon economic issues, and

upon such international questions as it may be necessary to consider. A Democratic victory will establish reforms already secured. Unless, however, some unexpected influence should arise to retard the remarkable progress of prohibition sentiment, strengthened as it has been by the experience of the nations at war, I am confident that national prohibition will before long become not only an acute Federal problem but a paramount political issue. And observation leads me to believe that a great many who have opposed prohibition in smaller units will favor national prohibition on the ground that it is the only effective means of putting an end to the liquor traffic.

When a city adopts prohibition it is embarrassed by the fact that cities around it license the sale of liquor. When counties adopt prohibition they are embarrassed by the sale of liquor in adjoining counties, and prohibition states find it difficult to enforce the law because of the importation of liquor from surrounding states. All of these embarrassments contribute to increase the belief that national prohibition offers the best solution of the question. Every state that goes "dry" increases the likelihood of national prohibition because its representatives in the Senate and House at once give their support to the proposed amendment.

**T**HE situation may be summed up, therefore, in a few words:

The use of alcohol is harmful, and, being harmful, its sale is indefensible.

The unit depends, not upon any theory or upon any accepted system of logic, but upon public sentiment, and that sentiment rests, not upon the strength of any argument, but upon the attitude of the people toward the use of liquor, the unit widening as the sentiment against the use of liquor grows. This national triumph of prohibition will be, therefore, the final result of the lesser triumphs, and those who labor to secure it will have the satisfaction of knowing that, in protecting themselves from the economic burdens, the social demoralization and the moral menace of the saloon, they are not only not injuring others—even those who most strenuously oppose the movement—but are helping to create conditions which will bring the highest good to the greatest number, without any injustice to any, for it is not injustice to any man to refuse him permission to enrich himself by injuring his fellowmen.

Lincoln, Nebraska

# REVEILLE AT PEEKSKILL

BY D. G. ROWSE

AT the moment it would be difficult to name a more American thing than a mobilization camp, of the kind that is to be found from one end of the country to the other. They are the melting pot for thousands of soldiers in the making. Some of the men are enthusiastically "taking up where they left off" years ago; some were wearing civilian attire a matter of days ago. The remainder represent the leaven of permanently trained, equipped, and ready-for-anything fighters of the National Guard, for whose presence in the body politic Uncle Sam has recently felt undeniably grateful. Such camps seem to strike exactly the right note, in so far as they meet America's desire for steady, unaggressive preparation against "contingencies." They are far from militaristic—merely and unmistakably preparative. Here is being done the work of coaxing, ordering, explaining into physical and mental shape the great bulk of heterogeneous material which offices, factories, departmental stores, ship-building yards, blacksmith's shops and millionaires' mansions have handed over to the country's service. It is difficult work, and it will yield proportionately important results.

Privileged to spend three days recently in one such camp—that of New York State at Peekskill, where the 47th Infantry Regiment and the First Motor Battery are stationed—I carried away the sense of having seen a business matter handled in a businesslike way, and, incidentally, with a wealth of good spirits.

Peekskill State Camp is one of old standing, with a certain number of permanent buildings, lending dignity to the rows of light brown "streets" of the camp proper. The situation, high up upon a wind-swept plateau overlooking the Hudson, is ideal, and the three battalions of about 500 men each which comprize the regiment have the best possible conditions for training. They are making the most of it, as the officers testify. I saw many evidences of the progress which even the rawest of recruits have made, under strict but kindly discipline. Even more striking is the indomitable buoyancy of the men; their continually upspringing, overflowing good spirits, and following is an attempt to show a few of the ways in which everyday humor greases the wheels of life in camp and how the writer, to a certain extent, was involved.

Private Brown (we will say), of the Supply Company of the Forty-

seventh Infantry, had his face inch-deep in lather. Minus everything but breeches, he was bending over a bucket just outside his tent in the act of washing away the soap, and with it the traces of mild annoyance which even the best soldier cherishes against the man who blows reveille. Birds were twittering faintly in the plantation north of the camp, and very slowly the sun was dispersing the delicate rose-pink clouds just above the horizon. Private Brown, however, had no eyes—even if they had been free of lather—for the beauties of early morning, or for his fellows. He was the symbol of self-contained, leisurely preparation; that and nothing more, for the practise in the Army is to leave the social courtesies until after breakfast, which was fully two hours in the future. Yet somehow Private Brown was constrained to notice a member of the Machine Gun Company, who was making his way, also silently and leisurely, toward that company's field kitchen. He came, significantly it seemed, from the direction of the Q. M.'s, and carried a bottle in the hand which happened, as he came nearer, to be the one further away from Private Brown. Private Brown thought enough of the matter to stand erect and view him critically. The private from the Machine Gun Company, however, preserved an unruffled front. He even brought the bottle into his other hand, and swung it nonchalantly to and fro as he walked past. Three "Heys," nicely graded as to their volume, failed utterly to halt him, and Private Brown, irrevocably committed, settled down with a sort of resignation to the business of making the deaf one hear.

"Hey," he shouted again. "You. Yes, you with the bottle."

The private from the Machine Gun Company had at length responded, with a look of wonderfully polite inquiry.

"Wass'at you got?" he was asked.

"Wass wot?" he countered.

"In the bottle."

"Wadja think it is—gasoline?"

"Can't I see wot it is? I'm asking you who it's for."

"For? Why, for the Machine Gun Company."

"Machine Gun Company nothing! Wadja think I am?"

"Well, I'm telling you," said the bottle carrier, resuming his walk with an air of crushing finality.

Private Brown completed his toilet, and made his way back to his tent in silence. But the incident was not disposed of. It cropped up again

when the company had answered roll call and fallen in for mess. I happened to be in the "queue" seeing first-hand what life is like in the mobilization camps of the New York National Guard. The six nicely crisped rashers of bacon, with two canned peaches, two considerable pieces of bread, and half a pint of steaming coffee, seemed to me an all-sufficient breakfast. But Private Brown, receiving an identical allowance, looked at his overflowing mess-kit incredulously.

"How about the tomato ketchup, cook?" he asked.

"Move on, next man. Say, this ain't the Ritz-Carlton."

"But listen, cook, Machine Gun's having tomato ketchup this morning. I just seen one of their men go by with it."

"Machine Gun may be having ice cream and chicken croquettes, but we ain't," the cook responded, "for we aint got any, and that's all there is to it. Now, move on, will yer?"

Private Brown did move along, but all the company were made aware, as he arranged a four-inch-thick sandwich of his bread and bacon, of the gross anomaly that had come to pass in the State Camp at Peekskill.

"We'd oughter have tomato ketchup, if Machine Gun are having it," he exprest himself more than once, and it appeared that his comrades were entirely in agreement with Private Brown. Moreover the Supply Company lost no time in telling the folks across the way, who passed the news over to the opposite side of the "street," and so on until everybody—even the Motor Battery detachment encamped at the other end of the parade ground—was aware of the facts in the case of the Machine Gun Company. Far from wilting under the stress of this notoriety, the Machine Gun Company, I observed, became puffed up with pride.

Similarly, I heard considerable ado about the alleged severity of a certain sergeant who, from a shady corner of his tent, kept an eye upon the bales of straw from which one filled one's mattress, and who had the knack of heaping confusion (or, more strictly, disappointment) upon the unwary with a sudden stentorian "Hey, there! Ten pounds only!" just when the guilty ones had crammed away enough "to keep an ellaphunt in perpetuality," as the sergeant put it.

Both of which incidents tend, I think, to show how swimmingly life goes with the Forty-seventh Infantry, and how little there is to really

Copyright Underwood

THE WHOLE CAMP HOLDS DOWN THE BARBER'S JOB

BUT THE COOK WORKS IN SOLITARY IMPORTANCE

complain of. The camp is without doubt one of the finest in the country, not only in the matter of location and accessibility, but also in the very important consideration of a good supply of water near at hand, and of timber. Clear, cooling breezes, sweeping thru the valley of the Hudson make it a wonderful hot weather resort, for the camp is located on a tree-shaded plateau, ideally adapted to parades, target practise and maneuvers. Those breezes mean much to guardsmen, many of whom are new recruits, who have to face six hours of strenuous drill each day. Compared with their congested, unhealthy conditions before the order came to leave for Peekskill, however, the camp is the most desirable spot in the United States, a fact which the Forty-seventh realizes to a man, if we except that enlarger of "inconsidered trifles," Private Brown, of the Supply Company.

On a fine night the camp is a place to walk about in, rather than sleep, however late the hour, by reason—to the city dweller—of the picturesque-ness of it all. It is a dreamy little town of soft, subdued lights and long shadows, with indistinct figures moving here and there against the faint gray background of the tents. Thru half-open doors you see dim, cozy interiors, whose occupants are reading, writing letters by candle-light or chatting over the last pipe before "lights out." Occasionally a river steamer rests the beam of its roving searchlight upon the thick plantation west of the camp. Even without the ghostly illumination the plantation is a queer enough place, wherein giant frogs croak all night and thousands of "lightning bugs" flash to and fro like tiny eccentric

meteors, and where the sentries periodically catch one or two intrepid latecomers from the town of Peekskill, minus the requisite pass from Headquarters and meet, therefore, for a sojourn in the guard-house.

Romance is romance, of course, but not so much so on stormy nights. And it was stormy when I arrived in camp and accepted with gratitude the hospitality of the Quartermaster, Captain F. Post and Lieutenant Curtis, and the shelter of the tent from which, during the day, is "issued" the miscellany of articles that a regiment under canvas requires. During ten minutes of what the Q. M. modestly said was a slack time, I jotted down the following list of things applied for by different people: 1 hat band, six small tent pegs, three mattress covers, C Company's mascot, to wit, one live rabbit, which had strayed (following a habit common to all the regimental mascots, excepting the turtle) into the Q. M.'s tent; one fly trap for Headquarters' mess, one can condensed milk, one tent pole, one O.K. upon a six hours' leave of absence pass, one apple pie, one bar of soap.

From this enumeration it may be judged that the supply tent had fundamental drawbacks as a place of intended repose. One such difficulty took the form of an ammunition box. As such it seemed quite an ordinary receptacle, but as a pillow during a thunderstorm it developed a number of planes and angles utterly incompatible with geometrical law. A piece of wet sacking, rescued with the aid of a hurricane lamp from the back of the tent, and the Q. M.'s edition of the "Manual of Sustenance," superinduced upon the sacking, still

left the box with more hard places than seemed to be logically explicable. The fact, moreover, that the Supply Company's mascots—a three-weeks' old kitten and a black and tan puppy scarcely any bigger—had come in out of the wet and disputed the right to crawl under the bed-clothes (a tent cover, thrice folded) created a "diversion" even greater than the intermittent flapping of the storm-loosened tent-hood.

Blinking at the lightning flashes, I recall an incoherent attempt to resolve the problems of whether the phrase "hitting the hay" originated with the straw mattresses of the army, how it was that the turtle was not with his fellow mascots, and, therefore, more or less on my chest, and whether the turtle won his scheduled fight with the muskrat from Company G, and whether—that was really reveille sounding, with the lightning and the driving rain gone before cold, calm beauty of dawn.

It was day indeed, tho only five o'clock, and an excellent day it proved, first for target practise, where several companies of recruits made a fine showing, and second, for a hike to Peekskill, there to join with a company of bluejackets from one of Uncle Sam's destroyers in helping to celebrate the centennial of the village. Of course there are numbers of men in the three battalions of the Forty-seventh who would prefer to be other than social lions, but if people are so cordial what can a fellow do but take it, soldier-like, as all in the day's work, and enjoy it as heartily as he does the hard slog of training, and as eagerly as he will go into the still sterner stuff, should the need for it come?

# LAST OF THE LITERARY CAVALIERS

SOME POEMS BY PAUL HAMILTON HAYNE

AND A BIOGRAPHICAL SKETCH BY HIS SON

*My father was born in Charleston, South Carolina, January 1, 1830, and died at Copse Hill, Georgia, July 6, 1886. Shortly after his graduation from Charleston College in 1852, he married Miss Mary Michel, who "thru-out his life was the companion, counselor, and loving critic, which a poet's wife should be." I am the only living member of the family. My parents had a beautiful home in Charleston, which was destroyed by fire, and the bulk of their fortune was swamped with the defeat of the Southern Confederacy.*

*In 1866 my father purchased a small cottage, "Copse Hill," near Augusta, Georgia. There he did the best work of his life, and kept in intimate touch with the literary world.*

*John G. Whittier was one of his best friends, and their political differences never interfered with their friendship. Longfellow, and Stedman, and Bayard Taylor, and many other Northern poets held congenial converse with him, thru the aid of pen and ink. Mr. Howells once told me, at a literary gathering in New York: "Your father wrote beautiful poetry." Contemporary criticism was largely in accord with this view.*

*A complete edition of his works—complete up to the year 1882—was published in Boston by D. Lathrop & Co. With regard to this volume, R. D. Blackmore—whose masterpiece of "Lorna Doone" was one of my father's favorite books—wrote as follows: "What surprises me is that such poems are not better known in England. As yet I have only glanced at some, but a glance is enough to show the "vividus vis" of the true poet; and some of the shorter pieces are—so far as I can judge—of the purest beauty. I would gladly know if your own countrymen value these works at all duly. But it cannot be so, or we should have more knowledge of them than yet exists." Mr. Blackmore dedicated his novel of "Springhaven" to my father's memory.*

*Maurice Thompson, poet and essayist, at one time editorially connected with The Independent, very happily wrote of my father as "the last of the literary cavaliers." He was also called "the poet laureate of the South."*

*My father left very few unpublished poems. One of them—memorial lines to Richard Grant White, the Shakespearean scholar—was published in The Independent some years ago. All the remaining verses—hitherto unpublished—I have collected here.*

WILLIAM HAMILTON HAYNE

## A MALICIOUS GENIUS

*In Smyrna's temples once great mirrors shone,  
Ranged in the glory of a crystal zone,—  
Yet no fair Image in their depths could dwell  
Which did not take the shape and hues of Hell.*

*Thus, tho your genius flashes bright and keen,  
It mirrors Virtue with distorted mien,—  
Christ's beauty glassed in its malign disgrace  
Would take the semblance of a Demon's face.*

## ACTION

*Oh! for a sail o'er seas that rage and roll:  
Some glorious Trial, grand for nerve and mind:—  
Oh! for a field to test a Launcelot's soul—  
A Winged Steed, to leave earth's storms behind!*

## OTHER QUATRAINS

*The heats of poet hearts and poet lives  
Grow cold and vanish with all grand endeavor;  
This Vine, their ashes nurtured, still survives  
So strong, one almost dreams 'twill bloom forever!*

*About our lives come tuneful fancies singing—  
Ah! let us catch those golden notes aright—  
Else, the soul's lark and nightingale go winging  
Their baffled way in sadness out of sight.*

*O God! the pathos of this lonely tomb!  
In life she dwelt how suffering, sad, apart!  
Now loveliest Nature voiced in bird and bloom  
Warbles, or sighs, above her moldering heart.*

*I see one faintly verdant streak  
Poor Leaf! across thy withered cheek—  
But that will soon be dim and dun,  
When thou hast dropt at set of sun!*

### Relearning a Job

After war, what? The question confronts thousands of crippled soldiers, so disabled by their wounds as to be unfit for future service in the army or for a return to their former work. Without some sort of instruction and help they must become industrial derelicts.

Even recently the country for which such men mortgaged their lives used to consider its duty done when it had pensioned them or made some provision for the support of their families. But now the remedy goes deeper than that. Instead of allowing the disabled soldiers to drift along until their helplessness relegates them to charity or to peddling shoestrings on the street corner, there is a big, constructive effort being made to give them another hold on life.

In practically all the countries now engaged in war, industrial hospitals have been established to carry on the work of reconstruction where the medical hospital leaves it. The aim of these industrial hospitals is to take each of the men whom the war has cast aside and fit him to take his place again as a unit in the community—to make him over from a disheartened cripple, who would rather die than live, into an eager and able worker.

The soldier who has lost an arm or a leg on the battlefield is given an artificial one to replace it, and he is taught some occupation by which he can earn a living. Heavy manual labor such as ploughing or digging, the various trades, delicate mechanical work, and even playing the violin or the piano, are all included.

### Listening in on War

Making tin can telephones is a part of every American boy's education—usually carried on in the backyard or, if the neighborhood is especially "easy," elaborated into a cross-street, inter-house system.

But now the backyard plaything has become one of the numerous battlefield

American Press

### IT LOOKS EASY

But to the soldier who has lost an arm, shoveling coal is a real achievement

inventions in Europe; and soldiers or civilians who want to locate a battle are proving its value. The apparatus is simple—merely a tin can, no matter what its size, shape, or previous condition of servitude, some copper wire and a pencil. Suspend the can on the wire, which is wound around the pencil, and hold the pencil to your ear. You can hear the boy across the street "hollering" or you can hear the sound of guns fired a hundred miles away.

### Waste Heat

The success of using waste heat to increase the growth and yield of gardens and of crops has been proved by a series of experiments made by students of the Technical High School in Dresden, Germany.

Underground pipes carried the heated water from the factories and electric stations to the farms, which in some cases were several miles away. The fruits and vegetables from the soil thus warmed grew twice as fast and from 40 to 100 per cent bigger than those in adjoining fields, grown under normal conditions.

Moreover, the crops from the heated ground brought enough higher prices to more than cover the cost of bringing the heat to the farms.

Experiments are to be made next year with flowers and also with larger crops of grain. The plan is said to be advisable only where plenty of waste heat can be obtained, for the profit will not pay for furnishing heat.

### BACK IN THE SHOP

A German soldier who has found profitable work and is teaching other cripples, too

### A Champion Girl Farmer

Thirteen-year-old Alma Kutz is the champion girl farmer of Cook County, Illinois. She earned the right to the title when she cleared over \$100 last summer by the sale of garden vegetables and flowers which she herself planted, cultivated and harvested.

In recognition of her success she was awarded a silver cup offered by the Cook County Garden and Field Club to the boy or girl who obtained the best results in actual agricultural work during the year.

Early in the spring Alma secured the consent of her father to cultivate one-eighth of an acre of his land.

She decided on tomatoes as the most profitable as well as the easiest crop to grow, prepared a hot bed four by six feet in size, and planted 15 cents worth of tomato seeds in it. After the plants were well up she transplanted them into small flower pots.

Meantime she marked off her land into rows thirty inches apart, and later set out the plants. Early in August she picked her first box of tomatoes and sold them for \$1.

In all she gathered 226 boxes of ripe tomatoes, which brought her \$113. On a part of her land she planted asters late in the season, and from the sale of these she realized \$9. Her total expenses were \$16.90, leaving a net profit of \$105.10. This money she has loaned to her father at six per cent interest, and this season she expects to double both her land and her income.

UNCENSORED REPORTS FROM THE BATTLEFIELD

# THE EFFICIENT MAN IN HIS HOME AND COMMUNITY

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**A** GROWN man is ten men. He is, of course, a leader in his business or profession. He is, moreover, nine additional men; a householder, a provider, a husband, a father, a neighbor, a mystic, a warrior, a statesman, a humanitarian.

Each of these nine men I would call a "plusman"—he is plus the ordinary man in respect to wisdom, power, character. And I would define the "superman" as the embodiment of these nine plusmen in a single individual. The measure of a man is not his height or his weight, but his reply to this question: "How many kinds of plusman am I—how far have I yet to go to reach the superman stage?"

The curse of civilization is the preponderance of half-grown men. We see them everywhere—in commerce, education, law, medicine, politics, religion. The half-grown man is content to succeed in his job—and fail everywhere else. It takes a big man to focus on his job—but a bigger man to forget it! And the biggest man of all smiles at himself for needing a job—he ought to be independently rich, and able to spend his time profitably, in science or invention or music or philosophy or reform.

This eternal straining for industrial efficiency grows to be weariness to the flesh, and vexation to the spirit. The ant hurries and scurries hither and yon, bent on nothing but lugging a load of food to a spot of safety. Herein is the ant efficient, being only an ant. Herein is a man not efficient, being a man.

The aim and sum of efficiency is personality. A man should do better work to make him a bigger man. The most efficient business man is only 10 per cent efficient while he neglects the other nine men he ought to be. Efficiency study is primarily self-interest, being scientifically based on the first law of nature, which is self-preservation. But efficiency study is ultimately social service, being ethically based on a higher law, which is the Golden Rule.

I have seen a professional man raise his earning capacity 5000 per cent, by means of the principles and methods we advocate. I have seen a corporation president create a demand for the product of his company ten times greater than the

company could fill. I have seen a school principal attract about 100,000 students for a branch of study never taught until he taught it. I have seen many a man, trained in Efficiency, perform deeds that would in the olden days have been called miracles. But I do not consider one of these men efficient as a man, merely because he is efficient as a cog in a business wheel.

A thoroly-evolved, highly-organized man is a compound of physical, emotional, intellectual and spiritual forces, the relative importance of which we would designate thus: physical, 10 per cent; intellectual, 20 per cent; emotional, 30 per cent; spiritual, 40 per cent. In your business your personal development is mostly confined to the physical and intellectual 30 per cent of you—what are you doing with the remaining 70 per cent of you? When a man's brain is defective or deficient, we call him an idiot or a lunatic, we are sorry for him, we drag him to an asylum and bravely lock him up. The average man—the "successful" business man—is apt to be an *emotional* idiot and a *spiritual* lunatic; he has about the same knowledge of, and command over, his feelings, desires and aspirations as a person "out of his mind" has in respect to the functions of cerebration. Not your brain, but your solar plexus, is the galvanic battery to make you a world-power! Not what you think but what you feel drives you to your goal; what you think merely paves the road, but what you feel moves you on and up, ever on and up—road or no road!

Have you learned how to *feel* efficiently? No matter what you say, I say you haven't. Because if you had, you would be such a colossal world-figure that you wouldn't take time to read my articles. Would Napoleon or Lincoln ask me, or anybody else, how to become efficient? I should hope not. The man whose heart beats high enough and fast enough has no need of a standard or a clock—he makes his own. The height of your dream and the depth of your resolve—these measure you. And these are of the heart, not of the brain.

Every ambitious man should learn to be efficient in his home and community, not merely for the sake of the home and community, but even

more for his own sake. Not otherwise can he ever unlock the emotional and spiritual energies in him and extend his ego fully, even thru the realm of commerce. A man never reaches the height of business success until he gains the elevation of utter absorption in something outside of business. The needs of his home, or of his community, or of both, should be to a good business man the real reason for learning how to meet the needs of his business.

Each of the nine plusmen that every man should be deserves a paragraph of question and suggestion. Each demands vocational training that our colleges ought to give, but do not.

## THE EFFICIENT HOUSEHOLDER

When you go home at night, are you a social integer—or a social cipher? A woman never respects any kind of masculine cipher, and you have lost home influence just to the degree that you have failed to give your wife sympathetic help in solving her many household problems. Your home knowledge must equal her business knowledge, if the domestic partnership works out properly. Why expect her to be a graduate in marketing and accounting methods, when you are a primary scholar in home decoration and feminine psychology? When your wife has trouble with the help, as of course she has, what do you do about it? Scold rashly? Or bluster vainly? Or just slink away, on the pretext of having a headache or a sudden weariness? You are supposed, being a man of affairs, to know how to manage employees. Your wife is not. Why don't you teach her? You get a vacation every week from Saturday afternoon 'till Monday morning—or 52 vacations a year, plus your annual holiday. How many periods of absolute rest does your wife take in a year? Remember that, if she is a good housekeeper, she cannot rest at home—she must get out and away. She wants, moreover, an eight-hour workday as much as you do; why don't you, being a master of planning, show her how to plan for it? When she needs a new labor-saving device in the kitchen, do you buy it as cheerfully as you would install such a contrivance in your own office? These are but a few sample queries—you might well devote an evening

to asking and answering forty or fifty more questions along the same line.

THE EFFICIENT PROVIDER

By this I mean literally the man who "sees ahead" for his family—not merely pays their bills. No one born with a "gold spoon in his mouth" ever learned to eat with it. Your job as head of a family is not so much to give your folks money as to teach them how to earn it, save it, and spend it, equally well. Has each member of your family a personal bank account? Does each live on the budget plan, successfully? Could each dine at Sherry's or the Waldorf with grace and elegance and \$5 each for the meal—or dine cheerfully and thankfully off a piece of bread-and-butter and a dish of prunes in the kitchen? Do you carry both life and fire insurance, reliable and ample? Is your will drawn up, so as to be just and generous, and clear and complete? Have you made it unbreakable by

any device of a lawyer? (I always enjoy telling a man to do something entirely impossible—then if he doesn't do it, I can always lay at his door any trouble that comes from taking my advice.) Do you keep all your valuable papers in a safe deposit vault or a fireproof home safe—and is each member of your household following your example? Could every person in your family over twelve years of age earn his or her own living if necessary? Do your folks all *enjoy* economizing? After such a question as the last I pause—the day of miracles is past! I judge the supreme test of a man as a provider would be that he induced his family to save money as cheerfully and persistently as they spend it. Why not? Should not building the future be as pleasant an occupation as wasting the present?

THE EFFICIENT HUSBAND

Good wives are born—good husbands must be made, or rather must make themselves. Wife-instincts are normal, husband-instincts are super-

normal. Thru ages women have been wives perforce. They have thus learned how—we say by "intuition." Men have *not* learned how to be husbands; they have not learned how to be emotional wizards and moral giants. To be an efficient husband, you must have the shrewdness of all the demons in the universe, and the goodness of all the angels, thoroly and sweetly combined. How? Am I then a Solomon, that ye should ask me this thing? The first duty of a husband is to learn to be a Galahad and a Bluebeard, both in the same breath! You must be everything—and its opposite. Else your wife cannot be a happy, wholesome and useful woman. She expects you to need her—and lead her; to want her—and worship her; to pet her—and dominate her; to soothe her—and hurt her; to protect her—and liberate her; to idolize her—and teach her; to pamper her—and empower her; to hide her far away—and show the whole world your pride in her. A full-grown man can do all this; but he is scarce. Fineness and force,

THE EFFICIENT MAN'S TEST

FOR DETERMINING THE MENTAL AND MORAL SIZE OF A MAN IN HIS HOME AND COMMUNITY

DIRECTIONS. Where answer is Yes, write numeral 5 in blank space opposite. Where answer is No, leave space blank. Where answer is partial affirmative, write numeral less than 5 denoting degree of assurance. For your percentage in home and community efficiency, add column of numerals. This Test is not complete, but may be held reliable so far as it goes.

- |   |       |
|---|-------|
| 1. Do your neighbors call you public-spirited, generous, philanthropic? .....                   | ..... |

| 20. Do you want greater success in order to achieve greater usefulness? .....                   | ..... |

perfectly united, a normal woman asks of her husband—or would ask it if she dared believe in him that much. A faded love-letter with the breath of roses still upon it means more to a woman than a marble palace with the sentiment gone. But you must give her a palace, too! Else were she not a woman. Perhaps, being stupid like most men, you ask me to be “practical”. All right—what are you doing to help your wife carve her own career, independent of you? Unless you are a cave-man, you are a wife-helper, not just a wife-owner. What have you done to prove it? Are you making her destiny as vital to you as you expect yours to be to her? Do you know how many secret longings she has in her heart, that she never shared with you? It might be well to find out.

#### THE EFFICIENT FATHER

It takes a brave man to look his children in the face. Some of the bravest men I know can't do it. Most men don't even try to do it—they leave the job exclusively to their wives. Noble exhibition of manly strength! Do you see that all your children's questions are answered properly? Do you make each one feel that, next to his mother, you are his best friend in the world? Have you engaged in a special study of the opportunities and responsibilities involved in scientific fatherhood? When your children have to be disciplined, do you whip them—or scold them—or let them go unpunished—or leave the whole affair to mother? All bad methods. Are you merely a check-book and a check-rein by turns, drawing on each to make up for the way you draw on the other? There are masculine views and virtues needed in the training of both boys and girls that a mother, even the best mother, cannot supply. What are they? How many of them do you contribute to the necessary physical, mental and moral equipment of your children? The duty of the father, more than the mother, is to provide for the little folks their athletic and industrial training, financial competence, vocational guidance, personal system, social selection, knowledge of state-craft and world-events, moral backbone, spiritual nerve and sinew. As a father, are you a success?

#### THE EFFICIENT NEIGHBOR

I do not refer to the cheerfulness and alacrity with which you lend your lawn mower, tho I might do so to advantage. I refer to the knowledge you have of your neighbors' needs, and the effort you make to supply them. In every family there are problems

that the family next door could help solve; yet the two families remain strangers. We have learned to exchange everything but experience; it is time we learned to exchange that—the most valuable, as the most costly, human possession. When we give a “party”, we always invite the other idiots in our “set”, and gage the affair by the amount of cake and punch the guests consume—while a beggar on the next street may be searching in vain for a crust of bread. We send millions to African heathen or Belgian war victims—not even knowing that in our own town are cases just as pitiful, of sorrow and destitution. Can't we find some way to be a little more neighborly—share a little with those who need so much?

#### THE EFFICIENT MYSTIC

A mystic is a man who draws his greatest power from Nature and from God. Every world-leader is a mystic. We may call his power magnetism, or enthusiasm, or energy, or will, or faith—no matter, it came from Nature and God. This all-conquering fire and force may be largely increased by music, art, poetry, philosophy, and other spare-time aids that unlock the subjective mind. Now the home and community need from the progressive man just the exercise of these forces whose results will, at the same time, expand him. Conquest merely crowns conviction. Power is the measure of purpose. The master of action was first master of inspiration; and the cry from the homes of the world has always been for the *man* who is inspired! He understands.

#### THE EFFICIENT WARRIOR

The ghastly but superb siege of Verdun was a miracle of human valor. Yet the brave who there fought and fell were blind—all blind. They fought to kill, instead of to *create*. The battles of tomorrow will be battles of construction—not of destruction. America needs a great army of knights of industry, knights of purity, knights of science, knights of peace. In your home town you can find intrenchments of evil as hard to take as was the fortress of Verdun. There is graft, corruption, child labor, disease, intemperance, poverty, profanity, gossip, slander, sex blasphemy and abuse. There is a modern need for a holy war. The newspapers tell us that 2,000,000 clubwomen are combining to reform the indecencies of the present styles in woman's dress. Can you picture 2,000,000 clubmen combining to outlaw the cocktail, banish the cigaret, or elevate musi-

cal comedy? Why not? Should not the vices of men be fought by men as powerfully and bravely as the weaknesses of women are fought by women? A real man loves a good fight—and a man is not real till he gets in a good fight. What should you be fighting for—and against, in your community?

#### THE EFFICIENT STATESMAN

Inefficiency is the slogan of politicians—they feed and grow fat on it. The spoils system; lobby legislation; machine-made ballots and votes; political rotation in office; the self-advertising and electioneering of party candidates; these are but a few of the wastes and follies in our boasted democracy. The man who always “votes straight” always votes crooked. He mentally squints, or morally dodges. There is no efficient political party. The first one, if there ever is one, will be organized as a protest against all parties, and a union of the good in all parties. Meanwhile, if you are a Democrat, a Republican, a Socialist, a Prohibitionist, or an Anarchist, you might be discovering how some other party is better than yours, and thus be preparing to vote efficiently when, the day just before the millennium, an efficient party, on an efficient platform, adduces efficient argument for efficient support.

#### THE EFFICIENT HUMANITARIAN

A good business man is good to himself last. He is big enough and wise enough to make the Golden Rule one of his chief business regulations. The new type of successful man is both hard-headed and soft-hearted. He makes of his profit a protectorate. A famous organizer and economist says that “the leaders in the world fifteen years from now will be the men with the greatest power of social coöperation.” This is already coming to be true. The heads of the great factories, mills and stores are devoting each year vast sums to purely social work among their employees—to hygienic and industrial education, home economics, music and art; athletics and recreation, personal welfare, moral supervision. The real profits in a business are the benefits to the community. When every business man has sense enough to learn this, he will double his profits and halve his troubles at the same time.

Now if, being a level headed and large-hearted man, you should ask what you can do practically for your neighbors and community, we would answer, briefly and partially, as follows:

Investigate the national civic improvement societies. Get their litera-

# VALPARAISO UNIVERSITY

FOUNDED 1873

VALPARAISO, INDIANA

One of the Largest Institutions of Learning  
in the United States

Thorough Instruction at Lowest Expense

**V**ALPARAISO UNIVERSITY was founded with 3 departments, 4 instructors, and an annual enrollment of 210 different students. Now there are 21 departments, 220 instructors and an annual enrollment of more than 5000 different students.

THE REASON for this growth is in the fact that this University constantly increases its facilities, strengthens its courses of study, and offers additional advantages without making the expense to the student any greater.

**Departments** Preparatory, High School, Primary Methods, Kindergarten Methods, Commerce, Phonography and Typewriting, Review for Teachers, Education, Arts and Sciences, Engineering, Architecture, Manual Training, Agriculture, Expression and Public Speaking, Music, Fine Arts, Domestic Science, Pharmacy, Law, Medicine and Dentistry.

While the expense in all the Departments is exceedingly low, it has not been made so at the sacrifice of a high grade of instruction, but by applying business principles to

**The Cost of Living** so that the most satisfactory accommodations for board and room may be had at from \$29 to \$41 per quarter of twelve weeks. Tuition \$20.00 per quarter, or \$65.00 if paid in advance, for a year of forty-eight weeks. If the entire tuition is paid in advance for the year, it includes all the departments, except Medical, Dental and private lessons in Music.

The total expense of board, tuition and furnished room for the regular school year (thirty-six weeks), need not exceed \$142, or for forty-eight weeks \$181. For Free Catalog Address

**HENRY B. BROWN,**  
President, or  
**OLIVER P. KINSEY,**  
Vice-President  
Box 54, University Hall  
Valparaiso, Ind.

The Forty-fourth Year Will  
Open September 19, 1916.

Group of Valparaiso University Buildings, including the Departments of Medicine, and Dentistry, located in Chicago

**STAMMERING  
MECHANICALLY  
STOPPED!**

Invention fits mouth—  
simple as false teeth. Con-  
trols muscles of articulation.

bar rooms. Expenses small. Catalogue free. Address The  
President, Salem, Va.

## Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence is removed from the hospital, is homelike and ideally located.

**Requirements:** At least one year of high school or equivalent. Age limit—18 to 35 years.

**Remuneration:** \$10.00, \$12.00 and \$15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

ture, think it over, hand it around. Join one or more of these organizations; if possible found a branch in your locality. Look up the various efficiency movements, magazines, books, leaders, clubs and associations in the United States.

Obtain from The Independent a list of titles and dates of the new efficiency articles soon to appear. Each of these would interest a number of your friends and neighbors engaged in the work discussed by each respective article. Order a few copies of each in advance, and distribute them where they will do the most good.

Apply to the nearest librarian for a list of the new books on social service and community betterment. Read one or two of these in your home circle, then adapt to the needs of your neighborhood. In this connection, study the recent developments of city government; such as the commission-manager plan, which has been tried in several hundred American cities, and proved successful, we understand, in over ninety per cent of these places.

Learn what is being done, what further should be done, by your associated charities organization, by your local Board of Health, by your societies for temperance, industrial coöperation, social hygiene and moral education. Give your support wherever you can. Give time, thought, influence, money.

Get in touch with the remarkable advance now being made in Sunday school efficiency and church practicality. Many a business man should go to a modern Sunday school to learn how to organize his business. I have before me the community program of one of the leading religious denominations. This aims to cover prison reform; needs of rural communities, the home and the child; problems of industry and immigration; temperance and social hygiene; education for social service; national security and international peace. Your church may help you to solve the problems of your business. Learn how. Keep informed on the social work of your national church organization. Identify yourself with it, promote it all you can.

General Goethals declares that the most successful engineer of the future will be the man who knows the human side of engineering work, the man who is master of human construction. A final test of a great man is that he holds his great work to be man-building, not business-building. Make your business the finest in the world; but that your community may be better, and your home best of all.

## PEBBLES

It looks like peace along the border. Time to organize Daughters of Veterans of '16.—*New York Tribune*.

"Say, Claude, did you get your shirt back from the laundry?"

"Yes, Reginald, but not the front."—*Texas Longhorn*.

Commercial Candor at the Regun Theater: "An interesting Story—Something Unusual—A Kind of Drama You Seldom See Here."—*New York Tribune*.

"The Saratoga Saratogian's" proofroom has no affection, apparently, for the administration. It lets stand "our position as a word power."—*New York Tribune*.

## THE OLD-FASHIONED FOURTH

Long Pond Gun Club will shoot the Idle Social Club at Long Pond Grove, July 4th, at 2 o'clock. The club requests all members to be on hand.—*Rochester Democrat and Chronicle*.

## THE FOURTH DIMENSION AND THE THIRD DIRECTION IN NEW ROCHELLE

Mechanic Street Extension is a one-way street. That is, any vehicle may now move only in one direction at a time. In fact, vehicles will hereafter move in two directions at one time.—*New Rochelle Evening Standard*.

## CONDITIONS THE PRESENT ADMINISTRATION IS RESPONSIBLE FOR

(As charged by the New York press)  
The European War.  
The high cost of living.  
The hoof-and-mouth disease.  
The failure of the Brazilian cotton crop.  
The Irish Rebellion, the Mexican revolution, and the shirt-makers' strike.  
Sun-spots.—*Puck*.

To one of the members of a committee of inspection on its tour of a penitentiary a convict confided:

"It is a terrible thing to be known by a number instead of a name, and to feel that all my life I shall be an object of suspicion among the police."

But you will not be alone, my friend," said the visitor, consolingly. "The same thing happens to people who own automobiles."—*New York Times*.

The captain of industry was addressing the students of the business college.

"All my success in life," he declared proudly, "all my enormous financial prestige, I owe to one thing alone—pluck. Just take that for your motto—pluck, pluck, pluck."

He paused impressively and a meek little student on the front row said:

"Yes, sir, but please tell us whom did you pluck."—*Ladies' Home Journal*.

A professor in a Western engineering college says that but for the occasional innovations in the applications of learning, such as the following, for instance, he would find it difficult to judge of his usefulness.

"What steps would you take in determining the height of a building, using an aneroid barometer?" was the question asked upon an examination paper.

One thoughtful aspirant answered, "I would lower the barometer by a string and measure the string."—*Harper's Magazine*.

At one of the Boston theaters recently there was shown on the screen a picture of a stock exchange. The brokers were hurrying about pushing away their arms, gestulating and, to the uninitiated, acting like a lot of insane men. Two young ladies in the balcony watched them with breathless interest for some time, then one asked:

"Why in the world don't they sit down and rest once in a while?"

"My dear," was the enlightening answer, "don't you know that a seat in the stock exchange costs thousands of dollars?"—*Harper's Magazine*.

## If You Did This From Early Morning Until Sundown

—if the life you lived was the healthful active life Nature intended—you wouldn't suffer from constipation.

But that sort of life is impossible for most of us. We hurry, worry, over-eat and under-exercise.

The results—constipation, periodic or chronic—and the use of laxatives which aggravate and confirm the constipation habit.

NUJOL is a safe and effective means of relieving constipation, and so getting rid of the headaches, nervousness, and depression which constipation causes. It is not a laxative but acts in effect as a simple internal lubricant, softening the contents of the intestines and facilitating normal bowel movements.

Your druggist has NUJOL. Refuse substitutes—look for the name NUJOL on bottle and package.

Sold in pint bottles only.

## INTERLAKEN SUMMER CAMP

MID-JUNE TO SEPTEMBER FIRST

Where boys grow in body and strong and develop the moral fiber of manhood. 700-acre estate. 200 acres of wood and meadow. Land sports, lakes and camping amid the sand dunes. Boating, fishing, swimming. Poles. Boys build their own boats, their own boats. Have opportunity to "make things" in wood, iron, brass and copper in the famous Interlaken School shops. Interesting experience of harvesting, threshing, harvesting on the Interlaken 700-acre farm. Registered dance band. Sheep. Land and water foot. A summer's recreation with responsibility for useful work added. Leadership and initiative developed through "boy government" under trained men connected from the Interlaken School where boys learn by doing. No extra charge for tutoring. For names and full particulars, address

Director of Camp, Box 128, Rolling Prairie, LaPorte County, Ind.  
CHICAGO REPRESENTATIVE, Phone Kenwood 4375

## This Job Needs a Trained Man

You've reached your limit. You can't expect to step into a job that pays a big salary until you've prepared yourself for it.

It's a serious question, this problem of getting ahead. There is only one solution—you must have *training*; you must be able to do work that others *can't* do, or your pay will stay on a level with theirs.

The business of the International Correspondence Schools is to help just such men as you to get good positions and hold them.

Right now over one hundred thousand ambitious men are preparing themselves through I. C. S. courses for the bigger jobs ahead. Last year nearly five thousand reported increased pay as the result of I. C. S. training. These men got their training in spare time and in their own homes. What the I. C. S. have done for others they can surely do for you. But you must make a start—the same start that they made—and the way has been made easy for you. Mark and mail this coupon.

I. C. S., Box 4517, Scranton, Pa.

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4517, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

## Book on Law Free

Write today for our new 171-page book on "The Power of Law Training." It carries a vital and inspiring message to every ambitious man. Find out about the opportunities that await the law trained man. Find out how you can learn from masters of the law right in your own home. No obligations. The book is absolutely FREE.

Write Today now while we are making a special reduced price offer.

American Correspondence School of Law  
8246 Manhattan Bldg. Chicago, Illinois

## MANUSCRIPT

Fiction narratives, travel, historical and scientific matter in prepared MSS., 25,000 words minimum, receives our careful consideration for BOOK or MAG. Readings absolutely necessary, no charge.

Roxburgh Pub. Co. (Inc.), 61 Court Street, Boston

## THE NEW BOOKS

### OUR NEGRO CITIZENS

*American Civilization and the Negro* is the most extensive work on the condition of the American negro written by one of the race. Professor Roman has for many years, in connection with his medical experience, made a study of negro conditions, and negro traits. As might be expected from one of scholarly training and living in the South, he finds all humanity one. Negroes are not all good or all bad, any more than all white people, and the percentage of the superior is small in all races.

His work is a strong defense of the negro of the south, and he finds every ground for encouragement in the progress which the race is making.

A chapter is devoted to showing how every charge of cruelty or superstition or ignorance brought against the negro may be matched by equal evils and crimes in the history of white races, even at the present day. We especially commend the volume to those for whom it was probably intended, those of colored blood, who need to have both their pride and their ambition stimulated in the midst of an environment too often depressing.

*American Civilization and the Negro*, by C. V. Roman, Philadelphia. Davis, \$2.50.

### EYE WITNESS AND THEORIST

It begins to look as if there is some conspiracy in Europe to hand Uncle Sam trouble jobs when the war is over. Thus Ian C. Hannah in *Arms and the Map* suggests that the United States become suzerain of Palestine until a Jewish state be built up there. This would "appeal to the imagination of Americans"; our national ambition would be flattered by it! If we must acquire islands and things all over the world, Palestine holds much, historically and sentimentally, to recommend it to idealistic statesmen in Washington. There is a dubious material bait in a coaling station for our fleet, "bad as the harbors of Palestine are." Mr. Hannah also feels that Japan ought to have something to employ her surplus energy—we recall the proverb about Satan and idle hands—and offers Yemen. It is one of the hottest regions on earth, mostly desert, and peopled with roving bands of fanatical Arabs. We appreciate the selection of Palestine instead of Yemen for us. Otherwise, Mr. Hannah's book is a compact and well composed presentation of his subject, pointing chiefly to the development of races within natural boundaries, a handy reference volume.

As a detailed personal aspect of events from June 20, 1914, when the German Emperor reviewed the German fleet together with the British visiting fleet at Kiel, up to the departure of the British and Belgian diplomatic bodies

from Berlin, *The Assault*, by Frederic William Wile, is an extremely informing narrative. He displays the working of the spy system in Germany, the riot of foreign spy mania there when war broke out, and the extravagant lengths of the latter in his own arrest and subsequent enforced struggle to leave Berlin. The position of the Emperor is debated. For the rest, Mr. Wile comments upon the, to him, strange English complacency and "business as usual" attitude at the moment of a supreme national crisis; our position in the United States; and the "iron facts" patent after a year of war.

A uniquely appealing little volume comprises *Letters from a Field Hospital*, Mabel Dearmer, with a memoir of the author by Stephen Gwynn. From the latter we gather that Mrs. Dearmer felt very supremely her part in life as a woman. This she endeavored to express individually as an actress; an illustrator; in novels of promise rather than fulfilment; in plays of merit, unsuccessful at first because not written in the prevailing pessimistic dramatic creed; and in working tirelessly with her husband, a London clergyman. Practically without money or influence she won recognition as a producer on the London stage, especially of children's and religious plays. While holding that all warfare was unrighteous, she yet unhesitatingly responded to the call to help the war stricken people of Serbia.

The one angle from which the war can be viewed with any satisfaction is that of the medical service. It is such books as *The Aftermath of Battle*, by Edward D. Toland, attached to the Red Cross in France, that reveal the tireless work of those men and women who go down to the battlefield, often in peril of their lives, to rescue the stricken and do their part in restoring the inhuman carnage of war. More hopeful to the desired end of peace than stirring or graphic war pictures is this diary, showing us that amid all the war's horror, humanity maintains an invincible front. It is owing to the faithfully sustained work of the medical service, in large part voluntary and unpaid, that thousands of lives are saved, human wreckage restored to usefulness, and a succeeding onswamp of world-wide pestilence prevented.

Robert Herrick always writes with charm and with the finish of literary excellence. *The World Decision* lacks nothing of these qualities, but it is precisely in these otherwise unsupported preëminent gifts of Mr. Herrick that one feels he falls short of producing a work of great war literature. It is as if one stood before the picturesque detail of a Meissonier, and then turned to the broad sweep and dramatic strokes of a masterly Verestchagin. The perspec-

tive of time will touch with light and shade much which today is either obscured or stands forth in shameless outlines. But let us take an example from Mr. Herrick's book, and see how a sweeping statement is immediately called in question. Of the French he writes: "There has never been the slightest panic in France." Now Mr. Sweetser saw panic enough in the cities of northern France. Mr. Toland discloses not only chaos in the French medical service at the outset, but downright selfishness on the part of certain well-to-do French citizens. Great War literature must present both sides with impartial judgment.

*Arms and the Map*, by Ian C. Hannah. London: Unwin. \$1.25. *The Assault*, by Frederic William Wile. Bobbs-Merrill. \$1.50. *Letters from a Field Hospital*, by Mabel Dearmer. Macmillan. 50 cents. *The Aftermath of Battle*, by Edward D. Toland. Macmillan. \$1. *The World Decision*, by Robert Herrick. Houghton, Mifflin. \$1.25.

### WAYS TO BE WELL

Prof. L. B. Mendel discusses all too briefly the neglected subject of *Changes in the Food Supply and Their Relation to Nutrition*, especially the effect of modern methods of transportation and preservation. (Yale Univ. Press, 50 cents.)

In *Alcohol and Society* John Koren subjects prohibition arguments and statistics to drastic criticism, yet leaves enough to show the need and progress of reform. The summary of recent legislation in foreign lands is interesting. (Holt, \$1.25.)

*Alcohol, Its Influence on Mind and Body*, by E. F. Bowers, M. D., is a popularly written account of recent discoveries, and experiments by business firms in regard to the harmful effect on mental and physical efficiency of even small quantities of alcohol. (Clode, \$1.25.)

The "fresh-air cocktail" is the most harmless, and probably one of the most beneficial of reputed panaceas. Dr. Howard's book, *Breathe and Be Well*, is a manual in deep-breathing. One who would understand its physiological benefits will find this a simple, clear, and practical little treatise. (Clode, \$1.)

George Wharton James has published recently two volumes of common sense counsel. *Quit Your Worrying* is sufficiently described by its title, tho that does not suggest the fine anecdotes that fill the pages. *Living the Radiant Life* is a plea for good cheer, sincerity and service to one's fellows as practical solutions of life's dissatisfactions. (Baker & Taylor, \$1 each.)

### PLEASANT ESSAYS

If any one has forgotten or never known how singularly clear, fine and refreshing are the writings of Michael Farlow, *The Road Warden's Book of Days*, arranged by Milledy Gentry, will show him and set him to turning the pages of those all too slender volumes of beautiful and serene prose. (Dutton, \$1.)

*A Northern Countryside*, by Rosalind Richards. If you love New England you will enjoy these outside, picturesque accounts of a town in Maine and the walks, drives, farms, flowers, birds and people around about it; the sort of things one might write in a letter. Excellent photographs illustrate the book. (Holt, \$1.50.)

Whether *Father Payne* be a real person or not the name is used to gather random and altogether delightful reflections on men and manners one cannot tell. At

## B.V.D.s And A River Breeze— Isn't This Great On A Hot Day?

HOWEVER, even though you must "peg along" at work and live on hopes and wishes, easy-breezy B.V.D. helps take your mind off the heat and is first aid to keeping you comfortable from out-o'-bed to in-again.

Loose fitting, light woven B.V.D. Underwear starts with the best possible fabrics (specially woven and tested), continues with the best possible workmanship (carefully inspected and re-inspected), and ends with complete comfort (fullness of cut, balance of drape, correctness of fit, durability in wash and wear).

# An Income for Life

Of all the investment opportunities offered  
there are few indeed not open to criticism.  
Absolute safety is the first requisite and ade-  
quate and uniform return equally important,  
and these seem incompatible. Aside from gov-  
ernment bonds, the return under which is  
small, there is nothing more sure and certain  
than an annuity with the METROPOLITAN  
LIFE INSURANCE COMPANY, by which the  
income guaranteed for a certain lifetime is  
larger by far than would be earned on an  
equal amount deposited in an institution for  
savings, or invested in securities giving rea-  
sonable safety. Thus a payment of \$5,000 by  
a man aged 67 would provide an annual in-  
come of \$418.32 absolutely beyond question or  
doubt. The Annuity Department, METRO-  
POLITAN LIFE INSURANCE COMPANY,  
New York, will give advice as to the return  
at any age, male or female.

least he is human enough to be taken as  
the writer describes him. And whether that  
writer be Benson or not—we incline to  
think not—he writes essays that are sug-  
gestive as well as entertaining. (Putnam,  
\$1.50.)

The reflections of a Scotch schoolmaster,  
set forth in *A Dominic's Log* by A. S. Neill,  
are amusing, sometimes wise, and often  
suggestive, as witness that for the school  
papers and that on patent medicines. (Mc-  
Bride, \$1.)

Dr. Frank Crane has gathered into a  
book called *Just Human* 255 pages of his  
daily preachments published in *The Globe*.  
They are original, fearless and "human,"  
according to his own definition: "It means  
to love folks . . . to esteem life greater  
than all institutions." (Lane, \$1.)

*The Observations of Professor Maturin*,  
by Clyde Forst. The author of these little  
essays has excellent ideas but his style is  
so curiously labored that the truly odd and  
interesting bits of thought and learning  
which he presents to the reader seem to  
lose their attraction. (Columbia Univ.  
Press, \$1.25.)

Professor Winchester's study, *Words-  
worth and How to Know Him*, treats of his  
personality in relation to his thought; ad-  
mits frankly his limitations, but dwells on  
his nobility and power. As in all of this  
series, this essay is illustrated by such full  
quotations that the reader has a real  
knowledge of the poet when he has read the  
criticism. (Bobbs-Merrill, \$1.25.)

## PLAYWRIGHTS AND POETS

*High Tide*. Mrs. Waldo Richards' per-  
sistently cheerful and on the whole well-  
chosen anthology of the better poets of the  
day. A bit sentimental; similar in scope  
but quite different in tone from the rather  
lugubrious "Little Book of Modern Verse."  
(Houghton, Mifflin, \$1.25.)

In *Lyrics of War and Peace*, by William  
Dudley Foulke, speaks a brave and healthy  
soul that has tested life and found it good.  
The masterly translations from Petrarch  
published last year are here followed  
by a few poems from Theocritus. We wish  
there were more of these. (Bobbs-Mer-  
rill, \$1.)

*Punishment*, a play in four acts by  
Louise Burleigh and Edward Hale Bier-  
stadt, with an introduction by Thomas  
Mott Osborne, deals with the vital problem  
of prison reform in a way that is at once  
vivid, accurate, and genuinely dramatic.  
It is almost as grim as Galsworthy's  
"Justice," but it is more hopeful. (Holt,  
\$1.)

*Madonna Dianora*, a play in verse trans-  
lated from the German of Hugo von Hof-  
mannsthal, is the eternal triangle in a  
rather beautiful setting. Some of the lines  
show real poetic ability, but on the whole  
the verse is a little stiff, perhaps because  
of the translation. The play itself is pic-  
turesque and the action swiftly unfolded.  
(Badger, 75 cents.)

A volume of *Two Plays*, by Morris M.  
Townley, adds nothing new or significant  
to the American drama. "Nothing Else To  
Do" is hackneyed and weakened because  
the main action turns out to be a dream.  
"Caught" is a rather diverting game of  
wits between a lawyer and a burglar who  
has come to rob his house. (Boston: Bad-  
ger, \$1.)

*The Mothers*, a play translated from the  
German of Georg Hirschfeld by Ludwig  
Lewisohn, has all the power and all the  
unblurred realism of Ibsen. Written  
twenty years ago, it now takes a worthy  
place in the Drama League series beside  
Hauptmann, Jones and Bernstein. The trag-  
edy is genuine, severe, uncompromising.  
The ending is tragically happy. (Double  
day, Page, 75 cents.)

# REPORT OF THE CONDITION OF THE UNITED STATES TRUST COMPANY OF NEW YORK

### PURE PROTECTION LIFE ASSOCIATION

A number of inquiries having come to me lately seeking information about the Pure Protection Life Association of Cleveland, Ohio, I have gathered such data respecting it as is readily procurable, for the information of others interested.

The association is organized under the assessment life insurance laws of Ohio and commenced business in 1913. It states that its object is to furnish pure protection, that is, only the payment of insurance at death. There are no cash surrender values, such funds as are in the association to the credit of policyholders being utilized (in the event the latter cease paying premiums) to extend the insurance.

The premium rates are based on what is called the National Fraternal Congress Table of mortality and are composed of contributions to an expense fund, a mortuary fund and a guaranty fund. The guaranty fund equals the American Experience 4 per cent reserve. We can, therefore, conclude that the rates charged are sufficient to meet all future obligations due to advancing age. The premium as computed for each age will remain level thru life.

Presumably for organization purposes, what is called a Founders' Advisory Board, consisting of 400 persons, was formed, each of whom is to contribute, or lend, the association \$100 at 7 per cent until repaid, one-third of the expense assessments to be set aside for that purpose. Thus far \$14,330 has been contributed by members of the Founders' Advisory Board.

Only Ordinary Life and Term insurance may be written on persons between ages of 21 and 65, inclusive, in sums from \$1000 to \$25,000. The application, articles of incorporation, by-laws and amendments to by-laws are made a part of the policy contract, provision being made that no amendment shall be adopted reducing the amount of the death benefits, nor the amounts of the aggregate annual assessments.

On December 31, 1915, the assets of the association were \$8475; the total liabilities (including a reserve of \$6200) were \$7327. During 1915 the income was: Premiums, \$9342.81 Founders' contributions, \$4945; total, \$14,287.81. Claims paid were \$3000; expenses, \$3583. The total amount of insurance written was \$271,000; the total amount in force at end of year, \$587,000.

The plan, considered mathematically, is sound, and if the expense fund will permit of the employment of successful

## EXCURSIONS

## A Back Yard 3 Miles Deep On Top of Orange Mountain

I have a plot of land, irregular in surface, with beautiful rocks and trees, on an attractive street, just over the edge of Montclair, N. J., in the town of Verona. The front is 400 feet, the depth 250. It joins on the rear Essex Park, which runs to Eagle Rock, so that in effect there is a back yard twice as deep. The land will be worth \$100 a foot in a few years. I will sell it now, if anybody, wants it, for \$50 a foot.

The street has a flag sidewalk, and there are many handsome homes in the immediate vicinity. It is only three or four minutes from the bridge leading to the beautiful new Lakeside station in Montclair, and is within walking distance of the famous Montclair Golf Club. There are few such opportunities remaining on the coast of Orange Mountain for a slightly, picturesque and well-located home. If you are interested, write to William B. Howland, 110 West 45th Street, New York.

solicitors, practicable. The future is a matter of capable business management and the personal character of the men in control. All new business enterprises are necessarily experiments, and this is no exception.

J. L. W., Marion, Kansas.—The book, "Fifty Years of a Civilizing Force," by Harry Chase Brearley, is published by Frederick A. Stokes Company, 443 Fifth Avenue, New York, at \$2.50 net.

H. D. J., Pittsburgh, Pa.—As you have \$25,000 other insurance, it would probably be wiser from a business viewpoint to take the cash surrender value of the policy that was reinsured and, as you suggest, use it paying for additional new insurance in some progressive company that is paying substantial dividends. You are young enough to do this profitably.

A. C. S., Hagerstown, Md.—The Prudential Casualty of Indianapolis, with total admitted assets of \$1,137,786, capital of \$500,000, and net surplus of \$211,881 on last January 1, is reported to have reputable backing and enjoys a satisfactory reputation in casualty insurance circles. In the matter of making profits on its business it has been unsuccessful. Its underwriting losses have been continuous since organization, the total being \$428,027 up to the end of 1915. Much of this is due to increased liabilities due to a constantly heavier volume of business each year. Altho the company seems to be under capable management, the complexities of the casualty business and the difficulties encountered of late years in making profits render a prediction as to the future of this company impossible.

R. A., Tone, Washington.—Financially, the Union Central is in splendid condition. The company has been well managed, transacts a large and steadily increasing new business every year, and for a number of years past has paid its mutual policyholders substantial dividends. But there is one feature of that company which is open to serious criticism, according to my way of thinking. Within the past eight years the stockholders have increased the capital stock from \$100,000, at which sum it stood for forty years, to \$2,500,000, capitalizing \$2,400,000 claimed non-participating earnings. In 1908 a stock dividend of \$400,000 was declared; in March of this year another stock dividend of \$2,000,000 was declared. Union Central stock, under its by-laws, pays 10 per cent dividends annually. A going life insurance company needs no capital whatever. The immense capital of this company is of no service to policyholders; but the transaction is tremendously profitable to the stockholders.

A. H. B., Butler, Ind.—An assessment association from 1878 to 1911, the Methodist Ministers' Relief Insurance and Trust Association of Boston, is now an old line mutual company, writing policies at a level premium and maintaining proper reserves. The change from assessmentism to legal reserve was followed by many withdrawals, the insurance in force falling from \$2,826,000 on December 31, 1910, to \$1,647,206 on December 31, 1914. The tide turned in 1915, the association ending the year with a gain—\$1,710,375 insurance in force. On December 31, 1915, the financial condition was: assets, \$115,911; liabilities (including \$103,721 reserve), \$109,766; net surplus, \$6145. The Presbyterian Ministers' Fund has been doing business on the old line basis for about half a century, has made substantial progress every year and has \$22,080,979 insurance in force. Its assets are \$7,178,299; liabilities (including \$6,142,691 reserve), \$6,188,536; net surplus, \$989,763. I haven't sufficient data of the Methodist Ministers' to make a comparison, but believe I am safe in saying its net cost for insurance is higher than in the Presbyterian Ministers', which is quite low. Both are good companies, but the latter is the better.

## University of Chicago

Second term of the Summer  
Quarter opens July 27 and  
closes Sept. 1.

Full program of collegiate and professional work.

Courses in the Graduate Schools of Arts, Literature, and Science, leading to Ph.D., M.A., and M.S. degrees.

# A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

AS HOMER WOULD HAVE CABLED IT  
SPARTA, Jan. 1, 1000 B. C.—The kidnapping of the Princess Helen, wife of Menelaus, by Prince Paris of Troy, Asia Minor, has created no little excitement in Sparta and the allied cities of the Peloponessus. Experienced diplomats assure the public that there is no danger of war.

Somewhere in Asia, Sept. 1, 1000 B. C.—A large expeditionary force has been sent to the Dardanelles. King Agammemnon, commander in chief of the allies, assures our correspondent that the obsolete fortifications of the Asiatic side cannot hold out for more than a few weeks against his determined attack. Modern wars are bloody but brief. The introduction of bronze weapons and the great cost of supporting an army in the field nowadays make a long campaign impossible.

Somewhere in Asia, April 1, 992 B. C.—There are rumors of dissension among the allied forces. King Agammemnon has retired General Achilles for insubordination. The siege will undoubtedly be soon abandoned.

Somewhere in Asia, Feb. 1, 990 B. C.—The allied forces claim that they are not down hearted, altho they have spent ten years before the Trojan trenches without being able to accomplish more than the devastation of the surrounding country. General Ulysses, the famous strategist, has taken command. He says that this will be a war of attrition and that it will begin next May.

Troy, Feb. 29, 990 B. C.—10 a. m. Allies abandon siege of Troy and betake themselves to their fleet. They were compelled to leave behind a great quantity of munitions, including a large wooden horse used as an observation post. Trojans capture the horse and take it into the city in spite of the protests of the suffraget spellbinder Cassandra.

Troy, Feb. 29, 990 B. C.—11 p. m. (Special to *Argive Herald*.) An unexpected reversal of fortune has placed the important city of Troy in the hands of the Greeks. By a strategic device which the censor does not permit us to disclose Field Marshal Ulysses introduced into the city a considerable force, which was able to overpower the garrison and sack the city. This proves beyond question that the day of the city fortress has past. It is understood that a protest will be sent to the Delphic Council against the atrocities which unfortunately occurred after the capture.

We have a constitutional aversion to giving free advertizing to private enterprises, but when one fills a long-felt want like the Baibunsha, Nimami-Sayegi-cho, Kyobashi, we like to help it along. So versatile an epistolist ought to get plenty of business in the course of a leap year like the present, espe-

cially since Mr. Sakai's terms are moderate—only a shilling for two hundred words with higher rates where extra sweetness is thrown in or the letter guaranteed to produce the desired effect upon the recipient.

Ladies and Gentlemen, We beg to inform that we have started a business to write love letters for you. We will write like a girl if you are a girl; like a *geisha* if you are a *geisha*; like a student if you are a student; and like a widow if you are a widow. We have able compositors; your affections will be successfully expressed in letters. If you send a telephone message to us, we will send a good writer immediately to you.

Free sample on application to  
Sakai's Literary Agency,  
No. 3, Sayegi-cho, Kyobashi.

Advertising is an insidious profession. Even preachers when they take it up are unable to keep to the simple truth. Going up Broadway recently I saw in front of a church the signboard:

THE BIGGEST FOOL IN THE WORLD  
Rev. Dr. H.—

Now this is a manifest falsehood. I have heard the Rev. Dr. H.— and I can affirm that he has no right whatever to claim such supremacy. Many a preacher has called himself the chief of sinners, but this new profession is really carrying Christian humility to an extreme.

Another church on the same street advertised:

After the war—What?  
A popular sermon by Dr. S.—.

This is quite misleading. The Rev. Dr. S.— preaches popular sermons now. No need to wait.

The Germans, who lead the world in preparedness of all sorts, are already laying their plans for the Germanization of Asia Minor. Carloads of professors have been shipped to Constantinople to start the teaching of German language and Kultur. Which reminds us of "Kitchener's School" at Khartum:

They terribly carpet the earth with dead.  
And before their cannon cool  
They walk unarmed by twos and threes  
To call the living to school.

But German is not an easy language and the prospect of having to teach it to the Turkish Empire and whatever lies beyond is truly appalling. In this emergency Professor Ostwald comes forward with the suggestion that a "simplified German" be invented for export purposes. He cites history to show that the spread of a language over alien territory results in its breaking down into simpler forms, as Latin into French in Gaul and English into "pidgin-English" in the Far East. Why not then an-

ticipate the process and construct a *Weltdeutsch* in which all complexities and anomalies are eliminated? In particular Professor Ostwald objects to gender both as a wicked waste of energy and as a survival of superstition, a vestigium of the days of animism, when men assigned a soul and sex to all things. He would also abolish the *Umlaut* and such combinations of letters as *sch* and *ts*, and would reduce the grammatical forms and sentence-structure to the simplicity of English and French. The German language thus reduced to its lowest terms could serve as a medium of commercial intercourse with all races even the most primitive.

This is certainly a commendable reform. I will use whatever influence I have with the German Empire to put it thru. It is not, however, altogether original with Ostwald. If I may say so without undue boastfulness, I discovered for myself at the early age of ten that the German language was unnecessarily complicated and ever since then I have employed in my conversation with Germans a sort of simplified German of my own, made by arranging the words in the English order, leaving off all the case endings and using only the article *der*, except of course before words obviously referring to females, like *Fräulein* and *Mädchen*, where naturally I use *die*. In fact the language as I have modified it for my personal use is just about the same as that now recommended as suited to the cranial capacity of the Kurds, the Kameruns and the Kongooses. Anyway it is a big improvement over Hanoverian German.

A student in the University of Atlantis, with whom I am intimately associated, assures me that the standard dictionaries are all off in their definitions of scholastic terms. He submits the following as the real up-to-date meaning of words whose original sense has become quite lost:

Academic style—Colloquial, journalistic, chatty, witty, slangy, informal.

Academic freedom—Freedom of manners. Athletics, amateur—Making a business of recreation.

Athletics, professional—The same plus a pay envelope.

College—An athletic field entirely surrounded by students.

Faculty—A body of men to keep the students in order.

Literary Society (obsolete)—Any number of men less than a quorum.

President—A diplomated diplomat, a learned politician and a doctor of finance, whose function it is to keep the trustees in order.

Trustees—A body of men to keep the faculty in order.

University—A western college.

A good many people have the defects of their virtues—without the virtues.

Grammar is the pursuit of a kinetic reality by a static method.

### THE TUFT OF FLOWERS

From *A Boy's Will*, published by Henry Holt and Company, we take this particularly happy poem of work and summer time, written by Robert Frost:

I went to turn the grass once after one  
Who mowed it in the dew before the sun.

The dew was gone that made his blade  
so keen

Before I came to view the leveled scene.

I looked for him behind an isle of trees;  
I listened for his whetstone on the  
breeze.

But he had gone his way, the grass all  
mown,

And I must be, as he had been,—alone,

"As all must be," I said within my  
heart,

"Whether they work together or apart."

But as I said it, swift there passed me  
by

On noiseless wing a 'wildered butterfly.

Seeking with memories grown dim o'er  
night

Some resting flower of yesterday's  
delight.

And once I marked his flight go round  
and round,

As where some flower lay withering on  
the ground.

And then he flew as far as eye could see,  
And then on tremulous wing came back  
to me.

I thought of questions that have no  
reply,

And would have turned to toss the grass  
to dry;

But he turned first, and led my eye to  
look

At a tall tuft of flowers beside a brook,  
A leaping tongue of bloom the scythe

had spared  
Beside a reedy brook the scythe had  
bared.

I left my place to know them by their  
name,

Finding them butterfly weed when I  
came.

The mower in the dew had loved them  
thus,

By leaving them to flourish, not for us,  
Nor yet to draw one thought of ours

to him.

But from sheer morning gladness at  
the brim,

The butterfly and I had lit upon,  
Nevertheless, a message from the  
dawn,

That made me hear the wakening birds  
around,

And hear his long scythe whispering to  
the ground,

And feel a spirit kindred to my own;  
So that henceforth I worked no more

alone;

But glad with him, I worked as with  
his aid,

And weary, sought at noon with him  
the shade;

And dreaming, as it were, held brother-  
ly speech

With one whose thought I had not  
hoped to reach.

"Men work together," I told him from  
the heart,

"Whether they work together or apart."

### REMARKABLE REMARKS

WOODROW WILSON—I am by instinct a  
teacher.

VICE-PRESIDENT MARSHALL—The world  
is all awry.

MRS. VERNON CASTLE—It bores me so  
to be stared at.

HENRY WATTERSON—The hyphenates  
are in the saddle.

DISTRICT ATTORNEY SWANN—Perjury is  
on the increase in New York.

CHARLES E. HUGHES—I have been long  
on silence and short on talk.

THOMAS MOTT OSBORNE—Every man  
has in him possibilities of reform.

G. K. CHESTERTON—I never claim for  
my opinions the vice of impartiality.

THEODORE ROOSEVELT—Nine-tenths of  
wisdom consists in being wise in time.

GENERAL JOFFRE—Any chief giving the  
order of retreat will be brought before court  
martial.

LILLIAN RUSSELL—The intelligence of  
the expression depends on the arch of the  
eyebrows.

CHANCELLOR VON BETHMANN-HOLWEG—  
We are the most democratic government in  
the world.

REV. WASHINGTON GLADDEN—Each na-  
tion must have its own God; religion is a  
purely ethnical affair.

MARY GARDEN—I love Chicago above all  
other cities. I am to receive \$2000 a per-  
formance for singing there.

CARDINAL LOGUE—This war seems to  
have stirred to their lowest depths the  
worst and most depraved of human pas-  
sions.

SENATOR THILMAN—We Americans in-  
vent things and then sit down and allow  
people of Europe to develop and utilize  
them.

H. G. WELLS—There is a profound and  
bitter wisdom in the deep distrust of Brit-  
ish labor for both military and industrial  
conscription.

GENERAL BRUSILOFF—All German strat-  
egy is based on the eventuality of winning  
quickly. They know how to push, but not  
how to develop.

ED. HOWE—I know of a woman who  
writes for the papers and calls herself  
Sunshine Mary. Moral: Her daughter  
lately ran away from home.

SECRETARY DANIELS—The day has  
passed when the spread eagle orator boast-  
ed in stentorian tones that Uncle Sam  
could whip anything in creation.

ASSISTANT SECRETARY OF NAVY ROOSE-  
VELT—Strictly speaking, if national de-  
fense applies solely to the prevention of an  
army landing on our Atlantic or Pacific  
Coasts, no navy at all is necessary.

BERT L. TAYLOR—Colonel Roosevelt's  
statement that he is out of politics does  
not mean that he has address an Othello  
farewell to the game. When a man remarks  
that he is out of breath he doesn't mean  
that he has quit breathing.

## THE POLITICAL CAMPAIGN—THE CANDIDATES

**T**HE two candidates for the presidency came to political prominence by similar roads. Mr. Wilson became Governor of New Jersey in an uprising against the political bosses; Mr. Hughes became Governor of New York in just the same kind of revolt. The governorships of both men were among the most striking examples of recent years of government on behalf of the people in calm defiance of the political machines. The American voter is to be heartily congratulated on the choice that is before him in November. It is not, as so often has been the sad case in elections to all kinds of offices, the mere choice between the puppets or the figureheads of two political machines. It is not even the choice between the candidate of a boss and the representative of a popular revolt. It is the alternative between two men, both of whom are primarily and essentially repugnant to the bosses and to party reactionism. The voter who is chiefly concerned with his hatred of machine politics can vote with his eyes shut. He will not go wrong. It does not matter that they are nominated with the acquiescence of the machine leaders. It was reluctant acquiescence dictated by the instinct of self-preservation and the innate cowardice of the machine boss in the face of aroused public opinion.

So, too, there is nothing to choose in point of personal character. Both candidates are the essence of uprightness; both stand high above any suggestion of time-serving or any hint of ulterior motive. If any voter there be who cares only that the man selected is honest and of high purpose, he, too, can go it blind. He cannot make a mistake.

But most of us want more than those two things, fundamental as they are. We know they are good men; we want to know what kind of good men they are. We know they will not let any boss pick out their line for them; but we want to know what line they will naturally pick out for themselves.

Both men are indefatigable workers. The interminable hours spent by Governor Wilson at the desk, even in the brooding days and nights of midsummer, is still a tradition about the State House at Trenton; while many a visitor to Albany in the days of Governor Hughes remembers the stereotyped and frugal lunch whose presence on a tray upon the Governor's desk was not allowed to interfere with conference or business, no matter how cold the chop might get meanwhile.

Both men have splendid minds; and both prefer to

use their own rather than those of other men. They think things out for themselves. Indeed, it has been matter for criticism of both from time to time that they are not sufficiently prone to take counsel of the thoughts of other men.

But their minds are as different in type as minds could well be. Mr. Hughes subjects the problems of life and human relationships and government to the cold light of reason; Mr. Wilson suffuses such problems with the warm glow of the imagination. Two passages from published writings of the two men are of deep significance in this connection, both because they illustrate this difference of approach and because they portray the essential agreement in fundamental belief. Mr. Wilson was addressing himself to the citizens of the United States:

The men who have been ruling America must consent to let the majority into the game. We will no longer permit any system to go uncorrected which is based upon private understandings and expert testimony; we will not allow the few to continue to determine what the policy of the country is to be. It is a question of access to our own government. There are very few of us who have had any real access to the government. It ought to be a matter of common counsel; a matter of united counsel; a matter of mutual comprehension.

So, keep the air clear with constant discussion. Make every public servant feel that he is acting in the open and under scrutiny; and above all things else, take these great fundamental questions of your lives with which political platforms concern themselves and search them through and through by every process of debate. Then we shall have a clear air, in which we shall see our way to each kind of social betterment. . . .

I am not afraid of the American people getting up and doing something. I am only afraid they will not; and when I hear a popular vote spoken of as mob government, I feel like telling the man who dares so to speak that he has no right to call himself an American. You cannot make a reckless, passionate force out of a body of sober people earning their living in a free country. Just picture to yourselves the voting population of this great land, from the sea to the far borders in the mountains, going calmly, man to man, to the polls, expressing its judgment about public affairs. Is that your image of "a mob"? . . . Or is that your picture of a free, self-governing people? I am not afraid of the judgments so expressed, if you give men time to think, if you give them a clear conception of the things they are to vote for; because the deepest conviction and passion of my heart is that the common people, by which I mean all of us, are to be absolutely trusted.

So, at this opening of a new age, in this its day of unrest and discontent, it is our part to clear the air, to bring about common counsel; to set up the parliament of the people; to demonstrate that we are fighting no man, that we are trying to bring all men to understand one another; that we are not the friends of any class against any other class, but that our duty is to make classes understand one another. Our part is to lift so high the incomparable standards of the common interest and the common justice

that all men with vision, all men with hope, all men with the convictions of America in their hearts, will crowd to that standard and a new day of achievement may come for the liberty which we love.

Mr. Hughes was addressing himself primarily to college men:

Whether you like it or not, the majority will rule. Accept loyally the democratic principle. The voice of the majority is that neither of God nor of devil, but of men. Do not be abashed to be found with the minority, but on the other hand do not affect superiority or make the absurd mistake of thinking you are right or entitled to special credit merely because you do not agree with the common judgment. Your experience of life cannot fail to impress you with the soundness of that judgment in the long run, and I believe you will come to put your trust, as I do, in the common sense of the people of this country, and in the verdicts they give after the discussions of press, of platform and of ordinary intercourse. The dangers of the overthrow of reason and of the reign of passion and prejudice become serious only as resentment is kindled by abuses for which those who have no sympathy for popular government and constantly decry what they call "mob rule" are largely responsible. But whether the common judgment shall exhibit that intelligence and self-restraint which have given to our system of government so large a degree of success, will depend upon your attitude and that of the young men of the country who will determine the measure of capacity for self-government and progress in the coming years.

Prize your birthright and let your attitude toward all public questions be characterized by such sincere democratic sympathy, such enthusiasm for the common weal, such genuine love of justice, and such force of character, that your life to the full extent of your talent and opportunity shall contribute to the reality, the security, and the beneficence of government by the people.

Both men believe in democracy, in the ultimate rightness of the common people, in their real trustworthiness. But with Mr. Hughes this belief in the soundness of the common judgment is the product of experience and logical deduction from the observed facts of life. With Mr. Wilson it is the deepest conviction and passion of his heart. Mr. Hughes approaches all these matters with a cool head; Mr. Wilson goes to them with a warm heart. What logic and reason do for the one intuition and sympathy do for the other. Since the goal is so often the same, who shall say which approach is the better?

Both men are fighters. If you doubt it, ask the Republican bosses of New York and the Democratic bosses of New Jersey, who bear deep scars that testify to the valor and the power of their quondam opponents. They use, too, the same weapons—pitiless publicity, the power of an aroused public opinion, the appeal to the popular sense of righteousness and justice. They fight fair, they fight in the open, they fight hard.

Both men believe in party government—and in their own parties. Mr. Wilson is a "good" Democrat, Mr. Hughes is a "good" Republican. Not "good," of course, as a machine politician would use the word; but "good" in the sense that there is nothing of the Mugwump about them.

They are much alike, in honesty of purpose, in firmness of conviction, in devotion to the common welfare, in self-sacrifice for the sake of the task they are called to perform. They differ in temperament, in manner of thought, in intellectual equipment, in emotional reaction, in political beliefs. Mr. Wilson is a good deal of a radical, Mr. Hughes emphatically a liberal. Mr. Wilson is ahead of his party; Mr. Hughes represents the best in his party. Mr. Hughes has a brilliant legal mind, Mr. Wilson has a broad and genial philosophic mind. Mr. Wilson could never have written the convincing judicial opinions of Mr. Justice Hughes; Mr. Hughes could

never have written the charming literary essays in the volume "Mere Literature."

The voter is fortunate in having two such men to choose between. But the good fortune carries with it its perplexities. The choice between the two personalities is not easy.

The decision, therefore, must largely be made on other grounds. There is not only a man to be put in the White House, there is a party to be put in power, there are policies to be adopted—and there is a presidential record to be endorsed or disapproved. The President has in many respects made a splendid record, and in other respects a highly debatable record. In the next four months it *will* be vigorously debated, and the effect of the debate will largely determine the result in November. But whichever way the die is cast, the people of the United States will find themselves with a high-minded, able, hard-working fighter of a President for the next four years.

### THE TERROR OF THE SEA

THE shiver that has passed along the North Atlantic coast at the approach of a school of sharks is so out of proportion to the magnitude of the peril that it seems to be due to a revival of the fears which haunted the childhood of the race. It has been so long since man has had to fight the carnivora of land and sea that they produce the impression of supernatural dreadfulness. The bathing beaches are deserted, altho the deaths every year from drowning are more than could possibly come from sharks.

Altho the sharks caught on the New Jersey shore are all of the common blue or dusky variety, the popular imagination prefers the white shark and revives the legends of a sea monster who, having once tasted human flesh, becomes henceforth insatiate for it as the drug fiend for cocaine.

This was the theme chosen by Herman Melville for "Moby Dick," the mystical romance that he dedicated to his friend, Hawthorne. Melville seems to have known more about the inside of a whale than any man since Jonah, and Moby Dick, the Great White Whale, is more than a symbol. So is Ahab, the Nantucketer, whose leg Moby Dick bites off. But Captain Ahab makes himself an ivory leg of the polished bone of a sperm whale's jaw, and in spite of all opposition hunts Moby Dick thru all the seven seas.

In Barrie's hands the sea-monster becomes a crocodile, and the limb bitten off is an arm instead of a leg. The crocodile with the clock in his stomach appears on the scene just in time to save Peter Pan from Captain Hook and his pirates.

Doubtless the papyri of Egypt and the clay tablets of Babylon tell the same story in their own fashion. The ancient myths are avatars and reappear from time to time in strange guises.

### DUCKING UNDER THE BLOCKADE

EVERY street urchin knows that the best way to elude a policeman is to dive between his legs and that the best way to get into a circus tent when one hasn't the cash or wants to save it is to crawl under the edge of the canvas. The Germans have learned this lesson, as the appearance of the "Deutschland" in Baltimore harbor proves. They have carried the war into the

third dimension and any time now we may hear that a Zeppelin merchantman with a million dollar cargo of dyes and drugs has landed upon Mount Washington or other eyrie port. There is always room at the top—or the bottom. It is the middle way that is most dangerous.

The British press may be right in saying that the voyage of the "Deutschland" has no military or commercial importance, but it is evident that Captain König and his crew were highly delighted at the way they had "come it over" the British battleships by coming over under them.

In fact the development of the submarine has been due largely to the efforts of Frenchmen, Americans, Irish and Germans to find some weapon that would shake Britain's sovereignty of the sea. The first time the submarine was used in warfare was in our national natal year, 1776, when the "Turtle" attacked the "Eagle" in New York harbor. The "Turtle" had been constructed by David Bushnell, an American engineer, for the purpose of blowing up the British fleet, but when she got under the British frigate "Eagle" she could not stick the torpedo to her copper bottom. So it floated off and exploded an hour later, doing no harm except to scare the English crew.

Twenty years later Robert Fulton was in Paris trying to get a contract for blowing up British vessels on commission or for ferrying a French army across the channel under water. The French admiralty rejected his submarine as too barbarous and inhuman a weapon to be used in civilized warfare. The First Consul, Bonaparte, being less scrupulous or more enterprising, looked with favor upon Fulton and gave him 10,000 francs for experiments. With this he constructed the "Nautilus," in which he went out to sea and blew up a hulk in the harbor of Brest.

In our Civil War, the Southerners, being in much the same fix as the Germans now, made many efforts to break the blockade and destroy the Northern navy by means of submarines.

One of their ineffectual schemes is portrayed on another page. This invention, by Mr. Anstilt or Alstitt, of Alabama, is especially interesting as it is the first in which steam and electricity were used. The sketch shows two cupolas. The one in front is the conning tower. The one toward the stern is the telescoped smokestack. Before the submarine could dive it was necessary to put out the fires and pull down the smoke-stack and cover it over, so she could not have been very quick in getting out of sight. Under water her twin screws were run with compressed air and the torpedoes were fired by the electric current.

The submarine really became a practical machine when J. P. Holland, of Paterson, New Jersey, got to work in 1877, but it was twenty-five years before the importance of this new weapon of warfare was generally realized by the admiralities of the world. In 1903 Burgoyne published two large volumes to urge England to adopt the submarine, for, as he said, "We all know France's dearest wish is to plant her army corps on the shores of perfide Albion but our superior navy bars the way." The French at that time had forty-five submarines and were talking of using them, as Fulton had suggested a hundred years before, to convey troops to England. The Belgian press also was rejoicing then at the prospective overthrow of the British sea power.

But the British naval authorities rejoiced at the folly of the French in wasting their money on such chimerical schemes. Vice Admiral Sir William Kennedy voiced true conservatism when he said in 1901: "I know nothing about submarine boats and what's more don't believe in them." Thornycroft, the leading British builder of torpedo-boats, said that two dimensions were good enough for him; he had no desire to soar into the air, and "if I ever have to go under water with a submarine boat I should prefer to sit outside so as to be able to get off quickly if anything went wrong."

Admiral von Tirpitz also was skeptical of the submarine in those days, but he was watching the French experiments with interest and five years later Unterseeboot I was launched. By 1914, the Germans were ready and young Otto Weddigen in the "U-9" sank three British cruisers within an hour with three shots from his torpedo tubes. After that no one could question the importance of the new fighting machine.

The German submarine has come to be regarded with aversion because it has been employed in sinking passenger vessels and neutral merchantmen, but our remonstrances have put a stop to this, and the exploit of Captain König is viewed in America as the ingenious infraction of an illegal blockade. The "Deutschland" is anchored within a few rods from where Simon Lake in 1897 first went under water in the "Argonaut." The "Argonaut," as its name implies, was designed to retrieve treasure rather than to destroy it; to raise vessels, not to sink them. The "Deutschland" also is a peaceful boat, tho made for use in war, so Baltimore may give us hope that this marvelous invention to which all nations have contributed may in the future be used for the advancement of civilization instead of its destruction.

## THE ART OF KEEPING COOL

MANY thousand years ago Prometheus or some simple savage who had nothing better to do than to rub sticks together discovered the means of keeping warm in cool weather. It is only recently that mankind has discovered the means of keeping cool in warm weather, and America has been the chief contributor to this the latest of the fine arts. The American system of internal refrigeration by the use of iced drinks and ice cream, and the American system of atmospheric circulation by the use of the electric fan, have made it possible to be comfortable in summer just as the American stove and steam heating systems have made it possible to heat a whole house comfortably in winter. The Englishman still sticks to his ineffectual fireplace in the north and his ineffectual punka in the south, but the American methods of regulating temperature are gradually making their way around the world.

The principle of these heat-reducing devices is simple altho the means of applying it are various. The human body has to be kept pretty closely to a fixed temperature, 98.6° F. A few degrees above or below means disease and death in the long run. Now the human body, like all other machines, has to have a continuous stream of energy running thru it in order to keep going. We take in this energy in the form of food and oxygen and we expel it for the most part in the form of heat. The first part of the process, the income of energy, we are fully conscious of. We get quite cross if we do not get our

food on time, and we get quite excited if any one shuts off our wind. But the second part of the process, the outgo of energy, proceeds so easily that we do not have to worry about it except when the weather is cold and we lose heat too fast, or when the weather is hot and we lose heat too slowly.

Heat flows from a hot place to a cold place just as water flows from a high place to a low place, and like water it flows the faster the greater the difference between the two levels. So as the temperature of the air climbs toward 98° the radiation of heat from the skin slows up, and when it passes that point the heat flows in instead of out. If the mill race is dammed up until the water is as high as it is in the pond the wheel

stops running. We have to get rid of our waste heat, a hundred calories or more an hour, and if we cannot run it off by radiation we must use some other means.

The other means is evaporation. That takes up a lot of heat. Put a pint of ice water over a stove and see how much it takes to drive it all off in the form of steam. If you drink the pint of ice water and let it evaporate it takes just about the same amount of heat away from you as it did from the fire. And it does not take long to dispose of a pint of water in this way when the weather is such as we are having now.

But here again we run up against another difficulty. Suppose the air has all the water it can take up. Then we cannot evaporate any water from the skin and so cannot lose any heat in that way.

If then the air is at 98° or over and has a humidity of 100° or near it, all we can do is sit and sizzle. Our internal temperature will rise from "blood heat" to "fever heat" and above until we perish like those poor things in the Black Hole of Calcutta. They did not die from carbonic acid poisoning, as we used to be told. Probably there was oxygen enough to go around in their prison. They just boiled over because they could not run off their surplus heat.

Fortunately for us these two conditions rarely occur, so we usually can get relief in one way or the other. As the temperature of the air rises it can take up more moisture, so it is rarely saturated when it is hot. A person can stand 110° or 120° in an Arizona desert where the air is dry if he can get water enough to keep his steam up. But down here on the seacoast where the air may get all the water it can hold from sea or rain, we feel very uncomfortable when the mercury goes over 85°.

A man is as cool as he feels, and a thermometer can-

## BOTH SIDES OF THE CAMPAIGN

**T**HE *Independent* aims to present fully, frankly and fairly both sides of the great questions of the day.

*In pursuance of this purpose we shall publish during the presidential campaign a parallel series of articles from the Democratic and Republican points of view. The Democratic position will be presented by*

**NORMAN HAPGOOD,**

*Former Editor of Harper's Weekly.*

*The Republican side will be set forth by*

**JACOB GOULD SCHURMAN,**

*President of Cornell University.*

*Both writers are intimately acquainted with the respective presidential candidates; both believe firmly in the principles and policies which Mr. Wilson and Mr. Hughes respectively uphold. Both will have exceptional opportunities to obtain at first hand the views of the candidates as they are brought out during the campaign. The Independent congratulates its readers and itself on being able to render them this important service at this critical period in American political life.*

not tell him that. A wet bulb thermometer is better because a man is constructed more like a wet bulb thermometer than like a dry bulb thermometer. The new Kata thermometer, which combines the wet and dry bulb, is better than either, but more bothersome to handle. What we want to measure is not how much heat we have, but how fast we are losing it. Heat is like money; to be happy we must spend it at the proper rate. The miser is miserable.

One other point is to be noticed and that is one the importance of which has only recently been realized. The air with which we are concerned is not the air of the meteorological station or even the air of the room we are in, but the air that touches us.

Now air that stays in contact with the skin tends to become like the skin, that is, to assume the body temperature and to become saturated with moisture. When it gets in that condition we are plunged into a Black Hole of Calcutta all our own. We can only get out of it by removing the layer of stagnant air that covers the skin. If no kind breeze will do this for us we can fan ourselves or let electricity do it for us. It has been found by the elaborate series of experiments on ventilation carried on in the last few years that the circulation of the air is the most important factor in the art of keeping cool. People confined in a room can stand an astonishing amount of carbon dioxide and a high degree of temperature and humidity if the air is kept in circulation. What we call "bad air" is mostly stagnant air.

## OUR SOULFUL CORPORATIONS

**O**UR railroads are beginning to undertake the "uplift" business. Some are conducting model farms. Some are going into "stations beautiful." Some are going out of politics. Some are cultivating politeness in their employees.

Now come two railroads—the Denver & Rio Grande, and the New York, New Haven & Hartford—with a campaign to impress automobilists with the utter senselessness of attempting to cross a railroad track ahead of a flying express. In 1915 1086 lives were needlessly lost in grade crossing accidents from this cause alone.

Thus, if this "public be pleased" policy is to take the place of the old "public be damned" policy, we may eventually expect the railroads to tackle the paramount problem of running their trains according to the time table. But perhaps this is expecting too much.

Copyright Underwood

#### A MAN-EATING SHARK

Along the Atlantic coast of New York and New Jersey several swimmers have recently been killed by sharks. Dynamite, drag-nets and all sorts of harrowing tactics have been used in the hope of catching or at least frightening away these dangerous fish. This "dusky" shark was caught at Beach Haven, New Jersey, by Mr. E. F. Warner with rod and line and killed with three revolver shots. The recent attacks of sharks upon human beings are, verifiably, very rare, but, in spite of sailors' yarns, the fact is that there are astonishingly few authenticated instances of such attacks. There is no satisfactory explanation for this conversion of the shark from a voracious, voracious and cautious fish into a man-eating monster, but a shortage of the shark's natural food in the ocean seems the most probable reason.

# THE STORY OF THE WEEK

The Battle of the Somme left the French considerably in advance of the British. This week the French have been comparatively inactive, while the British are catching up with them. Their efforts have been chiefly directed toward driving out the Germans from the corner they have hitherto held about Contalmaison. Here there are two villages of the same name, Bazentin-le-Grand and Bazentin-le-Petit, of which the Big Bazentin is the further south. To the east of these is Longueval, and to the west is Pozières. All of these villages have been taken by the British, giving them a gain of about a mile on a four mile front and straightening out the angle that indented their line. In clearing up the country north of Bazentin the British were able to use a squadron of their dragoon guards, which shows how their new offensive has loosened up the fighting, for it has not been possible to employ cavalry as such since trench warfare was established in this region in the fall of 1914.

The British were not able to hold all of the ground gained by their first swift drive to the east. The counter-attacks of the Germans drove them out of the Mametz and Trones woods, except for one party of the Royal West Kent regiment, who held out in the northern part of the Bois des Trones for forty-eight hours, altho cut off from the rest of the British troops. Both these woods, however, were reconquered in the course of the week and the British have pushed beyond them to the third German line. The British report the capture of ten thousand prisoners in their two weeks' offensive north of the Somme.

South of the Somme the French have pushed their line eastward to the village of Biaches, just across the river from Peronne, only two miles away. They have also captured Hill 97 nearby, which is the highest promontory

## THE GREAT WAR

*July 10*—Russians cross the Stokhold River. General Smuts takes Tanga, seaport of German East Africa.

*July 11*—British regain Trones wood, near Somme. Germans closing in on Fort Souville, near Verdun.

*July 12*—British regain Mametz wood, Somme region. Italians push back Austrians toward Trentino.

*July 13*—Martial law declared in Spain because of railroad strike. Arabs seize Mecca forts.

*July 14*—British take villages of Bazentin and Longueval. Heavy firing on Belgian front.

*July 15*—British take 2000 prisoners and village of Pozières. Russians take Baiburt, between Erzerum and Trebizond.

*July 16*—German counter-attacks upon Russians on Stokhold. Portuguese army equip to aid Allies.

in this vicinity and commands the Somme valley for a considerable distance. The Germans made a desperate attempt to regain Biaches by an infantry charge under cover of a fog, but the French drove them out with the bayonet.

The Anglo-French offensive on the Somme has not removed the pressure on the Meuse. The Germans continue their efforts to take Verdun and have made some progress on the eastern side of the Meuse near Fleury and Souville. In these operations they have taken during the week fifty-six officers and 2349 men.

**The Defense of Kovel** The strategy of the eastern theater of war is, like the western, mostly a struggle for railroads. This is especially important in Russia, where the distances are so great and the railroads are so few. The conflict is now over the north and south railroad connecting the fortress of Brest-Litovsk with the city of Lemberg. Near the middle of this line is the city of Kovel, against which the Russians are directing their main attack, for if they capture it, it is likely to give them both Lemberg and Brest-Litovsk and force the Germans to retire to the next line

of railroad, that which runs thru Lublin, some seventy miles west of Kovel.

General Brusiloff has entrusted the advance toward Kovel to General Kaleldines, in command of the left wing south of the railroad to Kovel, and General Lesch, in command of the right wing, north of this railroad. First the left wing moved forward from the Styr to the Stokhold River. The Germans made a desperate effort to hold back the Russian right on the Styr River, but failed, and it came forward with a rush to the Stokhold and even crossed it, thanks to the courage of Colonel Kautseroff, of the Pavlograd regiment, who at the head of his advance guard dashed forward across the bridge which the retreating Germans had set on fire. Now the Germans are trying hard to dislodge them from the western side of the Stokhold, for this river forms the last natural barrier in front of Kovel, twenty miles west. So far, General von Linsingen has been successful, holding the Russians in check at the Stokhold River by dint of hard fighting.

The rapid advance of the Russians is due in part to armored motor cars driven by British and Belgians transferred from the western front. But in part also it is due to a new form of tactics in which the famous Cossack cavalry are employed. It is an unprecedented and disconcerting spectacle to the Germans to see their concrete trenches and concealed batteries carried by a headlong charge of horsemen in the face of their rapid-fire guns. When there is a wide open space to cross exposed to German fire the Cossacks gallop forward as far as possible, then stop their horses and make them lie down, as they are trained to do at command. While the Cossacks, using their horses as breastworks, keep up a rifle fire at the trenches, the Russian infantry run up to them and then charge the entrenchments beyond.

#### A BATTLEFIELD NEAR THE SOMME

The shell bursting in the distance is the only indication that this seemingly peaceful landscape is crowded with fighting men and guns

According to the Petrograd War Office, General Brusiloff has captured 5620 officers and 266,000 men, as well as 312 cannon and 866 machine guns, between June 1 and July 12.

**The Voyage of the "Deutschland"** The German press is hilarious over the success of the first commercial submarine in reaching Baltimore and declares that it marks a new era in the history of navigation like the first steamship that crost the Atlantic. The British admit the cleverness of the feat but say that it is of no importance since such a vessel would be useless in time of peace and the small cargoes it could carry would not relieve Germany from the pressure of the blockade. A second submarine, the "Bremen," is said to be coming shortly and others are building so a regular service may be established.

The undertaking was launched last fall by Paul Lohmann, president of the Bremen Chamber of Commerce, who put up \$125,000 and persuaded the North German Lloyd and Deutsche Bank to make up the balance of the \$500,000 capital needed for the formation of the Ocean Shipping Company to start its submarine line.

The "Deutschland" has been thoroly searched by the U. S. Treasury inspectors and by three submarine experts of the navy and they pronounce her unmistakably a merchantman. She has no torpedoes or torpedo tubes and does not even carry the light rapid-fire guns allowed for defensive purposes on commercial vessels. The only weapons found abroad were the revolvers of the officers. It seems then that the "Deutschland" is entitled to all the privileges of a merchant vessel and is free to come and go whenever she likes, or thinks it safe. British warships are waiting for her outside the bay and a number of swift destroyers are said to have been sent over expressly to catch her as she returns. Strictly speaking they would have no right to fire upon her until after warning, search and taking off her crew, but doubtless they would hold that in sinking she was attempting to escape and so was legitimate prey.

The "Deutschland," like all the Ger-

man submarines, is provided with a phonograph and a library. Grieg's "Peer Gynt" suite was, according to Captain König, the favorite music, and Mark Twain, Bret Harte and W. W. Jacobs were the favorite authors.

The Diesel engines consumed only 85 gallons of fuel oil in making the 3800 miles. The "Deutschland" carried over about 750 tons of dyestuffs and fine chemicals worth a million dollars, and, since these are light, 300 tons of iron ballast. She will take back nickel in place of the ballast and crude rubber in place of the aniline dyes.

**The Declaration of London** The British and French governments have announced that they will no longer pay any regard to the Declaration of London. This destroys the last vestige of the code drawn up in 1909 under the authority of the Hague Conference to regulate commerce in wartime. It was signed by

American Press

**APPOINTED TO THE SUPREME COURT** Judge John H. Clarke, of Cleveland, has been nominated by President Wilson to fill Mr. Hughes' place on the bench of the Supreme Court.

the representatives of the nine leading naval powers and was regarded as the best formulation of international law.

The United States ratified it in 1912, but in England, tho it passed the House of Commons, it was defeated in the House of Lords. The chief opposition to it in England then was because it was feared that it would limit the sea power of Great Britain and enable her enemies to cut off her food supply. The Declaration specified certain articles such as food for civilians, medicines, cotton, rubber and soap, should never be contraband, and it required that a blockade to be binding "must be maintained by a force sufficient really to prevent access to the enemy's coast line," and it prohibited the capture of neutral vessels bound to neutral ports.

At the beginning of the war the United States asked the belligerents to agree to abide by the Declaration of London, but could not get them to agree to it. The British Government announced that it would hold to it in part, but has renounced one provision after another by Orders-in-Council. In particular, the British Government has made all commerce with Germany contraband, even tho carried in neutral vessels between neutral ports, has applied and extended the doctrine of continuous voyage, and claims the rights of a blockade altho it has no control over the Baltic coast of Germany.

According to the new Order-in-Council, Great Britain will henceforth proceed under the following rules:

First—The hostile destination required for the condemnation of contraband articles shall be presumed to exist until the contrary is shown if the goods are consigned to or for an enemy authority or agent of an enemy state, or to or for a person in the territory belonging to or occupied by the enemy, or to or for a person who during the present hostilities has forwarded contraband goods to an enemy authority or agent of an enemy state, or to or for a person in territory belonging to or occupied by the enemy, or if the goods are consigned "to order," or if the ship's papers do not show who is the real consignee of the goods.

Second—The principle of continuous voyage or ultimate destination shall be applicable both in cases of contraband and blockade.

Third—A neutral vessel carrying con-

traband with papers indicating a neutral destination which, notwithstanding the destination shown on the papers, proceeds to an enemy port, shall be liable to capture and condemnation if she is encountered before the end of her next voyage.

Fourth—A vessel carrying contraband shall be liable to capture and condemnation if the contraband, reckoned either by value, weight, volume or freight, forms more than half the cargo.

**The Arabian Rebellion** A new factor has entered into the war by the revolt of the Arabs against Turkish rule. The Grand Sherif of Mecca, who as a descendant of Mohammed and guardian of his birthplace occupies a position of authority in the Moslem world, has headed a movement for Arabian independence and has gained possession of Jedda, the seaport of Mecca, and the holy city of Medina, to which the Prophet fled and where he was buried. The capture of Jedda and other ports on the Red Sea to the north and south of it will permit pilgrims to reach the Holy Cities without interference by the Turks. The Moslems from the British Empire have hardly been able to make the pilgrimage since the war began, for the Hedjaz railroad from Damascus to Medina has been under the control of the Turks. This railroad passes by the Egyptian frontier and has been used for the transportation of the German and Turkish troops from Constantinople for the attacks on the Suez Canal. If the Arabs are able to advance from Medina northward along this railroad they will take the Turks in the rear and relieve Egypt of the threatened invasion. The Marquis of Crewe admitted in Parliament that the Arabian rising was no surprise to the British Government and we may safely assume that the movement received more than mere sympathy from the British side.

The Arabs have never been content to see the supremacy of Islam pass into the hands of the Turks and they have resented and resisted the efforts

made since the revolution by the Young Turks to Ottomanize Arabia by imposing the Turkish language as well as the Turkish rule. Now that the Germans are virtually the rulers of Turkey the Arabs have good reason for regarding Constantinople as having lost its claim to Mohammedan allegiance. The severity recently shown by the Turks and Germans in Syria has further alienated them. But the Arab tribes have never yet been able to unite in any persistent warfare against the Turks and it is doubtful if even now they will offer any formidable resistance.

#### Our Agreement with Carranza

Unless new difficulties arise, at present unforeseen by either nation, it is probable that the United States will not intervene further in Mexico except thru agreement with the de facto government. President Wilson is understood to have accepted the plan of General Carranza for a joint commission to adjust all differences now existing between the two governments. It is believed that if the Carranza government can give satisfactory assurances that the integrity of the American border will hereafter be secure from invasion, General Pershing's forces will be gradually withdrawn from Mexico. The commission plan of settling diplomatic difficulties arising between the American and the Mexican governments is in accordance with the provisions of the treaty of 1848, the treaty which President Wilson has recently declared would never be regarded under his administration as a mere "scrap of paper." Any renewal of trouble along the frontier will, of course, put an end to the agreement.

As a result of the renewed feeling of mutual confidence on the part of the American and Mexican authorities, the shipment of foodstuffs into Mexico has been renewed. Altho food and

clothing can now be imported into Mexico without restriction, the American Government has thought it best to retain for the present the existing embargo upon munitions of war. There have been disquieting rumors that in spite of the vigilance of the authorities arms and ammunition have been smuggled across the border to Villista rebels. The Mexican Northwestern Railroad has again been opened for the shipment of supplies to the American forces in Mexico.

General Carranza has announced that there will be a presidential election in Mexico as soon as the country has been completely pacified. At that time, he adds, a law of amnesty will be promulgated so that all Mexicans who have left their country for political reasons may return to their homes. Before the de facto government will give place to a regularly constituted government, however, all rebellion must be put down and the political reforms advocated by the Constitution- alists must be in effect. Ambassador Designate Arredondo and General Trevino himself have both issued statements denying that there is any truth in the rumor that General Trevino has gone over to the Villistas.

The de facto government has repudiated any responsibility for the various Mexican delegations, such as the recent Washington conference under the auspices of the American Union Against Militarism and the labor leaders who attended the meeting of the American Federation of Labor, which have attempted on their own responsibility to find a way to avert war between Mexico and the United States. Says Mr. Arredondo:

I am in receipt of a telegram from the Secretary of Foreign Affairs at Mexico City, stating that on June 31 last he made a public declaration to the effect that several committees of private institutions and organizations which have been sent to the United States to confer with other committees, also composed of private persons, bear no commission from the Mexican Government to deal with matters of an international character, either officially or unofficially, and that today he renews the statement in order that it may be completely understood in the United States that these persons are acting purely on their own initiative, and without any official power to represent the Government of Mexico.

**The Civil War in Mexico** The rebel forces now so active in southern Chihuahua have not as yet succeeded in seriously shaking the supremacy of the de facto government except in a very limited area. On the other hand, the Carranzista regulars have been equally unable to crush the rebellion. On July 11 Villistas attacked the Carranza garrisons at Rosario and Parral, but were beaten off. General Contreras is the nominal leader of the rebellion in Chihuahua, but the conviction has grown more strongly every day that Villa himself has been actively directing operations there. On the following day fighting was renewed at Cerro Blanco, a few miles south of Parral. Villa was reported in the neighborhood of Quinaga.

Paul Thompson

#### FRANCE CALLS TROOPS FROM THE FAR EAST

England is not the only country that can draw upon Asia for recruits. Here are some Annamites from French Indo-China who are, as the inscription on the photograph ambiguously states, deserting at la gare de A, on their way to the front.

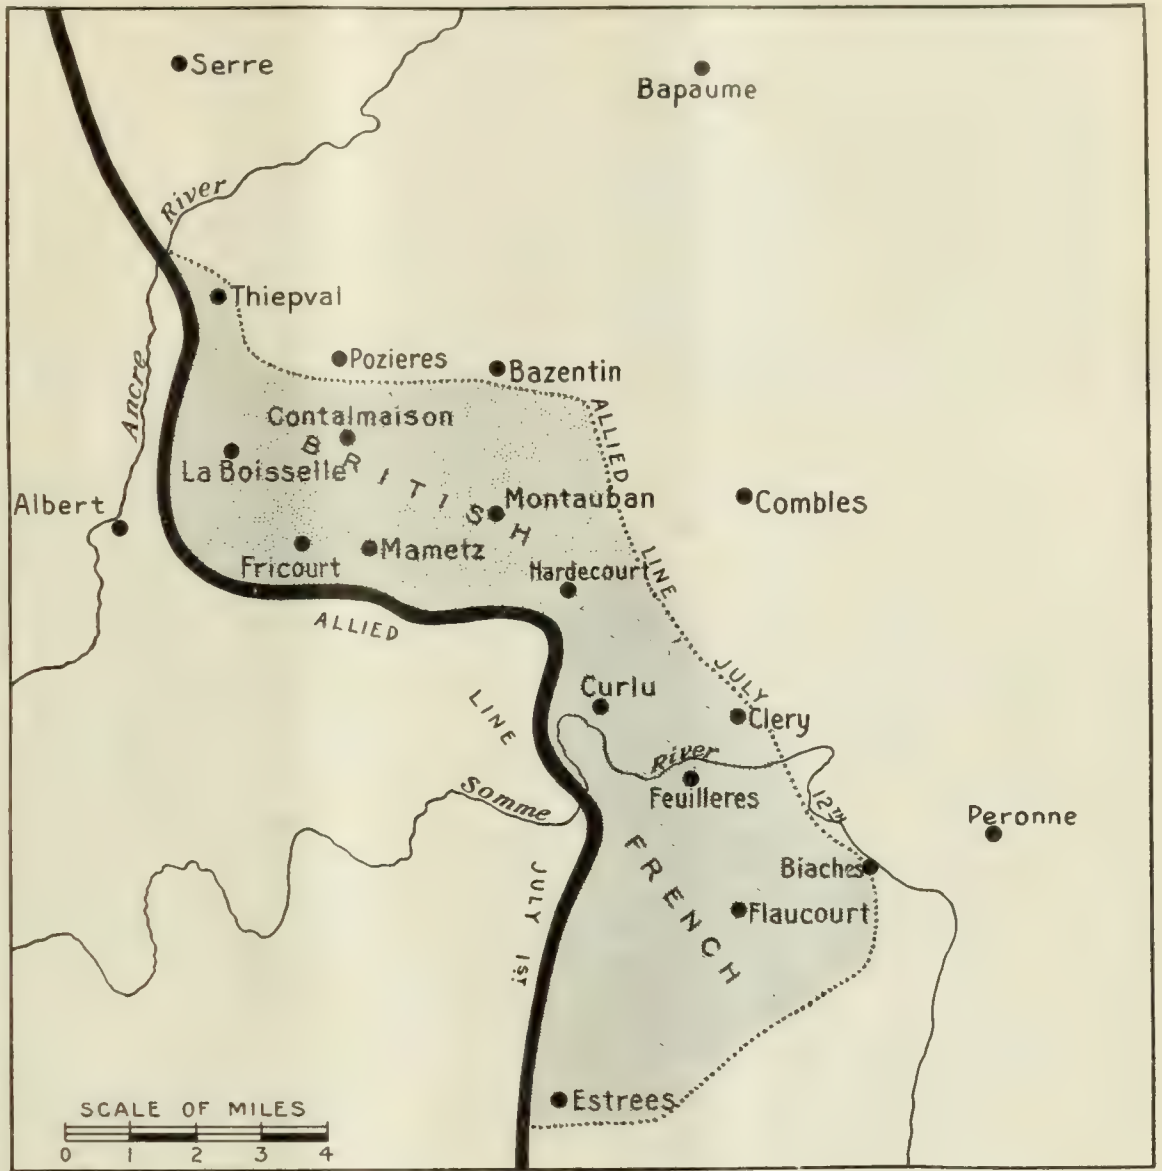

On Friday, July 14, it was learned at El Paso that an army of 8000 Villistas had entered Parral, looted the city, and advanced to attack Santa Rosalia, an important mining center. The Villista army grows daily by the voluntary or enforced adhesion of the people in the conquered territory and by desertions from the Carranzista forces. The military authorities of the de facto government express no alarm at the progress of the rebellion and claim that they hold the Villistas surrounded by an army of about 150,000 men. At the same time, it is evident that if Villa or any of his generals should arrive within striking distance of the American border there would be a repetition of the Columbus raid and the political position of the Mexican Government would again be extremely delicate.

**Paying for Preparedness** The Administration's revenue bill, which passed the House of Representatives on July 10 by a vote of 240 to 140, is designed to raise a sum of \$197,000,000. The measure increases the tax on incomes, institutes a federal inheritance tax and places a special tax on the net profit of war munitions manufacturers. It also creates a tariff commission composed of five members, no more than three to be of the same party, to investigate the conditions of international trade and recommend changes in tariffs. Several important amendments were made against the wish of the sponsors of the bill before it was finally passed. The most important of these eliminated the proposed levy of one dollar on every thousand of bank capital, surplus and undivided profits. Thirty-four Republicans and five Progressives voted with the Democrats in favor of the bill.

The naval appropriation bill, now before the Senate, provides for an expenditure within three years of \$588,180,575. The cost of new construction in 1917 will amount to more than a hundred and ten million dollars. The costliest item in this building program is that of four battleships and four battle-cruisers to be provided for in the coming year. The Senate committee recommended a peace strength in the navy of 74,700 men, which the President might recruit to 87,000 in an emergency. The less important sections of the navy bill have already been passed upon in order to clear the way for a full debate in the Senate upon the novel features of the program of construction.

**Fighting the Paralysis Epidemic** Altho every day increases the total number of deaths from infantile paralysis in New York City and in neighboring cities, the health authorities claim to have the epidemic fairly well under control. During the past week there has been no increase in the rate of the spread of the disease, the death rate has slightly decreased, and the majority of the cases are still confined, as at first, to the Italian quarter of Brooklyn. The New York City health officers are working in cooperation with the

THE ANGLO-FRENCH ADVANCE

The British are striking toward Bapaume and the French toward Peronne, the railroad centers which feed the German front. If these are taken the Germans will be forced to fall back upon their second line of railroads or be cut off from their source of supplies. The shaded area shows the ground gained by the French and British in the first two weeks of their offensive.

Rockefeller Institute and the United States Public Health Service. The federal government has provided a staff of fifty persons, including twelve physicians, for the purpose of examining children whose parents intend taking them out of New York City and issuing health certificates to those who are free from the disease. No one is required to apply for a certificate, but the examining officials have the power to detain any one whom they may suspect as being a possible carrier of the disease. Children in the "danger spots" of New York City and a few New Jersey towns are still under a partial quarantine and are excluded from libraries, theaters and other public places where the epidemic might spread. The total number of reported cases up to the present time is about two thousand and the number of deaths nearly four hundred. Wherever possible, the cases are treated in the hospitals.

The Rockefeller Foundation has advanced fifty thousand dollars for the purpose of fighting the epidemic. The money will be spent in the employment of physicians and nurses to watch suspected cases and to maintain a rigid quarantine wherever the presence of the disease is certain. At the same time the Rockefeller Institute is pursuing the theoretical study of the subject under the vigorous direction of Dr. Simon

Flexner. Poliomyelitis (infant paralysis) is now traced to a specific germ which is so extremely minute that for a long time it defied detection. Much remains to be done, however, before physicians will be in a position to deal with outbreaks of infantile paralysis as successfully as they now handle epidemics of more familiar infectious diseases. But, while the death rate of the paralysis sufferers remains high in spite of the best efforts of medical science, prevention is better than cure, and it is well understood that strict attention to public and private cleanliness reduces the danger of an outbreak very greatly. Indeed it is very possible that the present sanitary propaganda in the slums of Brooklyn and elsewhere will save more lives this summer than the whole course of the epidemic has taken, for it will lessen the death rate from all of the numerous diseases that spread thru carelessness and dirt.

**A Successor to Justice Hughes** John Hessin Clarke, federal district judge of the northern district of Ohio, was nominated by President Wilson on Friday to fill the vacancy on the Supreme Court bench caused by the resignation of Associate Justice Charles Evans Hughes, Republican candidate for the presidency. The Senate is understood to be favorable to the appointment and it is quite unlikely that there will be any such

contest over the new nominee as there was over the recent appointment of Associate Justice Brandeis.

Judge Clarke is a Democrat of the progressive wing of the party. He was born at Lisbon, Ohio, September 18, 1857. He graduated from the Western Reserve University in 1877 and was admitted to the Ohio bar in the following year. Until his appointment as district judge in 1914 he practised law. Altho he has acted as railroad counsel, Judge Clarke is regarded as a radical because of his intimate association with the late Tom Johnson of Cleveland and his contest against Mark Hanna for the United States Senate in 1903. During his campaign for the Senate he advocated a two-cent railroad passenger rate law.

One-third of the present Supreme Court has now been selected by President Wilson. His first nominee was Attorney General McReynolds, his second was Judge Brandeis, his third Judge Clarke. All three of the men selected by the President are of his own party and all of them in harmony with his personal views on public questions likely to come before the court. The majority of the Supreme Court bench is still, however, Republican in politics.

#### Corralling the Bull Moose

The greater part of the Progressive party has already followed the advice of the national committee and rallied to the support of Mr. Hughes. Republicans regard the reunion of the two parties as complete and have rewarded their Progressive allies by assigning them six places on their national campaign committee. At the official notification of Mr. Hughes of his nomination for the presidency both Colonel Roosevelt and Professor Taft are expected to be present. The local

organizations in several states have, however, declined to be ruled by the action of the national leaders. In New Jersey the state committee rejected an endorsement of the Republican candidates by a vote of seven to five. The Southern Progressives are the most averse to the party merger, for the majority of them were never in the Republican party and their chief object in supporting the new movement in 1912 was to create a rival organization to the Democratic party in the states where the Republican vote is considerable.

John M. Parker, Progressive nominee for Vice-President, is the leader of a group of irreconcilables who wish to maintain the continued existence of a third party. He has issued a call for a new convention for the fifth of August to nominate an independent ticket. In his statement, setting forth the reasons why the Progressives should repudiate the endorsement of Mr. Hughes, he says:

Earnest, patriotic and able men from every state in the Union worked to bring about a radical change which would enable the West, and particularly the South, to handle their own problems, develop, as they would do, amazingly, and take a virile part in national life.

I joined the Progressive party from a deep-seated conviction that it stood for what was best for humanity, best for my country, best for my state, and best for the people of the South. Today my views are stronger than ever that I was absolutely right.

I did not want office then, and I do not want office now, and my appeal to the men and women of America and of every individual state is to call another convention to meet in Chicago on August 5, the fourth anniversary of the birth of the Progressive party, nominate candidates for President and Vice-President, and let me labor in the ranks and on the stump to prove my work is for the principles I believe in and not for office, elective or appointive.

#### Sharks Raid New Jersey Coast

For the first time in more than forty years man-eating sharks have infested the waters of the North Atlantic states. Several persons claimed to have seen the sharks near the New Jersey bathing beaches, and on July 6 Charles Bruder lost his life from a shark bite while swimming in the ocean at Spring Lake, New Jersey. Other attacks occurred at Beach Haven and Asbury Park. But, while the bathing season at the ocean resorts was seriously injured by the panic consequent upon the appearance of the new danger, bathers at inland summer resorts showed no fear. Reports that sharks had been seen in the shallow waters of Matawan Creek were generally scouted, for every one knew that the shark is a deep sea fish. But on July 12 there was terrible proof that the incredible rumor was true, when young Stanley Fisher lost his life in an unsuccessful attempt to rescue Lester Stillwell, a twelve year old boy. A third bather was attacked and badly injured on the same occasion.

Every possible safeguard against further loss of life has been taken. Armed guards have been stationed off the New Jersey and Long Island coasts to watch for and kill any sharks that may appear. Naturalists are not agreed as to the kind of shark responsible for the recent attacks, as there are several man-eating varieties. It is thought that the sharks have been driven northward and inland beyond their usual range by a failure in their usual food supply of smaller fishes. Such large numbers have been reported from various points along the coast that, even allowing for the inevitable exaggeration in such cases, it is evident that several large schools are taking part in the raid.

# MAN TO MAN

BY DAVID LAWRENCE

Copyright Underwood

IF Woodrow Wilson and Charles Evans Hughes were to sit down to dine together à la Astor, if Mr. Hughes did not covet Mr. Wilson's job, and if Mr. Wilson did not see the penetrating and critical eye of the partizan competitor—in other words, if the two men could eschew political buncombe and put their minds in contact—the words of Kipling would be incarnate: “Two strong men come face to face.”

Candidacies make for artificiality. The political personality becomes invested with a spirit of campaign opportunism. For the moment the real man with his human faults is obscured. In his place stands the *ne plus ultra*, the Candidate who contemporaneously appears as the champion of labor and the protector of business, a progressive to one section of the land and a conservative to the other; a “red-blooded” belligerent to the young voters and a temperate, resolute man of peace to the church audience.

Comparison, therefore, of the two intellectual leaders who today contest for the presidency must be made by unveiling the gauze of politics, by reverting to pre-candidatorial days, when the picture was not a pose but a snap-shot.

Never have I met two men of similar character and poise who were so utterly different in self-expression. They are remarkably alike in habit of thought, in taste, in ideal of service and of life, yet distinctly opposite in viewpoint. Their lenses are of different focal length. They see the same general objects but they travel toward the goal along separate paths. Each is an individuality of fascinating strength and mental vigor.

Mr. Wilson has been President, Mr. Hughes has not. Comparison becomes thereby hypothetical. Yet inferences as to what Mr. Hughes would do as President can be logically deduced by retrospective study of his career as Governor of New York and Associate Justice of the Supreme Court. His connection with the court was, of course, merely a certification of character, a place

*Mr. Lawrence bases his comparison of the two Presidential candidates on a long and intimate study. He was in close touch with Mr. Wilson thruout his campaign in 1912 and with Mr. Hughes as Governor of New York.—THE EDITOR.*

where the processes of ordered thinking, of analysis, of keen penetration trained an already apt mind. But his record as Governor of New York won him the nomination.

As governors, both Hughes and Wilson, respectively, won fame by tactics almost identical. They depended on the people, they appealed to the people, and they conquered the bosses. The service Hughes gave New York was spectacular, but none the less so was the phenomenal change which Woodrow Wilson wrought in the moral fiber of New Jersey. The two men gained their first executive experience in gubernatorial office, their first intimacies with the devious ways of party politics. They essayed there a leadership in state affairs from which each derived his conception of leadership in national affairs. They were both efficient public servants, incorruptible and fearless.

Mr. Wilson's opportunity to enlarge on his experience came first. As a candidate in 1912 for the presidency, he showed tact and native shrewdness. The canniness of his Scotch and the cleverness of his Irish made him an affable, good-natured, respectable leader for the Democratic party. He was eloquent of speech, energetic, forceful and militant. He was spoken of as a man who would not vacillate, who would not pause to do the expedient thing, but who would fearlessly bring that lower jaw into sharp, earnest decision. To the correspondents who traveled with him, he was friendly and intimate. He joked and told stories. He was not cold or detached. He was warm-hearted, alert—a common man, breathing common aspirations.

Then came to him the presidency,

the great sobering influence that wrecks the best-laid of plans, responsibility that finds no time for jest.

Mr. Hughes is today the Candidate. Obligation to act in public business is not his. Foreign policy is not in his hands to shape. Problems involving thousands of lives he is spared the necessity of solving. The correspondents are with him daily—they see him as a tireless campaigner, a brilliant speaker, a man who “gets the crowd.”

But would the presidency change Charles E. Hughes as it unconsciously changed Woodrow Wilson? The task of Chief Executive is the most exacting in the nation's gift. It saps vitality, cuts wrinkles, expels the smile and invites the frown, and begets gray hair. The worries are manifold and multiplex. Only a superman can satisfy all classes of our mixed races and nationalities. That is why we are disappointed or surprised when we discover that our Presidents are not perfect.

Sitting in the library of his home, chatting with Justice Hughes, when he had no campaign problems to settle, no middle-of-the-road course to pursue to keep peace in the political family, I caught mental snapshots of him in natural mood. He was candor itself. He spoke freely, disingenuously. There was no questioning his sincerity as he told me time and again that he wished he would not be nominated, that he did not relish the power of the presidency and loathed the responsibilities. His argument was clear, sound and thoroly comprehensible. He didn't talk as a legal brief reads. He was idiomatic.

I have also sat with Woodrow Wilson and have likewise been impressed by the fluency of his thought—yet in quite another way. I shall always think of Hughes as the convincing lawyer who takes your argument, turns it inside out and makes you wonder at your own ineptitude. I shall remember Wilson not as a sententious lawyer, but as a litterateur—a man of ideas and big ideals, implicit in his thinking, didactic in his

speech. Hughes seems to me the more explicit, the sharper, the more decisive, while Wilson's spoken style has the masterful literary touch that leaves a lasting impression tho not always a conviction.

Of the two, I should say Wilson was the emotional while Hughes was the even-tempered. When Hughes has spoken, you feel the decision is irrevocable, the judge has ordered, and there is no clemency in his court. With Wilson, the face may be impassive but I have seen the eyes well with tears as the heart was touched. He is flexible because he is emotional.

Mr. Wilson has an intuitional judgment that is remarkable for its accuracy in many respects and singularly embarrassing in others. He not infrequently shuts himself from disinterested counselors. He has kept himself in almost constant retirement in the White House. This should not altogether suggest offishness or aloofness. It is rather the artist in the man, the penchant in him for solitary study.

Mr. Hughes is more of a social being. He mixes well but I doubt whether he will find any more op-

portunity to loaf with his friends than does Mr. Wilson, tho to be sure, he is given to quicker decision and may have more time. Mr. Hughes is an intensely practical man, impatient of the experimental and uninclined to venture where angels fear to tread. He is steady and sure-footed.

I would say that Charles E. Hughes is a thoroughgoing Republican—all that the party connotes. No man could have been chosen better fitted or better able to execute traditional Republican doctrines. Mr. Wilson is a new kind of Democrat. He has not hesitated to impose his ideas on the party he leads. He is attempting to regenerate Democracy. He tends toward the radical always, whereas Mr. Hughes clings to the conservative.

Each candidate has a different conception, no doubt, of the use of the executive power in domestic policy; and yet on foreign policy—the bone of contention just now—I would say their interpretations of American duty are much the same. There will be a lot said in the campaign about peace and war. The real Hughes is

neither swashbuckler nor belligerent. He is at heart a man of peace, one who would not rush hastily into war nor shirk unavoidable conflict.

There are many points of similarity in Mr. Hughes and Mr. Wilson. But the voters will be influenced by the differences in the two men, the essential differences in the objects of the two parties. The assumption is that each candidate seeks the general welfare of the people. Mr. Wilson arrives at decisions of policy by deductive reasoning. Mr. Hughes is inductive. Mr. Wilson applies predetermined principles to his problems. Mr. Hughes inclines rather to derive his rules of action from the facts of the problems themselves. This might mean, on the whole, similar ideals, but differing methods of execution, two ways of reaching, perhaps, the same end. It is cause for congratulation in American politics that the people already feel the country would be safe in the hands of Charles Evans Hughes or Woodrow Wilson at so critical a time. For each party has named its strongest candidate.

Washington, D. C.

## LET MEXICO ALONE

BY DAVID STARR JORDAN

WHEN I reached El Paso on June 26, before the beginning of the El Paso Conference (later transferred to Washington and by the way nowhere interfered with by the police), I found a telegram from the editor of The Independent. To this I responded by wire on the strength of the general information and misinformation of Mexican affairs which I then shared with my countrymen. I have now changed my point of view somewhat.

I am thoroly convinced that Mexico has the power of regeneration within herself, that her actual present condition is more hopeful than at any previous time in her history, and that General Carranza represents fairly well the only government since Diaz which has prospect of stability and which deserves our support. Moreover, a study of the arguments for intervention has convinced me that to intervene by force of arms either now or at any future time would be a blunder and a crime for which history would find no palliation. If, as Mr. Cannon claims, we are now at war with Mexico, we have him and his "Cientifico" colleagues to thank for it, and the only honorable thing left for us to do is to get out of it.

*In The Independent for July 10 Dr. Jordan gave his first opinions of our Mexican problem. Since then he has studied the situation on the border and has conferred with prominent Mexicans.—THE EDITOR.*

The great mistake of the American people is to lump together all Mexico's deficiencies and misdeeds as tho they all sprang from one root and as tho the whole aggregate were a meaningless chaos.

The Mexico of Porfirio Diaz was essentially medieval; great landholders owned the territory and the people were serfs on the land, eternally in debt, never earning enough to live in decency, and purposely kept in ignorance and hopeless impotence. Exploiters, American, British, German, monopolized the mines and oil fields—some concessions honorably obtained, a large percentage held by rank robbery—the oil concessions of Lord Cowdray standing perhaps first in this regard. The earlier revolutions had been incomplete and the medieval conditions which so long held Europe and which led to the French Revolution retained sway in Mexico.

The last Mexican revolution was

an effort to force the people from the dead hand of medievalism. It had its share of outrages, for when the lid is off, violence has free play. Its final purpose is constructive and in this it merits our sympathy and our aid. To these final ends Carranza has been loyal and so far as he has had power to promote the arts of peace, he seems faithfully to have done so. He has at times misunderstood us, deceived by the noise along our border. I am convinced that we have equally misunderstood him. The recent change of tone in the notes on both sides indicates not vacillation but access of knowledge.

The various incidents along the border give no cause for war. It would be preposterous to use any of them as a pretext. This border is 1756 miles long—about as long as from New York to Denver. In the ordinary sense it cannot be policed. It is as long on the Mexican side as on ours and that side has neither roads nor railroads. On both sides atrocities have taken place. The raid on Columbus was known at El Paso and at Douglas before it took place. It was abetted on the American side, it is believed, and for the sole purpose of bringing on war. So long as we dally with the idea of interven-

tion certain influences on the border will incite such raids. These influences are opposed to Carranza and to the regeneration of Mexico. They should not have our support.

At present the crisis seems to be past. If we will honorably realize that Carranza is trying to do the best he can, and if he will realize that the body of the American people wish neither war nor conquest, the crisis need never come up again. Our national policy in regard to Mexico should be very simple. Let Mexico alone. Help the de facto government to suppress border outrages, realizing that half the fault for them rests with us, and that the problem can

never be easy while desire for conquest dominates our border towns.

As to evidences of regeneration, half the twenty-seven states are already pacified and half the territory of the others. Where peace exists new and wholesome institutions are growing up like fresh grass after a prairie fire. Free schools are being established—2400 in Yucatan, as against 200 two years ago. The great estates are being bought up and divided among peon farmers, who forfeit their holdings if they fail to cultivate them. Mexico is being transformed from a medieval area of world exploitation into the beginnings of a democracy.

These advances take place first in the agricultural states, most slowly in mining districts where thousands on thousands are still unemployed. Last of all come the war-torn states, such as Chihuahua, where the fear of America—"the Colossus of the North"—promotes commotion, and in Morelos, where the wild Indian, Zapata, has expelled or killed all men holding property.

It is along the lines of education and sanitation that our people can best help Mexico. Matters, confessedly bad enough, would be made malignantly worse by the use of soldiers as a remedy.

Washington, D. C.

## IN THE VALLEY

BY CORRA HARRIS

THIS has been a year of floods and funerals in the Valley, with an eight weeks' drought to even up the weather reports. But no one has taken to strong drink nor flunked his job because of these disasters. And our faith in immortality is naturally stronger, since more of us have become immortal.

We have a deeply entrenched enemy in our valley, an enemy which was here before wars began and which will be here when wars are ended. From the days when the Cherokee Indians moved out and the white settlers came in down to the present time the people of the Valley have struggled to conquer Pine Log Creek. They have built levies, dams, breaks, all to no purpose. In the spring and summer weather, it is a little lady brook trailing a green veil of willows above a thousand blossoms. But when the rains come, rak-

*From year to year readers of The Independent look to Mrs. Harris for messages of wholesome philosophy and good cheer from the Valley folks. In an article to follow this she will write of still another phase of life "In the Valley," where "nothing is futile, not even death."—THE EDITOR.*

ing the mountains on either side with long silver combs, it ceases to be a lady brook, and becomes a devouring lion with a yellow, curling mane of waters which sweeps over the Valley with unimaginable fury. And once every fifty years or so this beast refuses to return to its lair. It clears clean out of its channel and makes a new one overnight in another place. So that the middle of our Valley is like an old battlefield, seamed with many abandoned trenches, where

once the willows were green upon the water's edge, but where now the weeds grow as thick as ragged gamin where once the waters of the creek ran.

This year we resolved to conquer our enemy. We resorted to science, an engineer and a spirit level. We worked together, building stone walls where the banks were low, and breaks across the fields where the floods dragged the corn and wheat from the earth. We were confident. We talked about what we could and would do, now that we had the creek by the neck, so to speak, and while every man was busy soldering and stiffening the banks, that little stream lay down in the bottom of its channel merely ruffling its mud-dark waters and watched us.

The day we finished our defenses rain began to fall. It fell in torrents for two days and nights. On the

"THE BLUE EYED CABIN" MRS. HARRIS'S VALLEY HOME.

morning of the third day the angry head of a yellow flood appeared over the tops of all our dams. Then it rolled over and rolled across the fields, wearing the timbers and pine tops of our breaks like a chaplet upon its enormous head.

While we gathered upon a hill to watch the fury of the flood, we heard loud whoops coming from the Valley, and some one discovered Brother A. standing like a long-whiskered prophet upon an island in the midst of what had been a pasture, but was now a lake of turgid water. The cold January wind blew his beard sidewise like a despairing flag of truce. He desired to be rescued. But we do not keep boats in the Valley.

"What you doing out there?" shouted some one.

He explained in a hoarse bellow that he had gone out early in the morning before the water had risen so high to get in a sow with a litter of young pigs.

"Whar's the sow?" another demanded.

"She swam out and left the pigs with me," he yelled.

"Are you cold?" was the next question.

He said he was.

"Jump up and down; stamp your feet," advised the good Samaritan, from a safe distance.

The sight of this dignified saint doing a kind of sword dance on that

little hillock was the only diversion we had that day. Presently some one went out on a horse and brought him out.

He dropt down from behind his rescuer, and carefully deposited the old cracker sack with the squealing pigs in it upon the ground. Then he straightened himself, reared back at the angle of an indignant Elijah and glared at us.

"Humph, just look at it!" he growled, sweeping his arm out toward the mile wide flood. "Did you think you were God, able to can that much water in a fifty foot ditch?"

No one could have inferred from his manner that he had worked as hard as any of us to do this.

He was the only active sufferer we had. The rest of us were chastened, passive sufferers.

But it is an ill flood indeed which brings no good. When the waters receded we had twelve inches of fine rich soil spread over the valley which had been washed down from the hills above.

In spite of the bad weather all the ground in the Valley had been "turned" and harrowed by the end of March. Then we realized that we were in for a regular "dry spell." This is an annual phenomenon in the Valley, and is known as the "corn planting drought," because we cannot plant corn so long as it lasts. This year it continued until the last of May, even tho we took our um-

brellas to church when we went to pray for rain.

But we cannot get everything we ask for, even if we ask with the faith that removeth mountains. It is one thing to move a mountain, and quite another thing to move the heavens. Besides, if we received everything we ask for, there would not be enough to go around. The Lord himself could not supply the greedy soul of man. So He lets his rain fall alike upon the just and the unjust. This year most of it seems to have fallen upon the unjust, upon the earth in that place where millions of men are fighting millions of men. It may be in this way thousands of lives were saved. Because you cannot kill so many of your brother men in a drenching storm as can be slain on a bright sun-shining day, any more than you can plant corn in a very dry season. I reckon we will have less corn in the Valley this year because of the drought, but more men are alive in the fighting lines in Belgium and France because of the floods. Others may think what they will, but my faith in the good God's economies is so firm that I never pray for rain when it is dry, nor for sunshine when the skies are dark. It all comes out exactly right at the right time, even if in the meantime you must get up and hurry out and lay your body earth to earth and dust to dust in the grave.

*The Valley, Georgia*

## SUMMER NIGHT FROM AN L PLATFORM

BY WILLIAM R. BENÉT

If it weren't for gravitation . . . !  
 Maybe at this moment we are turning under  
 The ever turning earth.  
 This Elevated station,  
 Those stores and cars and people,  
 That statue, yonder steeple,—  
 If God for once should blunder  
 Or doze, or, moved to mirth,  
 Should will it so,—I wonder?  
 Over us the sea-blue night . . .  
 Think of what an antic sight  
 It would be if all the people, all the buildings, all  
 the cars,  
 Were spilled out among the stars!  
 They would fall  
 In an architectural chaos, in a color carnival,  
 Scattered far: this dainty lady  
 In her peacock clothes and feathers,  
 That drab tramp whose past is shady,  
 The wild newsboy of all weathers,  
 The magnate in his limousine, smoking such rich  
 cigars,  
 The whitewing of the crossing, the sleek merchant  
 in his shop.  
 They would drop

All asprawl  
 With no breath to scream or bawl,  
 Sudden-spewed from off our planet  
 In a torrent toward the stars!  
 And the buildings—what a thick  
 Hail of concreté, steel, and brick!  
 But the fall  
 Might not be so tragical  
 After all!  
 For above this golden-gleaming white-hot furnace  
 of the town  
 Night's blue ocean ripples down,  
 And the plunge might be as cool  
 As that blessing to the tramper when he finds a  
 mountain pool!  
 Diving thru the Infinite  
 To some cloudy coast of light,  
 Or swimming on forever on the blue expanse of  
 Night . . .  
 If one could but dodge the buildings . . . !  
 Here's my train. It shakes the station.  
 But I really must repeat it: if it weren't for gravi-  
 tation . . . !

# ABOARD THE "DEUTSCHLAND"

BY GILBERT HIRSCH

THERE were three of us in the little launch which was chugging out thru the murk just before midnight toward that thing of mystery lying off Hawkins's Point.

Jimmy Fesmire stood at the wheel. It was he who had first sighted the submarine the night before. Then he had been on the deck of the tug "Timmons," patrolling off the Virginia Capes for two weeks—every eye in the crew straining seaward. But last night, as he was standing his watch at the stern, his eye had been caught by lights far out at sea, acting strangely. They were at first incredibly bright; and then, as if by magic—extinguished. And when they reappeared they were dim.

For a full half hour Jimmy had been in an agony of indecision and excitement. Then he stumbled inside and hauled out the captain.

A couple of hours later, a goodnatured, rather high-pitched voice shouted up from the sea:

"Is this the tug 'Timmons'?"

And Hirsch's reply had been:

"Is this the submarine 'Deutschland'?"

Jimmy Fesmire was still excited, as he now steered the "Efco" out thru the pitchy waters of the river under the high black sterns of interned German liners and of tramp steamers. He had been sent back from the tug to bring out on the launch the American who had made the thing possible.

One morning, just four months ago, I was standing on the deck of the "United States," watching the bleak, stone houses of Kirkwall grow smaller in the distance. After forty-eight hours the English had decided to let us thru. From Copenhagen to Kirkwall it had been a strained, morose company of men who had come together three times a day for their meals; each man keeping up a perfunctory conversation with his neighbor, in order, so it seemed to me, that no one might ask why *he* had been in Europe.

But there was one man who seemed to have no secrets—a typical American business man, who had not lost his exuberance of college days.

At breakfast he made a patrotic American speech in excellent German, and expressed his hope that some day we would again be independent of England. We drank to that hope in good Danish coffee. But not one of us dreamed that this man would make it possible.

He had, he admitted with perfect frankness, just been to Sweden in his capacity of Swedish Vice-Consul

*Mr. Hirsch was the only correspondent to visit the "Deutschland" before she docked.—THE EDITOR.*

of Baltimore. The project which had taken him there, he told me without any attempt at mystification, was a big one. And usually, after he had said that much, he had to walk the whole length of the deck and back again to calm himself down.

"Something interesting is going to happen," he said. "Would you like to be there to see it?"

As the weeks went by, and I had no word from him, I had forgotten. Then one morning had come the letter inviting me to Baltimore, to go out with him to meet the submarine whose rumored approach the papers had been greeting with such derision.

And while Jimmy Fesmire was steering the launch dangerously close to the lights which marked the channel, my friend's excitement kept dragging him out of the little cabin into the rain.

On shore, everything was ready. On the dock at Locust Point a gang of fifty men were still waiting on the chance that the submarine might come in during the night. A dozen of them were at work surmounting the wooden fence alongside the pier with four rows of barbed wire, a foot apart; placing sacking over the wires; and, so that no one could peep under, fastening it at the bottom with boards. No one was to be allowed to pry out the secrets of that submarine or her cargo, once she had docked.

There were four watchmen guarding the big red warehouse where the cargo for the return voyage had been collected. The pungent smell of the fresh rubber from South America told its own story. And there were thousands of bags of nickel.

Suddenly a searchlight swept the water. It was a long ways off. But Fesmire was sure it was the light of the tug "Timmons." It was. She had left her precious convoy to make a dash for the shore and pick up the customs officer. And now she was speeding back to the "Deutschland." The white ray of light swung back and forth and finally fastened upon us. Then she overhauled us quickly. The rest of the way we followed her.

By the time we got there the "Timmons" had tied up to her. We tied up to the "Timmons" and scrambled aboard the tug. Then I got my first look at her—an incredibly long,

low, mysterious-looking object, like a great fish, caught and saddled with a deck a couple of feet high, not nearly wide enough to fit her. We could just distinguish six dim figures scattered along the deck under the beating rain.

There was just one moment, near daybreak, when the spell of Neptune did hold us for a moment. That was when the hatch aft was silently lifted and a head and shoulders rose up, as tho some deep sea creature had emerged from the weird mechanism within the submarine. His face was a grimy, greenish yellow. He did not seem to see us, but let his gaze sweep along the low line of the shore, as tho he were looking at a world in which he had no part. Then he disappeared. And the hatch closed over him without a sound.

When we had boarded the tug, Captain Hirsch was there, all excitement, but showing the strain of his twelve days' watch. His clothes were soaked thru, and the small woolen cap he wore was dripping in the rain. At daybreak he reappeared. It was still raining; but he had put on his best clothes and a Panama hat. He had not been able to sleep.

"She's the eighth wonder of the world," he said. "She's beautiful. I expected a sort of tin box. But she is put together so clean you'd think she had been poured out of a mold."

And then he told me that he was the one man who had known exactly—to the minute—when she would arise; and not by wireless either.

"You see, there was something in the paper a couple of days ago about the Dutch boat 'Westerdyck'—eastward bound—sighting the submarine, and how she submerged. Well, I knew exactly the time the 'Westerdyck' passed out of the Capes—because I saw her go. So I was able to figure it out.

"'Two-seventeen tomorrow morning,' I said to Zach Cullison. And, sure enough, this morning, at exactly two-sixteen by my watch, I get the hail."

Little by little the green-gray light of a rainy morning revealed the features of the crew, who, one at a time, had been coming up from below. They seemed very young; but I was told that none of them was under twenty-one. They were talking and smoking as tho their arrival was a mere matter of course. Many of them were wearing suits entirely of leather, with leather boots; others might have been stewards on an ocean liner, to judge from their white coats.

By now we could see every detail of the submarine's exterior—her two high masts of specially prepared steel known as "Mannesmann tubes"; her whale-like hull, blue-gray to a couple of feet above water-line, but above that newly painted sea-green; the queer-shaped bridge with steel steps leading up it; the circular hatchways fore and aft; the five life-buoys hanging around the bridge, red as a fireman's shirt, the only bits of startling color; the name "Deutschland, Bremen," painted at three or four places along the sides.

About half-past four the captain of the submarine suddenly bounced out from the interior—the most genial of blockade runners.

When he recognized the man whose guest I was, romance, adventure, everything fled before the necessary discussion of business detail. The names of the head of the submarine

company and of its directors, the words "manifest," "bill of lading," "clearance," "cargo" were passed back and forth. And all the while Jimmy Fesmire, in the whisper of a hero-worshipper, was insisting that Captain Koenig did not look more than thirty-five, though they said he was forty-nine.

When I got close to him, and saw the deep horizontal furrows on his tanned forehead, the lines between his eyes, and the tired droop to his lips, I could see that he was nearly fifty, and that, in spite of his high spirits, he had felt the terrific strain of this voyage, the first of its kind in the history of the world.

The romance came back when he began to talk of the "Deutschland."

"She can submerge in exactly one minute," he said. "That is—from the moment of sighting danger to the time she is entirely under water. Just off the Capes, about seven

o'clock last night, was the last time we dove. We sighted two ships. They looked innocent enough. But we were taking no chances. We were up again at nine. And half an hour after that we sighted Cape Henry."

Some one asked him what his trip had taught him about the British blockade.

"There isn't any. We've proved it."

And then the American pilot climbed up on the bridge and split his own ears, and ours, by blowing the shrill air whistle of the "Deutschland" as a welcome to the approaching quarantine tug, from whose deck there was fixed upon this gray-green fish of the sea that sleepless eye of the great American public, the lens of a moving picture camera.

The "Deutschland" had arrived.  
New York City

# WHAT ARE OUR CONGRESSMEN?

BY WILLIAM B. BAILEY

THE previous occupations of the members of Congress are compared in the accompanying chart with the occupations of the general voting population. The statistics for the occupations of members of Congress were taken from the Congressional Directory. Unfortunately in some cases the information was not very complete. All that is given with regard to one Congressman from Arkansas is "Democrat, of Jonesboro." A Senator furnishes the following information concerning himself: "Democrat, born in Owen County, Indiana, a long time ago. I was always proud of my ancestors and my family." In most cases, however, the biography was sufficiently complete to determine the previous occupation.

For purposes of comparison, only men twenty-one years of

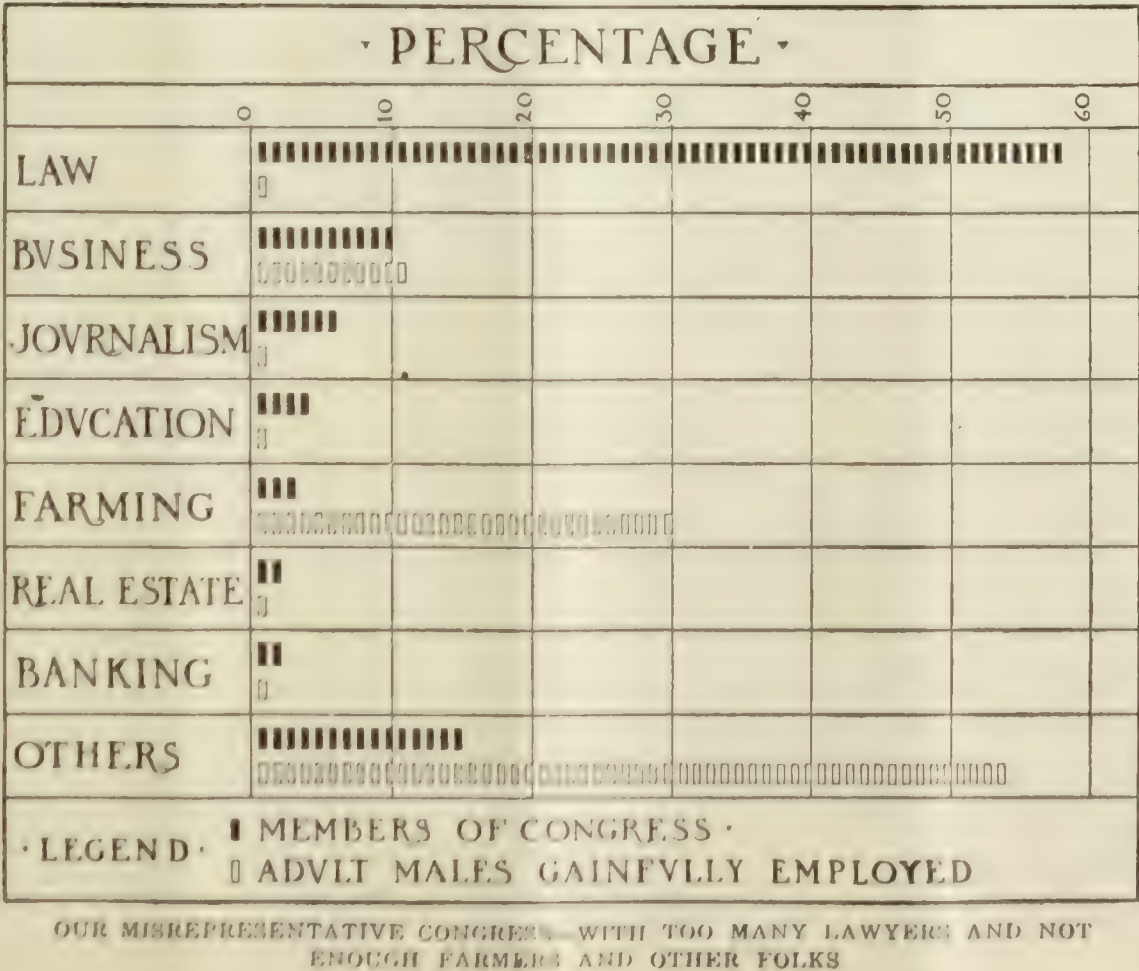

age or over and gainfully employed were included. It was felt that this represented most nearly the voting population.

A study of the chart brings out the fact that nearly three-fifths of the members of Congress are lawyers. There are about twenty-five million males twenty-one years of age and over gainfully employed in this coun-

try. Of these 120,000 are lawyers. Thus, about three-fifths of the members of Congress are chosen from a group comprising less than one-half of 1 per cent of the gainfully employed males. On the other hand, only 3 per cent of the membership of Congress were previously farmers, altho 30 per cent of the gainfully employed males in this country are in this large group. The chance of a lawyer going to Congress is apparently 1200 times as great as that of a farmer.

There seems to be in our Congress no such group of men engaged in mechanical industry as is the case in the English Parliament. We have no labor party made up of wage-workers. It would be natural to suppose that the Socialists would choose a workingman, but the one Socialist Congressman is a lawyer.

Yale University

# THE NEW BOOKS

## PRINCETON VERSE

Alfred Noyes has edited *A Book of Princeton Verse*, a collection of the work of undergraduates selected from poems written during the last six years on the Princeton campus. These show a surprisingly high degree of excellence. After reading them one feels distinct hope for the future of American letters. The poems show not only plenty of thoughts and emotions worth expressing, but a sincere desire to express them well, an appreciation of the fact that, as Mr. Noyes says in his introduction, "there is no grace or strength in literature, unless the form and the thought be in perfect harmony." There is evidence of careful, conscientious seeking after the right word, an avoiding of the bizarre and yet a disinclination to be satisfied with the trite or commonplace. The verse is young but it is also scholarly, a happy combination.

*A Book of Princeton Verse*. Princeton University Press. \$1.25.

## "VIVE LA FRANCE"

We have in *My Home in the Field of Honour*, by Frances Wilson Huard, a remarkable narrative of an American woman's experiences in the path of the German onrush into France. What one may term the twilight before the war—the gradual lowering of black clouds, the significant wandering rumor, emphasized by a calm and peaceful setting—steals with a sense of awe upon the reader. Follow rapidly the declaration of war; the decision to turn the chateau into a hospital; streams of refugees passing day and night; and, at last at an urgent message from her husband, her flight. It is only on return to her home, abominably desecrated, in which a treasured American flag had not escaped, that she gave way to outraged emotion. What this American woman saw and experienced cannot be passed over lightly. Its significance should be grasped by every thinking woman, to the determined end of all such horrors.

*Impressions and Experiences of a French Trooper*, by Christian Mallet, is entirely up to the standard of what might be expected from a French cavalryman. From times of old the French cavalry have ranked first in Europe for brilliancy of spirit and gallantry in action. Consequently there was no lack of courage and fortitude in the Twenty-second Regiment of Dragoons in their sweep into Belgium; the retreat after Charleroi; and a series of desperate adventures subsequently. At the obsequies of Lord Roberts at Saint-Omer, M. Mallet was greatly impressed with the presence of the Scotch Highlanders who "stood like statues," the English infantry "who marched with their heads down and eyes fixed on the ground," "the superb

Indian troops," and "the Highland pipers playing a lament whose refrain was eternally alike." Later present at the Battle of Loos, he leaves nothing to the imagination in describing that ghastly field.

At last a war book for which we have been waiting—a neutral Latin view of the French cause. *Among the Ruins*, by Gomez Carrillo, a Spaniard, rises to a supreme height in rendering homage to a sorely stricken kindred nation. His are not detached, observant feelings when visiting the scenes of French disaster, but it is as though every ruined object, each mark of French suffering, smote him a personal wound. But in spite of the depression which falls upon him, Latin gaiety will now and then reassert itself—that resilient element in the race which through periods of complete darkness keeps aflame the torch of a joyful destiny. "Vive la France" rings from the pages of Señor Carrillo with absolute and convincing faith in her victory.

*My Home in the Field of Honour*, by Frances Wilson Huard. Doran. \$1.35. *Impressions and Experiences of a French Trooper*, by Christian Mallet. Dutton. \$1. *Among the Ruins*, by Gomez Carrillo. Doran. \$1.50.

## FRANCE AND AMERICA

*With Americans of Past and Present Days* is a volume of studies and addresses by J. J. Jusserand, Ambassador of France in the United States who gracefully (and like a true diplomat) dedicates his book, in memory of former times, to the thirteen original states. What M. Jusserand, dean of the diplomatic corps in Washington, has to say on Franco-American relations is of interest and importance. It is not scholarly history—nor is it intended to be, altho some hitherto unpublished documents are brought forth. Neither is it idle gossip. Rather it is a collection of illuminating and always pertinent reflections on subjects ranging from Rochambeau and the French in America to Abraham Lincoln.

*With Americans of Past and Present Days*, by J. J. Jusserand. Scribner. \$1.50.

## MR. YEATS'S YOUTH

It is not as an idealized picture of his childhood and youth seen from afar through mists of poetic reverie that Mr. William Butler Yeats's latest book makes its appeal, nor by such a distinctive charm in sketches of scenes and people as make earlier reminiscent papers by the same author beguiling reading. On these sides this little volume is disappointing. But, granting a familiarity with the poet's work, the latter half of it at least will be read with lively curiosity for what it tells of the moods and ideas, which, as ordered and philosophized later, combined to fashion a rare personality and a view of life one will not meet in a

month of Sundays upon the beaten highways of art or thought.

Two men—Mr. Yeats's father and John O'Leary—were dominant influences upon his youth. Mr. Yeats, senior, with his explosive audacities of thought, did much, we infer from these pages, to determine the direction of his son's life and art. And from John O'Leary and his circle came, says Mr. Yeats himself, "all I have set my hand to since." The *Reveries* end upon a melancholy note, which we think of as sounding out of the comparative silence of its author's later years. "All life weighed in the scale of my own life seems to me a preparation for something that never happens"—such are its concluding words.

*Reveries Over Childhood and Youth*, by William Butler Yeats. Macmillan. \$2.

## THE INEVITABLE WAR

*The Things Men Fight For*, by Dr. H. H. Powers, is one of the few books dealing with the controversial aspects of the Great War that every one, no matter how much in disagreement with its opinions, must be glad has been written. The writer claims to be familiar with every one of the nations now at war with the exception of Serbia, and he has certainly succeeded in understanding the point of view of each nation and interpreting it with a wealth of insight and sympathy. His contention is that: "Every nation in the present war has its case, a case which it need not be afraid to present before the bar of humanity. Each has done the only thing that it could do, as judged by the standards which we habitually apply to our own national conduct." He regards the war as inevitable because he believes that national expansion is inevitable, and that the attainment of a "natural frontier" by one state means the loss of the same frontier by its neighbor; for example the crest of the Vosges and the fortresses of Metz and Strassburg must be either in German hands or in French. He believes that Austria-Hungary could only preserve her existence by the conquest of Serbia and that Germany's march through Belgium was a true "military necessity." On the other hand he considers that Russia is fully justified in striving to get control of Constantinople and that it would have been madness for Great Britain to permit Germany to establish her rule in the Netherlands or to outbuild the British navy.

Dr. Powers is at his best as a strategist. The titles of his chapters show this: "The Problem of the Mediterranean," "The Problem of the Adriatic," "The Problem of the North Sea," and the like. He believes that what is called land hunger is rather a desire for coastline, ports and passages; that wherever Nature has so arranged the land and sea as to congest the commerce of

large areas, and no parceling out of territory becomes possible without denying necessary facilities to one or exposing another to a neighbor's domination, any arrangement that can be made must involve hardship and inequality and so invite, if not insure, conflict.

One illustration of this geographical problem is of course the case of Russia, and the brief statement of Russia's position is exprest with such lucidity and vividness as to deserve citation at some length:

The Baltic is like the Black Sea, a double-locked area, controlled by inner and outer doors, the one at the Dardanelles and Gibraltar, the other at the Danish Straits and the English Channel. Curiously enough, it is the same great power in either case that is thus doubly locked in, and to complete the analogy, the same great power in each case holds the outer key. Is it possible to contemplate such a situation and not see in it the possibility, almost the guarantee of trouble? In one respect there is an important difference. The inner door, tho held in each case by comparatively weak powers, is really controlled in the north by the foremost of continental powers. Whoever would force the Danish Straits must reckon with Germany, a power which, tho not actually adjacent, is vitally interested and in a position of full control. . . . Germany's recent determination, however, to make Constantinople her objective, completes the analogy between the two situations. Russia, in either case, is locked behind double doors. In each case the inner door is held by a feeble power backed by Germany. In each case the outer door is held by Britain. That is the reason why Russia is fighting Germany now, and the reason why she will be fighting Britain later.

Obsessed by this geographic fatalism Dr. Powers sees little hope for a speedy world peace. He puts no faith in treaties, declaring in his abrupt and striking way, "We may some day be ruled by righteousness, but never by the dead hand." No possible delimitation of boundaries will ever satisfy vigorous and expanding nations and leagues to enforce the peace will only result in new coalition wars like the present. Yet he does not think that war will continue forever. The world will become united at last, but only when many decades of struggle have resulted in ever larger empires and alliances enwrapping the whole planet. At this point the author has a surprise up his sleeve for the reader who has followed him to the last chapter. The book, which up to that point was so studiously neutral, becomes a passionate plea for an intimate alliance between the United States and the British Empire. Altho Dr. Powers believes that German imperial aspirations are quite as legitimate as British, he holds that this country cannot stand aloof while all the other powers are contending for world mastery and that in spite of superficial differences our civilization is infinitely more akin to the British than to that of any of the peoples of continental Europe.

We speak one language, we cherish one literature, we recognize one political principle of temperate central rule and local freedom, and these are the language, the literature and the ideal of Britain. . . . and this civilization will survive or perish as a unit.

*The Things Men Fight For*, by H. H. Powers. Macmillan. 31 56

## A new Kodak in a new size

Pictures  
2 7/8 x 4 7/8

### The 2C Autographic Jr.

Just as surely as the 3A (post card size) picture displaced the 4 x 5, this 2C will displace the 3 1/4 x 4 1/4. The elongated shape, used horizontally is better for landscapes—it doesn't waste film on sky and foreground. It is better for portraits when used vertically for it gives the high narrow picture. It *gives more picture for the area* than is usually possible in a square—and the shape of the picture is far more pleasing.

And this elongated shape in the picture makes possible a slim, thin, easily pocketed camera. The 2C Autographic Kodak Junior has a capacity of ten exposures without reloading, it has the Kodak Ball Bearing shutter with cable release, working at speeds of 1/25, 1/50 and 1/100 of a second and of course the usual "bulb" and time actions. The camera has brilliant, reversible finder, two tripod sockets, black leather bellows, is covered with fine grain leather, is well made and beautifully finished. It is furnished with a choice of lens equipment as listed below.

#### THE PRICE.

No. 2C Autographic Kodak Jr., meniscus achromatic lens,	\$12.00

# MR. PURINTON'S EFFICIENCY QUESTION BOX

282. Mr. L. D. A., West Virginia. "I am a Sunday school teacher in a city where local influences make religious work perplexing. A few of our teachers greatly desire to increase the efficiency of our school in general attendance and practical usefulness. Will you kindly offer suggestions?"

Write the International Sunday-school Association, 5 South Wabash avenue, Chicago, and the West Virginia Sunday-school Association, Board of Trades Building, Wheeling, West Virginia, for all the available literature covering your specific problems. Have trained teachers—most Sabbath teachers are unfit, and unprepared, for their work, hence cannot hold their pupils. Make a study of the new "Efficiency Standards" for Sunday schools, and improve your organization. Plan special music, talks, blackboard charts, frequently. Start contests for better class attendance. Figure out a way to get the business men interested, by offering practical short, unpreachy thoughts on live topics of the day. Embody social service, applied psychology, industrial improvement. Secure the book, "How to Conduct a Sunday School," by Marion Lawrence.

283. Miss S. J. B., Illinois. "You say that when you finished college you spent a year investigating the science of industrial opportunity, and tell of the value that year has been to you. Can you advise me how to make such an investigation for myself? I have been doing secretarial work since graduating from college in 1913, but am anxious to make a change, and to investigate different business opportunities at once."

Go to the nearest library where complete files of *The Independent* are preserved, look over all back numbers of the Efficiency Question Box, write any concerns, magazines or institutions that seem promising. Borrow an American Newspaper Annual and Directory from a newspaper office, make list of all technical journals in your line, get sample copies, look thru advertisements, ponder and answer. Obtain a standard book on vocational guidance, and see if you are in the right work; if not, find it; if so, write Efficiency Publishing Company, Woolworth Building, New York, for names of books or correspondence courses to equip you for advancement. Confidentially state your specific problem to a leading business man of your acquaintance, in your line if possible, and secure his opinion.

284. Mr. G. W. M., Pennsylvania. "(a) Kindly advise me where I may obtain information relative to the public lands being sold by government and state. (b) Does a town that is being boosted and advertised generally make a good place for investment?"

(a) Apply to the United States Secretary or Department of the Interior, Washington, D. C.

(b) Yes, if the "boom" is natural; no, if it is artificial. Does the town contain valuable resources in itself—natural gas, oil, coal, or other products of the earth; factories, mills, railroads, or other industrial assets; pure water, exceptional climate, commercial or educational advantages, and other features making it valuable as a permanent home site? A real estate "booster" deals in probabilities; weigh the *actualities* before you exchange your good money for his mere promises.

285. Mrs. A. S. P., Tennessee. "(a) Please name a few standard books on systematizing work, life and destiny. (b) What do you consider the best filing outfit for notes and clippings? (c) Kindly suggest method of maintaining a personal or family budget of current expenses?"

(a) Write Efficiency Publishing Company, Woolworth Building, New York City, for titles of books; and make your question more specific—do you want personal, technical, vocational, or other kind of system?

(b) Refer to Question Box answer No. 207 in *The Independent* for February 14,

1916. We never declare anything the "best." Look up several outfits and choose for yourself.

(c) Refer to answer No. 194 in January 10 issue. Also write for announcements of institutions mentioned in answer No. 223, issue of March 13.

286. Mrs. W. C. H., Connecticut. "What books or magazines, bulletins and reports from leading experts and national organizations for the home and homemaker will help a progressive housewife to know her business?"

Write the following and ask for complete literature available, describing their work: The American Home Economics Association, and *Journal of Home Economics*, Station N, Baltimore, Maryland; Department of Home Economics, New York; College of Agriculture, Ithaca, New York; Russell Sage College of Practical Arts, Troy, New York; The Housekeepers' Alliance, Washington, D. C.; Housewives League, 25 West Forty-fifth street, New York City; Teachers College School of Practical Arts, Columbia University, New York City; *Good Housekeeping Magazine* and Institute, 119 West Fortieth street, New York City; *Forecast Magazine*, 6 East Thirty-ninth street, New York City; *The Housewife*, 30 Irving Place, New York City, and Household Economics Department of your State University. See also Question Box answer No. 223, in *The Independent* of March 13, 1916.

287. A Reader from New York. "I am a teacher in both day and evening schools, have taken two orphaned girls aged 4 and 8, am caring for them in my small apartment, desire to educate both for teachers. My income is meagre. How could I earn more, especially in the summer vacation? Have had several educational magazines accept and pay for articles in their line; could I further develop this means of revenue?"

Yes. Make a study of the general scope and special departments of all magazines that have taken your articles, work out a list of suggested themes for new articles, and ask each editor if he would consider further contributions on one or more of these subjects—reminding him that your work has already proved acceptable to him.

A book on women's ways of earning money by Mabel Conklin and another by Cynthia Westover Alden may be had from the Efficiency Publishing Company, 2528 Woolworth Building, New York City.

Are you not carrying too heavy a burden? Would not some person of wealth and leisure in your community be glad to help in your generous ambition for your little wards?

288. Mrs. F. Y. B., Michigan. "I desire to become efficient thru home study in the subjects of farm economic equipment, and organization, that I may secure a position based on this knowledge. Where may I obtain the information? Correspondence schools, I find, do not generally offer such courses."

Write the U. S. Department of Agriculture, Washington, D. C.; also the Department of Agriculture of your state university and other colleges nearby; also Farm Efficiency Bureau, 320 Fifth avenue; Farmers' Bureau, 150 Nassau street; Farm Service Bureau, 503 Fifth avenue, all of New York.

You should also find valuable references in the editorial and advertising pages of such agricultural journals as *The Farming Business*, Chicago; *The Country Gentleman*, Philadelphia; *Better Farming*, New York.

289. Prof. V. A. R., Texas. "Will you kindly inform me concerning the development of the honor system in schools? What is the origin of it, what colleges have adopted it, or abandoned it? Has the system been tried in any of the high schools of America?"

Questions like this make us wish in vain for omniscience. There should be a na-

tional clearing-house or information bureau where all data and directions pertaining to advancement in education would be collected, classified and distributed. We have not been able to learn of the existence of any such national organization.

However, certain partial efforts along this line have been made. Submit your question to the United States Commissioner of Education, Washington, D. C., to the secretary of the Carnegie Foundation, 576 Fifth avenue, New York; to the secretary of the Education Board of the Rockefeller Foundation, 61 Broadway, New York; to President Guy Potter Benton, University of Vermont, Burlington, Vermont, secretary-treasurer of the American Association of State University Presidents; to editor *American School Board Journal*, 3 East Fourteenth street, New York.

290. Mr. V. T. N., North Dakota. "Will you kindly suggest some method to follow (a) to find a good location for the practise of law in the State of Wisconsin; (b) to locate a man who travels around the state and might be in a position to know of a lawyer who contemplates forming a partnership? I have some plans of my own, but would like your views also."

(a) Write to William C. Sprague, secretary Commercial Law League of America, La Salle street, Chicago. Investigate the National Law Association, 132 Nassau street, New York; and the American Law List, 2 West Thirtieth Street, New York. (b) Find the traveling representative for Wisconsin employed by leading publishers of law books, such as West Publishing Company of St. Paul, L. D. Powell Company of Los Angeles, American Law Book Company of New York. Make an arrangement whereby these men will inform you of partnership possibilities among their customers. Be guided also by results from answer to (a).

291. Miss N. R., West Virginia. "I am a high school junior of seventeen. Am trying to decide whether to take a college or a business course, do not feel able to take both. I want the culture of the former, with the life training of the latter. (a) What do you advise? (b) Do any colleges offer business courses also? (c) Do any business schools teach French and Spanish? (d) I am specially interested in secretarial work; please refer me to institutions that specialize in this."

(a) We cannot choose for you. But we think your wise plan would be to take the business course, and supplement it by spare-time study of such features as are given thru Chautauqua Institution, the Mentor Association, home-study clubs and courses of different kinds. (b) Write American Schools' Association, Times Building, New York; also Coöperative Schools' Agency, 41 Park Row, New York. (c) Ask institutions mentioned under (b). Questions relating to Spanish have been discussed here already. (d) Fifth Avenue Secretarial School, 509 Fifth avenue; Collegiate Secretarial School, 38 West Thirty-second; Knickerbocker School of Secretaries, 16 West Forty-fifth; all of New York city.

292. Mr. J. P. Y., New Jersey. "My work requires me to stand all day, and in common with many others I am troubled with weak ankles and the breaking down of the arch of the foot. Is 'fallen arch' incurable? Do you know of any means to correct the difficulty, or to make all-day standing more comfortable?"

You may need a special shoe, such as the Coward Shoe, 270 Greenwich street, New York, or the Dr. Reed Cushion Shoe, 1372 Broadway, New York. Submit your problem to these concerns: Nathan Auklet Support Company, 88 Reade street; The Waters Laboratories, 53 Fifth avenue; A. J. Ditman, 2 Barclay street; William M. Eisen Company, 413 Eighth avenue; Knauth Brothers, 220 Fourth avenue; Straight Walk Arch Company, 1632 Madison avenue; all of New York.

## Independent Opinions

The poem, "Carty's Hall," by President Finley, of the University of the State of New York, which we published in our issue of June 19 has attracted more than ordinary attention. Evidently people are glad to see the modern bard does not, like his predecessors, confine himself to the eulogy of military heroes, but finds the man of science also worthy of his verse. We hope sometime to see an epic of Joseph Henry from the pen of Dr. Finley. We forwarded to him a letter from Edna Dean Proctor approving of his poem on Carty's achievements in telephony and received from him the following interesting reply:

I am very proud of your letter about "Carty's Hall." I feel as if I hadn't much to do with the writing of it, as it wrote itself on Sunday morning between eight o'clock and the close of the morning service.

I have been wishing that I could afford to send a copy of the sheet to every one of the auditors at that great meeting. There were five thousand or more. You will be interested to know that the meeting produced something of far greater consequence, however, than these verses. It has led to a movement in behalf of a monument to Joseph Henry, who discovered the principle that has made all this possible. Pupin and Carty came up to Albany the next week, and already we have in prospect, largely thru the generosity of Pupin, between fifteen and twenty thousand dollars. Such a wonderful address as Pupin made at this little dinner, at which the movement was started. I have seldom heard in my long experience of after-dinner auditing.

Next fall we are planning to have a great convocation, one feature of which will be the establishment of the apostolic succession in the field of electricity.

JOHN FINLEY

State Department of Education,  
Albany, New York

The following letter calls attention to what is undeniably a real defect in our political system, the unequal influence exerted over the government by certain classes:

In successfully arousing a man's thinking capacity I am convinced that The Independent beats 'em all.

In our poll of the men on the street in the issue of June 12 I wonder if the same thought occurred to you as to me that just two "working men" happened along. These two working men, I refer to, the chauffeur and the porter, are both engaged in business callings which would naturally bring them on the streets, but the real producers of all wealth and social activities are strangely absent.

And yet not so strange, after all, for these men are too busy engaged at their daily toil, in the endeavor to maintain themselves and their families decently, ever to have the chance to be heard on questions of national importance.

And this small matter of your poll has brought into strong relief the greatest fault of all our system of government.

When weighty matters of grave importance to him are under discussion for legislative action in the halls of Congress the working man can only think within himself how very much he would like to be heard on his side of the question. But this can never be more to him than an harness-

## What Brings Promotion to Stenographers?

**George D. Bates Tells Secret of  
Increased Salaries and  
Better Positions**

### What the Wonderful New Way in Typewriting Means to You

I am asked why some stenographers earn only \$8 to \$15 a week—and remain stenographers year after year—while others earn \$25, \$35 and even \$40 weekly and are soon promoted to bigger, better positions.

I believe no man in America has helped more stenographers to get into these bigger positions than I have, and I can tell you the secret of it all in a very few words.

Promotions are based on what you produce. It is your *finished work* that you are paid for, and judged by. It is the *quantity and quality of your typewriting* that will get you the big money, the rapid advancement.

All the recent articles on stenographic efficiency—all the many books on the cost of stenographic service—tell the same story. The way for the stenographer to *earn more money and secure a bigger, better position*, is to make yourself more efficient—to increase your *speed and accuracy in typewriting*.

### The Ideal Stepping Stone— If You Make It So

Every one knows that there is no better way to learn a business—there is no quicker way to get ahead, than to start in as a stenographer. But you must be a better stenographer than the average much better. Many big men and women of today, now well known to the public, began this way. Cortelison, Vanderlip, Loeb, Lynch, Eastis, Bok, these and thousands of others, started in as stenographers.

But—they were mighty good stenographers! Remember that. You have got to prove yourself good likewise, before you can expect to get ahead.

### The New Way in Typewriting

Now I want to tell you how thousands of other men and women are equipping themselves for bigger salaries, better positions—how thousands have already done it. The whole story is in my 48-page free book, about the New Way

## HOTEL BRUNSWICK

BOYLSTON STREET

BOSTON, MASS.

Only a short walk from N. Y., N. H. & H. and B. & A. Stations. Convenient to all parts of the city. European and American Plans. Music.

## TYPEWRITE THE NEW WAY

80 to 100 WORDS A MINUTE GUARANTEED  
Totally new system. Based on Gymnastic Finger Training. Practical, easy to learn. First day shows results. Learn while you work. 48-Page Book Free from hundreds of stenographers. A revelation as to speed and accuracy possible to typists. Postal will do, but write today—NOW.  
THE TULLOSS SCHOOL, 3807 College Hill, Springfield, Ohio

in Typewriting. It describes the secret principles of a wonderful new method of acquiring skill on the typewriter at home, in 10 easy lessons—a new method that has completely revolutionized the typewriting situation. Read how thousands of men and women, who never exceeded 30 to 40 words a minute, are typewriting 80 to 100 words with half the effort and with infinitely greater accuracy than ever before—have increased their salaries from \$10 and \$15 a week up to \$25, \$30 and even \$40 weekly—and are gaining promotion to better positions on the strength of their having made good as stenographers!

### An Entirely New Idea

Don't confuse this New Way in Typewriting with any system of the past. There has never been anything like it before. Special Gymnastic Finger Training Exercises bring results in days that ordinary methods will not produce in months. Among the thousands of operators who have taken up this system, are hundreds of graduates of business colleges and special typewriting courses—many were so-called touch writers—yet there has been hardly a single one who hasn't doubled or trebled his or her speed and accuracy, and their salaries have been increased in proportion.

### Wonderful 48 Page Book Free

We have prepared a book which tells all about the New Way in Typewriting, which is free to those interested. It is a 48-page book, brimful of eye-opening ideas and valuable information. No instruction book ever written, no matter what its cost, ever told so plainly the real WHY and HOW of expert typewriting. We will also send you our new offer to let you take the 10 Easy Lessons in New Way Typewriting on Trial guaranteeing you results, or the Course will not cost you one cent. Right NOW we are making a special low price to certain new students to help advertise the New Way in Typewriting. If you are ambitious to get ahead, if you want to get more money in your pay envelope write us at once. Please send your Free Book about the New Way in Typewriting. Also your offer of the Course on Trial, and the Special Low Price Rate just now open. This incurs no obligation on my part.

ing wish. He has neither the money nor can he spare the time for a trip to Washington.

On the other hand the "business man" can leave his business in the hands of the very men who would like so much to have their side of the case heard, and while they work for him and his money works twenty-four hours a day for him, he makes a comfortable trip in a Pullman or private car accompanied by his skilled attorney and stenographer and with every facility at hand pleads his case before a Congressional committee.

Of recent years it has become the custom more and more of the working man to have his representative, from his labor organization, appear for him. This for the working man is possibly his salvation, and matters are amicably patched up to suit the needs of these two important factors in the elements of life in America. The working man gets more for his labor and the capitalist increases the cost of production, and all goes merry as a marriage bell.

But there is another class of citizens totally unrepresented in your poll, who may or may not find time to be on the streets in working hours. These are the brilliant men of the nation, architects, engineers, artists, sculptors, novelists, poets, chemists, editors, civil engineers, mechanical engineers, inventors and in toto men who live by their brains and scientific knowledge. I have not included lawyers, doctors and ministers, these men, the bulwark and the life of the nation. What shall happen to these? It is beneath the dignity of these men to form a union and organize and they are not rich enough nor can their time be spared before Congressional committees, individually.

And herein lies the greatest fault of American institutions. The best and brightest minds the nation affords are ground beneath the upper and lower millstones of a crude and sordid system of laws which excludes these minds from every financial consideration.

CHARLES A. JUNKEN  
Fort Monroe, Virginia

Mr. Reeser, State Senator of Indiana, packs the world policy of the great Middle West into a nutshell:

The sentiment of the Middle West is not for peace at any price; but we are willing to pay a mighty good price for peace.

Lafayette, Indiana ALVA O. RESER

I have noticed frequently of late in writings and in speeches a tendency on the part of papers, periodicals and public men to ignore the fact of the South being a part of this United States. There is no attack on the South—no conscious slurs at the South—no old time waving of the bloody shirt; but just an apparent absence, a total absence, of thought or knowledge that the South is a part of the nation.

For instance, I have noticed several times in print the statement, substantially as follows: "We should hold in grateful remembrance the Germans, who to the extent of several hundred thousand, fought for the preservation of the Union." I have noticed a number of references to the United States as "the Yankees" or the "Yankee Nation." I further note in your latest issue of The Independent, in Senator Harding's opening paragraph in his article "Reënter Republicanism," the following: "... and there is an anxiety for our nationality not unlike that which sought out Abraham Lincoln in 1860."

Of course Southern people could not be grateful to the Germans, who, to the number of about half a million, lured by Northern gold, came over to help shoot down the soldiers of the South nor did Southern people "in their anxiety" in 1860 "seek out Abraham Lincoln." Nor do Southern people form part of a "Yankee Nation."

This is a time for all of the country to stand together and no part of the country will do its duty more cheerfully, fully and faithfully than will the South. In fact, it is the belief of the writer that the salvation of the country lies in the South, where

## NORTHWESTERN Military and Naval Academy

New fireproof home on shores of Lake Geneva. Modern sanitation, ventilation, heating, lighting. High scholastic standards, certificate privilege. Outdoor life emphasized. Fixed charges covering board, tuition, uniforms, pocket money. Address:

COL. R. P. DAVIDSON, Supt., Lake Geneva, Wis.

## PACIFIC THEOLOGICAL SEMINARY

An undenominational, union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. degree. All privileges of University of California open to qualified seminary students. Term begins August 21, 1916. Address: President C. S. Nash, Berkeley, California.

stand the last strongholds of the pure Anglo-Saxon race. The North and a large part of the West is a swirling hotbed of isms, of hyphenates, of foreign riff-raff. A pure bred American who can trace his ancestors as Americans for even two generations is the rare exception. In the South the contrary is the exception. In view of these facts this peculiar absentmindedness—this continual reference to this nation as if it were entirely composed of Northerners and men of Northern thoughts and sympathies—is a little curious to say the least. Why is it, Mr. Editor?

ARTHUR H. JENNINGS

Lynchburg, Virginia

The tendency to which our correspondent alludes is not derogatory toward the South but quite the contrary, for it recognizes so completely that "the South is part of the Nation," that it unconsciously ignores the time when the South tried not to be. Not a few Southern people are now glad that they are part of the nation and are correspondingly grateful to the Germans who from whatever motive helped to make it be so. Of course it was not the Southern people who in 1860 sought out Lincoln, but it was undeniably those who at that time had "an anxiety for our nationality." The term "Yankee" is as offensive to a Westerner as to a Southerner, but we do not believe its use is due to the efforts of New England to absorb the whole country. "American" is as much too big to fit us as "Yankee" is too narrow, but unless somebody invents a national adjective just our size one or the other will have to be used. We cordially welcome and fully accept the assurance that the South will do its duty in these days of trial but we are equally confident of the loyalty of many of the new comers who have no Anglo-Saxon blood in their veins. There was, so the historians say, not a little "riff-raff" among the early colonists of Virginia as well as of New York, but seeing how well we both have turned out we may be encouraged as to the future of our country.

I am delighted with The Independent and its writers, for the most part. Corra Harris seems like a fellow-worker along side, and others I might mention strike responsive harmonies of the mind and heart.

But the article quoted from the *New York Times*, in the notes about the Republican convention, on page 461, June 19, regarding the Root demonstration, truly "got on my nerves" and "haunted my waking and my sleeping dreams." That it should be published wholly without comment seems utterly foreign to the wholesome atmosphere generally pervading the columns of "our" noble periodical.

Can it be endorsed by The Independent? It seems incredible! The horseplay of that affair of the "rebel yell," and the willingness of a woman to lend herself a tool to such buffoonery also seems incredible.

RUTH L. SIMISON

Mt. Hermon Seminary,  
Clinton, Mississippi

We must remind our good friend that The Independent is among other things a newspaper and as such we have to report whatever happens. A great many things happen in the world of which we do not approve—earthquakes, the Great War and convention boisterousness are among them, but we put them in so that our readers may know and be able to form their own opinions about them.

## SCHOOLS AND COLLEGES

**The University of Chicago**  
**HOME STUDY** in addition to resident work, offers also instruction by correspondence.  
For detailed information address  
25th Year U. of C. (Div. M) Chicago, Ill. Mitchell Tower

### SCHOOL INFORMATION

**FREE** Catalogs of all Boarding Schools (or camps) in U. S. Expert Advice free. Want for girls or boys? Maintained for all Schools. American Schools' Association, 1011 Times Building, New York or 1516 Masonic Temple, Chicago.

### "Home-Making, the New Profession"

Is a 100-pp. ill. handbook—it's FREE. Home-study Domestic Science courses. For home-making, teaching and well-paid positions. Am. School of Home Economics, 69th St., Chicago, Ill.

**ELY SCHOOL FOR GIRLS**, Ely Court, Greenwich, Conn. One hour from New York City. College Prep, General Courses. Separate departments for Girls under 15.

### MARTIN COLLEGE, PULASKI, TENNESSEE

A Junior College with Preparatory Department. Moderate Rates. Modern Buildings and Equipment. In the Blue-Grass Hills of Sunny Tennessee. Careful Supervision. W. T. Wynn, President

**ROWLAND HALL**—Home School for girls and young women. Preparatory for selected College, also advanced course. Department for younger girls opened this year. Special advantages offered in Music, Expression and Household Arts. High elevation, mild climate, delightful surroundings. Beautiful thirty acre campus. Riding, Tennis, etc. Mrs. E. M. Rowland, Principal, Ooltewah, Tenn.

**LATSHAW SCHOOL** FOR BACKWARD CHILDREN. Do you want your child to become bright, interesting and happy, with a possible future of usefulness? The history of our School warrants this offer to you. Kindly individual care in a small family group. Rates \$1,200 upwards. ALLEN LATSHAW, Founder and Director, Pennsylvania, Berwyn. "The Maples," 3412-14 Sansom Street, Philadelphia.

### FORTY-EIGHTH YEAR

### Pennsylvania College for Women

Woodland Road, Pittsburgh, Pa.

Location combines advantages of city and country. Collegiate and Special Courses. Exceptional advantages in Social Service, Music and Expression.

John Carey Acheson, LL.D., President

### Oberlin School for Girls

Six to Fifteen Years

Offers exceptional advantages in education and home life, in an ideal environment. Music, Oberlin Conservatory of Music. Art, French, German, Home Economics. Catalogue.

Forest Place, Oberlin, Ohio

**STAMMERING MECHANICALLY STOPPED** Invention fits mouth—simple as false teeth. Controls muscles of articulation. Stammering impossible minute controller is used. *Soon talk correctly without controller.* Special low rates this month. Write Peate & Beattie, Box 83, Spencerport, N. Y.

### Crane Normal Institute of Music

Training School for Supervisors of Music in public schools. Both sexes. High School course required for entrance. Voice, Harmony, Form, History, Ear Training, Sight Singing, Methods, Practice Teaching, Chorus and Orchestra Conducting. Limited to 65. Personal attention. Catalog 65 Main St., POESDAM, N. Y.

### BROOKFIELD

#### The Open Air School for Her

Teaches your daughter how to realize the durable satisfactions of life. The Directors believe that this end is attained through helping the growing girl to establish habits which keep her well, make her think clearly, make her live in right relations to her world.

The aim at Brookfield is to give the girl her fullest power, rather than to cram her mind with a specified quantity of book-learning.

Open air sleeping, study and recitations. Open air dining room. Domestic arts, gardening, physical training, summer and winter sports, dancing, story telling, dramatic training, music.

Write personally to Miss Helen Fairman Cooke,  
The Brookfield School,  
North Brookfield, Mass.

### BOSTON UNIVERSITY

Law                      Medicine  
College of Liberal Arts  
Theology              Graduate Department

The College of Liberal Arts now occupies its new building next to the Boston Public Library and offers the advantages of a modern college campus. The building is equipped with laboratories, Department Libraries, and has tallest use of the Boston Public Library. The professional schools located in the heart of the city, not only offer the best courses of instruction but afford unusual opportunities for self support and for the practical training in the several professions. The Graduate School offers exceptional opportunity for research work.

LEMUEL HERBERT MURLIN, President  
Copley Square, Boston, Mass.

### DEAN ACADEMY

FRANKLIN, MASS.

Young men and young women find here a homelike atmosphere, thorough and efficient training in every department of a broad culture, a loyal and helpful school spirit. Liberal endowment permits liberal terms, \$300-\$350 per year. Special course in Domestic Science.

For catalogue and information address

ARTHUR W. PEIRCE, Litt.D., Principal

### Mary Baldwin Seminary for Young Ladies

Established 1842. Term begins Sept. 14th. In the beautiful and historic Shenandoah Valley of Virginia. Unsurpassed climate, modern equipment. Students from 35 states. Courses: College, 4 years; Preparatory, 4 years; with certificate privileges. Music, Art and Domestic Science. Catalogue. STAUNTON, VA.

### WALNUT HILL SCHOOL

24 Highland Street, Natick, Mass.

A College Preparatory School for Girls. 17 miles from Boston. 40 Acres. Skating Pond. Athletic Fields. 4 Buildings. Gymnasium.

Miss Conant, Miss Bigelow, Principals.

### Williston Seminary for Boys

New \$100,000 residence hall opens September. Efficient masters. Small units. Boys personally directed. Scientific and preparatory departments. 6 buildings. Athletic fields. Moderate rates. *Booklet* in separate building. Booklet.

Joseph H. Sawyer, L. H. D., Principal, Easthampton, Mass.

VIRGINIA. Manassas, Box 114.  
Eastern College Co-ed. 30 mi. from Wash., D.C., a 20th Century College. Fine new bldgs. Standard A. B. course. Also two year degree courses in Lit., Ped., Dom. Sci., Express, and B.S. for high school graduates. Superior Music Conservatory. Select academy for boys and girls. \$500 a year. Gym. and athletics. DR. H. U. ROOP, Pres.

### Randolph-Macon Woman's College, Lynchburg, Va.

One of the leading colleges for women in the United States, offering courses for A.B. and A.M.; also Music and Art. Four laboratories, library, astronomical observatory, modern residence halls. Scientific course in physical development. \$20,000 gymnasium with swimming pool, large athletic field. Fifty acres in college grounds. Healthful climate free from extremes of temperature. Endowment, recently increased by \$250,000. Expenses moderate. Officers and instructors, 60; students, 624, from 40 states and foreign countries. For catalogue and book of views illustrating student life, address

WILLIAM A. WEBB, President, Box A.

### Interlaken A School on a Farm

"Where boys learn by doing" **School**

Thorough instruction in sciences and languages. Prepares for all universities. Academic work applied in practical agricultural and mechanical training. The school, located on a 700-acre farm, with its own electric light, power plant, wood and metal shops, makes two hours of useful work each day part of the course. Boy leadership. Self-government under university-trained men counselors.

(Summer Camp Mid-June to Sept. 1st.)  
For particulars address Headmaster, Box 128,  
Rolling Prairie, LaPorte Co., Indiana. Chicago  
Representative, 'phone Kenwood 4375.

## CHANGE OF ADDRESS

If you are going away for the summer, you will want The Independent to follow you. Let us know your new address, if possible, three weeks ahead. Be sure to give us your old address also.

## The Independent

# The Market Place

### THE YEAR'S CROPS

Crop reports published by the government in July have been more favorable than those of June. An improvement of condition has warranted larger estimates of the quantities that will be harvested. An addition of 24,000,000 bushels of spring wheat, and an increase of 20,000,000 in the winter wheat fields, make an expected or indicated total of 759,000,000. This must be compared, of course, with last year's enormous and unprecedented yield of 1,012,000,000 bushels; but the fact should not be overlooked that a crop of 759,000,000 has been exceeded only three times. It was fortunate for the United States that our billion bushel crop came at a time when the foreign war demand enabled us to sell the great surplus at good prices. There will be another surplus this year, and it will be marketed at remunerative prices, altho last year's figures will not be reached. There are conflicting reports about the wheat crop in Europe, but the total will fall below that of last year. A loss of 54,000,000 bushels in devastated Poland, Belgium and Serbia is foreseen, and in the countries actively engaged in war there has been a lack of efficient labor for work in the fields. Much of this work has been done by women, old men and boys. This country will have a fair market for all the wheat it does not need.

There is a promise of 2,866,000,000 bushels of corn. In only four years have we had more. The summit was reached in 1912, when 3,124,000,000 bushels were harvested, and last year's crop, like the yield of wheat, was a large one, 3,055,000,000 bushels. Here again the June estimate is increased, and a similar change is seen in the figures which point to a harvest of 1,317,000,000 bushels of oats. This will be a large crop. Last year's, 1,540,000,000, was distinctly exceptional, like the yield of wheat. The average for the six years immediately preceding had been only 1,132,000,000. Barley falls this year to 205,000,000, from 237,000,000; there is an indicated gain of 10,000,000 in the potato fields; an increase of 130,000,000 pounds of tobacco is predicted, and the highly satisfactory condition of the hay fields is shown by the figures 93.4, the average for the preceding eight years having been only 82.

The crop of cotton will be 14,266,000 bales. Last year's was only 11,191,820, following the high record

yield of 16,134,930 in 1914. Low prices, due to the war, caused the planters to reduce acreage, but a recovery of market values led this year to an increase of 3,890,000 acres, or about 12 per cent. The indicated yields in 1916 and the crops of last year are measured below:

	1916	1915
Corn .....	2,866,000,000	3,055,000,000
Wheat .....	759,000,000	1,012,000,000
Oats .....	1,317,000,000	1,540,000,000
Barley .....	205,000,000	237,000,000
Potatoes .....	369,000,000	359,000,000
Rice .....	34,000,000	29,000,000
Tobacco, lbs..	1,191,000,000	1,061,000,000
Cotton, bales..	14,266,000	11,191,820

WAR ORDER SHARES AND TRADE

In the stock market for some time past the shares of companies engaged in making war supplies have been weak, several of them showing considerable declines. The downward movement has been due in part to higher rates for loans on call, although these rates receded after a temporary advance, but there were other causes. It was more and more difficult to obtain loans on war order shares as collateral, owing to opinions as to the future condition of the trade in munitions and other products which the belligerents are buying here. In April of last year three companies undertook to fill an order for \$65,000,000 worth of shells. The work will soon be finished, and announcement has been made that one of the companies will dismantle its shell factory, sell the machinery used in it, and discharge 2,500 employees. At about the same time it became known that a great powder company, whose sales to the Allies have been very large, had reduced the day's working time in its mills from 24 to 16 hours, using two shifts instead of three. This news apparently had more effect in the stock market than the recent declaration of large dividends by war order companies.

Investors, traders and loan brokers believed they had evidence that the number and value of orders for war supplies were declining, except perhaps so far as Russia was concerned. There is evidence in the statements of Lloyd George and others that the British output of munitions has been growing rapidly. But while there may not be many new orders for finished munitions, recent purchases here of steel in forms to be used abroad in the manufacture of munitions have been very large. Neutral nations in Europe have been buying here such supplies of steel as they formerly obtained in Germany or England. Italy, France and Japan are buying our pig iron. Russia has recently purchased 365,000 tons of steel rails and 165,000 tons of barbed wire. The market for war order shares has been affected by the opinions of those who think the end of the war has been brought nearer by the advances and successes of the British and the Russians. And there has been taken into account the approaching reduction of profits to be caused by our new taxes on munitions. But the great export movement has not yet been checked.

H. D. SHUTE, Treasurer.  
New York, June 21, 1916.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Saturday, July 15, 1916, to stockholders of record at the close of business on Friday, June 30, 1916.  
G. D. MILNE, Treasurer.

## Spending Money to Reduce Selling Prices

**I**F you were going to give a large entertainment, you wouldn't go out personally and deliver a hundred or so invitations verbally, would you? Of course, you would have them engraved and mailed to your guests.

You would in this way spend money to save money and time, which is also money.

Any man who has anything to sell has the problem of getting his invitation to buy before the largest possible number of prospective buyers.

The larger the number he interests, the more units he can make, and the lower his producing cost descends. So he takes the quickest method of reaching a large number of people—printing advertising.

If anyone tells you he is able to sell you his goods at a lower cost because he had no advertising expense, laugh at him.

Advertising reduces sales expense, because a single ad calls on thousands, while a salesman can call on one or two. Advertising reaches an individual at less than 1% of the cost of telling the story to

that person in any other way.

Advertising increases the keenness of competition so that prices are forced downward.

It would not be possible to produce a lead pencil for two cents, a tube of paste for ten cents, a collar for twelve and a half cents, were it not for the force of advertising in creating a wide demand, permitting quantity production and labor-saving machinery, thus cutting costs.

There are other reasons why you should insist on the advertised product.

The purpose of most advertising is to establish the reputation of a name. In order to live up to that reputation, definite standards of quality must be maintained in the product. It must live up to the claims of the advertisement. Faking or misrepresentation cannot stand the light of publicity.

Advertising is your protection and safeguard. It points out the lines of goods of whose quality you can be sure.

Write us for free booklet. This is written for buyers like yourself and every man or woman who buys any kind of commodities will find it profitable reading.

This article—one of a series to Advertise Advertising—was written for the Associated Advertising Clubs of the World (headquarters Indianapolis) by

## UP-TO-DATE EMPLOYMENT CONSERVATION

BY HERBERT N. FELL.

The best available statistics show that it costs the average employer *forty-five dollars* (\$45) to hire and educate each and every man he takes into his employ during the year, apparently a hitherto unreckoned-with expenditure in manufacturing, the extent of which may be determined by the number of men hired in any business.

Statistics further show that almost every concern employing labor has to hire the equivalent of its entire working force annually, so that if these estimates are correct a concern employing 3000 people is compelled to hire labor equivalent to a replacement of its entire working force annually, i. e., *3000 new hands during the year.*

At an "Educational Expense" of \$45 per man this would mean to such a firm an expenditure of \$135,000.

No remedy for this condition can be effective and lasting that does not afford to the employee adequate protection against his "time o' need" and assure the employer of steady workmen.

Any plan that will reduce this "instability of labor" will result in a saving to the employer directly, and to the industrial world at large.

Such an industrial waste presents a problem that can only be solved by some natural effort on the part of employee and employer that will protect the worker and guarantee the employer continued and efficient service.

The various attempts that have been made to improve the situation and bring about more stable labor conditions thru the medium of workingmen's compensation laws, old age pensions and welfare work, while good as far as they go, do not appear to have accomplished the desired result, in that they do not take into consideration the basic principle that the employee and employer have mutual interests that must be served and any plan that does not imply the mutual effort of both interested parties cannot help but fail of satisfactory results.

The following industrial pension system seems to offer the best solution of this difficulty.

Let the employees of a plant be organized into an association with a board of directors elected by the local secretaries of each department.

Let the employee contribute five per cent of his weekly wage and the employer contribute an amount equivalent to from one to nine per cent of such employee's wage, the exact percentage being based on the length of time the employee has been in the plant and increasing one per cent each five years that he continues with the firm as the following table indicates:

Years of service...	1-5	5-10	10-15	15-20	20-25	25-30	30-35	35-40
Percentage	1	2	3	4	5	6	7	8

The fund thus created is deposited with whatever one of the insurance companies the employee's organization may select and the employee at once

## This Job Needs a Trained Man

You've reached your limit. You can't expect to step into a job that pays a big salary until you've prepared yourself for it.

It's a serious question, this problem of getting ahead. There is only one solution—you must have *training*; you must be able to do work that others *can't* do, or your pay will stay on a level with theirs.

The business of the International Correspondence Schools is to help just such men as you to get good positions and hold them.

Right now over one hundred thousand ambitious men are preparing themselves through I. C. S. courses for the bigger jobs ahead. Last year nearly five thousand reported increased pay as the result of I. C. S. training. These men got their training in spare time and in their own homes. What the I. C. S. have done for others they can surely do for you. But you must make a start—the same start that they made—and the way has been made easy for you. Mark and mail this coupon.

obtains thru the medium of an organization directly under his own control and supported in part by his employer the maximum of protection against any "time of need."

So long as he remains with that one firm he is provided with (a) a savings scheme, (b) a loan privilege, (c) a benefit fund, (d) a life insurance policy, and (e) a pension guarantee for his old age, and these benefits increase in value with the length of his service.

As an example; an employee securing employment at twenty years of age; retiring at sixty-five and earning \$18 per week has paid in at the end of the fifth year \$234 and has had all thru that period life insurance valued at \$2217; can borrow at the end of the fifth year \$168 or if he leaves his place and wants to cash his contract it has a value of \$126.

At the end of the twentieth year he has paid in \$936, is carrying life insurance valued at \$2977; can make a loan of \$1268 or draw out \$1008 in cash, while if he stays until he is sixty-five, the retiring age, he has a life insurance policy for \$7341; can withdraw this entire amount if he so desires or a pension of \$677 will be paid him each year as long as he lives. In any event the pension will continue for ten years—even should he die after receiving the first year's pension his heirs will continue to receive the pension for the remaining nine years.

These assurances relieve the employees of all worry about the future and enable him to devote all his attention and enthusiasm to his work, while the knowledge that the employer is contributing equally with him to safeguard the future holds him to the one position.

These awards are pronounced actuarially sound on the authority of recognized experts.

The plan itself has been approved by a number of large employers of labor and, altho new, has already been adopted and is in operation in part with one of the largest and best known manufacturing drug concerns in the country.

### PEBBLES

Well, England is still postmistress of the seas, anyway.—*Brooklyn Daily Eagle*.

And now it has become the bear that walks like an antelope.—*Washington Post*.

"Think of having a food-dictatorship!" "You can get used to it. Our cook has been successfully operating one for years."—*Washington Star*.

What we can't understand is why that enormous excess of Austrian prisoners doesn't capture the entire Russian army.—*Washington Post*.

Wilson is highly indignant with foreign interference with our choosing of a President. Now he can appreciate how Huerta felt.—*Philadelphia North American*.

Won't it be hard luck for those Congressmen who supported the Hay Army Bill because of the National Guard vote if all the militiamen are down in Mexico on November 7?—*Philadelphia North American*.

"Now we will say that your mother bought three dozen of oranges, the dealer's price being thirty cents a dozen, how much money would the purchase cost her?"

"You can never tell," answered Harry, who was at the head of his class. "Ma's great at bargaining."—*Harper's Magazine*.

## Hide Bran In a Dainty

Clear bran is not inviting.

People soon quit it, however much they need it.

Bran is Nature's laxative. All folks need it often—most folks constantly. It should therefore be made delightful.

In Pettijohn's the bran is hidden in a luscious morning dainty. There is 25% bran, yet one hardly suspects it. You get here a whole-wheat food, an efficient bran food and a luxury. Please prove it.

# Pettijohn's

Rolled Wheat With Bran Flakes

At grocers—15c per package.

Also Pettijohn's Flour—75 per cent patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe. 25c per package. (1348)

The Quaker Oats Company

# THE SAGE OF POTATO HILL

ED. HOWE'S THOUGHTS ON MEN, WOMEN & THE WORLD

**I** DON'T understand causes and theories, but when the same thing has happened year in and year out in my own life, and I read that the same things have happened regularly in the lives of others in the past, I am able to understand results. All the facts of life are as apparent as that people require food three times a day. Quit bothering with theory; deal with results.

There is nothing more humiliating than to bark up the wrong tree a long time, and find nothing there.

The whale strains a lot of worthless sea water for a little food. Likewise that which passes in one ear does not leave much of value to your brain in passing out at the other ear.

Now that Our Boys are all drest up in their soldier clothes, there doesn't appear to be any place to go.

The Independent lately attempted to tell the difference between the Republican and Democratic parties. There isn't any difference; the platforms of both are the same old tickle stuff we have been familiar with for years.

There is no such thing possible as reform; the only thing we can do is a little better.

When a loafer sits around a store, and finds fault with everything, that isn't wisdom; that's meanness.

We have finally learned that Fiat money is nonsense; but probably we will never be able to learn that Fiat prosperity is equally absurd.

There are no victories in war; in the end the victories offset each other. Peace is declared only after each side has lost heavily in men and treasure; it is all a matter of waste. Patriotism is rarely a factor in war a month after the fighting begins. Some hot-headed fool declares war, and then all concerned must get out of it, after suffering as much damage as they can stand, and inflicting as much punishment as possible.

The trouble with piffle is that it gradually gains respectability. When new piffle appears, we laugh at it, but it gradually becomes more respectable, and finally finds its way into the hearts of the people. I once believed it would finally die out, but lately it has taken a fresh start.

People entertain low, mean, suspicions because so many of them turn out to be well-founded.

A good many years ago a man wrote a poem in which were mentioned all the

Good Ideas. A number of idle gentlemen are now bothering busy people to contribute money with which to build a monument to his memory. Why is it that poetry, for which few of us really care, is regarded so highly, while the ordinary affairs of life (of which all of us are guilty, and for which there is every excuse and apology), are regarded as sordid and mean? Have you heard of a movement to build a monument to the memory of James J. Hill, one of the most useful men in modern history?

The worse off Mexico becomes, the more frequently we hear of its great Natural Advantages; it is stated every day that Mexico is the richest country in the world. Which it isn't; the great richness of Mexico reminds me of the great smartness of a town drunkard when he is sober.

Poverty is a curse to the old, but a blessing to the young. If you are young and poor, don't forget you may beat your neighbor who is young and rich.

Be fair with your enemies, certainly; but be fair with your friends first.

Half our public effort seems to be to unbotch the botched.

American preparation for war with Mexico reminds me of the manner in which members of a women's club attack a proposition with which they lack experience, and have no business. For awhile I laughed at the absurdity of it all, but finally I became ashamed; and at length frightened.

Do It Now! Probably you will do it wrong; but, anyway, it will be over with.

In a certain city there was a doctor who made a specialty of scolding the people because they neglected simple health rules. He died yesterday, at the age of fifty.

Not all the women want to vote, or march in parades, or speak in conventions; but practically all of them want more liberty in dry goods stores.

My enemies have never injured me as much as I expected them to. Indeed, I am lately feeling rather kindly toward many of them, they let me alone so steadily.

In the history of men no attempt has been made to help each other comparable with the present attempt in Europe to injure each other.

If I want information about the church, I will not look to a bishop for it; nor will I look to a professional

unbeliever. Both exaggerate. Somewhere between these two may be found a man who will tell the truth.

Probably there never was a tiresome man who had not read a book or two on Psychology and Mental Therapeutics.

The average man thinks so much about his ambitions that he does not work at them as much as he should.

I don't like a man with little feet; a man should have big feet. And there are so many bald men now that a good head of hair is almost regarded as a weakness.

Every day the question is asked, "What should we do?" I don't know, but I know what we will do: Go on as we are. The wise ones will remedy their little follies; the foolish ones will continue to clamor for some big change, and get nothing.

Women talk about men in the cold, matter-of-fact way in which men discuss business.

A man looks mighty shiftless when sitting on his front porch at 11 o'clock of a week-day morning.

If you are a failure, your wife knows the Trusts didn't do it; she knows you have the same opportunity other men enjoy, and do not take advantage of it.

The world will always be ruled by the Teddy Roosevelts and Billy Sundays; all we can do is to force the leaders to be as moderate as possible.

Dr. Frank Crane says: "Commit something to memory every day from a book. Get in the habit of carrying a book about with you. There is some hope for the mind of a man who travels with a volume of Keats or Dante in his bag. Have a bed-book that waits you before you sleep." Yet how many millions of worthy people do none of these things! And how well they get along!

The impudence of a politician who is trying to fool me, and who says he is trying to save me, is always an annoyance.

The newspapers must always have something to cackle about, and excite those who are looking for eggs; and a devil or a saint answers the purpose equally well.

It will probably be admitted by every one that we should all become sensible in time; but at what age should we begin? Before we have sown our wild oats, or after?

## JUST A WORD

The next issue of The Independent, dated August 7, will have two important features. It will contain the first articles on "Both Sides of the Presidential Campaign," in which the reasons for voting the Republican ticket will be set forth by Jacob Gould Schurman, president of Cornell University, former minister to Greece and Montenegro, and president of the first Philippine Commission.

The Democratic ticket will be supported by Norman Hapgood, former editor of Harper's Weekly and an influential member of the Campaign Committee of President Wilson. In every other issue of The Independent, until Election Day, these articles, dealing with various phases of the campaign, will be published.

A review of the second year of the Great War, summarizing the important steps in its progress and illustrating the significant facts with maps and statistical tables, will also appear in the August 7 issue. The landmarks of the Eastern and Western campaigns will be listed and the total losses and gains announced.

## P E B B L E S

Between the college graduates and party platforms the country ought to find out what's the matter with it.—*Knorrville Sentinel*.

With all our horses sold to Europe, it is difficult to see how we can give Mexico a stable government.—*Syracuse Post-Standard*.

Europe may get together at any time, but there is no chance of peace in the United States before November 7.—*Cleveland Plain-Dealer*.

The Marketer Aren't you wasting a good deal of that steak in trimming it? The Butcher—No, ma'am; I weighed it first.—*Toledo Blade*.

"There are several great obstacles to peace," begins a writer upon a much-discussed topic. There are. One of them is war.—*Louisville Courier-Journal*.

Cynical chaps, these copyreaders. Thus a *Buffalo Courier* headline: "Lieutenant to Take Wife This Afternoon; Expects to See Actual Fighting."—*New York Tribune*.

The Prohibition party, by adding to its platform a plank advocating the free and unlimited coinage of frosted chocolate, could win us away from Our Candidate.—*New York Tribune*.

We look to that redoubtable enemy of nature fakery, Colonel Roosevelt, to come out of retirement and denounce the writer of the headline, "Bull Moose Sings Swan-Song."—*Chicago Daily News*.

Ten year old James takes his father as a delightful joke, and does not always mind him promptly. One day his mother listened at the top of the stairs. "James," said the father's voice, "do what I tell you!" The boy looked up and grinned. His mother smiled and awaited the outcome. "Jim," said the father, solemnly, "you do what I told you, or" he lowered his voice, "I'll sic your mother onto you!" And Mrs. Harrod had a fleeting glimpse of Jim junior flying to do what his father had ordered.—*Christian Register*.

The other day at the Front a hand grenade whizzed toward an Irishman's head. Pat dodged it with a low bow, and it went by, taking off the head of a man behind him.

"Faith," exclaimed Pat, "ye niver knew a man to lose anything by bein' perlite!"—*Tid-bits*.

A soldier whose head and face were heavily swathed in bandages, and who obviously had had a bad time, was being feelingly sympathized with by the solicitous lady.

"And were you wounded in the head, my poor fellow?"

"No, ma'am," Tommy replied. "I was wounded in the ankle, but the bandages slipt."—*Tid-bits*.

A local Territorial was placed on guard for the first time. About midnight he observed a shadowy form approaching from the distance. Fulfilling his duty, he immediately presents and shouts: "Halt! Who goes there?"

A somewhat husky voice replies: "Shut up. I ain't going, I'm coming back!"—*Tid-bits*.

## F O R B E L G I U M

The Commission for Relief in Belgium wants about half a dozen high grade volunteers for six months' service in Belgium and France. A speaking knowledge of French and German is necessary. The Commission is in much need of the right kind of men of the maturer type, as distinguished from the very young man recently graduated from college; men of character and poise. Communicate in writing with Caspar Whitney, Commission for Relief in Belgium, 120 Broadway, New York City.

## LETTING NATURE DO IT

Louisiana sugar planters are expecting important results from a remarkable expedition which leading entomologists of the United States are to conduct in Cuba. The ravages of the sugar cane moth borer constitute one of the most serious and difficult of the planters' problems, and prominent scientists have been lending their aid by searching for an effective insect "antidote" to the borer, having regard to the success with which "ladybirds" have been imported into California to keep down the cottony scale which attacks certain trees there. The search, it was reported at a recent gathering of planters, has turned in the direction of Cuba. Hawaii planters have secured, at considerable expense, a parasitical fly from New Zealand that is successfully controlling the destructive weevil borer, one plantation having quadrupled its yield since the owners' insect ally came to the rescue. The moth borer apparently has not many natural enemies, but Dr. W. H. Hunter, of the National Department of Agriculture, believes that an insect related to the horse fly and whose habitat is Cuba will solve the Louisiana planters' problem, if the fly can be properly acclimatized and introduced on a large scale. Already about three hundred have been liberated, with good results, and the expedition which is shortly going to Cuba hopes to eventually get several thousand of the anti-borer flies to work in America.

# Shall Railroad Wages be Determined by a Nation-wide *Strike* or an Impartial *Federal Inquiry*?

From the viewpoint of the public it is an intolerable situation when any group of men, whether employes or employers, whether large or small, have the power to decide that a great section of country \* \* \* shall undergo great loss of life, unspeakable suffering and loss of property beyond the power of description, through the stoppage of a necessary public service. This, however, is the situation which confronts us as a nation.—  
*From the Report of the Eastern Engineers' Arbitration Board (1912), signed by Charles R. Van Hise, Oscar Straus, Frederick N. Judson, Albert Shaze, Otto N. Eidlitz and Daniel Willard.*

*To prevent the disaster of a nation-wide railroad strike—*

*To insure an impartial settlement of the unprecedented demands for higher wages made by train employes throughout the United States—*

The railroads propose that the entire question be disposed of

- (a) *By reference to the Interstate Commerce Commission, or*
- (b) *By arbitration under the existing Federal Law.*

The Interstate Commerce Commission is proposed by the railroads as the public body to which this issue ought to be referred for these reasons:

No other body with such an intimate knowledge of railroad conditions has such an unquestioned position in the public confidence.

The rates the railroads may charge the public for transportation are now largely fixed by this Government board.

Out of every dollar received by the railroads from the public nearly one-half is paid directly to the employes as wages; and the money to pay increased wages can come from no other source than the rates paid by the public.

The Interstate Commerce Commission, with its control over rates, is in a position to make a complete investigation and render such decision as would protect the interests of the railroad employes, the owners of the railroads, and the public.

The offer by the railroads to submit this controversy for settlement to a National Arbitration Board or to the Interstate Commerce Commission has been refused by the employes' representatives.

The railroads feel that they have no right to grant a wage preferment of \$100,000,000 a year to these employes, now highly paid and constituting only one-fifth of all the employes, without a clear mandate from a public tribunal that shall determine the merits of the case after a review of all the facts.

*The single issue before the country is whether this controversy is to be settled by an impartial Government inquiry or by industrial warfare.*

## National Conference Committee of the Railways

## FOR A CONFERENCE OF NEUTRAL NATIONS

**T**WO years ago today the Great War began. What has been the result?

Hundreds of cities razed. Thousands of miles of territory ravaged. Millions of men killed and wounded. Billions of wealth blown up in cannon smoke. Whole populations massacred. Half the human race drawn into the vortex. And the result so far a draw.

Yet today, after this unparalleled destruction of men and treasure, there are still some twenty million men in arms recruited from the five continents of the world, who are engaged in drenching the world with human blood.

It matters little who started the war. It matters little whether militarism, monarchism or commercialism is most to blame. History will decide.

The cardinal fact never to be forgotten is this: The war was precipitated by a handful of captains, kings and cabinet officers. It was not a people's war.

But tho the kings still reign and the people still slay one another at their bidding, a light is beginning to dawn.

Both the Allies and the Central Powers now declare they are fighting only to establish the future peace of the world. This is true now, no matter how false it was at the start.

Said the Imperial German Chancellor before the Reichstag on April 5, 1916:

For us the meaning and goal of this war is a Germany so firmly knit, so strongly protected, that no one will ever again feel the temptation to annihilate us. . . . Such a Germany is what we wish to attain, not the destruction of other nations. . . . The peace which will end this war must be a lasting one and must not contain the seeds of new war, but rather of a new final and peaceful order of European things. . . . On December 9th I declared our readiness to discuss peace.

Said the Prime Minister of England on April 10, 1916:

Great Britain, and France also, entered the war not to strangle Germany, not to wipe her off the map of Europe, not to destroy or mutilate her national life, certainly not to interfere with the free exercise of her peaceful endeavors.

We are convinced that these views voice the present sentiment of the leaders of the official classes in all the belligerent nations. They voice as well the aspirations of the soldiers at the front and the civilian population at home. The following extract from a letter of a young Austrian soldier, written to his sister, to be opened only after his death, typifies this popular sentiment as effectively as anything we have seen:

We go to battle for freedom and justice—and our struggle is for lasting peace. . . . If this lasting peace is really attained, then I shall not have yielded up my life in vain. For when you read this letter I shall be resting under the sod. My spur to endurance was the thought of the world peace which is to follow this war. I left this world unwillingly. . . . Do not forget what I lived for—what in the end I died for—the building up of a better order which shall create happier men.—Arbeiter Zeitung, December 19, 1915.

The Central Powers have had enough. This is an open secret. The German Government has even authorized "the German National Committee for Securing an Honorable Peace" to begin this week its nation-wide propaganda.

The Allies, however, have just launched their great drive. They will not listen to peace talk for the immediate present. They evidently hold, with Rudyard Kipling, that tho "Germany is winning all the victories, the Allies are winning the war." This drive will in all likelihood continue well into the autumn. Then it will end either in success or failure.

If it ends in success, it will have a profound effect in Germany. It may well be that the German people will then rise up and compel their government to make further concessions in order to end the war.

If it ends in failure, then the Allies must needs pause and ponder.

In either case the psychological moment of the war is probably approaching. What can be done?

The belligerents can come to terms without outside intervention at any time they like. They can also invite mediation from the outside whenever they desire.

It requires no statesmanship for the United States to wait and watch for either of these alternatives to happen.

The problem before Woodrow Wilson is how so to bring things to pass that the United States, acting alone or in conjunction with the other neutral states, can induce the belligerents to hasten the day of peace.

Professor Fisher on another page presents a powerful argument in support of the view that a more durable peace will be assured if the war stops while it is still a draw than after victory has been achieved by either side.

What can our President do? He offered mediation at the beginning of the war. It was refused. He has not renewed the offer. Doubtless he has received intimations that it would be refused again. What then is left? There is one course still untried.

Let him now begin negotiations with a view to calling an official conference of the thirty-three neutral nations.

of the earth. The other neutrals are ready. Some of them are anxious. They are only waiting for the United States to take the initiative. The calling of such a conference could not possibly be construed as an unfriendly act by any of the belligerents. At the second Hague conference all the nations of the world solemnly subscribed to this declaration, which we quote in full:

The contracting powers deem it expedient and desirable that one or more powers, strangers to the dispute, should, on their own initiative and as far as circumstances may allow, offer their good offices or mediation to the states at variance.

Powers strangers to the dispute have the right to offer good offices or mediation even during the course of hostilities.

The exercise of this right can never be regarded by either of the parties in dispute as an unfriendly act.

What could a conference of neutral powers do? It could concern itself with three things: First, the rights and duties of neutrals; second, the basis of a durable peace; third, the best method of bringing the war to an end. A neutral conference would not think of making a public move or pronunciamiento without unanimity. A divided counsel with a minority report would be worse than no action at all. It would nullify all effort. The conference would wait until there was agreement. And it is inconceivable that thirty-three sovereign nations could unanimously agree on anything absurd. It would have to be sensible. And being sensible, and being the official expression of that half of the human race in whose veins the madness of war is not running, it would tend to crystallize, as nothing else could, the sentiment for peace, not only in the neutral nations, but in the belligerent nations as well. In time it would prevail. Suggestions would be followed by acceptances, mediation would naturally be the next step, and that would be the beginning of the end.

President Wilson has waited long and patiently. The time has now come for him to act. He may fail, but let him take the chance. What is failure compared with the possibility of saving millions of men, women and children from misery, suffering and death?

### THE DEATH OF AN OPTIMIST

THE death of Elie Metchnikoff, head of the Pasteur Institute of Paris, at the not unusual age of seventy-two, will doubtless be regarded by the world at large as a disproof of his theories of dietetics. Yet such an inference would be unfair to the modest man of science. It is true he believed that the normal length of human life was nearer a hundred and fifty years than its ordinary span, and he tried to find out how to make it so. But he never claimed to have discovered "the elixir of life," and the title given by the English translators to his most popular work, "The Prolongation of Life," misrepresents the main purpose of these "Essays in Optimism." The wags of the press called him "the modern Ponce de Leon searching for the Fountain of Immortal Youth and finding it in the Milky Whey," but he himself never claimed that his Bulgarian bacillus would cure all the ills the flesh is heir to. As a matter of fact, he fell a victim not to the noxious intestinal flora that he most dreaded, but to heart disease, doubtless due to the activity of the phagocytes which he made known to science, those wandering cells which protect the body from invading microbes, but which in old age gnaw the lime from the bones and deposit it in the arteries.

Metchnikoff came of a short-lived family. All of his brothers died young; one of them was the "Ivan Ilyitch" of Tolstoy's terrible picture of the fear of death. It was probably the war that put an end to Metchnikoff's life, for he has been indefatigable in hospital and field. But he died as he wished to die, in the height of activity and in the plenitude of his powers. The lactic acid beverages by which he is most known to the public may not fulfil the extravagant claims of their makers or even the more moderate expectations of Metchnikoff himself, but they have added a pleasant and healthful drink to the repertory of the soda fountain.

### AMERICAN LIKE MINDEDNESS

THE good Archdeacon Stuck of Alaska, who preached a baccalaureate sermon on the spiritual emptiness of statistical curves and the ethical frigidity of sociological investigation, seems not to have irritated anybody and the fact is significant. His outbreak provoked nothing more dynamic than a mild amusement, and better evidence than this could not be asked—that an intelligent public has at last gotten beyond its long time faith in uncritical ways of dealing with social problems, and has begun to see the humaneness as well as the economy of applying to social tasks the scientific and efficiency methods which long since ousted magic and emotion from the realm of industry.

We may, therefore, anticipate a reasonable degree of interest in the possibilities of relatively exact study of collective behavior which have been opened by referendum legislation in various American states. For the first time we have numerical records of extensive voting on things as distinguished from voting on candidates. We know, for example, not only how many voters in Oregon record themselves as Republicans or Democrats, but also how many are in favor of woman suffrage, how many would have railroads built by the state, how many would abolish capital punishment, how many would abolish the state senate, and so on. With these new and highly significant statistics at command, it becomes possible to know the make-up and functioning of the social mind of an entire commonwealth to a degree of precision hitherto possible of attainment only in studies of local communities in New England where the town meeting survives.

In the June number of the *Political Science Quarterly* Professor William F. Ogborn and Mr. Delvin Peterson of Reed College have presented an important study of one phase of this statistically recorded social mind. They have asked the question, to what extent do different groups of voters in Oregon think and decide alike on questions of public policy? For example, do city voters and rural voters think alike on current issues, or do they, as a large part of the newspaper press assumes, constitute different types of mind? Again, is there, as the Socialists proclaim, a class struggle? Does the laboring class vote on most matters of some importance otherwise than the upper or capitalist class? Does the middle class vote as the upper class does, or as the laboring class does, or on a tangent of its own?

The statistical methods employed by Mr. Ogborn and Mr. Peterson are simple and quite comprehensible by any reader who knows enough arithmetic to understand ordinary election returns or a population table in the Census. Election districts and the returns from them

were classed according to density of population as urban or rural. Election precincts inhabited by a great preponderance of persons owning property and living in homes valued at from \$5,000 to \$50,000 were grouped as upper class. Precincts inhabited chiefly by a population paying an average rental of \$10 to \$12 a month were grouped as laboring class. The investigators then ascertained how many voters in each 100 in each of these precincts voted for each of the 103 measures upon which the people of Oregon have recorded their preferences in the last four elections.

The percentages so obtained are tabulated, and the table is, to say the least of it, a remarkable map drawn to scale of the social mind of a commonwealth. For example, the first question in the list is woman suffrage, and it appears that the rural population voted 46 in every 100 voters in favor, the upper class 21 in 100 in favor, the middle class 46, and the laboring class 29.

The general result which stands forth from the investigation is one that must strengthen our confidence in the stability and the coöperative adequacy of a democratic people. The average differences in thought of the social classes and between city and rural populations, as evidenced by their votes on 103 measures, was as follows: upper class and laboring class, 14; middle class and laboring class, 12; upper class and middle class, 6; upper class and rural class, 11; laboring class and rural class, 11; city class and rural class, 8. These figures mean that on the average 86 laboring class voters in every 100 vote as 86 in 100 upper class voters do; that 88 laboring class voters in every 100 vote as 88 in 100 middle class voters do; that 94 middle class voters in every 100 vote as 94 in 100 upper class voters do, and so on. This is a degree of like mindedness that was not anticipated, and that many readers of revolutionary instincts will find astonishing. Probably, if we could have similar statistics for the Eastern industrial commonwealths, especially New York, Connecticut and Massachusetts, greater differences would appear. Unhappily the data do not exist, but, in view of this study of the mind of Oregon, we may reasonably assume that there is more social solidarity of a practical kind in America than has hitherto been assumed.

### DEFINING A DEFINITION

THE defining of a definition is a delicate and may be a very dangerous task. We found that out in our Civil War, when people tried to define the meaning of States Rights. Our present concern is with an attempt to define Christianity, and then to define its definition.

When the present terrible war has come to an end, and between German and Englishman the song of love has replaced the song of hate, there is to be held, on the invitation of the Protestant Episcopal Church of the United States, a World Conference on Christian Unity; and the basic call for it is "Our Common Faith in Jesus Christ as Our God and Savior." This invitation is supposed to include all true Christians, Protestant and Catholic, Greek, Armenian and Copt; and a distinguished Lutheran scholar has been asked by the executive committee to define and expound this "basic call."

But by what authority has this definition itself been formulated, "Our Common Faith in Jesus Christ as Our God and Savior"? There are other definitions that might have been made, such as Our Common Discipleship of

Jesus Christ. The definition actually given appears to have to do with intellectual credal belief and not with character, and so it is understood by Dr. Remensnyder in what we may regard as the official exposition in the *Constructive Quarterly*. The first thing to be observed in this definition is that it is intended to shut out Arian Unitarians. It is thus expounded. "Jesus Christ was thus true God as well as true man" and we are under obligation "also to render to Him that *worship* which the New Testament, Josephus (!) and the primitive writers universally accord Him." "The primary article of our Christian faith is a belief in the *Divinity of Jesus Christ*, specifically in His divine-human personality—that He was God manifested in the flesh." We observe here that there is in the Bible no such passage as here appears to be quoted. The passage reads, "*He who* was manifested in the flesh," as in the revised version. Far be it from us to deny the divinity of our Lord, but it is not to be deduced from I Timothy 3:16. Nor is it claimed for Him anywhere in the Synoptic Gospels, altho the doctrine may or may not be found in what is said of the Word in the first verse of the Fourth Gospel. We fear that the insistence upon the full Deity and worship of Jesus Christ as God would make a schism in Lutheran and Episcopalian and other Protestant churches.

We wish the conference committee would send out that invitation simply addrest to those who wish to be known as disciples of Jesus Christ, thus making the invitation inclusive and not exclusive. Let us not fence the Law or the Gospel.

### THE BANE AND THE ANTIDOTE

THE Bane and the Antidote do not often come closer together than they appear in an order given by Cardinal Farley to the priests of the Archdiocese of New York requiring them to take up a collection for the families suffering from the Irish "Rebellion." He says: "The punishment which England meted out so mercilessly by execution, imprisonment, or deportation to hundreds if not thousands of fathers, husbands and sons, has fallen with extreme severity and dire misery on countless women and children, many of them aged, of unhappy Erin." And he concludes by saying, "It is hardly necessary to suggest that any reference on this occasion to the Irish question from a political viewpoint would be unseemly and unwise." One would think that after describing the English Government as "merciless" the Cardinal need not have been concerned over what his priests might say.

### AN AMERICAN ATROCITY

WACO is the county seat of McLennan County, Texas. It is situated half way between Dallas and Austin in a fertile agricultural region. It is the junction point of seven railroads. It enjoys nearly two hundred manufacturing establishments representing some seventy industries. It is the seat of Baylor University and four other higher educational institutions. It has sixty-three churches. It has doubled its population during the past twenty years. At the last census its inhabitants were reckoned at 26,425, of which 6067 were colored. The population is typically American. There are not over 1000 foreigners in the city. Waco in fine is a thriving, growing, intensely American town.

On a farm about six miles from Waco a negro lad of

seventeen on May 8 committed "the usual crime" and murdered his victim. He was arrested and taken to the Waco jail. The next day a mob in thirty automobiles visited the jail. They could not find the boy, for he had been taken to a neighboring county seat, where he confessed his crime. Another mob went to this county seat, but he was again removed to Dallas. Finally the mob pledged themselves not to lynch him, if the authorities acted promptly, and if the boy would waive his legal rights. This was agreed to by the authorities and by the boy. The Grand Jury thereupon indicted him and his trial was set for the 15th; one week after the crime.

At the trial the boy was convicted of murder and sentenced to death. Then the mob which filled the courtroom to suffocation made a rush, seized the culprit, and took him to the center of the town, where, in full view of 10,000 spectators, including the mayor, the chief of police and hundreds of women and children, he was indescribably tortured and finally burned to death. The horrible details of the affair may be found in the special supplement to the July issue of *The Crisis*, the ablest organ of the negro race.

If *The Crisis* account is correct, and we have no reason to doubt its veracity, the Waco lynching is about the foulest blot on American civilization that has been perpetrated in this generation, both because of the incredibly hideous tortures inflicted on the criminal and because the law in its normal course would have expiated the crime with the sentence of death, and there could be no conceivable charge that justice had miscarried.

Waco is indelibly disgraced. Texas is indelibly disgraced. The United States is indelibly disgraced. Is there not enough courage in Waco or Texas—unfortunately nothing can be done outside the state—to see to it that punishment is meted out to those who participated in the crime? The names of the ringleaders are well known.

Nothing in the reports of the atrocities in Belgium, East Prussia, Serbia or Armenia shows a more hideous state of public opinion than that manifested by the people of Waco in participating in such a degrading display of wanton savagery.

#### ANTIPODAL OPINIONS

A FEW years ago the Australians were dreading a Japanese invasion and were encouraging German immigration and commerce. Now they are fighting with the Japanese against the Germans and Premier Hughes has visited England to conduct a platform campaign in favor of a closer federation of the British Empire and a combination with the Allies to exclude German products in the future.

In antebellum days the "Young Australia" party was urging Australia to pursue a policy dictated by her own interests and to keep as free as possible from England's entangling alliances. Here is a quotation from a Young Australia pronunciamento issued only a short time before the war:

The policy of England in supporting a Mongol nation stinks in the nostrils of Australia. The Japanese alliance is an humiliating alliance and the party that consummated such a bargain must stand for many years suspect in the eyes of the Australian people.

To be almost brutally candid, imperial federation with Great Britain as the predominant partner may look attractive enough to Canada; but in Australia the worth-while-ness of federating with a country like England begins to

be a debatable question. We want as many millions of German immigrants as the Kaiser's empire can spare. England, on the other hand, instead of coming years ago to terms with Germany, first assisted Japan to break the power of Russia, thus permitting Germany to become the dominant factor in Europe, and now muddles along in a half-hearted, spiritless manner with preparations for war with Germany.

But times have changed. The young Australians have been fighting at Gallipoli to promote the expansion of the Russian Empire and on the Pacific to promote the expansion of the Japanese Empire. It is now Australia which thru the mouth of her Premier is urging imperial federation, while Canada, tho loyally supporting the empire, is reluctant to have its bonds drawn any tighter.

#### THRU AND THROUGH

THE National Editorial Association now falls in line. At its annual convention held recently in this city, it officially adopted the simplified spelling of the following twelve words:

*Thru, thruout, thoro, thoroely, thorofare, tho, altho, program, prolog, catalog, decalog, pedagog.*

Even so good and ardent a simplifier as the late Professor Lounsbury of Yale once confessed that he couldn't help wincing at *thru*. But, he was quick to add: "I know of only one worse way to spell it, and that is *through*."

#### THE WAR AND THE WOLF

EVEN in times of peace it is true that he who would predict the political events of the immediate future would do well to study the crop reports. At the present critical hour the news which comes from Amsterdam that the wheat harvests of the central powers will show a decline of thirty-five per cent from last year, may well be more significant than all the fighting around Verdun or along the Somme. Germany, Austria-Hungary and Turkey have felt the food blockade severely during the past year and they have looked forward to the present harvest to pull them thru another twelvemonth of war. Other relief they have none; for the countries which they have conquered and devastated, Belgium, Poland and Serbia, will, it is estimated, harvest only a fourth of their normal crop; and "submersibles" are not yet built on a scale adapted to transporting wheat. Unless the central powers can conquer new granaries during the summer or make up for their lack of wheat by a plentiful supply of other foodstuffs, the Kaiser may be forced to surrender his sword to General Wolf, that grim warrior who has taken so many otherwise impregnable fortresses in the past.

The nations of the Entente, with all the seas of the world open to their ships, will be in no such peril. Yet it is probable that they too will have to pay unaccustomed prices for bread. The wheat harvest in the United States, it is estimated, will show a decrease this year of about a quarter of a billion bushels from that of 1915, and similar conditions are reported from most of the other wheat producing regions of the world. It is not impossible that this double stringency, on both sides of the great blockade, may make the German people eager to offer acceptable terms of peace, and put the people of the Entente powers in a more receptive mood. It seems almost as tho Dame Nature had resolved to put a stop to the quarreling of her children and so denied them food.

#### THOMAS MOTT OSBORNE—DOCTOR OF HUMANITY

For Sing prisoners welcomed "Tom Reuben's" return as warden with elaborate ceremonies and conferred upon him their degree of "Doctor of Humanity." One of the first innovations which Warden Osborne plans to make at Sing Sing is the establishment of a psychopathic clinic, supported by the Rockefeller Foundation, which will thoroughly examine the mentality of incoming prisoners and advise suitable treatment for each.

# THE STORY OF THE WEEK

## Brusiloff Victorious

The Russian armies under General Brusiloff continue to push back the Austrian and German forces opposing him on the southern half of the eastern front. His left wing has swept over the Austrian crownland of Bukovina and reached the Carpathians beyond. The entrances to four of the mountain passes are already in his hands and it is said that the Cossacks have gone thru the barrier at one point and raided the Hungarian plains beyond. But the reports that the Russians have already undertaken the invasion of Hungary in force is unbelievable. Even when they were in possession of almost all Galicia and both sides of the Carpathians they did not seriously attempt the conquest of Hungary. The defiles leading from Bukovina into Hungary are so narrow and high that a small force could defend them, and if the Russians should undertake the passage of the Carpathians now, they would be liable to attack on their right from General Pflanzer's army, which withdrew from Bukovina after the capture of its capital, Czernovitz, and retired westward into Galicia.

As we should expect then, General Brusiloff is directing his main efforts not toward the invasion of Hungary, but toward the capture of Lemberg, the capital of Galicia. The map shows that the Russian line makes a strong salient between Lemberg and Kovel, an important railroad center a hundred miles to the north. The direct advance upon Kovel by General Lesch was checked at the Stokhold River. But General Sakharoff, who commands the army on the south side of the salient, has achieved a notable victory on July 16. The Germans under General von Linsingen were established in a strong position at the point where the Lipa River flows into the Styr near the Galician frontier. In spite of the heavy fire of the German artillery the Russians forced their way across both rivers and General von Linsingen was forced to retire to the west and south. The Russians secured several thousand prisoners and large stores of shells, grenades and small arms ammunition.

## Widening the Wedge

The joint Anglo-French offensive that began the first of July thrust forward a salient on a front of about twenty miles and about four miles deep at the points of farthest advance. Instead of trying to force this line forward in the center the Allies, during the past week, have devoted their efforts to bringing forward the two wings and to clearing the Germans out of the angles between the old line and the new. The French on the extreme right advanced another section of their former line between Estrées and Vermandovillers, a two mile stretch,

and pushed the Germans back about half a mile.

On the British side there are three small bunches of timber land, the Trones, Delville and Foureaux woods, which the Germans held with great obstinacy. Once the British thought they had them, but a strong counter-offensive put them again in the hands of the Germans, and the British were obliged to force their way thru the woods once more by hand to hand fighting. In regaining Foureaux woods, the British have obtained a hold on the third German line and gained a ridge that commands the lower and more open country looking toward Bapaume, the British objective. A gallant ad-

vance of the Anzac troops brought them to the village of Pozières.

In their first advance the British enveloped the village of Ovillers, but the Third Prussian Guard stationed there held out for two weeks although cut off from reinforcements and supplies. Finally without food or water and with 98 per cent of their number killed, the remnant surrendered. A cable to the *New York Times* describes the action as follows:

After six hours of concentrated bombardment by hundreds of heavy guns, the attack began at dawn from three sides. The English plunged, shouting, into the ruins, chasing the enemy along the passages. In one underground retreat they captured twenty-five Germans, survivors of a full battalion, who had not tasted food for sixty hours. In another stronghold the survivors were nearly dead from thirst.

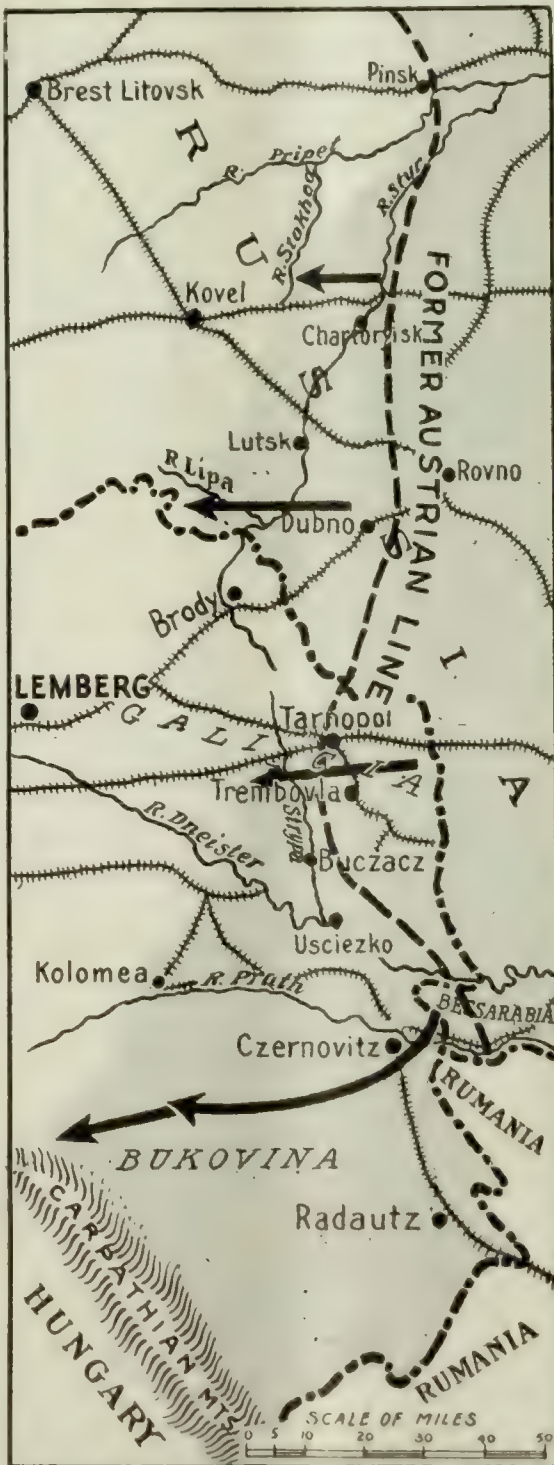

Only 126 living prisoners out of nearly 6000 men remained. As the tattered, exhausted prisoners marched to the rear an order rang out, and swiftly formed khaki lines presented arms in homage to the defenders' courage.

## The British Blacklist

The British Government has published in the *Official Gazette* a list of eighty-two American firms and individuals with whom British subjects are not allowed to trade. They are either Germans or corporations suspected of German proclivities. Some have supplied goods to blockade runners or German commerce raiders. Others have subscribed to German loans or have assisted the pro-German propaganda in the United States, or otherwise shown themselves inimical toward England. Most of the firms are in New York, but Philadelphia, San Francisco, Galveston and Seattle are represented in the list.

This measure, which has now been extended to the United States, has already been found effective in the Far East and South America. France has adopted a still more sweeping restriction and prohibits trade with all persons of every nationality in any part of the world. The comptroller of the trade department of the British Foreign Office explains that the policy is "purely a piece of domestic legislation which only interferes with trade, even in the case of the specified concerns, by prohibiting persons domiciled in the United Kingdom from dealing with these concerns."

The boycott, however, has a far-reaching influence, for these houses will doubtless not be able to ship their goods by British vessels and since most of the carrying trade of the world is done by British shipping their trade will be much restricted. Further than that, neutral ships will refuse to carry such "tainted goods," even to neutral ports in Europe, for their vessels would be forced to go to English ports and unload them there. American ships going to any part of the world with the wares of the boycotted firms on board

BRUSILOFF'S DRIVE

The Russians have achieved a decided victory in dislodging the Germans from the strong position they occupied at the junction of the Styr and Lipa rivers. This appears to open the way to Lemberg. In the south the Russians have reached the gates of the Carpathians, leading into Hungary. In the north they have reached the Stokhold River opposite Kovel. The shaded area shows the territory now held by the Russians. The arrows indicate their chief points of attack.

Drawn for The Independent by W. C. Morris

CANDIDATE HUGHES WILL MAKE HIS CAMPAIGN AS ROOSEVELTIAN AS POSSIBLE

would not be permitted to coal at any British port and since American coaling stations are rare our vessels have been compelled to decline goods to which the British Government objects. For instance, the United Fruit Company, an American corporation which, before the war, used to sail its ships under the British flag but has now brought them under American register, has been obliged to refuse all shipments suspected of being German because otherwise it would not be allowed to coal at Jamaica.

The blacklisted firms have organized for neutral protection and will appeal to Washington but it is doubtful what our government can do to help them.

#### American Relief Shut Out

President Wilson has taken the unusual course of addressing personal letters to the King of England, the Czar of Russia, the President of France and the Emperors of Germany and Austria-Hungary urging that the United States be allowed to send relief to the people of Poland. This country has been swept over more than once by the Russian and German armies and millions of non-combatants have been left in dire distress for lack of food and medical aid. The Poles and Jews in the United States have collected large sums of money for the relief of their kinsmen and friends in Poland, but are unable to send it on account of the British blockade. All United States mail to Europe, even when sent by neutral ships to neutral ports, is opened in England and any checks and cash for per-

sons within German or Austrian territory are taken out. The protests of our government against this violation of neutral mails by Great Britain have been ineffectual.

The Rockefeller Foundation has appropriated a million dollars for Polish relief and Germany has offered to provide the ships to carry the food to the starving population. The German ships interned in New York might be used for that purpose, as they could be sent direct to the Baltic port of Danzig under the American flag. The Rockefeller Foundation has expended more than two

million dollars in Belgium and northern France during the last six months under the American Commission for Belgian Relief and there have been no complaints from either side of the way the distribution was effected. The same commission is anxious to extend its relief work to Poland, where the distress is much greater, for the Russians, in retreating last year laid waste the farms and villages in order to impede the advance of the Germans. Besides the Belgians were at the start among the richest people in the world and the Poles were among the poorest. All thru the winter negotiations were carried on to get permission to do for Poland what has been done for Belgium, but the British Government refused to make any exception to its blockade rules unless Germany should agree not to use any food grown in Poland for its troops. The German Government replied that on account of the difficulty of transportation it would be impossible to discontinue altogether the use of local products.

Even Red Cross supplies are barred out from Germany by the British blockade, altho the rights of the Red Cross are fully recognized by international law. Ex-President Taft, as chairman of the Central Committee of the American Red Cross, sent a protest against the ruling of the British Government to Secretary Lansing which was forwarded to London. Mr. Taft promised that the distribution of medical and hospital supplies should be carried on under the supervision of American

#### THE GREAT WAR

July 17—Russians defeat Germans on Lipa River. British take Ovillers on Somme front.

July 18—British Government blacklists eighty-two American firms. Russians take Baiburt, Armenia.

July 19—Cossacks cross Carpathians into Hungary. French advance south of Somme, taking 2900 prisoners.

July 20—Russians regain Kerman-shah, Persia. Turks advance to within thirty miles of Suez.

July 21—Germans in Italy ordered interned and their property seized. Linsingen defeated by Russians on Galician frontier.

July 22—Parliament told that England is expending \$30,000,000 a day on war. Sazonoff, Russian Foreign Minister, resigns.

July 23—Kuropatkin breaks Hindenburg's lines on Drina River. Anzac troops reach village of Pozieres.

agents. But Sir Edward Grey in his reply refuses to make any concessions and expresses the opinion that the Central Powers have no lack of supplies. The American Red Cross has a large number of boxes of medicines and hospital utensils intended for Germany and Austria stacked up on its docks in New York City but cannot forward them, so it has been forced to decline all offers of relief for the sick and wounded in the Central Powers.

#### Prohibitionists Nominate Hanly

The national convention of the Prohibition party, which was in session at St. Paul from the nineteenth to the twenty-first of July, has nominated J. Frank Hanly, former Governor of Indiana, for President, and Dr. Ira D. Landrith, of Tennessee, for Vice-President. Hanly received 440 votes, against 181 cast for William Sulzer, ex-Governor of New York, his nearest competitor. Mr. Sulzer acquiesced in the result and declared that whatever the convention did would be satisfactory to him as a Prohibitionist. The platform adopted by the convention this year is of unusual interest because it emphasizes many issues be-

sides the paramount issue of national prohibition of the liquor traffic. The party is committed to an uncompromising opposition to the "wasteful military program of the Democratic and Republican parties"; to maintain an adequate defensive armament, but only until international coöperation can be secured "to dismantle navies and disband armies"; to avoid military intervention in Mexico; to support equal suffrage and the initiative, referendum and recall; to public ownership of many public utilities; and to a broad program of social justice. The intention of the party is to add to its normal strength important contingents of pacifists and maverick Progressives.

#### Cloakmakers' Strike Settled

The twelve weeks' strike of sixty thousand cloakmakers came to an end on July 22. The conference committees of the trades union and the manufacturers arranged a compromise which was more satisfactory to both parties than a continuation of the strike, and it is probable that the referendum to the workers which still remains to be held will probably con-

firm the action of their representatives. The strike began on April 28 in the lockout by the Manufacturers' Protective Association of 25,000 workers, which was promptly followed by the action of the cloakmakers' union in withdrawing from other shops 35,000 unionists. The manufacturers refused from the first to permit any arbitration or mediation by third parties and succeeded in ending the strike by direct negotiation with the strikers. A "peace conference," under the presidency of Samuel Gompers, head of the American Federation of Labor, had previously been arranged, but it came to an end on July 18 without result.

The workers claim a victory in the strike because the manufacturers have agreed to continue the existing system of preference for unionists in the shops, and have conceded a six per cent advance in wages, a standard scale of pay for piecework and a reduction of the fifty-hour week by one hour. On the other hand, the workers fail to gain the forty-eight-hour week which they demanded, and the manufacturers are permitted to discharge any employee whom they regard as inefficient or superfluous. In case the union thinks such discharge unjust it has no remedy but the strike, for the manufacturers have been wholly successful in their opposition to the existence of a permanent tribunal or board of conciliation claiming the right to review the actions of any employer.

#### President Urges Child Labor Bill

The proposed federal enactment restricting the exploitation of child labor in the states where it is still permitted has encountered the strongest opposition from the Democratic senators of several southern states. It was believed that their objections would force the postponement of the measure till another session of Congress; the more so since the Senate has already been burdened with an unusually heavy legislative program, including the important army and navy reorganization bills. But the situation has been completely altered by the action of President Wilson in calling into consultation several of the Democratic leaders in the Senate to urge immediate action. Senator Smith of South Carolina, the chief opponent of the child labor bill, has threatened to hold up the legislative program of the session by a filibuster if President Wilson should persist in his determination.

The incident will probably have an important effect upon the presidential campaign, because the Progressives and the labor unions are unanimously in favor of federal restriction of child labor, and any failure on the part of the Democratic administration to deal with the question would be remembered against it in November. President Wilson is reported to have postponed the date of the notification of his re-nomination by the Democratic party until he has received assurances that the child labor bill and the federal workingmen's compensation bill are to be pushed thru to enactment. It is

J. Frank Hanly, former Governor of Indiana and editor of the *National Enquirer*, will make his presidential campaign on a platform that includes opposition to militarism and intervention in Mexico, and support of equal suffrage, as well as prohibition.

probable that a majority both of the Republican and of the Democratic senators will support the federal child labor bill, and the only difficulty will be to bring the question to a vote in the brief period remaining before the end of the session.

**Senate Votes** The enlarged naval building program recommended by the naval committee passed the Senate on July 18 by a viva voce vote. The entire naval appropriation bill, requiring an expenditure of \$315,826,843, came up for a final vote on July 21 and was approved by the decisive majority of 71 to 8. The real test came, however, on the amendment previously offered by Senator Thomas to substitute the building program authorized by the House of Representatives for that proposed in the Senate, which was beaten by 65 votes to 12. Senators Cummins, Kenyon, Shaforth and Townsend also proposed various amendments designed to reduce somewhat the number of capital ships projected in the bill. None of these was successful.

The naval appropriation bill now approved by the Senate must be accepted in the House of Representatives before it will be ready for the signature of President Wilson. The bill as it originally passed the House called for over forty-five million dollars less than it does at present. The chief increase has been in the provision for the construction of capital ships. The bill now authorizes the building of ten battle-ships within the next three years, four of them to be begun this year. The complete three years' program provides for 157 vessels of all classes; an eleven million dollar armor plate plant; heavy appropriations for ammunition, aviation, laboratory research and naval yards; an enlisted personnel of 74,500 in the navy and 14,500 in the Marine Corps.

**A Pacifist** The preparedness parade in San Francisco on Saturday, July 22, had a terrible sequel in the explosion of an infernal machine in the crowd which caused the death of six persons and the injury of at least twenty-five others. The bomb escaped attention because it was hidden in an ordinary suitcase and exploded by clockwork. It went off just as the First California Regiment of Spanish-American war veterans was passing and it injured several of the paraders, but the procession continued as if nothing had occurred. Most of the damage was done among the spectators. The police would perhaps have been at a loss to guess the motive for this wanton outrage except for the fact that on the previous day an anonymous communication was sent to the various newspaper offices of the city threatening "a little direct action" to demonstrate that "militarism cannot be forced on us and our children without a violent protest." A sailor named Frank Josephson was arrested in connection with the incident on the ground that he had

Paul Thompson

#### A NEW AMBASSADOR TO TURKEY

As soon as the Senate approves his nomination Abram I. Elkus will sail for Turkey to take up the work which former Ambassador Henry Morgenthau left in order to support the Democratic presidential campaign here. As a lawyer in New York City Mr. Elkus has been prominent in the furtherance of commercial and industrial welfare

made an anarchistic speech near the scene of the explosion. He denies having any previous knowledge of the plot. Apart from the great tragedy which overshadowed it, the parade would have been an impressive demonstration. The official count of the parade indicated that more than fifty thousand persons were in line.

#### Rebel Activity in Mexico

The Carranza Government is experiencing increasing difficulty in maintaining its sovereignty thruout northern Mexico. There is little doubt in any quarter that Villa is leading the present revolt in person, and the magic of his name and the destitution of the country have enabled him to gather a formidable force. Villista agents quote their leader as boasting that within thirty days he would be dictator of all Mexico. The Villista bands are reported in many parts of Chihuahua and Durango, and the accounts of their movements are often confused and conflicting. The heaviest fighting has taken place to the south of Parral, where there have been numerous skirmishes and at least one important battle. A large force of bandits met defeat on July 15 at Hacienda el Florido, on the Durango border, and at least two hundred of them were killed in the battle. The Carranzistas pursued the scattered remnant for more than fifty miles before losing them in the desert. Smaller bands of rebels are reported northeast of Chihuahua City, and General Trevino has interposed a curtain of loyal troops to prevent them from reaching

the American boundary. He advised the American authorities to be on the watch in case the bandits should evade the vigilance of the Mexican soldiers. Some two hundred Villistas are said to be operating within fifty miles of the Rio Grande. A much larger force, estimated at 1800 men, has for some time past been threatening the important city of Torreon.

#### Negotiating with Carranza

The Mexican Government has made public the text of the note which was address to Secretary Lansing on July 11 regarding the appointment of a joint commission to arrange a settlement of the issues now under discussion between Mexico and the United States. The text of the note is given as follows:

Mr. Secretary: I have had the honor to refer the note of your Excellency, dated the 7th inst., which was transmitted to our Confidential Agent, Eliseo Arredondo, and upon doing so I wish to mention that I have received instructions from the First Chief in charge of the executive power of the union, suggesting that you convey to his Excellency, President Wilson, the idea of naming three commissioners to represent each of our governments to meet in some place of mutual designation, hold conferences and resolve at once the point regarding the definite withdrawal of the American forces now in Mexico, draft a protocol of agreement regarding the reciprocal crossing of forces and investigate the origin of the incursions taking place up to date, so as to be able to ascertain responsibility and arrange definitely the pending difficulties or those that may arise between the two countries in the future, all this to be subject to the approval of both governments.

C. AGUIAR

It is thought that if a conference is

## THE OPEN SEASON FOR SUBMARINES

arranged it will probably be held at Niagara Falls early in August. But the American Government has not as yet given its full approval to the Mexican proposal because it limits the activities of the conference to a discussion of the withdrawal of the American forces, the safeguarding of the border, and the responsibility for the recent raids. President Wilson is understood to desire to amend the Mexican suggestions by enlarging the scope of the conference so as to permit the consideration of the general problem of the pacification and rehabilitation of the war-torn nation. It is not known what attitude the Carranza Government will take toward the counter proposals of the American Government. If a satisfac-

tory agreement is reached between the two governments, Henry P. Fletcher, our Ambassador-designate to Mexico, will go to his post in Mexico City and normal diplomatic relations will be resumed.

There are several indications that the sentiment in this country against further intervention in Mexico is increasing. The most important of these is the resolution of the Merchants' Association for the immediate recall of the National Guard troops now on the border, the repeal of the law federalizing the National Guard, an increase of the regular army and provision for universal military training. It is evident from the terms of the resolution that the association is strongly for

Hesse in New York World

## THE BLOOMIN' GAME LAW

preparedness, but finds the present withdrawal of so many employees from civil life an increasing burden. Many of the National Guard have complained that they were mobilized to no purpose and express the hope that they will be recalled before their business activities suffer further loss thru their absence. Senator La Follette offered an amendment to the naval bill providing that the American navy should never be employed to collect debts from Latin-American countries. He defended his position in a strong pacifist speech and received the support of several of the radicals in the Senate, but the amendment was finally voted down by a majority of 44 votes to 8.

LETTERS FROM HOME ARE THE CHIEF INTEREST OF MILITIAMEN IN MEXICO NOW

# CALL A NEUTRAL CONFERENCE NOW

BY IRVING FISHER

PROFESSOR OF POLITICAL ECONOMY AT YALE UNIVERSITY

THE conviction seems to be as general as it is natural that the world war must be fought to a finish; that, out of so terrible a conflict, some issue must be settled and some party must be satisfied; that nobody will be satisfied with a draw or stalemate; that if the war is not fought to a finish now the conflict will be simply postponed and peace will be but a temporary truce; that the living will be dishonoring the dead if they permit their death to have occurred in vain and do not fight on in the same cause as long as there is any chance of winning.

I believe, however, that a careful examination of the situation and reflection on what has happened and what is likely to happen will show that these views are as false as they are impulsive.

Undoubtedly it is altogether inevitable that those in the thick of the fight should, in hot blood, passionately desire and resolve to crown their efforts with a decisive victory and to throw to the winds any calculation of the chances, or any counting of the costs. We cannot expect those actually engaged in fighting to be judicial-minded and clear-sighted. Pride rules their wills and it is, for that reason, difficult to end the conflict before it ends itself. It may, therefore, well be true that the war will have to take its course, or that it cannot be checked as early as calm reasoning may dictate.

BUT this is no reason why neutral nations should not be judicial and clear sighted. On the contrary, the very blindness of the rage of the belligerents is the best of reasons why neutrals should be calm, should collect evidence and should make a forecast as to what can be done and give advice as to what ought to be done. Such evidence, forecast and advice would certainly attract attention in all warring countries and, if sound, would at least have a good chance of shortening the war.

In fact, there seem to be only two possible ways in which the war can end, one thru the belligerents being left alone to fight it out and the other thru the influence of neutrals. As I see the situation, the last method will be incomparably the better and ought, for that reason, to be urged with the utmost emphasis.

In presenting the reasons for this view, we may begin by considering the probable consequences of "fighting the war to a finish." Overlooking for the moment the cost in blood and

treasure, let us ask what results will have been achieved, what questions will have been settled? Undoubtedly the conquering side will have received some additions of territory in Europe and in colonial possessions and may impose some indemnities and thru these receive some slight industrial and commercial advantages as offsets to the cost of prolonging the war. But I do not believe that any rational being thinks that these slight advantages will really be sufficient to fully offset even the financial cost of prolonging the conflict, much less the cost in lives. And, as a matter of fact, those most anxious to have the fight continue to a finish do not now allege such advantages as sufficient justification.

WHAT result, then, to be obtained by a decisive victory do they allege as sufficient justification? They all answer: "Prevention of future wars." The only real issue of the present war is future war. Thus both sides want the same result, international safety.

The opportunity for effective action of neutrals is therefore far simpler than if the issue were of some other nature. If it were slavery or some other specific and vital issue, neutrals would have far more difficulty in framing a proposition likely to receive acceptance than in the present case where both parties loudly maintain that all they want is to prevent the other party from making war upon them. The Allies will, they believe, accomplish this object by crushing German militarism so that in the future there will be no "mad dog of Europe." This is England's illusion. The Germans will, they believe, secure the desired result by crushing English navalism and securing perpetual freedom of the seas and her "place in the sun." This is Germany's illusion.

The question, therefore, is simply whether *future wars* will best be prevented by fighting the present war thru or allowing it to end in a draw.

I have, myself, no hesitation in saying that if the conflict ends in a draw a much more deadly blow will be dealt to militarism, navalism and war than if the war is continued to the bitter end. To destroy the military strength of Germany or of any one nation will not prevent future racing in armaments; for the other nations will race among themselves and even the crushed nation will rise again. Napoleon thought to limit the standing army of Prussia, but

this very effort led Prussia, by evasion, into the path of military competition. Military competition is absolutely inevitable when a number of nations without any international control are as close neighbors as are the nations of Europe today. The modern inventions which abridge distance, the railway, the steamship, the automobile, telegraph, telephone, the wireless have made the nations of the world far closer neighbors than ever before. Communities close to each other and in close commercial relation need international control corresponding to those close relations. Without such international control thru, say, a league to enforce peace with an international court of justice and other machinery, military competition cannot be prevented. Just as industrial concerns often must either compete or combine, so must the nations. And combination is the only permanent solution.

LET us keep steadily in mind that the question which we wish to have settled is the question of war itself. All of us, neutrals and belligerents alike, want this war to be the last great war. But the only hope of getting rid of war is to make the people disgusted with war, not only because of its costliness, but because of its futility as a method of settling disputes. If this war "settles something" so that somebody is satisfied, that somebody will be satisfied with war as an institution. However false this view may be, it will certainly be the view of a large number on the winning side. Instead of desiring to prevent a repetition of such a war there will be a tendency to jealously guard the right to make war and to secure whatever advantage, prestige, satisfaction, pride and glory war may bring. If, on the other hand, the conflict ends in a draw and the people of both sides become convinced that it has accomplished nothing except the destruction of wealth, the accumulation of debt and the slaughter of the very flower of the manhood of Europe, then war itself will be regarded as an accursed institution and there will arise such a popular clamor for future safeguards against war, that any nation may be willing to make whatever sacrifices are necessary to substitute a better method. The great hope of abolishing war is to have a war which is totally unprofitable. From the beginning the great incentive to war has been the booty to be obtained thereby, the indemnities

ties, the increased territory, the added sense of power, the feeling that certain glorious results could be achieved which were worth all they cost. The instant it can be demonstrated that war in modern society yields no results worth while, or no results at all, while it costs incomparably more in every sense than formerly, then war is surely doomed and the people will compel their government to turn to a league of peace and an international tribunal, as more effective than war. If, therefore, the really vital question involved in the present war is the continuance of war itself, we reach the conclusion that a decisive victory will leave the question of future war undecided, whereas a stalemate, altho indecisive in the immediate and military sense, is far more likely to be decisive as against the whole idea of war.

To me the one ray of hope out of the darkness is that this war may, because of the inherent forces at work, necessarily end in a draw.

Former wars have often reached speedy conclusions because of the element of surprize. In the present war the element of surprize seems to have been abstracted thru the use of modern scientific methods of observing the enemy. The aeroplane, the telephone and the wireless have enabled each side to know in advance the objective of the enemy and to checkmate him. It is difficult to see, therefore, how a decisive victory is to be won in this war except by exceedingly slow and costly "attrition."

It is difficult to imagine that Germany can conquer a united world against her and it is almost equally difficult to conceive, in view of the strength and efficiency of German arms, that Germany can be destroyed or even temporarily crushed.

If this view is correct, it should be formulated by neutrals in an international conference and presented to the attention of the warring nations so that they clearly see the only two prospects before them—one being a long, weary and infinitely costly struggle, ending in victory for one side but leaving the great question of future wars still precisely where it was; and the other being an earlier cessation of hostilities with neither side victorious, with millions of valuable lives and wealth saved and with every chance for the formation of some form of organization to prevent future wars. When this view, if it be the view of neutral nations, is forced upon the belligerents, it is at least conceivable that they will conclude a peace and make it lasting, earlier by many years than would otherwise be the case, if, indeed, they would have otherwise

made the peace lasting at all. As soon as it becomes the settled judgment of the world that nothing can be gained and much can be lost by continuing the war, the time will have arrived to conclude it and to get at the task of ending war in general.

**M**OREOVER a conference of neutral nations is justifiable quite irrespective of the interests of the belligerents. The interests of neutral nations themselves are far more vital today than formerly and must be reckoned with quite as much as the interests of the belligerents. With international trade and international relations as intimate as they are today, it can no longer be said that neutral nations are not concerned. On the contrary, to preserve the rights of neutrals during war, for the sake of maintaining inviolate the traditions of international law, is one of the most sacred obligations of the nations. Just as in an industrial strike or lockout it is increasingly recognized that, besides the two parties to the conflict, there is a third party, the general public, whose interests are of equal or even greater importance, so a modern international disturbance of the peace affects the third party, i. e., the neutral nations, quite as vitally as it affects the two contending parties. In a conference of neutral nations the idea that neutral rights should be insisted upon will have opportunity to voice itself.

Finally, if a conference is to be called, the sooner it can be called the better, even if the end of the war is yet a long way off. What is to happen after the war is over will require many thoughts of many people and the sooner some of these thoughts can be brought together and recognized the greater is the likelihood that the final results will be what they ought to be. Even if the conclusions which have been stated are incorrect, and it is deemed better not to attempt to end the conflict for the present, it will still be advantageous to have an international neutral conference in order that the subject may be discussed. Enough time has elapsed since the war broke out to afford a profitable discussion of the situation and to lay the foundations for future conferences, if need be.

To have the conference now is simply in line with the general policy of preparedness in advance. It would be unfortunate if neutrals had not reached definite ideas before the war comes to a close, as to their attitude in reference to terms of peace and the results to follow.

Already the desire for such a neutral conference has shown itself among some neutral nations of Europe.

In connection with the celebration of the First Hague Conference fifteen hundred societies and organizations of Norway passed resolutions urging the government to call a neutral conference at once. Nine great mass meetings were held in different important sections of Norway, eleven in Holland, seven in Switzerland, eleven in Denmark. It was necessary to provide for overflow meetings in Sweden. The mayor of Stockholm has an appeal pending in the Riksdag of which he is a member, calling for a neutral conference. The bill passed the lower house unanimously. The Norwegian Parliament has a similar appeal pending there. The same question is being discussed by the Swiss National Council. An influential Dutch organization, including many state officials in its membership, has cabled President Wilson asking if his address on May 28th could be interpreted to indicate his readiness to call a neutral conference. It is evident that the other and smaller neutral nations are looking to the United States to take the initiative. So far, therefore, as the question of prematureness is concerned should the United States act now, the danger appears to be that we may let our opportunity slip thru our fingers. It would seem, therefore, that the United States should take the initiative in calling a neutral conference and thus fulfil its proper mission as the leader of the neutral nations.

**I**F the conference of neutral nations could work out a proposal which would appeal to the leading men of both sides of the conflict, the result would be to crystallize public opinion in all belligerent countries. Instead of public opinion being formless, instead of individuals groping and hoping that something tangible may some time be submitted for their consideration, we should have at once a tangible proposal to which these people could very directly and simply signify their approval or disapproval. Public opinion is seldom crystallized unless the issue be clear cut and definite so that the people can express themselves, one way or the other. A simple yes or no vote is as far as the great mass of humanity can express itself. Sooner or later the people of the world will vote war down. A neutral conference may give the world an opportunity to vote a century earlier than otherwise. May the day of such a world vote be not far distant!

*New Haven, Connecticut*

# POLITICS AND PRAYERS IN THE VALLEY

BY CORRA HARRIS

**T**HIS Valley is the only place I have ever known where sickness and death are occasions of the liveliest human interest.

Last summer during the busiest season one of our prominent citizens died. The next day nobody was at home in the Valley; every farmer left his hoe or his plow in the field, hitched his team to the wagon and started with his whole family to the funeral. It was an "all day funeral," and they brought their dinners with them.

The candidates came, too. Brother C., who was running for coroner, and Brother D., who was running for the office of county commissioner, were there, shaking hands with their friends and urging their claims to the very mourners. As we marched solemnly out of the church behind the casket, Brother D. waved his cane at one of the pallbearers and shouted cheerfully:

"Don't forget me at the polls, Sam!"

"Sam" wagged his head gravely as much as to say he'd attend to that later on, when he was not a pallbearer.

No one was shocked. I was not scandalized, tho I had never before seen politics hung over the edge of a grave. That which impressed me is that life is supreme in the lives of these people, and death is an incident, as it should be. If any one infers that they are heartless because they make a picnic of a funeral, he is mistaken. They are natural and unashamed of nature. They live literally and more tenderly from the heart than any people I have ever known.

Two days before Christmas our neighbor, Brother E., was taken desperately ill. When I went over at nightfall to be of what service I could be, there were twenty men standing around a log fire in the road before the house, a silent company of tall, ungainly figures.

Inside, a dozen women moved to and fro, neighbors of the wife who sat huddled in the darkest corner of the kitchen with

*Last week Mrs. Harris told Independent readers how an ill flood brings good "In the Valley." Here she writes of the faith that transcends death.—THE EDITOR.*

her seven children around her, gazing with that animal curiosity of young children at the strange scene. The stricken man lay upon the bed attending to his last thoughts—all this in that hurried, sibilant silence one feels and hears whenever the angel of death is expected.

**I**F ever I have time to relax from the hard labor of living and come down upon my bed to die in this Valley, I ask nothing better of my neighbors than that they will care enough for me to watch the night thru with me before the gates. I prefer it to the conventional passing now in vogue where a pussy-footing trained nurse runs everybody out of the house. I would not be deprived of those last hours of companionship with my own kind. I should have more courage with which to face the uncertainties of my immortality escorted by my familiar mortal kind. I might have something to say, and if I did, I'd wish to say it to real folk, not to a doctor and a trained nurse, who would be sure to think I did not

know what I was saying, because they are accustomed to deal with the flesh, not the spirit. Death in my opinion is altogether too strictly censored in polite society. Both the passing and the living should be given more freedom of expression.

**T**HERE is a little weather-stained hard-shell Baptist church on the hill above this Valley. When some one of that faith dies in the community the sexton rings the bell, and the men who hear it gather there in the church yard to dig the grave. Early on Christmas Eve morning we heard the bell ringing in Mount Pleasant Church. Then along the road and every path in the Valley Brother E.'s neighbors could be seen hurrying with spades and picks on their shoulders. If an undertaker came into this Valley and did what is usually done to the dead, he would be mobbed. We do not hire these last services. We perform them ourselves with love and reverence.

There were no flowers. The earth was gray with frost. But here in the cabin we had evergreen wreaths already made for Christmas decorations. So we carried these and laid them upon Brother E.'s bier; and they did look well there, as if no lightly blossoming saint lay below, but a man who had put forth his strength and fallen as a tree falls with its boughs still green.

The hard-shell Baptists do not mince words even in a funeral sermon. The preacher looked us in the face across the bier and said he hoped Brother E. was saved. He said he was an honest man who worked hard and did the best he knew how to do. When you squeeze the pusillanimous eloquence and sentimentality out of the most elegant funeral discourse, I doubt if what remains is a better tribute to the essential qualities of a brave man's character. This sermon was not over ten minutes in length. Then we went out and buried Brother E. The whole thing was desolate, bare, ter-

MRS. HARRIS AND HER DAUGHTER, FAITH, AND "BU CO"

ribly simple, for these Baptists scorn to garnish the tragedy of death with softening ceremonies.

From the church yard I went back to see Sister E. She was sitting in her desolate house like the graven image of a great faith in a little, crumpled, dingy, misshapened body. She was expecting her eighth child to be born within the week. She had very little, and now no longer any means of support. But she was perfectly calm. She was facing the bad weather of life with a fortitude which I have never seen surpassed. When I asked her what she would do she said she did not know, she had no plans. She reckoned the neighbors would look after her affairs.

And they did.

Such sublime faith in your fellow man is faith in God.

THE people who live on the farm at the other end of the Valley are Methodists. Three generations have lived there and practised the same faith with a softer courage which the hard-shell Baptists at the other end follow with so much sternness.

The patriarch of this family was a woman, one of those unknown great women who determine so much the better qualities of this civilization.

Her husband was wounded during the Civil War and became an invalid. She bore ten children. She plowed, sowed, reaped and kept her house clean, and her children healthy and strong. She educated them in the only school to be found in these mountains twenty-five years ago.

When I came to live in the Valley she had finished the years of her strength. Nothing remained of her but a pleasant, artless, childish simplicity. She was very tall and thin, as if she had put off the flesh and the things of the flesh down to her very spirit, which was a smiling spirit. Her figure was bent, warped by the loom of life. Her face was beautifully wrinkled like a very fine script which meant something good to those who could read it. When she sat down to rest, she had a habit of keeping a little old Bible open upon her knees. Not that she read it—she knew much of it by heart. But she told me once she liked to have it “where I can lay my hand upon it and feel the Word.”

She was not only at peace with God; she was at peace with the earth and the sky. She had a queer companionship with just the weather. She could look at the heavens early in the morning and tell which way

the clouds would come late in the afternoon. On dark winter days, when no one else dared hope for a clear sky, she would whisk out of doors, sniff the air, feel it with her fingers as if God had wrapt the world in silk, then she would declare the sun; we always had a bright afternoon on these days even if the weather bureau predicted a storm.

THE family gathered in her room morning and evening, and the son who lived with her “led in prayer.” But once when we had a long drought she said she would lead herself that evening. It was as if she thought some things had been omitted lately in these petitions which she desired to bring to the remembrance of God.

We knelt in the soft candlelight, a wide circle before the old split bottom chairs.

She began at once, in the sweet monotone of the saint accustomed to pray in secret. She mentioned those things first for which she wished to give thanks, just the natural blessings like health, food and “raiment.” She was also thankful for her sons and daughters, whom she praised, politely reminding God of how good they were. She remembered “those in affliction,” and she passed over the heathens “in the uttermost parts of the earth” with a lick and a promise, so to speak. Then she came to what was really in her mind. She spread the wings of her prayer over the drought-smitten land as if it were a living thing tortured by thirst. She prayed for “the spring beneath the rocks” that its waters might not be quenched; for the grass, as if undoubtedly the grass must be very dear to God, since it was the first life upon the earth that He had made. She desired His mercies for the corn that it might not wither and die; and for the trees that “their roots might drink deep,” and for the “beasts of the fields that they might have kind masters.”

When we arose from our knees I felt as if the spirit of all things had

been drenched with dew. The very air was perfumed with that perfect prayer.

One day in March of this year word went thru the valley that this old saint was “passing.” She was not ill. She was simply passing. Late in the afternoon I went over and found her sitting in her arm chair before the fire. I could discover no difference in her except that she was idle, for she was always busy with some little endless task, like knitting, and she wore her best clothes.

The next day she did not notice that she had not risen from her bed as usual. But she was still smiling and cheerful, with that strange look of expectation, as if presently some one would enter.

The end came a week later, quite like the end of one of those long, long summer days when in her prime she had risen early, attended to her household, gone into the fields to do the work there, then returned at evening to lie down, tired, in perfect peace to rest.

When I asked one of the daughters if her mother knew she was going so soon, she replied:

“No, we didn’t tell her. She’s been ready these many years. But if she’d known she was really going now, she’d have worried about leaving us. So we didn’t tell her.”

IN a place where men and women live like this and die like this, it is foolish to doubt the goodness of God. So we do not doubt, tho we are having no easy time with His elements this year.

If the harvests fail some of us in the Valley will suffer. But it is not like losing one’s job, with no roof over one’s head, and no bread. Whatever happens, every man will still have his home and his land and his almighty hopes for a better harvest next year. That beats walking the streets of a city looking for work, or going on a strike for higher wages.

If you have grace in your heart, and faith to remove mountains and dam great waters; if you are poor and have courage to endure beyond all endurance, and to hope after that, the place to live is in the country next to the patient earth. But if you lack one of these qualities, it is better to stay where you are, and look to reforms or to charity for your salvation, but not to God, whose rewards are not riches, but righteousness and honor and peace even in poverty.

## THE BRIDGE

### BY MARJORIE ANDERSON

A bridge of lights, low lying o’er the sea,  
A link between two worlds, I watched its span  
As, like some gently modulating key  
In music, which by a master’s guiding plan  
Leads us from grief to joy, it too began  
In darkness ending in a dream of light,  
A faeryland beyond the ken of men . . .  
And yet too vast for faeries; rather might  
It be the palace of the gods who rule the night.

# FUTURIST MUSIC

BY CHARLES L. BUCHANAN

IT is not entirely irrational to claim that music has progressed thru the last score of years at a rate of speed and with a degree of intensity unparalleled in any other epoch of its history. Twenty years ago Richard Strauss and Debussy were practically unheard in this country. Brahms, even, represented little more than a synonym for some excruciating kind of tediousness. In these last twenty years Richard Strauss has flamed his meteoric way into our ken—and out of it. His “Thus Spake Zarathustra,” once hailed as a last word, an ultimate in music, is now almost ignored for a kind of junk heap of fictitious, sterile splendors. Debussy and his evanescent harmonic scheme has wooed us, momentarily enthralled us and (we think we may dare say) ended by wearying us. We have found only vapors in his music when we have sought substance. Reger has had his little moment and gone his way. We do not know whether we may rightly call this precipitant pace progress; whatever it is, it has culminated in a kind of contemporary music that some people call futurist music and other people call absolute nonsense. Whichever you choose to call it, it is an inevitable development of that dominant trend of the music of the last score or more of years in the direction of a chronic cacophony. Is it possible to attain a just valuation of this latest development in music?

What, for instance, if any, is the intrinsic significance of the extraordinary and astounding spectacle presented by young Mr. Leo Ornstein both in the kind of music he plays and in his manner of playing it? We choose Ornstein because we believe that his music, whether good or bad, is unquestionably the most intense and salient manifestation that contemporary music has given.

The majority of persons hearing Ornstein for the first time would probably receive an unfavorable impression of him. His performances indubitably hint of charlatanism. You see a young man of a rather distraught, disheveled appearance and a sort of cowed, hang-dog manner slouch upon the stage. He sits before the piano in a crumpled-up, hesitating, half pathetic way. A lock of black hair falls over a frail, sensitive and not unprepossessing countenance. He plays music other than his own with a considerable degree of charm, tenderness and an occasional rhythmic irregularity amounting almost to faultiness of taste. When he reaches his own composi-

tions our attention is peremptorily demanded by the most extraordinary and vehement sounds that have ever come out of a piano. At times, as, for example, in his playing of his “Wild Men’s Dance,” he seems possessed by a bewildering and diabolic degree of energy. The affair overwhelms one by the sheer dynamic force back of it. It is a kind of rhythmical frenzy, a veritable battering of the piano, and it suggests nothing so much as a child in an uncontrollable fit of hysteria. We have seen presumably responsible reviewers (to say nothing of an obviously amused and incredulous public) with tears of mirth in their eyes at the close of Ornstein’s peculiar but none the less potent performance.

Knowing Ornstein as we do we can emphatically testify to the genuineness of his intentions and the admirable catholicity of his tastes. He is an ingratiating, charming, alert young man not yet twenty-one years of age, and his most vivid characteristic is, we think, his supreme unaffectedness. He will talk to you of the music of Bach, Brahms, Schubert, Chopin, Ravel, Debussy, etc., with the same degree of impetuous, fiery enthusiasm that he evinces for the music of Leo Ornstein. He possesses to a large extent that indefinable clairvoyant quality that is present in all vital art. We ourselves think that, potentially, he is the most significant figure in today’s music. But when we come to a consideration of the actual value of the kind of contemporary music represented by Ornstein and, to a lesser degree, by Schönberg, we cannot help asking ourselves whether it is a valid music, a music at once constructive, compelling and indispensable.

To say that the music of Ornstein and Schönberg is an annihilation of the musical conventions of the past is to fall into one of the slovenly stock phrases of criticism. The charge may be dismissed as irrelevant, futile, banal. There is no discovered reason why Ornstein and Schönberg should not compose this music, if they so desire. Technically speaking, it is nothing more nor less than an acute intensification of the harmonic side of music; and we question whether it makes any keener demand upon this generation than Richard Wagner made upon his. We may only legitimately ask ourselves one question concerning it—is it effective? Does it convey a sensation more or less irresistible and vital? Does it represent in music something approximating an idea?

Now it is obvious that the music of Ornstein and Schönberg may be honestly conceived and yet remain absolutely negligible. Ornstein proclaims no intentions, formulates no creed; he merely reproduces, so he tells us, certain combinations of sounds that occur to him. It seems to us incredible that the human ear can conceive these sounds as separate entities; to all intents and purposes one chord of Ornstein’s might be substituted for another without any of us being very much the wiser. However, it is possible to conceive that Ornstein is what he claims to be: a kind of passive transmitter thru which a bleak, shrill, screaming kind of sound finds its way to us. But the fact that this music is an unpremeditated music, a sort of spontaneous combustion, so to speak, does not necessarily justify it. Ornstein has told us the subjective impressions back of his “Notre Dame,” “Dwarf Suite,” “Thames.” The impressions are fantastic, grandiose, sinister, terrifying; and his music, no doubt, is for him an inevitable expression of them. But to us who hear it only as music it is essentially inarticulate with the inarticulateness of the prophet who feels so passionately that he fails thru the very excess and turbulence of his feelings to project his message to us clearly, concisely and unmistakably.

We recently heard Ossip Gabrilowitsch play the five short piano pieces of Schönberg, opus 19. Here in a modified form we discovered tendencies substantially similar to the tendencies so obviously dominant in Ornstein’s music. These tendencies seem to us to be an ultimate and very logical outcome of program music. They seem to be dangerously in the direction of an exclusive preoccupation with mood at the expense of thought. Musical thought consists of a certain number of notes arranged in a certain orderliness so as to produce a significant sequence of sound. A significant arrangement of words is its literary equivalent. It represents an ability to think consecutively and coherently. It seems to us that the music of the immediate present is lacking in this particular quality—the quality of inevitableness that characterizes all valid art. Do we not sometimes suspect an Ornstein, a Schönberg, a Debussy, of a rather too facile trifling with sensation? Can a substantial, authentic musical message proclaim itself thru a medium essentially suggestive rather than definite?

New York City

IT IS EASIER TO FISH FROM A BOAT

## BRONZE BACKS

BY O. W. SMITH

**A**LL bass casting is divided into three parts: first, the tackle and skill required to use it; second, doing battle with the most resourceful fresh-water fish; third, the healing touch of God's out-of-doors.

I sometimes find myself wondering if we do not overestimate the importance of "rods and reels and traces." However, I say get the very best split bamboo you can afford, five feet or five feet six inches long, and as light as is compatible with safety and your skill. It should cost at least six dollars and as much more as you care to pay, tho fifteen dollars will bring you as perfect a tool as you can demand.

In the matter of reels and lines I am going to be exceedingly careful that you do not discover my favorites. Bless you, I wish that you might peep into my tackle cabinet, then I could show you what is best. But it is neither wise nor possible to attempt that task upon paper. If you desire a short cut to casting skill, procure one of the so-called self-thumbers, they are all their makers claim. If you are doubtful of your ability to remember to spool the line, purchase a self-spooler and care for it as the apple of your eye. But if you desire to get out of the sport all there is in it, procure a regulation winch, in German silver, of course, and provided with jewels. "Cost"? Don't ask me! Seven dollars and a half, fifteen, twenty-six, and up. I know of no single article of the equipment where quality is so quickly

*The Rev. O. Warren Smith is a preacher plus—and the plus stands for all the joys of out-of-doors, particularly fishing. In the June 5th issue he asked the readers of The Independent to go camping in the woods "By Your Lone." Now he describes, with the wisdom of an experienced angler, the pleasures of bass casting.—THE EDITOR.*

discoverable as in the reel. I am the proud owner of a high grade Meek, engraved with my initials, which I expect to will to my angling daughter, having no son. (Why not women casters as well as men?)

A dollar will get you a soft braided silk casting line, fifty yards long, testing let us say in the neighborhood of twenty pounds; it will last you a season if you care for it, drying after each day's work, or it will rot in a week if you don't. The lures you will buy because they are pretty, at first; because of their effectiveness after you are somewhat experienced. Get them in red and white, or red and white in combination, green, yellow, or any other color which tickles your fancy, tho you will discover the first two colors most effective. "What pattern"? Another question I dare not answer, tho I will say this, as you value your soul, get some "floater" that will wait on the surface with commendable patience while you untangle the first back-lash, compared with which the Chinese puzzle is as a straight string. Do not attempt to use under-water lures until you have

obtained some skill in casting. And there is just one way to learn how to cast and that is by casting. There is no easy road to casting or to any other worth-while bourne, as for that. When first you attempt the use of the short rod and reel, go alone to some sequestered lake, where only the birds may behold your awkward gyrations, and where only the birds may hear your language. There's a reason!

It was good Dr. Henshall who paid this glowing tribute to the American black bass—"Inch for inch, and pound for pound, the gamest fish that swims." No angler will quarrel with the apothegm. The bass—which is no bass at all, simply an overgrown sunfish—is American to the backbone, pugnacious and resourceful as becomes his birthplace. Not to have fought a two-pound small-mouth on a light rod at the end of one hundred and fifty feet of singing, shrieking line is to have missed something as worth while as clipping bonds. Not to have beheld the confusing leap of a hooked bronze back, his yellow armor glistening in the sun's rays, while the water rains from his radiant sides, a brilliant shower, is to have missed a sight infinitely more inspiring than a speed contest between two high-power automobiles. To have missed playing a bass for fifteen minutes, thru many aerial leaps and numberless soundings, rod bending double and reel shrieking in agony, only to have him flop loose just as the net was slipped beneath his tail and disappear amid a maze of bubbles, is to have missed

the most heart-rending experience to which man is heir. Only the other day a friend of mine had that experience, and he looked at me from his end of the boat after the bass had disappeared, with a grief-stricken face that would have been comical had it not been so poignant, to remark, "I would not have felt worse had you died." I understood.

To me, the glory of the black bass is his get-able-ness. You may be compelled to journey far to angle for the winsome beauties of our brooks, for they must have water of low temperature and properly aerated; but the bass is found in streams and lakes almost everywhere, within reach of every town and city, and always ready to do battle with the knowing rodster. Bass can be caught with worms, minnows, or almost any live bait, tho there is not much need for resorting to it in this day of perfected casting lures. Artificial lures impress one as being more sportsmanlike, at any rate they are more cleanly and less trouble.

It is easier to fish from a boat; row along the shore within casting distance of the weed beds and drop your lures just where this ichthyic torpedo waits to attack; but it is rare sport to adventure along the banks of some familiar stream, or wade the shores of some forest environed lake. I have tried each method and I am in love with all. For fish and companionship—companionship is the sauce piquant of angling—take the boat; there must be two, one to row and the other to cast. Don't hire a boatman, take a brother angler, and fish change and change about. However, for real heart enjoyment and self-acquaintanceship, take the stream bank "by your lone."

The only thing that has kept me from being a modern Thoreau is my profession and family. As it is, I must needs frequently "steal a while away from every cumbering care," and from green, growing things derive faith's prophylactic and doubt's anodyne. Mrs. Grundy says, "There's

the preacher's goin' fishin' again," and he is, but the catch that is worth while is the one that finds its way into head and heart rather than into the creel. Oh, I catch fish, more than my share I sometimes think, but the catching of fish is a by-product of the expedition in spite of my knowledge of the game. I pray God that I may keep "fish," and some other things, where they belong.

Take a whole day for the excursion if you can, selecting a river small enough to cast across, then fish down one side and back the other; always fishing the bank opposite the one upon which you stand. You will not be apt to catch many fish in the middle of the day; early in the morning and again at evening is the best time, but always you may creel that intangible something of more value than many bass. Study the bank as well as the water. See the royal columbine nodding in the breeze; note the bluebells ringing yonder on that shelving bank; do not neglect the bird-like actions of that great yellow butterfly, flying high and low, now here, now there; hear that red-eyed vireo, the "preacher," saying as monotonously as any pulpiter, "You see it—you know it—do you hear me? Do you be-

lieve it?" Do not miss the midday note of the indigo bunting, for no midsummer noon is too hot for him. God's out-of-doors is full of color, song and life, and it's all a part of angling.

As the sun sinks in the west the long purple shadows will reach out and out over the limpid water, the bird songs will increase as the soporific hum of insects dwindles, the night-hawks will appear suddenly, ricochetting and booming above you; but a splash and widening circles of ripples on the far side of the river will bring you back to the business of the hour with a jerk, you will suddenly remember that that length of shining wood and glittering German silver in your hand is a casting rod. "One," up comes the tip until it points slightly back of the right shoulder; "two," down, straight down, with force. Out shoots the lure, straight as an arrow from an archer's bow, striking with an audible "plop" right in the center of the concentric circles. Instantly there is a commotion in the water, your hand turns instinctively, and a bronze back shoots into the air. Down and away, dashing hither and yon in a vain endeavor to rid himself of that stinging hook at his lip. But why multiply words and quadruple adjectives?

The fight of a bass has never been adequately described and never will. On your knees, as you should, you received the exhausted but not vanquished warrior into your landing net. Mercifully, with a quick thrust of a sharp blade, his spine is severed and he rests upon a soft bed of green grass in your creel; while, for a reason you are ashamed to confess even to yourself you gather a handful of bluebells and lay them reverently by his side. That, too, is bass casting.

So, here is to the bronze backs, gamy and resourceful to a fault; here, also, is to the bass angler, be he who or what he may, so long as he add to his ichthyic skill understanding and appreciativeness of God's out-of-doors.

Washburn, Wisconsin

FOR REAL ENJOYMENT WADE ALONG SOME FAMILIAR STREAM

## A GIFT AND A MESSAGE FROM SING SING

THRU the little opening in the barred window of my cell, there has been coming, for more years than I care to confess, a stream of weekly and monthly publications. The average is some 160 a month. They come from all states in the Union; from Canada, England, Australia, and from shell-shattered Europe. They are the open sesame thru which for a time I pass from grim actualities and find my place and part in the activities of the life that lies just beyond the prison walls. It is the one best thing of which I know. Take it from me and the result would be stagnation. In prison stagnation spells D-E-A-T-H. It is thru self-expression we endure—and exist.

There is no mathematical formula by which I could compute the value of *The Independent* to me. It has been very great. From out all the magazines I receive, it is my first choice, my one indispensable source of reliable news intelligence, educational stimulus, and moral growth. And I am but 1/800 of the population here. Taking the thirty men to the right and left of my door I find that twenty-one of them place *The Independent* first in their choice of weeklies. Five give favor to *The Literary Digest*. Three swear allegiance to the late *Harper's Weekly* and Norman Hapgood. One lone soul yearns for pictorial *Leslie's*.

So I am moved to write you of these things, some few others, and to send you a tangible token of our appreciation of your brave magazine. That is to say—of you. Accept it as a tribute of respect or a good-will offering from the damned, if you must. Most of us are that, for the time being. But accept it. Award it no other recognition than a place of honor on your walls, "where all who run may read," and perhaps be made wiser and happier because of it.

The difficulty of doing art work in a 6 x 8 cell need not be gone into at this time. Could I lessen the difficulties it is certain I should be for returning similar holdings to many of the brilliant folks I have met thru *The Independent*. That gentle pan-

*The other day some copies of The Independent which had been sent up to Sing Sing prison came back reformed almost beyond recognition. Their reincarnation took the shape of the ornamental and serviceable cane photographed above, which was made by one of the men at the prison. He folded the pages of the magazine in narrow strips and strung them on an iron rod. Then the paper was wet to a pulp, prest tight and allowed to harden. Later he smoothed it into shape with a jack-knife and sandpaper. Along with it was sent a letter from one of his pals telling something of what The Independent had brought to him. In view of Warden Osborne's recent reinstatement and the immediate prospect of progress in his work for prison reform this statement is particularly interesting.—THE EDITOR.*

theist up the Hudson, John Burroughs, would be getting an extra choice illumination of his poem "Waiting," done in a grapevine-and-clustered motif. Each in turn should have his own come to him, even unto "The Sage of Potato Hill," Ed. Howe, whom I heard the late Elbert Hubbard at the Roycroft Shop say was "the greatest thing Kansas had produced," would not be overlooked. And as for the Lady-of-the-Metaphors, whose sanity of thought and clarity of expression are worthy the vote for women—she should be returned something extra choice, touched with the odor of sanctity, and pleasing to all in *The Valley*.

It all would mean much work. But think of the joy of it! The law of compensation is a blessed thing. I love them all, those serious folk with smiling faces turned toward the east, beckoning us to follow them on their quest for the Gleam. We who have read their hearts thru their writings render them homage.

And now, Mr. Editor, one other little matter. Last January 10th, with a foresightedness akin to prophecy you wrote of Thomas Mott Osborne. Mr. Osborne has been vindicated. Every savior of mankind has been crucified. It was Mr. Osborne's

turn. Today his character as a man and his prestige as a penologist are stronger than ever. If you would help him greatly, then encourage your readers to a more decent attitude toward the discharged convict. Once he has paid the law's award of sentence, he merits another chance. Don't give him alms, a religious tract and a freezing stare. Give him work. He will, ninety-nine times out of a hundred, respond. Grant him not only the right to work, but a place to work. Work is a remarkable therapeutic. He needs such treatment. Work is fine moral prophylaxis. Any man fresh from prison sorely needs cleansing. I cannot conceive of a man's being made better by imprisonment, tho I recognize the necessity for such action. And once this matter of employment is seriously taken up, just so soon will you have solved the recidivist problem. I am but one of many thousands of convicts. This appeal is for them. I know them and what they desire. I know, too, what awaits them. Within six months I shall be discharged. My greatest need will be for employment. I shall want work worse than Mr. Ford wants peace, more than Joseph wanted to get out of the pit, even more than the devil wants his own. I am thirty-nine years of age—and a recidivist; and I am a recidivist because every avenue of honest employment was closed to me when I left prison. For six months I have persistently sought for some assurance of employment. The results are nil. Quite a few persons have written that they were praying for me. I thank them. But a pay envelope filled with nothing but prayers would not feed and clothe even an ex-convict.

Candidly, now, is it a square deal? Eliminate the sympathy and give us service. Else let provision be made to ship all discharged convicts

Somewhere east of Suez,

Where the best is like the worst,  
Where their ain't no Ten Commandments

And a man can raise a thirst.

GEORGE H. STELLE

Ossining, New York

## The Fruits of the Rubber Tree

**R**UBBER TREES first gave shade and a harborage to the birds of the forest. That was all they gave for many ages. Then a beetle bored into the bark and a liquid oozed out which barbaric man discovered could be dried into crude balls to play with. Then civilized man found how these balls could be transformed into things to serve all mankind.

The birth of the rubber tree is lost in the shadowy past. The birth of the rubber industry is comparatively recent. Seventy-four years ago the first factory was licensed to make rubber goods. This pioneer plant—the great-great-grandfather of the entire rubber industry of the world—is now an important unit of the United States Rubber Company.

Pictured here are thirty-four of the forty-seven great factories owned by the United States Rubber Company, the world's largest producer of rubber goods, including Footwear, Clothing, Automobile and Bicycle Tires, Druggists' Sundries, Insulated Wire, Soles and Heels, Belting, Hose, Packing, Mechanical and Moulded Rubber Goods of all kinds.

If all of these factories were grouped in one locality, if the army of workers and their families were housed around the mammoth plant so formed, there would arise a mighty city—larger than Rochester, larger than Louisville, St. Paul or Denver.

It is only by such an imaginative comparison that one can sense the tremendous size and activities of this giant organization, which manufactures and distributes throughout the world every article into which rubber is made.

That the United States Rubber Company is the leader in this great field is a distinction won simply by merit. It has responded most satisfactorily to the rubber requirements of the people. It has, through persistent and exhaustive research, been constantly active in finding new ways to turn rubber to the benefit of mankind. It has consistently maintained the quality of its products under all conditions. It has been enabled through its size, through the variety and quantity balance of its output, and through the age and organized experience of its associated companies to combine, in all its products, quality and economy in the maximum.

# United States Rubber Company

## Vacations Wanted

If you could rescue one little child or one overworked mother from the city's hot, glaring walls and pavements from which they have no escape except into stuffy rooms whose stifling air is even more oppressive than that of the sun-baked streets and roofs; and

If you could give them an outing at the beach with bountiful food, rest, coolness, fresh air, a daily dip in the surf, shady porches and sandy beaches, would you not regard such a gift as well worth giving?

Such a gift is entirely within your power. Ten thousand of these mothers and children are waiting for invitations to our Sea Breeze Summer Home. You can

send as many as you will for a day, a week, or a fortnight. Allow 50 cents a day or \$3 a week for each person, and direct your gift to George Blagden, Treasurer.

### The New York Association for Improving the Condition of the Poor

CORNELIUS N. BLISS Jr., President  
Room 200

105 East 22nd St. New York City

Volunteers are wanted in every town to plan a fair, sale, entertainment or lawn party to raise special Sea Breeze vacation funds for certain poor mothers and children whose circumstances are particularly distressing, and whom clubs, societies, classes, schools, or churches can adopt as their special guests at Sea Breeze. Write for suggestions for planning a fresh air fund fair in your own town or your summer home.

"Gee, but it's great at Sea Breeze"

## The New Books

### OUTSIDE PRISON WALLS

*The Prisoner*, Alice Brown's latest novel, follows the unusual method of presenting the hero as he is released from prison and touches but lightly the story of his crime. It is his rehabilitation which interests the author, and in the telling of his restoration to normal living, the characters of the four women who fill the book with their benign or hostile presences stand out with startling distinctness. Two of them, the vivid Lydia and the amazing Madame Beattie, seem exotic in a New England village, yet whom may we not find in any village? Esther is the commonplace charmer, and Anne the loveliest of the New England variety of "nice girl." The "Prisoner," with all his strength of manhood, is a shadowy figure beside these masterly portraits. The book is remarkable for its almost uncanny insight into obscure psychological processes, and for its wholesome treatment of the world's reaction toward a returned prisoner; it is not written with mawkish sympathy, but with sympathetic insight.

*The Prisoner*, by Alice Brown. Macmillan. \$1.50.

### FORCEFUL PEACE

There is only one Gerald Stanley Lee, just as there is only one Chesterton and one Bernard Shaw. He has Chesterton's knack of opening up an idea and letting you see "the wheels go 'round," while the cold penetration beneath his buoyant good humor would be as diabolical as Shaw's, if it were not so ringingly sincere and well-intentioned.

But the author of *We* is too intensely individual to tie literary labels to, and his latest book seems to us to command a place of its own among the vast mass of wartime writing. He calls it "a confession of faith for the American people during and after war." If for nothing else, it is remarkable for disclosing a man who has performed the unique feat of holding on to the frame of mind—then regarded as "normal"—which most people lost during August, 1914, and are slowly recovering.

Starting out with a heart that is as warm and generous as his mind is critical, Mr. Lee has delved into things innumerable—advertising, Mr. Ford, political economy, the spirit of Broadway, Nietzsche, Niagara Falls—anything that would provide a new glittering facet for his central idea. That idea could more easily be boiled down into twenty columns or so of "Remarkable Remarks" than into any one sentence summary. Briefly, however, he thinks that peace, to be interesting,

## The Independent Investor's Service

*The Independent* is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of *The Independent* such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

valuable and self-protective, must be an aspiring, conscious attempt to perfect the everyday work of the world, a kind of sublimated industry. "We shall conquer our enemies at their own firesides," he says, "by serving them better than they can serve themselves," and he points to many things that seem to bespeak the future for an American pacifism that shall be virile and constructive.

Whether one be impressed or otherwise by the argumentative side of the book, one cannot fail to make some response to the breezy benevolence that sweeps thru it from cover to cover. Mr. Lee actually believes in mankind, which, at the moment, is so daring that one is almost stampeded into doing the same.

We, by Gerald Stanley Lee. Doubleday, Page. \$1.50.

### THE CAUSE OF THE TRAGEDY

We are indebted to Professor L. T. Hobhouse in *The World in Conflict* for an illuminating exposition of the ethical position of England when the Great War fell, "The Victorian age believed in law and reason. Its sons have come in large measure to believe in violence, and in impulse, emotion, or instinct." Philosophy, science, art, music and literature all became shaded by principles, or the lack of such, which placed the "ego in the front of the stage, stripped of all idealism as mere paint and flummery, and taught how to honor in unscrupulous selfishness the sincere expression of human nature as it really is." It was held man had become the supreme law unto himself, vaunting to high Heaven his newly discovered freedom from self-restraint, until the darkness swept down and all Europe lay weltering in a sea of blood.

Dr. Charles Seymour in *The Diplomatic Background of the War* is impartial, clear and logical. He traces from the period of Charlemagne the origin and development of the Germanic ideal—that German *kultur*, or lawful civilization, was destined to rule the world, if not pacifically then by might of the sword. Thru the centuries, winding in and out amid diplomatic machinations and wars both of victory and disaster, this ideal remained fixed. In opposition to it came the rapid growth, in modern times, of democratic individualism tending in the vision of Germany toward moral and political anarchy. Thus, the Great War is not merely a contest for territorial aggrandizement, but also one of conflicting ethics.

In *Before, During and After 1914*, Anton Nyström gives us a Swedish view of the origin of the war. We have been under the impression that Sweden leaned toward German sympathy, but Anton Nyström holds Prussian militarism as the sole guilty party. His partizanship, however, leads him into conclusions which cannot always be sustained. Thus, that England "must have a large navy is obvious" owing to her imperial position is no more obvious than that Germany must possess a large army. In fact, Dr. Frederic Harrison, who certainly could not be

## Suppers Out-of-Doors

Puffed Wheat or Rice in a bowl of milk or cream. What a dish for out-door suppers.

Great bubbles of grain—eight times normal size—toasted, thin, flaky and crisp.

Whole grains, not mere flour foods. All the minerals, all the gluten in them.

Every food cell steam-exploded. Every granule easily digests. Every atom feeds.

And each of the Puffed Grains—three in all—gives a different-tasting dish.

## Also Odd-Hour Foods

You serve Puffed Grains for breakfast—with cream and sugar or mixed with fruit. And you call them breakfast dainties.

They are more than that. Puffing makes whole grains wholly digestible. Every food cell is exploded. Digestion is both easy and complete.

Nothing is so fitted for between-meal food. Let hungry children eat them dry, or douse with melted butter. With their nut-like taste and their fragile texture they are like confections.

They mean less candy, less pop corn, less cookies.

Puffed Wheat	Except in	12c
Puffed Rice	Far West	15c
Corn Puffs—Bubbles of Corn Hearts—15c		

Prof. A. P. Anderson, the food expert, invented this method for cooking grain. The process is long and difficult. The grains must be shot from guns. A hundred million steam explosions occur in every kernel.

This is not done to make the foods delightful, but to make them hygienic. It is done to break up all the food cells, while baking breaks less than half.

The results are most enticing. So there is every reason why these great grains should be often served in puffed form.

Keep them all on hand. Some like one best, some another. And all like to change about.

accused of pro-Germanism, asserted in his "German Peril" that Great Britain's doctrine of Supremacy of the Seas was continuously untenable.

Out of the mouth of the onetime Sage of Chelsea it is no difficult matter to prove justification for the position of Germany, but it is singular that the author of *Carlyle and the War*, Marshall Kelly, whose name suggests an Irish origin, should cordially associate himself with the hero-worshipper of Cromwell. This literary *bund* is one of the curiosities of the war bookshelf.

Thanks to Professor Hobhouse we have seen to what a pass iconoclastic individualism brought England in the pre-bellum period. Yet Samuel P. Orth would have us believe this is the best of all possible conditions, and calls France to the witness stand to prove it. "Again all eyes are on Paris," he cries. They are—but to behold a spiritual rebirth, a national unity, a sacred love of the Motherland which must indeed be an astonishment to Mr. Orth.

*The European Anarchy*, by G. Lowes Dickinson, is mainly an able political study demonstrating that the spirit of Machiavelli in European statesmanship brought about the present world cataclysm. He does not seem to perceive, however, that behind this lay an ethical anarchy grasping with its tentacles every human effort. Those who are endeavoring to establish a lasting peace, may find at least a partial solution of the difficulty in emphasizing the need of awakening the social conscience to a reconstruction of ethical principles upon the basis of "law and reason," and, as a learned Brahmin philosopher would add, under guidance of the Supreme Universal Intelligence.

*The World in Conflict*, by L. T. Hobhouse. London, Unwin. 25c. *The Diplomatic Background of the War*, by Charles Seymour. Yale Univ. Press. \$2. *Before, During and After 1914*, by Anton Nyström. Macmillan. \$1.

### THE ROMAN CATHOLIC CHURCH

In *Crises in the History of the Papacy*, Joseph McCabe has written an impartial and complete history. His method is to choose an individual as typical of a period and to study him in his representative aspects, rapidly summarizing the gaps between period and period. Thus St. Calixtus stands for the period before the Bishop of Rome was recognized as Pope, while Innocent III represents the institution at its zenith, and Leo XIII as it was but yesterday. Judicious in selection, orderly in arrangement, lucid in presentation of its subject, this work is an admirable "briefing" of the complex history of one of the most imposing and longest-lived of human institutions. A Catholic might have written with more unction, but we find no hostility in the attitude of the historian, who some two decades since left the priesthood of the Roman Church for a world of freer thought.

*Crises in the History of the Papacy*, by Joseph McCabe. Putnam. \$2.50.

M., July 31, 1916. The transfer books will not close.

D. H. FOOTE, Secretary.

San Francisco, California, July 7, 1916.

# The Market Place

## THE LOAN TO FRANCE

The new loan of \$100,000,000 to the French Government has been regarded with much interest on account of the novelty of the plan adopted by the strong American syndicate which has undertaken to supply the money. This syndicate, led by J. P. Morgan & Co. and Brown Brothers & Co., includes the National City Bank and the Guaranty Trust Company, with other prominent trust companies, banks, and banking firms. Chicago, Philadelphia, Pittsburgh and St. Paul are represented, as well as New York. For the Anglo-French loan of \$500,000,000 the security was the credit and wealth of France and Great Britain. This time it was proposed that the government bonds of ten nations, with certain other securities, should be used as collateral, and the bonds, while undoubtedly of good quality, are of a character that does not appeal to American investors.

Therefore a new American corporation was formed, the American Foreign Securities Company, with a capital of \$10,000,000. Robert Bacon, formerly Ambassador to France, is president, and the board of directors is a notable group of financiers, including the presidents of our leading banks and trust companies and the heads of great banking houses. This company loans \$100,000,000 to France, and has asked American investors to buy its own notes to the amount of \$94,500,000. These have a term of three years, bear interest at the rate of 5 per cent, and, offered at 98, yield for the full term about 5.735 per cent a year.

France deposits here, as collateral security, bonds of Argentina, Sweden, Norway, Denmark, Holland, Switzerland, Uruguay, Brazil, Egypt, Spain and the province of Quebec, with Suez Canal shares, and less than \$4,000,000 of United States securities, the value of all being \$113,449,000, and agrees to add other bonds from time to time in order that the value of the collateral shall always exceed the principal of the loan by 20 per cent. As we have said, the bonds deposited by France are not attractive to investors here, who know little or nothing about them. But the new holding and loaning company is well informed as to their value, and it serves as an intermediary, offering its own gold notes, as to the soundness of which there can be no question whatever. It is not surprising that the issue was promptly oversubscribed.

## If You Lived As The Cave Man Lived

*Your health would take care of itself*

The cave man ate coarse food and lived a strenuous life in the open. His digestive apparatus was suited to that kind of an existence.

You inherit from the cave man the same internal mechanism, but you eat different food and you lead a different kind of a life. Hence the almost universal prevalence of constipation and its constant menace to health.

Your problem is to adjust that "cave man" internal mechanism of yours to the sedentary life and concentrated food of civilized man. NUJOL accomplishes this adjustment by preventing the bowel contents from becoming hard, thus making natural movements easy. It doesn't upset the ordinary processes of digestion and it doesn't form a habit.

NUJOL is sold in pint bottles only, at all drug stores. Refuse substitutes—look for the name NUJOL on the bottle and package.

STANDARD OIL COMPANY  
(New Jersey)

Bayonne New Jersey  
Dept. 12

## Merchants & Miners Trans. Co.

W. P. TURNER, G. P. A., Balto., Md.

Consult any ticket or tourist agent.

Probably this company will be engaged in other similar loan transactions. A good and serviceable instrument has been found, and it will be used. A new British loan is expected, and it may be negotiated by the agency of this new corporation. If so, while the securities of South American and of European neutral countries may be included in the deposited collateral, United States bonds and stocks, large quantities of which have come into the possession of the British Government, may be added. Such securities, the continuing sale of which on the New York Stock Exchange has restrained and sometimes depressed the market, are brought here by steamships. A consignment valued at about \$20,000,000 arrived last week.

Shipments of gold from Canada have not been checked. The amount received since the beginning of this movement, on or about May 1, slightly exceeds \$200,000,000. Last week \$20,000,000 came by rail from Halifax, having been brought to that port from England on a warship. It is difficult to ascertain the sources of the greater part of this supply of gold, however, but it is believed that much of it comes from the mines of the Transvaal, Canada and Australia, which yield about \$21,000,000 a month. A part may have been drawn from the Government banks of the Allies.

This loan to France makes a total of \$1,204,500,000 which has been loaned here to foreign countries since the beginning of the war. At the head of the list, of course, stands the Anglo-French loan of \$500,000,000. Canada and the Canadian municipalities and provinces have borrowed \$240,000,000, France \$185,000,000, and Argentina \$75,000,000. Italy, Switzerland, Sweden, Norway, Greece, Chile, Bolivia and Costa Rico have taken comparatively small amounts, and Russian credits are \$82,000,000. If the loans placed privately could be exactly measured, the total would be increased by \$150,000,000 or even \$200,000,000.

## METALS

If the demand for munitions is declining, the purchases of raw or half finished steel by the Allies and European neutrals continue to show an increase. Great orders for rails, wire, steel bars, steel forgings, and other material to be used in foreign munition factories sustain the iron and steel industry. These orders now include 100,000 tons of shell steel for France, Italy has bought 40,000 tons more of pig iron, and our own Government seeks 1,000,000 shells for the navy. For the third time this year the American Tin Plate Company has increased the wages of its employees, the total having been 19 per cent. Large output, with declining demand, has depressed the price of zinc. This is also true of copper, the price of that metal having fallen from the recent summit of 29 1/4 cents a pound until producers are asking 26, and the buyers offer only 24. This is the natural effect of the increase of production.

# Insurance

Conducted by

W. E. UNDERWOOD

## UNRELIABLE LIFE INSURANCE

It is quite evident from the number of inquiries I receive from readers who are seeking information about assessment associations and fraternal orders, that the representatives of those organizations are increasingly active. In what I am about to write, it is not my intention or desire to injure that class of insurers, for I fully appreciate the work they have done and are doing in educating that portion of the population which they reach to the importance of making provision against the misfortunes resulting from the deaths of men and women with dependents.

But their way, or rather the way of a vast majority of those institutions, is a poor one. Until they adopt a better way criticism of their system must necessarily continue.

The business of insuring lives is not a mystery. It is as simple and comprehensible as any ordinary problem in arithmetic. It is known with reasonable accuracy how many insured persons at each age will die and how many will survive each year. The survivors continue to pay until their deaths occur. They are fewer in number and closer to death every year. Inevitably, the cost increases. Enough money must be collected in advance to pay for each death as it occurs, including the last man in the group. Any one can see how impossible the scheme would be if we attempted to collect into extreme old age the actual sum needed each year. It is easy going, so far as cost is concerned, from age twenty to thirty; it is moderate from thirty to forty; it is becoming serious between forty and fifty, and from there onward it grows from burdensome to prohibitive. There is but one solution: Pay more than enough from the beginning, invest the overcharge and let interest take care of the future burden. That is the old line, legal reserve way. It seems to be the only reliable solution of the problem.

There are a few assessment associations and many fraternal orders operating under makeshift arrangements in the matter of reserves for offsetting accumulating liabilities consequent upon increasing age. Unless their rates include, from the beginning, a provision for a mathematically ascertained reserve, adequate to meet the growing liabilities, there will be trouble in the shape of rate readjustments and increasing costs during a period of life when they can least be borne. Nothing less than a reserve based on a standard mortality table, assuming an interest rate of 3½ or 4 per cent, will serve.

# AMERICA'S GREAT CIRCLE TOUR

Sailing from Seattle Eastbound about November 22, 1916, and February 7, 1917 **"ALASKA"** Sailing from Philadelphia Westbound about January 4, 1917, and March 15, 1917

SUMMER is late. Plan to take this winter voyage on Summer Seas as your vacation. See Havana and Santiago, Cuba, the island famed as "Queen of the Antilles"; see Kingston, Jamaica, and the Blue Caribbean; Colon, Panama and the greatest modern work of man, the Panama Canal, eighth wonder of the world; see San Diego and Los Angeles, the Mission cities of California, San Francisco, the city of the Golden Gate, and Seattle, the New York of the Pacific Coast. The high-powered, commodious steamship Alaska, with excellent service, is the ideal boat; no inside rooms, no rooms with more than two berths. Inviting social halls and dining room, observation room, broad promenade and shelter decks. From Seattle to Philadelphia, 26 to 28 days, day ashore each port of call. Rates, including berth and meals, \$200 to \$275. All tickets first class; number limited for each trip. Make reservations early.

Interesting colored folder "America's Great Circle Tour" just off the press, with complete information. Where shall we send your copy?

Address John H. Bunch, G. F. and P. A., **ALASKA STEAMSHIP CO., 426 Colman Bldg., Seattle, U.S.A.**

## ARE YOU GOING TO BOSTON?

Ladies going to Boston without male escort find the Franklin Square House a delightful place to stop. A home hotel in the heart of Boston for young women, with a transient department. Safe, comfortable, convenient of access; reasonable. For particulars and prices address:

MISS CASTINE C. SWANSON, Supt., 11 East Newton St., Boston.

## The University of Chicago

**HOME STUDY** in addition to resident work, offers also instruction by correspondence. For detailed information address

25th Year U. of C. (Div. M) Chicago, Ill.

## Book on Law Free

Write today for our new 171-page book on "The Power of Law Training." It carries a vital and inspiring message to every ambitious man. Find out about the opportunities that await the law trained man. Find out how you can learn from masters of the law right in your own home. No obligations. The book is absolutely FREE. Now while we are making a special reduced price offer.

**Write Today** American Correspondence School of Law 8240 Manhattan Bldg. Chicago, Illinois

## Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence is removed from the hospital, is homelike and ideally located.

**Requirements:** At least one year of high school or equivalent. Age limit—18 to 35 years.

**Remuneration:** \$10.00, \$12.00 and \$15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

# THE CHAUTAUQUA IDEA

O trains go to Chautauqua. You pick out a railroad that seems to run in that general direction and when you get nearest to the place you drop off the train

and go the rest of the way in a trolley or a boat. Consequently it takes time to get to Chautauqua. It took me forty years. I determined to go there as soon as I heard of the place which was, if I remember right, while I was around looking at the Corliss engine and the butter woman at the Centennial. But it was a long, long way to Chautauqua, I being in Kansas, and Chautauqua got tired of waiting and came to me instead. There were, it appeared, certain cabalistic letters, C. L. S. C., which properly repeated would give access to the magic circle wherever one might be. From the announcements I inferred that I was entering upon a prescribed course of reading for no more than four years and that I could drop it at any time. But you never can depend upon those prospectuses. I have been reading the C. L. S. C. course for forty years and can't drop it. It is harder to get out of than a coöperative life insurance association. And yet I haven't any certificate or seals or badge to show for it—nothing but the information and the pleasure I got out of it and that doesn't show. I think President Bestor ought to give me a Mother Hubbard with red bands on the sleeves and throw a Bagdad stripe around my neck as a reward for my assiduity. Any other educational institution would have done it long ago.

The reason why I never really got thru with the Chautauqua Literary and Scientific Circle reading is because they keep running in new books on me. Only the other day I got hold of one—by mistake, it being disguised in an ordinary binding, Powers' "The Things Men Fight For." I didn't intend to read it—I was only going to review it—but I incautiously read a few pages and then it was all up with me. I had to go thru it.

In the early days of the C. L. S. C. they did not give us such books as this one of Powers', that slips down like an egg phosphate, cool, pleasant, nutritious and digestible. No indeed, we had to use our teeth in those days and tough gnawing it

was too sometimes. They started us off on "The Philosophy of the Plan of Salvation" and Timeyenis's "History of Greece," knowing that anybody who got thru these would never shy off at any book.

The parent plant that grew up on Chautauqua Lake sent runners underground all thru the land so that little Chautauquas began to sprout up in every state. One of the first of them grew and flourished in my own state, on the banks of the Marais du Cygne, the Swan's Marsh, made famous thru a great tragedy and Whittier's poetry. Here we tented in the woods and made the acquaintance of most of the original band of Chautauquans; Gunsaulus, with his great lecture on Savonarola; Dan Beard, who used to make cartoons and clay figures to order; Sherwin, genial tyrant of the baton, who would scold his chorus till they cried and then heal all hearts with his "Day Is Dying in the West"; Hurlbut, who could sort out and distribute the tribes of Palestine as deftly as a postal clerk will throw the mail into its pigeonholes. He knew where they all belonged on the map, the Hittites, the Jebusites, the Perizzites, the Ammonites, the Belemnites, the Trilobites, and all the others that end in "ite." Dr. Hurlbut was the only one of that Old Guard whom I found at Chautauqua when I got there after forty years of wandering in the wilderness. He seemed astonished at my memory of the Palestinian tribes; said he could not remember half of those I mentioned.

But altho there are new speakers and new features at Chautauqua now, I was glad to see that they kept up the best of the old practises, particularly the reading of poetry. What used to astonish me as a boy at the Ottawa Chautauqua was a man—I forget his name—who used to read Milton as tho he enjoyed it, and so did we, while he was reading. At the Chautauqua Chautauqua I did not hear Milton, but they were listening to poetry, all kinds from "Othello" down to "Quoodles." You would see live

poets like trees walking, only they weren't labeled like the trees with their scientific names, so you couldn't always tell them from ordinary people. They ought to be tagged, "Poeta perrenialis, var. vers-libre." A modern poet is likely to look like a drummer, and a modern poetess may look like anything from a Greek goddess to a haystack.

And the poetry is really read, not hung on trees or printed. The Chautauquans know that poetry is a vocal art, not a branch of typography. Some people, it is said, can read music, getting as much enjoyment from looking at a page of the score as from hearing it rendered by the finest orchestra. Perhaps also there are people who can read poetry silently, but they must be as rare.

Now, at Chautauqua they long ago discarded paper poetry in favor of the real thing. They have also brought back philosophy and politics to their original academic form, that is, to their grove or where men talk face to face about what they think. The woods were God's first temples and they were man's first schoolhouses as well.

There is no reason why there should not be as good talk under the maples beside Lake Chautauqua as there was under the plane trees beside the Ilysus. Very likely there is, only there does not seem to be any stenographer as good as Plato to take it down. Certainly if there is any Socrates alive now he must have been caught in the Chautauqua net sometime, for Mr. Bestor flings his seine far, and gathers in many strange fish.

Books one can read anywhere and anytime but to hear what the men who are thinking have to say for themselves and how they say it there is no place like Chautauqua. Here in the course of a season one may see all the latest novelties in thought pass across the platform like the models at a fashion show. Here the newest philosophy meets the oldest in single combat. The debates that are started in the auditorium are carried to the porch

and to the grove. So it was that thought flourished in Greece; the Stoic was the porch school, the Peripatetic was the walking school, the Academic was the grove school. Akademia became in time the name of an institution instead of a place and Chautauqua is on the same road toward becoming a common noun.

### JUST A WORD

In the Educational Number of The Independent, to be published next week, there will be several important articles on the problems of public and private schools. Philander P. Claxton, United States Commissioner of Education, who is responsible for the schooling of twenty-two million citizens-to-be, will set forth his theories of "Educating a Nation." The numerous distractions that complicate the work of the private schools to-day will be discussed by George H. Browne, headmaster of the Browne and Nichols School in Cambridge, Massachusetts.

A comprehensive review of the new text books of the year will also be presented. For the grades there are books on reading and 'rithmetic—'riting is there too under various other names—farm and gardening books, and French and Spanish readers and grammars. Many new suggestions are made for School and College English.

We did not realize how many of our readers own automobiles or motor boats until we began to get telephones and letters in reference to the statement made in our issue of July 24 that the submarine "Deutschland" "consumed only 85 gallons of fuel oil" in coming over, or rather under, the ocean. We regret that we must blast their hopes of cheaper power by confessing that either the intelligent compositor or unintelligent editor got in "gallons" where it should be "tons."

### THE THINKER

Back of the beating hammer  
By which the steel is wrought,  
Back of the workshop's clamor  
The seeker may find the Thought,  
The thought that is ever Master  
Of iron and steam and steel,  
That rises above disaster  
And tramples it under heel.  
  
The drudge may fret and tinker  
Or labor with lusty blows,  
But back of him stands the Thinker,  
The clear-eyed man who knows;  
For into each plow or saber,  
Each piece and part and whole,  
Must go the brains of labor,  
Which gives the work a Soul.  
  
Back of the motor's humming,  
Back of the bells that ring,  
Back of the hammer's drumming,  
Back of the cranes that swing,  
There is the Eye which sears them,  
Watching thru stress and strain,  
There is the Mind which plans them—  
Back of the brawn, the Brain.  
  
Might of the roaring boiler,  
Force of the engine's thrust,  
Strength of the sweating toiler,  
Greatly in these we trust,  
But back of them stands the schemer,  
The Thinker who drives things thru,  
Back of the job—the Dreamer  
Who's making the dream come true  
*Berton Brady in American Machinist*

### REMARKABLE REMARKS

GENERAL FOCH—It goes well.  
GENERAL HAIG—Our cause gives us strength.  
THEODORE ROOSEVELT—Fatuity is apt to be reason-proof.  
GENERAL PERSHING—Send candy to your boy at the border.  
THE DUKE OF MANCHESTER The hardest work is the pursuit of pleasure.  
WOODROW WILSON—If you want to make enemies try to change something.  
CHANCELLOR VON BETHMANN-HOLWEG—Be thankful that we have a monarchy.  
HENRY FORD—True democracy cannot exist where the soldier holds precedence.  
BARON SHIBUSAWA—Now is the time to demonstrate the moral tone of this nation.  
SECRETARY REDFIELD—The one cent paper will be a thing of the past in a short time.  
CAPTAIN KOENIG—Just as sure as the "Deutschland" came to America so will Zeppelins.  
W. W. HUSBAND—The relative Americanizing power of the farm and industrial center is as 95 to 5.  
ED. HOWE—I have seen an entire gallery of Raphael's paintings and not a good one in the collection.  
CHARLES E. HUGHES—My dream of America is America represented in public office by its best men.  
EMPEROR WILLIAM—Suppose Christ entered at this moment thru yonder door. Could we look into his face?  
HERR BALLIN, of the Hamburg-Amerika Line—This is the greatest, bloodiest and most idiotic war in history.  
LILLIAN RUSSELL—There is no consolation in being told that bald people are not to be found in insane asylums.  
VICE-PRESIDENT MARSHALL—Never in all history was George Washington as much alive as he is at this moment.  
DR. E. A. STEINER—No teacher ought to be employed in our schools who does not speak English contagiously well.  
KING PETER—There are two patriotisms. One consists of hating the countries of other peoples; the other in loving one's own.  
CLARENCE DAY, JR.—If our children were born when they were about seven years old, they would look more shaped-up, as it were.  
DAVID LLOYD-GEORGE—Great as the British infantry was in Wellington's and Napoleon's day, it never has been greater than now.  
DR. MAX NORDAU—The United States was the first nation the world has ever known that disavowed conquest as a legitimate fruit of war.  
BETTY VINCENT—There must be a rapid decline in the mind of a pure girl before it is possible for her to put a vile cigaret between her clean lips.  
GEORGE MOORE—New social ideas are destroying the great estates and making it impossible to keep valuable art works from one generation to another.  
GENERAL NELSON A. MITES—These overseas expeditions spring from the minds of men writing about preparedness who know less about preparedness than anything else.  
BARON SARATANI—If the United States of America will join with the Allies and enter an agreement to assist Great Britain, France, Russia and Japan in the maintenance of the peace, that peace which the world so long for will be realized and endured.

## SILVERWARE IN THE HOME

Silverware shares this distinction with books, that it lends an atmosphere of refinement to the home.

It has even something of the companionable quality of books, for one never tires of its society.

Above all, silverware is substantial — it carries weight, both literally and figuratively — it contributes something to the home which is out of all proportion to the cost — it lends to its surroundings the radiance of intrinsic worth — it has the hospitality of friendship and the integrity and imperishability of home.

But whether you buy silverware  
for ornament or for use —  
for table or for mantel —  
for sideboard or for centre piece —  
for beauty or for service —  
for breakfast, luncheon, dinner or tea  
— *do not forget that*

**GORHAM STERLING SILVERWARE**  
is the first and last word in silverware  
and is trade-marked thus:

## BOTH SIDES OF THE CAMPAIGN

**W**ITH this issue The Independent begins its presentation of Both Sides of the Campaign. The Democratic side is set forth by Norman Hapgood, former editor of Harper's Weekly; the Republican side by Jacob Gould Schurman, president of Cornell University. These forceful writers will continue their joint debate in our pages at intervals of two weeks until the election.

This double series of articles sets the keynote for The Independent's treatment of the campaign. It will not be partizan; for partizanship means the abdication of personal judgment in favor of party loyalty. It will be independent—it will do its own thinking and form its own judgments. It will be eager to give credit where, in its

best judgment, credit belongs; ready to criticize where it believes criticism is due. It will print and interpret, with all the impartiality and fairness of which the not infallible editorial mind is capable, the news of the campaign. It will discuss editorially the issues of the campaign as they present themselves. It will endorse—and criticize—nothing because it is Republican or because it is Democratic. It will commend with warmth and vigor whatever it believes to be right; it will attack with energy and without equivocation whatever it believes to be wrong, in whichever political camp it may be found.

This, we believe, is true journalistic independence—fairness to both sides, unbiased printing of the news, untrammelled thinking on fundamental issues.

## A BARGAIN IN ISLANDS

**T**HE INDEPENDENT rejoices that the Administration has seized the opportunity to negotiate for the purchase of the Danish West Indies, for we have urged their annexation for fifty years. In our issue of December 27, 1915, we published, under the title of "Our Lost Bargain," a review of the attempts of Lincoln, Seward, Grant and Roosevelt to acquire the islands, and in our issue of March 13, 1916, we printed a full page photograph of the beautiful harbor of Charlotte Amalie and told something of the romantic history of the islands.

This is probably the last chance the United States will have to acquire the islands and it is at any rate an exceptionally favorable time, for the war has loosened Germany's grip upon them and the people are dissatisfied with Danish rule. The government at Copenhagen doubtless means well by the islanders, but it is at best an alien administration, speaking a foreign language, and the officials sent out from Denmark have no real knowledge of local conditions and are apt to impose misfit legislation that they have brought with them from Europe.

Last summer the Governor, Mr. Hedweg-Larsen, had to go back to Copenhagen to answer to the charges of maladministration which had been brought against him. The negroes of St. Croix, the largest of the three islands, had secretly collected in amounts from ten to thirty cents the sum of \$280 to pay the passage of one of their number, Mr. Jackson, to Denmark, where he brought their complaints before the king and the government. He told the ministers that the officials they

were sending out were "narrow-minded bureaucrats," who treat the negroes like dogs, not allowing them to issue a newspaper or hold political meetings. "The negroes live in abject poverty and the hospitals are beyond description."

Another cause of complaint is absentee landlordism and land monopoly. The *West End News* of Fredriksted, St. Croix, says:

Let the big concern, as well as the planter, keep all the land which they cultivate, but let the common black man get a chance to acquire and utilize the land which is now lying waste and unused to the benefit of nobody.

The reality of the discontent with Danish rule is proved by the rate at which the negroes are leaving the islands for Porto Rico and the United States to seek better opportunities and a freer atmosphere under the American flag. More than four hundred have come to New York City and unless the Danish administration is reformed they threaten to desert the islands in mass and move to America. The people of the Danish West Indies all speak English and the recent efforts of the government to make Danish the language of the islands is not meeting with favor. If the question of annexation to the United States were put to popular vote the majority in favor would probably be as large as in 1868 when annexation was carried by 1244 to 22. But the plan for the purchase failed then thru what President Wilson aptly called "the treaty-marring power of the Senate." The determining influence was the personal feud between Senator Sumner and President Grant.

Fourteen years ago when President Roosevelt and Secretary Hay took up the question the treaty of annexation passed the Senate but was defeated by a tie vote in the Upper House of the Danish Parliament thru German money and German court influence. Prince Waldemar held a banquet in celebration of the victory and in cooperation with German capitalists started in to develop St. Thomas into a port that should enable the German steamship companies to dominate the trade of Central and South America as the British dominate the trade of China from the similarly situated port of Hong Kong. No doubt the present treaty will also be fought by German influences in various and devious ways, but Germany is so busily occupied just now that prompt action by the Senate may win the game for us.

### A FAIR PAGE BLOTTED

**W**HEN the super-submarine "Deutschland" unostentatiously broke water inside the Virginia capes and placidly swam into port after her three thousand mile voyage, it was difficult to repress a cheer for the courage and hardihood of the German seamen and the inventive genius of German industry. The Great War has put the capstone on the German reputation for constructive skill, for administrative organization, for industrial effectiveness, for collective efficiency. But it has done more than that. It has shown that the German, as man, has good stuff in him. It has shown him brave—such victories as the German arms have won on land were never the work of faint-hearted men. It has shown him daring—on the sea and under it, and in the air over sea and land, he has taken always the long chance and held his life at a farthing's price for the Fatherland's sake.

When History comes to write the book of the Great War, many a fair page will be filled with even-handed praise of German efficiency, of German valor, of German devotion. But the pages will be sadly blotted. For the story of German official brutality and ruthlessness will lie like the trail of the serpent over them all.

The murder of Edith Cavell will never be erased from those pages. Nor will the execution, after summary trial by court martial, of Captain Fryatt, of the British Channel steamer "Brussels." His offense was that with his merchant ship he tried to ram a German submarine. This is not justice; it is mere frightfulness. Never in the history of international law has the penalty for such an act as Captain Fryatt was accused of been death. When he forcibly resisted capture he exposed his vessel to instant destruction; but once peacefully captured he was no more subject to the death penalty than is any prisoner of war. This is the law of the case, as it was before the exigencies of the German dilemma on the seas led the German Government to substitute frightfulness for law.

Sir Edward Grey spoke a true word when he said, "Germany cannot have it both ways." It is precisely because Germany has tried to that crimes like the Fryatt execution have been committed. Germany first made out of the vulnerability of the submarine an excuse for absolving the under-water boat from the universally accepted prohibition against attacking merchantmen without warning. Then, when the captains of Allied merchant ships found that they must either try to resist or

be sunk without warning, Germany courtmartialed and shot the first captain it caught resisting. So frightfulness seeks to have it both ways. But the opinion of mankind will not have it so. The blot on History's page will be erased by no sophistical argument or plea of necessity.

### ONLY THE INSIDE DOOR

**I**T is announced in the Duma that England will turn over the Strait of Dardanelles to Russia—when she gets it. The English press agrees that the possession of an open door is indispensable to Russia's peace and prosperity.

But the possession of the Dardanelles alone does not give Russia access to the ocean and the commerce of the world. May we then expect that Great Britain intends also to turn over to Russia either Suez or Gibraltar? If not, Russia remains a prisoner. The cell door may be opened, but another still holds the keys to the gates of the prison yard.

### A FINE LEGISLATIVE RECORD

**I**N a presidential campaign the party in power has the advantage of position—if it has a good record. It can "point with pride," while the opposition can only "view with alarm"; and when the record is a substantial one, sounding the alarm is not too easy a task.

The record of an administration has two sides, the executive and the legislative. In the present campaign the Democratic record of legislative achievement is a notable one. Chairman McCormick, of the Democratic National Committee, has just issued a summary of it, intended for Progressive consumption. It contains a score of items:

(1) The rural credits act, which permits the farmer the same access to credit facilities that is enjoyed by the other elements of our citizenship.

(2) The income tax law.

(3) The federal reserve act, which measures up to the Progressive requirement for "the issue of currency as a governmental function under a system whose control should be lodged with the government and should be protected from domination or manipulation by Wall Street or by any special interest."

(4) The good roads law, which extends federal aid to road building.

(5) The trade commission law, which fully satisfied the Progressive demand for a "strong federal administrative commission of high standing that shall maintain permanent, active supervision over industrial corporations engaged in interstate commerce."

(6) An eight-hour law applying to work done for the government as well as work done by the government.

(7) An eight-hour law applying to female employees in the District of Columbia, over which Congress has jurisdiction.

(8) An eight-hour provision for post office clerks and carriers.

(9) An eight-hour provision applicable to civilians engaged in the manufacture of ordnance and powder for the government.

(10) An eight-hour provision as to the mining of all coal to be used by the navy.

(11) The children's bureau law to promote the welfare of children and to devise means preventive of the necessities of parents retarding development of the child.

(12) The industrial commission law to investigate the entire subject of industrial relations.

(13) The phosphorus match law to protect the health of workers in the match industry.

(14) The Clayton anti-trust act, embracing the regulation of the issuance of injunctions.

(15) The Department of Labor law, creating a department with a secretary, who shall be a member of the President's Cabinet.

(16) The Smith-Lever agricultural education law, which responds to the Progressive demand that measures be taken to lift "the last load of illiteracy from American youth" by "encouraging agricultural education and domestic schools."

(17) The corrupt elections practices act.

(18) Measures abolishing the Commerce Court and authorizing the Interstate Commerce Commission to make a physical valuation of railroads.

(19) The Sherwood pension bill, which must meet the Progressive idea of a "wise and just policy of pensioning American soldiers and sailors and their widows and children."

(20) The parcels post law.

This is impressive. Standing on such a record of accomplishment as this, the Democrats are entitled to feel confident. The attack upon their position must be made from another angle. The indications are that it is on the executive acts and policies of the administration that the heavy guns of the Republicans will be brought to bear. But that is another story.

### OUR BEASTLY INTIMATES

THE doctors are having a hard time finding out how the germ of infantile paralysis gets about. It attacks rich and poor alike, and seems to have no connection with mosquito ponds or sewer pipes. But so many cases are reported from households where there are animal pets that some physicians have come to the conclusion that the microbe is conveyed by them. If this theory proves true it will add another to the many diseases which come to man because of his fondness for living with the lower animals. It is a habit he finds it hard to break off, for it is an old habit, several hundred thousand years old. For when man first took to living in caves he had many faunal commensals whose pictures he drew upon the walls. The mastodon was doubtless too big to be made a pet of, but the reindeer and the horse man took in and tamed. Soon the wildcat and the wolf crept in to get by the fire, and man made them useful.

Now the automobile has left the horse and reindeer far behind, and soon they will find their occupation gone. The watchdog cannot compete with the electric burglar alarm, and the cat is not half so good a mousetrap as one made of wire. But man is not like those climbers who cut their humble associates as they rise in the social scale. Altho he has climbed the ladder of evolution to the very top, he still retains a fondness for his poor relations and likes to have them in his house, even tho they are useless and bothersome. The Irish peasant keeps the pig in the parlor. The Russian muzhik sleeps beside his cow. The southern cracker likes to have the chickens running under the table. These customs are quite excusable, for they are based on convenience and economy, but no such good reason can be given for the admission of cats and dogs to the family circle by those persons who are rich enough to be more select in the company they keep. But it seems that the richer people are the more they take to beasts. If the presence of dogs and cats make a home unwholesome for children, why the children will have to go, that's all. In fact, the children have already gone from thousands of the wealthiest homes, and various fantastic brutes have taken their places. Stroll down Fifth Avenue on a sunny afternoon and you will count twice as many dogs as babies. In fact, you might think that you had chanced by mistake upon one of those Cities of the Blind that they are building in Europe, so many of the ladies and gentlemen are being led along the

sidewalk by dogs. It is indeed a touching sight to see these wealthy people whom some would call hard and selfish lavishing their money and devoting their personal attention to animals who are rarely beautiful and never useful, and whose only claim upon man's gratitude is that their remote ancestor may have helped him herd sheep or guard the cabin door.

### PLAYING WITH THE GULF STREAM

THE Gulf Stream is one of the handiest things we have in New York. The newspapers would hardly know how to get thru the year without it. It is the universal solvent of our problems; the common scapegoat of our sins. A crime wave or an epidemic of Poliomyelitis is promptly laid to the Gulf Stream. If we blamed the police or the doctors we should cause hard feelings in our peaceful community, but the Gulf Stream flows on without getting a bit hotter about it. When sharks visit our coast resorts or the market price of fish goes up it is ascribed to a shift in the Gulf Stream. Our cartoonists show us Coney Island as it will be in the future; palm trees along the beach with monkeys throwing down coconuts on the happy throng at two throws for a nickel.

The encyclopedia tells us that "north of the Bermudas it is improper to speak of the Gulf Stream." New York is north of the Bermudas, but the Gulf Stream is often spoken of in ordinary conversation, even with women and children present.

Just now we are down on the Gulf Stream because it brings us muggy weather and sharks, but a few years ago we were considering a scheme for erecting a barrage off the Newfoundland banks that would send the Arctic current and its icebergs over to Europe and divert the Gulf Stream to the American side. Labrador then would become a perennial Palm Beach and Greenland would live up to its name. But that would be a mean trick to play on the old folks at home. For the North Sea would become as the Hudson Bay and the people living on its shores, now so lively and hot-tempered, would degenerate into Eskimo and Samoyeds.

A similar scheme for the aggravation of England and the aggrandizement of his own country was devised by a French engineer many years ago. He proposed to cut a canal thru the chain of hills separating the Sahara Desert from the Mediterranean and let the water in. It would, he assumed, flood the whole desert, making of it a second Mediterranean. Timbuktu would then become a seaport and the Mountains of the Moon a new Riviera. The English reviews protested energetically against this because it would turn the Gulf Stream into the Strait of Gibraltar and reduce England to the climate of Labrador. This ingenious project was never carried out, perhaps not so much in deference to British protests as because it was discovered later that the Sahara was not below the sea-level as was assumed.

And now scientists are trying to do away with the Gulf Stream or to diminish its influence. It is not responsible, they say, for the climate of England. Soon they will be saying that it has nothing to do with New York politics. Then we should have to fall back on sun-spots or odic force to account for all the unaccountables. But whatever the scientists may say we, the people of the United States, will stick to the Gulf Stream.

# MR. HUGHES ACCEPTS

SIGNIFICANT EXTRACTS FROM THE REPUBLICAN CANDIDATE'S SPEECH OF ACCEPTANCE

WE desire that the Republican party as a great liberal party shall be the agency of national achievement, the organ of the effective expression of dominant Americanism. What do I mean by that? I mean America conscious of power, awake to obligation, erect in self-respect, prepared for every emergency, devoted to the ideals of peace, instinct with the spirit of human brotherhood, safeguarding both individual opportunity and the public interest, maintaining a well-ordered constitutional system adapted to local self-government without the sacrifice of essential national authority, appreciating the necessity of stability, expert knowledge and thorough organization as the indispensable conditions of security and progress; a country loved by its citizens with a patriotic fervor permitting no division in their allegiance and no rivals in their affection. I mean America first and America efficient.

The dealings of the Administration with Mexico constitute a confused chapter of blunders. We have not helped Mexico. She lies prostrate, impoverished, famine-stricken, overwhelmed with the woes and outrages of internecine strife, the helpless victim of a condition of anarchy which the course of the Administration only served to promote. For ourselves, we have witnessed the murder of our citizens and the destruction of their property. We have made enemies, not friends.

In the light of the conduct of the Administration no one could understand its professions. Decrying interference, we interfered most exasperatingly. We have not even kept out of actual conflict, and the soil of Mexico is stained with the blood of our soldiers. We have resorted to physical invasion, only to retire without gaining the professed object. It is a record which cannot be examined without a profound sense of humiliation.

The nation has no policy of aggression toward Mexico. We have no desire for any part of her territory. We wish her to have peace, stability and prosperity. . . . We demand from Mexico the protection of the lives and the property of our citizens and the security of our border from depredations. Much will be gained if Mexico is convinced that we contemplate no meddlesome interference with what does not concern us, but that we propose to insist in a firm and candid manner upon the performance of international obligations. To a stable government, appropriately discharging its international duties, we should give ungrudging support. A short period of firm, consistent and friendly dealing will accomplish more than many years of vacillation.

The chief function of diplomacy is prevention; but in this our diplomacy failed, doubtless because of its impaired credit and the manifest lack of disposition to back words with action. Had this government by the use of both informal and formal diplomatic opportunities left no doubt that when we said "strict accountability" we meant precisely what we said, and that we should unhesitatingly vindicate that position, I am confident that there would have been no destruction of American lives by the sinking of the "Lusitania."

It is a great mistake to say that resolution in protecting American rights would have led to war. Rather, in that course lay the best assurance of peace.

We denounce all plots and conspiracies in the interest of any foreign nation. Utterly intolerable is the use of our soil for alien intrigues. Every American must unreservedly condemn them, and support every effort for their suppression. But here, also, prompt, vigorous and adequate measures on the part of the Administra-

Copyright Underwood

tion were needed. There should have been no hesitation; no notion that it was wise and politic to delay.

It is apparent that we are shockingly unprepared. There is no room for controversy on this point since the object lesson on the Mexican border. All our available regular troops (less, I believe, than 40,000) are there or in Mexico, and as these have been deemed insufficient the entire National Guard has been ordered out; that is, we are summoning practically all our movable military forces in order to prevent bandit incursions.

In the demand for reasonable preparedness the Administration has followed, not led. Those who demanded more adequate forces were first described as "nervous and excited."

Later, under the pressure of other leadership, this attitude was changed. The Administration, it was said, had "learned something," and it made a belated demand for an increased army.

It seems to be plain that our regular army is too small. We are too great a country to require of our citizens who are engaged in peaceful vocations the sort of military service to which they are now called. As well insist that our citizens in this metropolis be summoned to put out fires and police the streets.

There should be not only a reasonable increase in the regular army, but the first citizen reserve subject to call should be enlisted as a Federal army and trained under Federal authority.

We are deeply interested in what I may term the organization of peace. We cherish no illusions. We know that the recurrence of war is not to be prevented by pious wishes. If the conflict of national interests is not to be brought to the final test of force, there must be the development of international organization in order to provide international justice and to safeguard so far as practicable the peace of the world.

There should be an international tribunal to decide controversies susceptible of judicial determination.

We need conferences of the nations to formulate international rules, to establish principles, to modify and extend international law so as to adapt it to new conditions, to remove causes of international differences. We need to develop the instrumentalities of conciliation.

And behind this international organization, if it is to be effective, must be the cooperation of the nations to prevent resort to hostilities before the appropriate agencies of peaceful settlement have been utilized.

It is only thru international cooperation giving a reasonable assurance of peace that we may hope for the limitation of armaments. It is to be expected that nations will continue to arm in defense of their respective interests, as they are conceived, and nothing will avail to diminish this burden save some practical guaranty of international order.

When we contemplate industrial and commercial conditions, we see that we are living in a fool's paradise. The temporary prosperity to which our opponents point has been created by the abnormal conditions incident to the war.

Our opponents promised to reduce the cost of living. This they have failed to do; but they did reduce the opportunities of making a living.

The Republican Party stands for the principle of protection. We must apply that principle fairly, without abuses, in as scientific a manner as possible; and Congress should be aided by the investigations of an expert body. We stand for the safeguarding of our economic independence, for the development of American industry, for the maintenance of American standards of living. We propose that in the competitive struggle that is about to come the American workingman shall not suffer.

We must build up our merchant marine. It will not aid to put the Government into competition with private owners. That, it seems to me, is a counsel of folly.

We stand for the conservation of the just interests of labor. We do not desire production, or trade, or efficiency in either, for its own sake, but for the betterment of the lives of human beings. We shall not have any lasting industrial prosperity, unless we buttress our industrial endeavors by adequate means for the protection of health; for the elimination of unnecessary perils to life and limb; for the safeguarding of our future thru proper laws for protection of women and children in industry; for increasing opportunities for education and training. We should be solicitous to inquire carefully into every grievance, remembering that there are few disputes which cannot easily be adjusted if there be an impartial examination of the facts. We make common cause in this country, not for a few, but for all; and our watchword must be cooperation, not exploitation. No plans will be adequate save as they are instinct with genuine democratic sympathy.

I endorse the declaration in the platform in favor of woman suffrage.

Our opponents promised economy, but they have shown a reckless extravagance. They have been wasteful and prodigal. It is time that we had fiscal reform. We demand a simple business-like budget. I believe it is only thru a responsible budget, proposed by the Executive, that we shall avoid financial waste and secure proper administrative efficiency, and a well-balanced consideration of new administrative proposals.

# THE STORY OF THE WEEK

## First Month of the Somme Battle

On the first day of July, the British and French launched their offensive against the German lines, opposite Albert. The end of the month finds them about four miles ahead of their former positions at two points on their twenty-five mile front. The greater part of this gain was made during the first few days. Since the Germans have rallied from the shock of the onset the advance of the Allies has been slackened, tho each week has seen definite gains. The British troops engaged are said to outnumber the French two to one, and besides, the French contingent is composed in part of Senegalese and Turcos from Africa who, according to the Germans, do not fight so effectively as the Frenchmen.

The British have given the post of honor in the front to the Australian and New Zealand troops, who, since the abandonment of the Gallipoli campaign, have been brought to France. It was these Anzac men who last week took the village of Pozières. This lies to the north of the British line and on the road from Albert to Bapaume, about seven miles beyond.

Hill 160, just beyond the village also captured last week, is the highest point of land in this section. The next promontory, two miles to the east in the Foureaux Woods, is Hill 156 and therefore thirteen feet lower. This also is now in the possession of the British.

On the extreme left of the British line, west of Pozières, the Germans still hold a point that forms the apex of an angle in the new British front.

This is the village of Thiepval. Probably the British will direct their efforts toward this point for the purpose of straightening their line before undertaking a further advance toward Bapaume.

Delville Wood, east of Foureaux Wood, was taken by the British on July 17, but the Germans regained it. Now, however, it is again in British hands after a terrible struggle. The English soldiers call it "Devil's" Wood, for when it was recaptured it was found filled with dead and wounded men from both armies lying among the broken branches and the barricades of fallen trees. Some of the best of the German troops, the Brandenburgers, have been brought from Verdun to check the British advance.

In this hard fighting on the Somme, the British and Germans have learned to respect one another as never before. A copy of a speech made by the Kaiser to the Third Guard, as it was transferred from the Russian to the British front, was captured on a prisoner. In this the Kaiser warns the Guard: "The foe fights differently over here. He is tougher, more resisting, more adroit, more versatile." This is a change from the tone in which he is said to have referred to "the contemptible little army" of General French at the outset of the war.

## Russians Take Erzingan

The Russian campaign from the Caucasus was halted for some time after the capture of Erzerum and Trebizond. The road between these places was still held by the

Turks, and near Mush, south of Erzerum, they delivered a counter offensive in force. But on July 16 the Grand Duke Nicholas was ready to begin a new advance movement. The capture of Baiburt put him in possession of the road thru the mountains from Erzerum to the Black Sea at Trebizond and also enabled him to bring his forces to bear upon Erzingan from the north as well as from the east. Consequently the Turks evacuated Erzingan, apparently without resistance. Erzingan is a hundred miles west of Erzerum and the next town in this direction is Sivas, a hundred and thirty miles further. There is an American hospital and school at Sivas, but the missionaries from this and other Armenian stations have been forced to leave for Constantinople.

## Russians Take Brody

General Sakharoff, who is leading the Russian army toward Lemberg, made another advance in the capture of Brody, the first station on the Austrian side of the frontier on the railroad from Dubno to Lemberg. General von Linsingen has lost heavily in the effort to hold the Russians back at the junction of the Styr and Lipa rivers in front of Brody. Between July 16 and 28 General Sakharoff took 940 officers and 39,152 men, as well as 17 howitzers, 32 other cannon, 100 machine guns, 39 mine throwers and other munitions. This would indicate a very precipitate withdrawal, but the German version represents it as an orderly retirement.

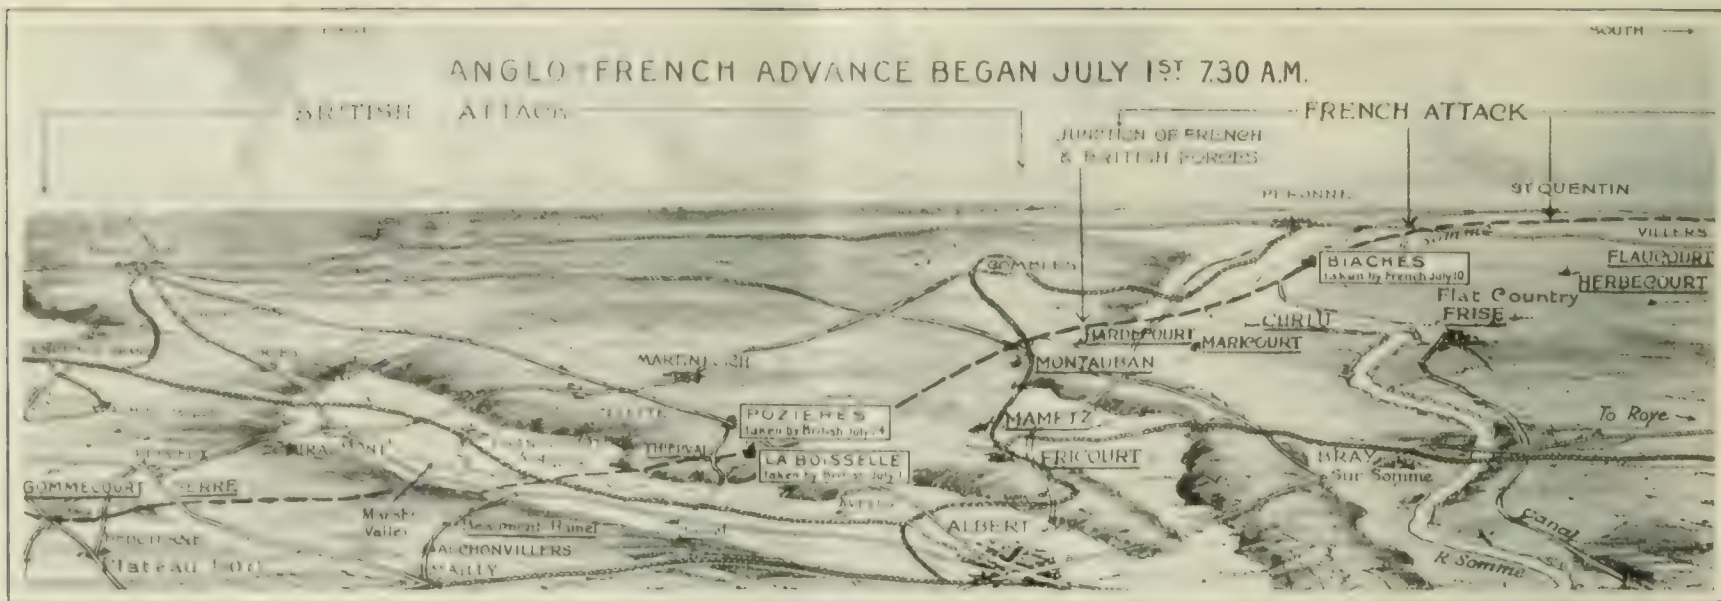

Copyright Associated

## THE ALLIES SEE VICTORY AHEAD

As their capture of the German second line of defense on the Somme continues, the British and French soldiers find convenient observation shelters in the craters their own shells have made.

### THE BATTLE OF THE SOMME

The long-awaited Anglo-French drive began on July 1. Starting from the old line running near Albert the British are advancing toward Bapaume and the French toward Peronne. At the end of the first month the British had reached Pozieres and the French had reached Baches

Lemberg, the capital of Galicia, is fifty-eight miles beyond Brody and the River Bug runs between, on which General Boehm-Ermolli will doubtless endeavor to make a stand. The Russians took Brody in 1914 and held it until September 2, 1915.

On July 15 the Russians made an attempt to break thru the German lines on the Dvina River near Riga, but, according to Berlin reports, they were beaten back and gained nothing more than one outpost.

It is reported that 70,000 Turks are being brought from Constantinople into Hungary in order to resist the prospective Russian invasion. This is one of the most curious of the violations of historic propriety in the present war, for it has been the chief pride of the Hungarians that they saved Europe from the Turks in the seventeenth century.

The resignation of Sergius Sazonoff

as Foreign Minister of Russia has given rise to much speculation as to whether this indicates any change in Russian policy. Since it was under Sazonoff that the entente with England was converted into an alliance of the solidest sort and Russia took up arms against Austria in defense of Serbia, it is natural to see in his retirement the possibility that Russia may be more disposed to make peace. But the policy of Premier Sturmer, who takes his place, is unknown, except that he is a reactionary of the most pronounced type.

#### Questions of Sea Law

The shooting of Captain Charles Fryatt by the German authorities in Bruges has excited almost as great indignation as the execution of Edith Cavell. Captain Fryatt had gained the nickname of "The Pirates' Terror" because of his feats in escaping and

fighting submarines while in command of merchant vessels. For one of these exploits in March, 1915, he was awarded a gold watch by the Lords Commissioners of the Admiralty. According to the official German account, the "U-33" overhauled the Channel steamer "Brussels" off Maas light-ship and signaled her to show her colors and stop. But instead of obeying, Captain Fryatt, in command of the "Brussels," headed the vessel toward the submarine and tried to run her down, but the submarine escaped by diving. The "Brussels" was captured on June 24 last and taken to Zeebrugge. Finding whom they had captured, the Germans tried Captain Fryatt by court-martial, and finding him guilty of acting as a franc-tireur condemned him to death. At the request of the British Government, Ambassador Gerard endeavored vainly to obtain a respite. The Germans have

## BLACKLIST PROTESTED

Acting Secretary of State Polk sent to London, July 26, a strong note in regard to the action of the British Government in prohibiting British subjects from trading with eighty-two specified firms in America suspected of being pro-German. The paragraphs quoted below give the tenor of the note:

The announcement that his Britannic Majesty's Government has placed the names of certain persons, firms and corporations in the United States upon a proscriptive "blacklist" and has forbidden all financial or commercial dealings between them and citizens of Great Britain has been received with the most painful surprise by the people and Government of the United States, and seems to the Government of the United States to embody a policy of arbitrary interference with the neutral trade against which it is its duty to protest in the most decided terms.

"The scope and effect of the policy are extraordinary. British steamship companies will not accept cargoes from the proscribed firms or persons or transport their goods to any port, and steamship lines under neutral ownership understand that if they accept freight from them they are likely to be denied coal at British ports and excluded from other privileges which they have usually enjoyed, and may themselves be put upon the blacklist. Neutral bankers refuse loans to those on the list and neutral merchants decline to contract for their goods, fearing a like proscription. It

appears that British officials regard the prohibitions of the blacklist as applicable to domestic commercial transactions in foreign countries as well as in Great Britain and her dependencies, for Americans doing business in foreign countries have been put on notice that their dealings with blacklisted firms are to be regarded as subject to veto by the British Government. By the same principle Americans in the United States might be made subject to similar punitive action if they were found dealing with any of their own countrymen whose names had thus been listed.

The harsh and even disastrous effects of this policy upon the trade of the United States and upon the neutral rights upon which it will not fail to insist are obvious. The Government of the United States begs to remind the Government of his Britannic Majesty that citizens of the United States are entirely within their rights in attempting to trade with the people or the governments of any of the nations now at war, subject only to well-defined international practices and understandings which the Government of the United States deems the

Government of Great Britain to have too lightly and too frequently disregarded.

There are well-known remedies and penalties for breaches of blockade, where the blockade is real and in fact effective, for trade in contraband, for every unneutral act by whomsoever attempted. The Government of the United States cannot consent to see those remedies and penalties altered or extended at the will of a single power or group of powers to the injury of its own citizens or in derogation of its own rights. Conspicuous among the principles which the civilized nations of the world have accepted for the safeguarding of the rights of neutrals is the just and honorable principle that neutrals may not be condemned nor their goods confiscated except upon fair adjudication and after an opportunity to be heard in prize courts or elsewhere. Such safeguards the blacklist brushes aside. It condemns without hearing without notice, and in advance. It is manifestly out of the question that the Government of the United States should acquiesce in such methods or applications of punishment to its citizens.

always held that franc-tireurs, that is, civilians who fire upon an army of occupation, are liable to execution, and many Frenchmen and Belgians were shot for sniping in 1870 and the present war. But the extension of the term to sea war is an innovation in international warfare. The German contention is that merchant captains who in accordance with the orders of the British Admiralty attack an enemy warship forfeit thereby the rights of non-combatants without acquiring the rights of combatants.

In the "Appam" case both the German and American courts have rendered opinions during the week. The "Appam," a British liner, was captured by the German raider "Möwe" and sent under a prize crew to Norfolk, Virginia. The Berlin court has decided that the "Appam" is a good prize and the gold found on board, amounting to \$185,000, goes to the government. The United States District Court has decided that the "Appam" lost her status as a prize when she entered American waters and that she belongs to her British owners.

After the Dublin revolt the Commission Government for Ireland the Lord Lieutenant of Ireland, Baron Wimborne, and the Chief Secretary for Ireland, Augustine Birrell, resigned their offices. The Royal Commission appointed to investigate the disorder and affix the responsibility reported that the main cause was the reluctance of the authorities to take action that might lead to a conflict with any section of the Irish people, so first Ulster and later the Nationalists were permitted to import arms and drill in defiance of law. For this neglect to suppress sedition Mr. Birrell and not Baron Wimborne was blamed in the report.

On account of the complete breakdown of the government of Ireland five Lord Justices have been appointed to take charge of affairs until the estab-

### THE GREAT WAR

July 24—Italians capture Monte Cimone.

July 25—Russians take Erzincan. German governor fines Brussels \$1,250,000 for anti-German demonstrations.

July 26—British take whole of Pozieres, on Somme. Russians take Brody, Galicia.

July 27—British take Delville Wood on Somme. Captain Fryatt executed.

July 28—Russians claim capture of 350,000 in June and July. Seven thousand Turks sent to defend Hungary.

July 29—"Appam" awarded to British owners. Russians advance from Stokhod River toward Kovel.

July 30—French reach Maurepas, north of Somme. Central Powers claim 2,678,000 prisoners in two years' war.

lishment of Home Rule, thus putting Ireland *ad interim* under what is called in America the commission form of government. Three of these commissioners are justices of the Supreme Court of Ireland. The others are Lord Castletown and Sir David Harrel, former Under Secretary for Ireland.

David Lloyd George, delegated by the Cabinet to arrange a compromise on the Home Rule question, was supposed to have done so and has been appointed Secretary of State for War to succeed the late Lord Kitchener. But altho the assent of both parties to the compromise plan had been secured, serious disagreements have broken out since. Lord Selborne resigned from the Cabinet because he had misunderstood the intentions of his colleagues and supposed the Home Rule bill was to be amended by the exclusion of Ulster.

On the other hand Lord Lansdowne's explanation of the plan to the House of Lords, which was intended to placate the Unionists, gave offense to the Irish and led to a vigorous denunciation by John Redmond. Lord Lansdowne said that 40,000 troops under General Maxwell would be stationed in Ireland to maintain order, and he intimated that the changes to be made in the Home Rule bill would be "permanent and enduring." The Irish members, on the contrary, will not consent to more than the temporary exclusion of the six Ulster counties.

According to the proposed plan

seventy-eight Irish members of the House of Commons will be transferred to the new Irish Commons. They will also retain their seats in the English Parliament. Among those so transferred is, curiously enough, Sir Edward Carson, representing Dublin University, who organized the Ulster rebellion against Home Rule. In the Irish Senate the Unionists will be given considerable representation. This arrangement is to last until one year after the war, when an imperial conference will be held to adjust the government of the empire. It is the hope of the Nationalists that Ireland under Home Rule will be so prosperous that the six Ulster counties temporarily excluded will want to come into it.

**The Irish Dilemma** On the face of it, it would seem that the old quarrel had broken out again with greater violence than ever just at the moment, but the national genius for compromise, aided as it now is by Asquith's political skill and Lloyd George's conciliatory power, may find a way out of the present deadlock. But at present the situation looks black. Since the leaders of the Unionist party, which was formed thirty years ago to oppose Home Rule, have accepted the compromise, members of the Lords and Commons, who are determined to fight Home Rule to the bitter end, have organized the Imperial Unionist Association. And since the Nationalist party have agreed to permit the exclusion of Ulster, the rank and file of the party have lost confidence in them. It appears that the form of agreement to which Lloyd George got Carson and Redmond to agree was afterward altered by the Cabinet in two important particulars. One was that the Irish representation in the London Parliament should be cut down except when Irish affairs were under consideration. The other was that the exclusion of the six Ulster counties might be continued by an Order-in-Council if Parliament a year

THE KILLING OF A SOLDIER BY AN ENEMY SOLDIER. THE KILLING OF A SOLDIER BY AN ENEMY SOLDIER. THE KILLING OF A SOLDIER BY AN ENEMY SOLDIER.

THE FAMOUS FRENCH "75"

Protected by a sand pit, and mounted on a carriage that takes up the recoil without disturbing the aim, this gun will deal death as fast and as long as the gunners can reload it

after the war has not settled their status.

These changes are regarded by Redmond and the other Irish members of Parliament as having been introduced to cheat Ireland out of Home Rule altho the bill has passed. When the Premier tried to explain, the Irish members interrupted with ironical references to his former words that England was "the protector of small nations." One Nationalist was suspended because he accused the government of bombarding the headquarters of the Irish nurses in the recent insurrection. He was on the following day sentenced to six weeks' imprisonment for trying to gain admission to the barracks where the Irish prisoners are confined.

**Dynamite Disaster in New Jersey** A carload of dynamite exploded at Black Tom Island in the immediate neighborhood of Jersey City on July 30, resulting in a series of further explosions and a widespread fire. The plant of the National Warehouse Company, where the explosion occurred, and which was stored with shrapnel and ammunition waiting shipment to the Entente Allies was wiped out and most of the workmen near the scene of the accident were killed. Altho the explosion took place at two o'clock in the morning, when few persons were about, several workmen were killed and hundreds of others were reported as missing. The loss in property was also very severe. The value of the war munitions destroyed is estimated at seven million dollars and the damage to buildings in Jersey City and elsewhere was even greater. Ellis Island was thrown into a panic by the drifting of burning barges loaded with ammunition from Black Tom Island in that direction. The immigration authorities put as many of the immigrants as they could

upon the Ellis Island ferryboat and several police boats, and transferred them to safety at Battery Park, Manhattan. The shock was severely felt thruout New York City and a large part of New Jersey, and was perceptible as far away as Philadelphia. There is no direct evidence that the origin of the explosion was anything but accidental, but the police are busy investigating the matter, since more than once in recent months munitions plants have suffered from the activities of pro-German or anti-militarist agents. The Commissioner of Public Safety in Jersey City has ordered the arrest of Alexander Davidson, superintendent of the National Dock and Storage Company; A. M. Dickman, agent for the Lehigh Valley Railroad, and T. B. Johnson, head of the Johnson Lighterage and Towing Company, all on the charge of manslaughter for permitting high explosives to be left at the pier overnight in violation of the law.

#### Washington Accepts Mexican Commission Plan

The American Government has made public its acceptance of the pacification plan proposed by Carranza for a joint commission to agree upon the conditions of evacuation of Mexican territory by United States troops and to arrange for the policing of both sides of the border so as to prevent any future raids by Villistas or other bandit forces which would compel renewed intervention. To the Mexican proposal is added, however, the further suggestion that the conference might well discuss other matters related to the present unsatisfactory condition of Mexican affairs with a view to their amelioration. The text of the reply addressed to the Mexican Secretary of Foreign Relations is as follows:

Mr. Secretary: I have the honor to acknowledge receipt of your excellency's note transmitted under date of July 12 by

Eliseo Arredondo, your government's confidential agent in Washington, informing me that your excellency has received instructions from the citizen First Chief of the Constitutionalist army, charged with the executive power of the union, to propose that each of our governments name three commissioners who shall hold conferences at some place to be mutually agreed upon and decide forthwith the question relating to the evacuation of the American forces now in Mexico, and to draw up and conclude a protocol or agreement regarding the reciprocal crossing of the frontier by the forces of both countries, also to determine the origin of the incursions to date, in order to fix the responsibility therefor and definitely to settle the difficulties now pending or those which may arise between the two countries on account of the same or a similar reason, all of which shall be subject to the approval of both governments.

In reply I have the honor to state that I have laid your excellency's note before the President and have received his instructions to inform your excellency that the Government of the United States is disposed to accept the proposal of the Mexican Government in the same spirit of frank cordiality in which it is made. This government believes and suggests, however, that the powers of the proposed commission should be enlarged so that, if happily a solution satisfactory to both governments of the question set forth in your excellency's communication may be reached, the commission may also consider such other matters the friendly arrangement of which would tend to improve the relations of the two countries, it being understood that such recommendations as the commission may make shall not be binding upon the respective governments until formally accepted by them.

Should this proposal be accepted by your excellency's government, I have the honor to state that this government will proceed immediately to appoint its commissioners and fix, after consultation with your excellency's government, the time and place and other details of the proposed conferences.

#### Activities of the Senate

The closing weeks of the current session of the Senate are burdened with an exceptionally heavy legislative program. The most important item on the calendar is the budget for national defense. The army bill which passed the Senate on July 27 calls for an expenditure of \$313,970,447, an increase over the House bill of more than one hundred and thirty-one millions. Both the army and navy bills will have to be adjusted by a conference between the two branches of Congress because in each case the Senate has amended the measures which passed the House of Representatives by adding heavy appropriations. Among the legislative provisions of the army appropriation bill is the creation of a council for national defense consisting of the Secretaries of State, War and the Navy, the chief of staff of the army, a naval officer, and six civilians appointed by the President to secure the best utilization of the industries and resources of the country from the point of view of wartime efficiency. Another important section of the army bill provides for the support of the dependent families of soldiers in the regular army and also of members of the National Guard called into federal service. The minimum age of enlistment in the regular army without consent of parent or guardian has been raised from eighteen to twenty-one. The proposed amend-

ment giving soldiers on the Mexican border the right to vote in the November elections if they should be still mobilized at that time, was eliminated from the bill.

The President's emphatic request for the immediate passage of the child labor bill has greatly embarrassed the minority of Democratic Senators who have opposed it, since they had counted upon postponing consideration of the measure until the December session of Congress, when the elections would be safely past. The Republican Senators are almost unanimously in favor of the bill and so are most of the northern Democrats. The Democratic caucus has decided to include the child labor bill in its program for the present session and even the staunchest opponents of the measure realize that a successful filibuster would at the present time endanger Democratic prospects in the fall elections. But it is rumored that as a last expedient an attempt will be made to combine the child labor bill with the immigration bill in the hope that President Wilson will veto the combined measure, since he is known to disapprove emphatically any restriction of immigration which includes the illiteracy test.

The regular appropriation bills for local improvements (disrespectfully known as "pork") are being rapidly pushed thru Congress with little effective opposition. Besides these routine appropriations, the measures for national defense, the immigration bill, the child labor bill and the new expedients for raising the extraordinary national revenues necessitated by the year's legislative program, the Senate must consider the administration's projected shipping bill and the treaty with Denmark for the purchase by this country of the Danish West Indies. On July 24 the Senate unanimously confirmed the nomination of John H. Clarke, of Cleveland, as a member of the Supreme Court.

WHERE THE DANISH FLAG STILL FLIES

The harbor of Charlotte Amalie, in the island of St. Thomas, is one of the most commodious and beautiful in the West Indies. The ship on the right is one of two Hamburg-American liners kept here by the war.

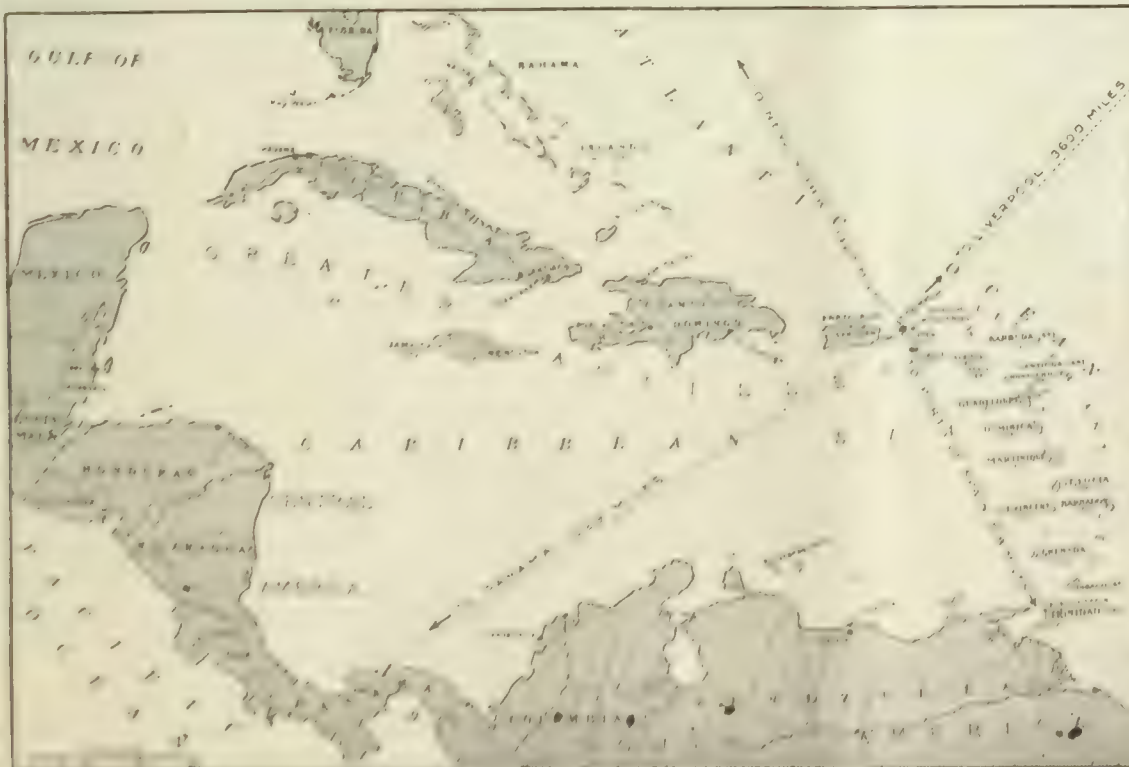

#### Buying the Danish West Indies

On July 25 the United States Government officially announced that the negotiations with Denmark for the purchase of the islands of Saint Thomas, Saint Croix and Saint John had been completed. The price mentioned is the sum of \$25,000,000 and the abandonment in favor of Denmark of any American claims based on explorations which we have undertaken in Greenland. The treaty is so framed that any inhabitants of the islands who desire to do so may retain their Danish citizenship. Twice previously the Danish Government has attempted to sell the islands to the United States. President Grant desired to purchase them, but was forced by the opposition of the American Senate to abandon the project. In 1902 President Roosevelt again opened negotiations, but the treaty was defeated in the upper house of the Danish Parliament, in part thru German diplomatic and court influence. It is probable that the transfer will be approved on this occasion by both the Danish and American Senates, and the proposed plebiscite of the residents of the islands will be little more than a form, since on every previous occasion

when the sale was proposed local sentiment favored it almost unanimously.

The reasons which have induced the Danish Government to make the sale are many. The islands are a drain upon the Danish treasury, and the poverty of the natives, most of whom are negroes, has more than once resulted in social disorders and political agitations which have created serious problems for the administration. In spite of tariff barriers, the United States rather than Denmark is the chief market for the exports of the islands and the chief source of their imports. The islanders speak English more than any other tongue, and the attempts to foster the use of Danish thru the schools and other public agencies have never been successful. In short, Denmark gains little or nothing from the political, commercial or cultural point of view by retaining this portion of her empire, and if she sells at all, must sell to the United States, since the transfer of American territory from one European power to another is understood to be a violation of the Monroe Doctrine.

The advantages which the United States would gain by purchasing the Danish West Indies are largely political and strategic. Saint Thomas has an excellent harbor, recently improved and equipped by German steamship companies; and the location of the islands in reference to Porto Rico and the Panama Canal shows clearly what a help their possession would be to the mastery of the Caribbean. It has been thought by many that Germany contemplated the ultimate acquisition of these islands, even against the veto of the United States, because of the aid they would be to the German merchant marine and the imperial navy, but for obvious reasons the German Government is hardly in a position to object to their sale at the present time. Aside from the shipping industry, the chief economic interest of the Danish West Indies is the raising of sugar cane. The introduction of American capital which is expected as a result of the purchase will probably go far to relieve the present commercial and agricultural depression. Probably the greatest objection which the treaty will meet is that the suggested price of the islands is five times what we offered when the sale was last projected.

THE KEYS TO THE CARIBBEAN

The opening of the Panama Canal has given a new importance to the Danish West Indies, for they stand where the steamer route from Europe to Panama crosses the route from New York to South America.

MR. HAPGOOD

# BOTH SIDES OF

## NORMAN HAPGOOD, FORMER EDITOR OF HARPER'S WEEKLY, SPEAKS FOR THE DEMOCRATS

### TORY OR LIBERAL?

F some dramatic accident, with Germany or Mexico, does not come along to distract attention, the voter who has not yet made up his

mind will be swayed in the end, when he has reflected carefully, by a few simple considerations.

The country is prosperous.

We avoided war with Germany and yet won an epoch-making victory for international law; epoch-making, that is, if Germany does not return to her earlier policy. If she does, it will mean war, and the issues will change.

We have thus far been able to avoid interfering with Mexico's attempt to realize herself. It has been a delicate and difficult maneuver, but up to now it has been accomplished. The voter will ask himself whether he would have preferred a policy based on American investments. Here again, if war comes, the issues will change.

The readers of *The Independent*, who are thinking persons, may well go beneath these simple considerations. Beyond them lies one inclusive question. In which of the two great divisions of human thought do you belong? Are you Liberal or Tory? If you dread the struggle to put ideals into public life, if you deem established privilege the safest foundation, you should next November vote Republican. The platform is a clear production in a way. At least its reactionary spirit is clear. It is like Mark Hanna edited in 1916. Mr. Hughes says he agrees with every word of it. He is a brave and virtuous candidate, an apostle of honesty, who is much more of the old school than Mr. Wilson. It was, I confess, a surprise to me that he was willing to leave the Supreme Court to lead the fight against the President. I

was rather captivated by the report, no doubt fabulous, that in 1912 Justice Hughes said: "The man who, being on the highest judicial tribunal, would consider another office, is fit neither for the one he holds nor the one to which he aspires." Mr. Hughes had undoubtedly right to leave. He stepped down, I am convinced, in full conformity with his conscience. Nevertheless, the Republican newspapers are already quoting his decisions as arguments in the campaign. But what disappointed me was that I had expected a larger, more imaginative conception from him. I had expected him thus to muse: "If it is in any way possible, I shall decline. I may decline in a paper which, like Washington's farewell, will be a guide to generations, lending stability to the nation, making politics in the court impossible, keeping it a court forever, not a nest of political aspirants." I could scarcely fancy him casting his robes aside merely to contest the place with Woodrow Wilson; to prevent, if possible, the continuance of the policies of the last three and a half years, foreign and domestic. For me, the halo suffered thru the decision.

The independence of Mr. Hughes is high. Nobody can control him. If he should be elected, with a Republican Senate, he will find that body dominated by Smoot, Gallinger, Penrose, Lodge (Mr. Roosevelt's choice for President!), young Wadsworth, and such. The House will again be a congenial place for Joe Cannon, and Leader Mann will bloom. Probably Hughes and this Old Guard will fight. At Albany, Governor Hughes made an inspiring spectacle of courage and moral integrity, but he showed no ability to lead the legislature, as Wilson led in Jersey and has led in Washington. Even a Wilson, however, it is important to remember, could not lead a Republican Senate and House. The Democratic reactionary elements are very different from the Republican. They are far weaker and less significant. Southern Senators, for example, are largely reactionary, but they have to conform; there is nothing else to do; a man like Wilson can make them come along. The Democratic machines in

the northern cities are often black spots, but they are mere obstacles. These things are the inertia, existing in any party. With that dull mass a strong leader can deal. The bulk of the party is made up of the poor, the aspiring. The Republicans have been so long in power that to their party have been drawn those whose dreams are of material advantage, not much lightened by larger purpose. It is not only the Garys, Perkinses, Roots. It is not even mainly they. It is the young men also, who, almost everywhere at the North, have entered the party because, at the threshold of life, wealth, social glamor, and local power are promised only thru that gate. After half a century of scarcely broken rule, the Republican party has become the custodian of the favored dollar, and of all the favored dollar's bias.

Always there must be a liberal group. It protests against stagnation and unfairness. I would not, in this series of articles, use cheap arguments, or carry water on both shoulders. It would be easy to argue that Wilson is as good a Tory as he is a liberal, etc. It is an easy and familiar trick. It would not fool readers such as take this magazine. No, I concede that those who adored that very strong man, Mark Hanna, who were pleased with Alton B. Parker, should vote against the President. Were the parties not so confused, Hiram Johnson should vote for him, and La Follette, and Bass. It is absurd to find such men voting with the entrenched system, against the most progressive legislative record since the war, and against principles of equality and justice successfully applied, even in so turbulent a time, to foreign affairs; to China, Mexico, South America, Europe. Such men belong with Wilson, Newton Baker, Brandeis, McAdoo, Crane, Houston, William Kent, Lane, Frank Heney, Vance McCormick. That is where they belong. Their leader faced the mighty System at Princeton; he gave and asked no quarter. He saw it again in New Jersey, defied it, beat it, and wrote his victory in the statutes. Carried to the White House on his record in Princeton and New Jersey,

(Continued on page 184)

# THE CAMPAIGN

JACOB GOULD SCHURMAN,  
PRESIDENT OF CORNELL,  
SPEAKS FOR THE REPUBLICANS

## PROGRESSIVE REPUBLICAN

HARLES E. HUGHES was a Progressive long before the organization of the Progressive party. In New York State he was the first

Progressive—first in standing and distinction and first in order of time. As governor of the state his principal political task—and it was the task which made him most difficulty and involved him in the bitterest fights—was that of establishing Progressive leadership in the Republican party and making it the organ of progressive policies. It brought him into conflict with the party leaders and the managers of the party organization, who were all opposed to the change; and it led him into the novel and extraordinary course of making direct appeals over their heads to the people of the state, to which the people responded with a voice of emphatic endorsement and an assurance of complete confidence, and it was by explaining the issues in dispute and defending the policies and principles which he advocated that Governor Hughes sowed the seeds of progressivism.

It is characteristic of the man that Governor Hughes did not expect the people to accept his leadership or approve his principles without thoro investigation. No public man has ever appealed more zealously and constantly to the understanding and intelligence of his fellow-men. He took infinite pains to get the facts before them to expound to them the principles involved in his program; that done he confidently left the result to their deliberate judgment. He was at once a leader and an educator of the people. His leadership was realized in and thru their education. On his side there was the work of analysis of facts and situations, of careful study of existing problems, of devising necessary remedies for admitted abuses, and of representing to the people the course to be taken for their protection. On their side there was the function of considering the facts and estimating the soundness of the policies proposed. There was no place anywhere in this

process for passion, for personal ambition, for mere partizan expediency.

Here was a new type of political leader. Its first mark is unselfishness—absolutely disinterested devotion to the public service. Its second mark is the calm and patient application of sound judgment to the consideration and determination of measures of public policy. We have seen progressives carried away by impulse, passion and half-baked theory, but Governor Hughes was a truly rational progressive, one who applied the light of reason to the questions and issues of the day after the fashion of a scientific investigator.

Clearly this progressive is no revolutionist. Governor Hughes was an evolutionary reformer. He saw clearly that politics has to do not with static but with dynamic conditions, he kept constantly in mind the scientific principles of development and progress; he did not hesitate to declare to his conservative brethren that human society cannot even be stable "unless it is progressive"; and for the conservative ideal of leaving things as they are and have been he substituted the evolutionary conception of the gradual and continuous modification of our social and political organization to meet the altered conditions and to respond to the new demands and needs of American democracy and civilization at the beginning of the twentieth century. With serene confidence in the American people he welcomed and championed every reform that gave promise of a better adjustment of political institutions and arrangements to modern ethical, ideal and economic and social conditions. Others might be prophets of evil, but his faith in the American people dispelled all fear. As he once put it: "It is the fact that we are a common-sense people that gives us assurance for the future." Hence where wisdom, justice and right point the way Governor Hughes would set his foot along the path of reform as far as he who went farthest. But there must be a wrong to be righted, there must be a wise and just measure to carry out the reform proposed. For this progressive never loses his head and he never juggles with his conscience.

As an illustration of the progres-

PRESIDENT SCHURMAN

sive statesman in action, take Governor Hughes's regulation of the public service corporations in New York, which blazed the way and set the standard for similar reforms in the other states of the Union. Here were organizations with enormous powers and privileges, every one of which was derived from the legislature of the state, and yet in the exercise of these powers and privileges the corporations grossly failed to render to the public that safe, impartial, adequate and effective service at reasonable charge which was the sole justification and was (or should have been) the sole motive of their incorporation by the legislature. Governor Hughes insisted that this abuse of public privilege should cease. He found it monstrous and intolerable that these creatures of the state should have and exercise the power of discriminating between persons and localities and of injuring and oppressing the people generally. Representing the people of the state he declared, calmly and dispassionately but with irresistible logical impressiveness, "that the people, without animosity toward the rights of property, but with a just insistence upon the performance of public obligations, demand that the state shall exercise its power over its creatures and compel due regard for the duties which are correlative to the privileges it has granted." Governor Hughes's remedy was that of public service commissions with large powers to supervise and control the public service corporations. It was the most thoroughgoing and radical measure of the kind that had ever been enacted by any legislature in America. It was, of course, opposed—opposed not only by the financial interests concerned but also by the legislators of both parties. But Governor Hughes explained his measure of reform to the people of the state at public meetings in Utica, Elmira and other cities, and

(Continued on page 186)

# BOTH SIDES OF THE CAMPAIGN

## TORY OR LIBERAL? PROGRESSIVE REPUBLICAN

(Continued from page 181.)

he enacted the mandates of his country. He closed the door to predatory interests. In spite of many high-bred wails he reformed the currency of this country and thus shackled the money-trust, so as to put business credit freely in the hands of the people, where it belonged.

He carried along the story with the rural credits measure as the creative policy of the Agricultural Department. Under him the tariff passed from a puppet of the big trusts to the fairest measure that impartial brains could think out. An income tax helps to shift the burden to those who are best able to bear it. A Federal trade commission was one of the favorite Moose ideas.

Some of the Moose care less for such heavy assaults on the underlying system of privilege than they do for what they call social amelioration. They ought to be satisfied with the record in social welfare. They have the eight-hour law applying to work done for the government as well as to work done by the government; an eight-hour law for female employees in the District of Columbia; an eight-hour provision for Post Office clerks and carriers; for civilians engaged in the manufacture of armaments and powder for the government, and in the mining of coal for the navy. The Children's Bureau law is directed immediately to the welfare of children. The Industrial Commission law was passed for investigation into the whole subject of industrial relations. The Federal Employment Bureau is in action and has an immense future.

There have been enacted under the present administration a number of other measures of this Armageddon type. Indeed, the greater part of the Bull Moose platform of 1912 has already been carried out by the Wilson administration.

Labor is at last respected, as Lincoln said it should be respected; recognized as having special human rights, superior to those of capital. I have small esteem for a laboring man who can look at the Clayton act and the Seaman's act and vote against the President. I have not too much intellectual regard for a Progressive who can consider these measures, and the appointment of Brandeis, and vote to turn the President out of office. I admire Mr. Hughes, but what a contrast! He sought honesty and economy in insurance, but said nothing about the relation of the great reserves to the money trust; nothing about how insurance might be bought to succor the old age of the poor. As Governor he shone in morality, but what did he do that touched the underlying System?

Under him as President, any new currency act would have been the Aldrich act; the Payne-Aldrich tariff would necessarily have remained; the Clayton act and the Seaman's act would have had no chance; Brandeis could not have been made a member of the Supreme Court; rural credits would undoubtedly have been beaten as class legislation; Mexican aspiration might have been strangled for the convenience of American dollars; our European record assuredly could not have been better and it might very well have been disastrously worse.

Shall President Wilson, fully tried, be put out now, that an experiment may be undertaken with Mr. Hughes?

*New York City*

(Continued from page 185.)

the pressure of public opinion compelled the legislature to enact it into law.

This progressive Republicanism Governor Hughes carried into the field of labor also. He proclaimed that in a democracy the aggrandizement of a few could never be a substitute for the welfare of all. Social justice demands a greater equalization of opportunities; and, tho Governor Hughes had no sympathy with "fanciful schemes for the abolishment of poverty by act of the legislature," he does demand "such housing of men, women and children that they may live in decency and with proper sanitary safeguards," protection from "avoidable danger to life and limb," and diminution in those preventable casualties which "constitute a disgrace to the country," restriction upon child labor and better protection for the "lives and health of our children," and an "opportunity afforded for proper education and preparation for the work of life." The state must be held to these duties toward the wage-earners and as new avenues of proper co-operation and assistance open up the state must be ready to enter them. Meanwhile, the municipality has an important function "in providing clean and well-paved streets, public baths, suitable parks and playgrounds."

But the larger and more numerous the functions of government the more important does good administration become. If this is a truth which President Wilson has not adequately grasped and applied, it was a self-evident axiom and constant practise of Governor Hughes. His crowning aim and supreme effort was to be a good administrator. His conviction was that a perfect administration of every office would dispel almost all our problems. Listen to his own words:

"Matthew Arnold tells us that conduct is three-fourths of life. Certainly the administration of office is at least three-fourths of political life. And if we could secure the administration of every office in accordance with its obligations, and in adequate fulfilment of the fair intent of the Constitution and statutes creating it, we should find almost all our problems solved."

From this conception of the duties of the Chief Executive followed naturally Governor Hughes's theory and practise in regard to appointments. In each case he sought the best man for the office to be filled, irrespective of party activities or other extrinsic circumstances. "We want in office," he said, "men adapted to the office with the character and the capacity which will enable them to discharge its duties."

Thus Governor Hughes was a great and inspiring civil service reformer. In this respect, as in other respects also, he reminds one of Grover Cleveland, who declared that "public office is a public trust," and lived up to the declaration. President Wilson has been a distinct disappointment to the friends of civil service reform. Is his falling away from the ideal of Cleveland and of Hughes due to his subordination of the administrative functions of government and the making of appointments to the legislative functions and to party leadership and to his purpose to be, like an old-world premier, not only the chief executive of the nation, but also the political leader of his party; the mold and master of its legislative record? Yet in the old world the premier has no fixed term of office, but may be thrown out at any time by an adverse vote of the legislature.

*Katonah, New York*

HEDWIG HEYL—KITCHEN STRATEGIST

## THE BEST KNOWN WOMAN IN GERMANY

BY CHARLOTTE TELLER

WHEN I went to a dinner to meet Hedwig Heyl, the woman who "would not let Germany starve," I pictured a super-Hausfrau, weighted down by the burdens she had assumed, which ranged from writing "War Cook Books" to canning a million pounds of beef for the German army. I found her given to flashes of repartee and anecdotes worthy of the dowager of an English novel. And when she spoke of her work it was with an air of genial conspiracy, as tho the English by their "starvation plan" had challenged the German woman to show her true colors.

She had come directly from a meeting of one of the food commissions where everything is discussed, from the question of how many million pigs shall be killed to the latest discoveries of Professor Nathan Zuntz. Every one has heard of them. He himself gave me a formula to use if there was not enough cream in the milk for a nursing baby. It sounded dangerous for a very young stomach, but it was another proof of that vegetable miracle in disguise, the potato, for potato flour was one of the ingredients.

"Little did the Englishman who brought the first potato to Germany realize that he was giving us a powerful weapon against his country," said Hedwig Heyl, and explained to me how salad dressing

could be made out of it without using either oil or eggs—potato salad with potato flour for mayonnaise!

"We have found a substitute for everything," she said, "but the German appetite. We can find nothing to take its place."

But they have certainly taught it how to keep its place, for the Germans, who were the heaviest eaters in Europe, are today, probably, the lightest. Before there was even a hint of the English siege tactics, the Women's National Service League persuaded the scientists to make a study of the German appetite and discover how little food was needed to satisfy it. This they did and with such zeal did they disseminate their conclusions in book and pamphlet that the Minister of the Interior had to suggest—since it was all at the public expense—that they limit their investigation to the most practical phase of their laboratory work.

It was at this time that Hedwig Heyl published her war cook book; but in three months it was useless because so many of the ingredients had either disappeared or gone beyond the purse of the workingman's wife. Besides, as soon as the English began to carry out their scheme the daily press became interested in recipes as news.

And in those first days a conference was held by the city authorities at the House of Representatives,

to which 800 persons came by invitation to hear lectures upon methods by which the kitchen could be brought into common course of action. And later, cooking classes were organized all over the city—which means all over the Empire, for Berlin was watched as an example.

In these classes the housekeepers and cooks were told about the various substitutes and their use. They were shown the necessity of saving, and of old-fashioned methods of drying and preserving fruits and vegetables, for it was recognized that the winter food had to be laid in while the sun shone. The reason for returning to old methods was that there were not enough glass jars for the great increase of preserves, and for what jars there were the rubber bands were lacking.

The use of home made fireless cookers was also demonstrated, and the baking of cakes with war flour, which called for different proportions of the other ingredients in order to be light and palatable. Hedwig Heyl helped to organize the Housewives' Union and to bring together all sorts of knowledge which, long unused, or just discovered, could now be put to the winning of this siege of the German stomach.

The appointment of a food dictator was but the final phase in the second part of the program which these women were working at from

the time when war was declared, the controlling of prices, the pursuit of the profit-hunter. The farmers and the middlemen might be patriotic, but the habit of profits is a hard one to break, and the laws of Germany were not made for the communal ideals and existence which were suddenly at hand. The women knew this.

To speak of the pig again, as an illustration of one sort of difficulty, an order went forth that pork could only be sold by the butchers at such and such prices. Good! For the prices had been high beyond words when one considered the fact that at this time there were more pigs in Germany than when the war broke out—22,000,000. But—the next day there was no pork at all on the market; it had all been sold to the sausage makers whose prices had not been regulated. Another session and a difficult one, since there are a dozen different grades of pork sausage, to determine what the prices thereon should be. I happened to be at the house of Robert Kuszynski, the statistician, who had found himself in great demand when it came to laying down the laws of supply and demand. The price of sausages had been determined. He looked worn out. The sausage makers would have to lose on the finest sorts and they had put up a hard fight. It always sounded easy when you read the official reports in the morning papers and went to market in a quiet state of mind, but for these men and women who had to take the responsibility of turning a competitive state into a socialistic one over night it was a time of stress.

It was Hedwig Heyl and the women who worked out the scheme of bread cards, without which chaos would have reigned. And she stood for butter cards and milk cards before the rest of the world saw the need of them. As an example of the sort of effective work that was done—in August, 1914, there was a sum of 13,000 marks spent in food tickets—or to supply the food the tickets called for, and there were 25,000 persons seeking help from the headquarters of the Women's National Service League. And, by the end of October there were only 4000 dependent upon the organization for help. I have seen some quick organization in times of catastrophe, but I have never seen anything to equal this.

As a strategist, Hedwig Heyl has had a unique training. Her father was a liberal man and one of the founders of the North German Lloyd. She was brought up by the Froebel method; and when she married, at eighteen, a man with many employees she fell to work to better their conditions. A year or two ago there was a reunion of the employees to celebrate her birthday, for she has managed the dye works since her husband's death. Those who came to the reunion had been born in the hospital she had opened as her first work forty years ago. They had been taken care of in the day nursery and kindergarten she had opened. The men had eaten at the communal lunch in quarters provided by the company. The girls had taken her course in domestic science and some of them the gardening course opened for women. And these original beneficiaries brought their children who had also been the recipients of this generosity—no longer personal, for the state has taken over some of the institutions and imitated others. I gave up trying to visit all the schools and homes and educational courses originated by her. The Woman's Lyceum Club, of which she is a president, was undergoing the same sort of transformation as everything else in Germany. Kitchen topics, discussed by the art section! Vegetarianism urged upon the members by ministers of the gospel! The fear of hunger had stimulated the community in an unbelievable way.

Her strategic position is fortified by Frau Heyl's friendship with the German Empress, with whom she takes tea once or twice a week and who carries out many suggestions made by this practical woman. It was in the palace that the Crown Princess opened a school of lace-making and fine sewing for the women who were suddenly called upon to earn

their living. The teacher was a little woman discovered by Hedwig Heyl, a German refugee from Belgium. And the patrons were the women who were used, before the war, to buy their lace in Brussels and their lingerie in Paris. They will not have to again, for the school is now self-supporting.

Hedwig Heyl enjoys too frankly her position as conspirator to hide in affected modesty. But when she talks in public her voice hardly carries to the near seats and you say "What a demure person." All the time she is probably working out new schemes—how to populate Germany after the war without withdrawing women from the point of vantage they have gained economically. How to cajole or frighten some public official who is still too conservative to be useful, or how to get the Girl Pathfinders, of whom she is a member, to plant more potatoes in the public parks after nightfall and feed the underfed cows on the estates of the profit-makers without rousing too much antagonism.

I lost all sense of there being any danger of starvation when I had one conversation with this woman. A natural tyrant in whom the love for the people has something a little dramatic but nothing sentimental; a good business woman, as I saw when I went over to the dye works converted now into a canning factory and watched her quiet management of the women in white caps and aprons putting up the cans of beef for the army at the rate of 6000 a day. These women were refugees from East Prussia; they are being well paid and Hedwig Heyl is making a good profit on her canned beef. Altho she is over sixty she works there every morning. The day I went I found myself soon seated upon a high stool taking marrow out of monstrous beef bones while we discussed her theories about

suffrage. She put me to work first and talked afterward. The marrow was to be put upon the market (combined, of course, with potato flour) as a substitute for butter, since that was so high. Of the vote, she said it was like an apple: it would fall into our laps when it was ripe; that what women had to do was to water the tree. The war—to her thinking—has given them their biggest chance to water the tree. And she has done her share.

FRAU HEYL WORKED OUT THE SCHEME OF BREAD CARDS

THE WORLD AT THE END OF THE SECOND YEAR OF WAR

All of the German colonies have been conquered except a narrowing strip in the middle of German East Africa. The black area is that now held by the Central Powers; the shaded belongs to the Entente Allies. Neutral countries are left white

# THE SECOND YEAR OF THE GREAT WAR

BY EDWIN E. SLOSSON

**A**FTER another year of warfare in which the area of conflict has widened, the number engaged are more numerous, the losses have increased and the expense has multiplied enormously, the issue of the conflict still remains in doubt and there is no more evidence of a speedy peace than there was on August 1, 1914, or August 1, 1915. In men and money the odds in favor of the Allies are greater than ever and so their ultimate victory seems inevitable if they keep up the fight, but, on the other hand, all the campaigns of the past year in Europe have gone to the advantage of Germany and her allies and their powers of resistance show no evidence yet of being exhausted.

Since the Great War is being fought on fields whose operations are quite distinct it will be most convenient to consider the various campaigns separately, giving in each case a few memorable dates and a brief summary of the results.

## THE CAMPAIGN IN FRANCE AND BELGIUM

August 3 1914—Germans enter Belgium.  
August 7—Germans take Liège.  
August 23-25—French defeated at Charleroi and British at Mons.  
September 6-16—Germans defeated on the Marne.  
September 14-23—Germans make a stand on the Aisne.  
October 9—Germans take Antwerp.  
March 16-14 1915—British attack at Neuve Chapelle but gain little ground.  
April 22-May 9—Germans attack at Ypres but gain little ground.  
May 9-14—French and British attack in Artois but gain little ground.  
September 25-27—British attack at Loos and French in Champagne but gain little ground.  
February 21 1916—Germans begin attack upon Verdun that still continues.

**COUNTRIES IN CONFLICT**  
*Territory now in possession of Allied Powers*  
31,332,000 square miles  
*Territory now in possession of Central Powers*  
1,245,000 square miles  
*Superiority of Allies over Central Powers in area more than*  
25 to 1

**PEOPLE IN CONFLICT**  
*Population of territory now in possession of Allied Powers*  
846,000,000  
*Population of territory now in possession of Central Powers*  
177,000,000  
*Superiority of Allies over Central Powers in population nearly*  
5 to 1

July 1—French and British begin attack on the Somme that still continues.

The battle line in France and Belgium remains substantially where it was drawn in the fall of 1914, altho more than a million men have been sacrificed in the effort to shove it one way or the other. Determined and long prepared attacks have been made upon it three times by the British, three times by the French and twice by the Germans, but nowhere yet has the line budged more than five miles or so from where it was first fixed. In the spring of 1915 the British took the village of Neuve Chapelle at a cost of 12,000 men, and in the fall they took the village of Loos at a cost of 50,000 men. The Germans made a desperate attempt with the aid of gas to smash their way thru the low land of Flanders to Calais, but the

British, French and Belgians held the line about Ypres. The French struck at the same time as the British in Artois and Champagne, but with no better success. That, in brief, was the history of 1915.

In 1916 it was expected that an Anglo-French offensive would open the campaign in the spring, but the Germans forestalled it by a furious attack upon Verdun, the corner fortress of France. Since February 21 the fighting has been incessant here and half a million men have been sacrificed but the French still hold to the ruined town and its inner circle of forts.

Finally at 7:30 in the morning of the first day of July, 1916, the Anglo-French offensive was launched. The attack was directed at the German lines on both sides of the Somme opposite Peronne, a battlefield familiar to every reader of Scott's "Quentin Durward." At the end of a month the French and British have each advanced three or four miles—but here the cautious chronicler must stay his hand and not attempt to forecast the fate of the virgin fortress, Peronne la Pucelle.

Whatever may be thought of future prospects the campaign in France at the end of the second year must be pronounced a deadlock if not a stalemate.

## THE RUSSIAN CAMPAIGN

August 26-31, 1914—Russians defeated at Tannenberg, East Prussia. Limit of Russian advance westward into Germany.  
May 1, 1915—Russians driven back from Dobruja.

London: Sphere, Copyright 1918.

### THE HAMMER THAT IS SMASHING

THE SKETCH SHOWS ONE OF THE HEAVY BRITISH HOWITZERS JUST AS IT IS TAKEN INTO ACTION. THE ENEMY GUESSED RANGE OF IT. THE CYLINDERS ON GUN FOR TAKEN AT THE RANGE, BUT FAILED FOR LACK OF THEIR EXPLOSIVES. NOW THE BRITISH ARE

River Galicia limit of Russian advance westward into Austria.  
 August 5, 1915—Germans take Warsaw, capital of Poland.  
 September 16, 1915—Germans take Pinsk and Vilna limit of German advance eastward into Russia.  
 June 1, 1916—Russian drive begins.  
 June 17, 1916—Russians take Czernovitz, capital of Bukovina.

The eastern front presents a great contrast to the western. Instead of a line practically stationary for a year and a half, the contending armies have swept back and forth over a strip nearly three hundred miles wide and eight hundred miles long. Some cities have changed hands two or three times, and no country has been more thoroly devastated. The Russians on their retreat adopted the same tactics as they did against Napoleon and destroyed factories, stores and crops so far as they were able to. Three million refugees fled into the interior of Russia, causing great distress and embarrassment, but incidentally breaking down the Pale which has hitherto restricted the Jews to the western provinces.

The war began by a swift advance of the Russians into East Prussia, but this was checked by the victory of General von Hindenburg on the historic field of Tannenberg. Thus the Germans took the offensive and penetrated Poland almost to Warsaw, but here they were stopped in mid-winter.

Then the Russians turned their attention to the Austrian front, where they were more successful. Lemberg, the capital of Galicia, and Przemysl, its chief fortress, were

captured, and the spring of 1915 found the Russian armies in possession of the mountain wall of the Carpathians, looking down upon the Hungarian plains to the south.

But the German general, Mackensen, with a large army of Austrian and German troops, swept the Russians back three hundred miles during May and June, and so recovered all of Bukovina and Galicia except one corner.

In the north the Germans were still more successful. One year after the war began Prince Leopold of Bavaria entered Warsaw in triumph. A dozen fortresses fell in quick succession. All Poland was conquered and also Russian territory for two hundred miles north of it and a hundred miles east of it. The Baltic province of Courland, largely inhabited by Germans, fell into German hands except the port of Riga, which, protected by its swamps, resisted capture. By the fall of 1915 the Germans held a line running almost straight south from the Dvina River to the Rumanian border and at least a third shorter than their old Russian frontier. This line remained stationary until the following June.

The Russian armies were badly demoralized. They had lost heavily in casualties and prisoners. They were out of ammunition and the transportation system had broken down. The Grand Duke Nicholas, who as commander-in-chief was, rightly or wrongly, held responsible for the dis-

aster, was removed to the Caucasus and the Czar himself assumed nominal command of the Russian forces. During the winter the armies were completely reorganized and equipped for a new campaign. Munitions were received in large quantities from Japan and the United States by way of the Siberian railroad. British, French, Belgian and Japanese contingents were sent to take charge of armored motor cars, aeroplanes and other expert services. In exchange Russia sent six detachments of her surplus troops, unequipped, to France.

General Kuropatkin, of Manchurian fame, was placed in charge of the northern army group and General Brusiloff in charge of the southern. On June 1 the Russian offensive started in the south and in the two months since has attained a considerable success. The Russians have reconquered the crownland of Bukovina and reached the Carpathians beyond. The Austrians in Galicia and the Germans just north of it have both been driven back fifty miles from their winter front. The Russians claim the capture of over 300,000 prisoners in the last two months.

As it stands at the end of the second year of war the Germans hold over 100,000 square miles of Russian territory and the Russians hold about 10,000 square miles of Austrian territory.

#### THE ITALIAN CAMPAIGN

May 23, 1915—Italy declares war on Austria.  
 May 15, 1916—Austrians advance from Trentino.  
 June 20, 1916—Italians drive Austrians back toward Trentino.

The entrance of Italy into the war did not make so much difference as the Allies had hoped. The boundary line, which was drawn in 1866 so as to give Austria a strategic advantage, proved to be all that was expected of it. The Austrians were able to hold their frontier, protected as it was on the one side by the Tirolese Alps and on the other by the Isonzo River, with three or four hundred thousand men against a million or more troops at the command of General Cadorna. The Italians have not taken any town of importance, and until recently the fighting has mostly been confined to a strip of four or five miles inside the Austrian border.

But in the middle of last May the Austrians undertook an offensive movement from the Trentino and had advanced about ten miles into the Venetian Valley when the Russian drive began, and they were obliged to withdraw their troops to their mountain shelter.

So, after more than twenty-two months of war, the Austrians and Italians stand about where they

THE BATTLEFIELDS

The regions over which the war-wave has swept are given in black. Neutral countries are white. The Central Powers are distinguished from the Entente Allies by different shading.

started, except for the heavy losses both have sustained.

#### THE BALKAN CAMPAIGN

July 28, 1914—Austria declares war upon Serbia.  
 August 23, 1914—First Austrian invasion repulsed.  
 December 10, 1914—Second Austrian invasion repulsed.  
 September 20, 1915—Bulgaria mobilizes.  
 September 23, 1915—Greece mobilizes.  
 October 5, 1915—French and British troops land at Salonica.  
 October 8, 1915—Austrians take Belgrade.  
 November 5, 1915—Bulgars take Nish.  
 November 30, 1915—Conquest of Serbia completed.  
 January 14, 1916—Austrians enter Cetinje, capital of Montenegro.

Serbia, about which the war began, was the first country to be completely conquered. The armies that Austria sent into Serbia in the summer and winter of 1914 met with such humiliating defeats that no further attempts were made until the fall of 1915. By that time the spectacular success of the Germans in Russia and the failure of the Allies to make any impression upon the German lines in France had inclined the Balkan states toward the Central Powers. Both sides made generous offers of enemy territory to Bulgaria, Greece and Rumania and both had hopes up to the last moment of winning over one or all of them. But when it came to the show-down it turned out that Rumania was determined to remain neutral, that Bulgaria would espouse the cause of the Central Powers and that Greece was divided. King Constantine, whose wife is sister to the Kaiser, was pro-German in his sympathies, but Venizelos, his prime minister, was pro-Ally. The King won the political battle and declared Greece neutral, but that did not prevent the British and French troops from using Greek territory for their military and naval operations.

The Bulgarian troops entered Serbia from the eastern side at the same time that the Austrian and German troops entered from the northern side. While the Teutons took Belgrade, the old capital of Serbia, the Bulgars took Nish, the new capital. The Serbs, caught between the two armies and receiving no aid from outside, were defeated on the plain of Kosovo, where the Turks had conquered them five hundred years before. The aged King Peter escaped in a peasant's cart and such of his troops as were not captured or killed took refuge in Greece and Albania.

The tiny kingdom of Montenegro shared the fate of the allied and kindred Serbia. The supposedly impregnable Mount Lovcen, which dominates the Bay of Cattaro, was taken by the Austrians with surprising ease, and King Nicholas went into exile in France.

Albania, which five months before the war had been set up by the powers as an independent nation under

THE PARTITION OF TURKEY

Asiatic Turkey has been attacked from all four sides. The attempt of the British and French to force the Dardanelles and take Constantinople was frustrated, but on the east the Russians have conquered the greater part of Armenia as well as overrun northern Persia. The British have occupied southern Persia and the coast of the Persian Gulf, and declared a protectorate over Egypt. The British expedition sent up the Tigris to take Bagdad was defeated and captured. Most of the Arab tribes are said to be in revolt against Ottoman rule.

a Prussian prince, is now divided among her neighbors. The Austrians are in possession of the northern part and the Bulgars of the eastern; the Italians hold Avlona on the western coast and the Greeks have seized the Epirote provinces on the south.

The British Government, surprised and chagrined at Bulgaria's joining the enemy, thought it too late to intervene in the Balkans, but General Joffre ran over to London, and by his eloquence and earnestness persuaded the cabinet to join with him in the rescue of Serbia. But by the time the French and British troops got there the country was conquered, so they withdrew to Salonica which they have ever since occupied in spite of the protests of the Greek Government at this violation of neutrality. The Allied fleet blockaded the Greek coast and so forced the Greek Government to evacuate the Salonica district and finally to demobilize the Greek army. The Bulgars, claiming the same privilege, have occupied Greek territory to the east of Salonica.

The Balkan campaign, then, has gone altogether against the Allies. The Central Powers have won Bulgaria as an ally and have occupied Serbia, Montenegro and Albania.

#### THE DARDANELLES CAMPAIGN

February 19, 1915—British warships shell Turkish forts.  
 March 18, 1915—Three warships lost in Dardanelles; fleet withdrawn.  
 April 25, 1915—Australasian troops landed on Gallipoli.  
 August 6, 1915—Second landing made at Suvla, Gallipoli.  
 December 19, 1915—Troops withdrawn from Gallipoli.

The attempt to force the Dardanelles and take Constantinople was ill advised and ill managed. First a

fleet of British and French warships, including the largest battleship ever constructed, was sent out to accomplish the feat alone. After a month spent in bombarding the Turkish forts guarding the strait had failed to reduce them, the fleet rashly entered the Dardanelles, where two British and one French battleships were promptly sunk by floating mines.

Then it was decided to try troops, but a month was spent in making the necessary preparations for landing, and by that time the Turks, under German engineers, had fortified the Gallipoli peninsula. The Australian and New Zealand Army Corps was landed on the western shore of the peninsula, called for that reason Anzac Cove, but they were never able to fight their way inland far enough to reach the ridge commanding the strait. Another contingent landed at Suvla Bay, a little farther up the coast, was also forced to keep to the shelter of the beach. Late in the year the enterprise was abandoned and the troops withdrawn. The British losses were 117,549 killed, wounded and missing. There were also 96,683 hospital cases of disease, an unusual feature in the present war.

The Dardanelles campaign accomplished nothing, except, perhaps, to frustrate a Turkish attack upon Egypt.

#### THE MESOPOTAMIAN CAMPAIGN

November, 1914—British take Basra, near head of Persian Gulf.  
 January, 1915—Expedition starts up Tigris.  
 November 22, 1915—British advance checked at Ctesiphon, 18 miles below Bagdad.  
 December 3, 1915—British expedition retires to Kut-el Amara and is there besieged.  
 April 29, 1916—British expedition surrenders at Kut-el Amara.

#### AN AVIATION BASE BEHIND THE FRENCH LINES AT VERDUN

This photograph was taken by an aviator 1500 feet high and directly over the camp. It shows with remarkable clearness the French army aeroplanes drawn up before their hangars, and behind these the soldiers' tents and several groups of motor trucks. On the upper and under side of each wing of the French biplanes is painted a red, white and blue circle, in order to make immediate identification possible during duels. The German machines are marked by a black cross.

TERRITORIAL GAINS

The end of the second year of the war finds the belligerent powers holding the following territories not previously included among their possessions:

	Area Square miles	Normal Population
Great Britain	2,510,000	22,000,000
Russia	412,000	5,350,000
Germany	127,000	29,000,000
France	112,600	1,800,000
Austria	31,500	3,400,000
Bulgaria	17,000	2,270,000

Early in the war the British took possession of the Persian and Turkish territory about the Persian Gulf, and in 1915 expeditions were sent up the Tigris and Euphrates rivers. The Tigris expedition had almost reached Bagdad when it encountered a superior force of Turks and was forced to withdraw a hundred miles down-stream. Here it was caught in a bend in the river at Kut-el-Amara and was so closely invested that only aeroplanes could reach it. After holding out for nearly five months, the expedition, consisting then of only 10,000 British and Indian troops, surrendered to the Turks.

The failure of the Mesopotamian campaign, tho it involved insignificant numbers compared with the European operations, had a serious effect upon British prestige in the East.

THE CAUCASIAN CAMPAIGN

February 15, 1916—Russians take Erzerum.  
April 18, 1916—Russians take Trebizond.  
July 28, 1916—Russians take Erzingan.

The only definite success outside of Africa so far achieved by any of the nine Allies is the Russian conquest of Armenia. The Grand Duke Nicholas, transferred to the Caucasus, began from there the invasion of Turkey before the winter was over. The opposition was feeble and the fortresses of Erzerum and Trebizond, renowned from old for their ability to stand a siege, surrendered as soon as they were reached. But the Russian occupation of this region was not soon enough to save the Armenians. The Turks, knowing that the Armenians would welcome the advance of the Russians, determined upon their removal, and during the winter a million or more Armenians, Syrians and Greeks were massacred or deported. Northern Persia, which, according to the Anglo-Russian agreement of 1907, was recognized as the Russian "sphere of influence," has now passed under Russian control in spite of the resistance of the Persian Nationalists aided by the Germans and Turks.

Unless, then, the results of this campaign are nullified in Europe, the

Russian Empire will incorporate northern Persia and northeastern Turkey.

THE AFRICAN CAMPAIGN

August 26, 1914—British and French conquer Togoland.  
July 9, 1915—General Botha of Union of South Africa conquers German Southwest Africa.  
February 18, 1916—British and French conquer Kamerun.  
March 9, 1916—General Smuts of the Union of South Africa enters upon the conquest of German East Africa.

The German colonies in Africa have an area more than four times that of the Fatherland, but there probably were not more than 25,000 Germans in them when the war broke out. Cut off from Germany, from one another, and from the outside world by the British command of the coast, it was inevitable that they should succumb. The only wonder is that these four isolated groups should be able to hold out as long as they have against enemies on every side. Two of the colonies, Togo and Kamerun, were cleaned up by British and French troops. The other two were left to the Union of South Africa. The Boer generals, Botha and Smuts, who sixteen years ago were fighting against the British, undertook to annex German Southwest Africa to the British Empire. The job was so well done that General Smuts was set at the same task in German East Africa. The region about Mount Kilimanjaro is already in his possession, and with Belgians invading the colony from the west and Portuguese from the south, the handful of Germans in the interior cannot be expected to resist much longer.

With their capitulation will vanish the colonial empire that the German Government has labored ever since 1884 to construct.

THE WAR ON THE SEA

August 5, 1914—Beatty sinks three German cruisers in the battle of Heligoland.  
November 1, 1914—Craddock's squadron defeated off Coronel, Chili, by Von Spee's squadron.  
December 8, 1914—Sturdee destroys Von Spee's squadron near Falkland Islands.  
January 24, 1915—German squadron defeated at Dogger Bank.  
February 7, 1915—Germans declare a war-zone about British Isles.  
March 11, 1915—British Order-in-Council establishes cordon control shutting off all goods going to or from Germany.  
May 7, 1915—"Lusitania" sunk.  
May 4, 1916—Germany agrees not to sink liners without warning.  
May 31, 1916—Greatest naval battle of history fought off Jutland.  
June 5, 1916—"Hampshire" sunk with Ketchen on board.  
June 29, 1916—England renounces the Declaration of London.

The story of the war on the sea may be summed up in few words: After two years the British supremacy remains unshaken. The German submarines have inflicted heavy losses upon the naval and mercantile shipping of the Allies. A few sea-rovers like the "Emden" and the "Mowe" have been for a time at large. The submarine "Deutschland,"

THE DAILY COST

The leading belligerents are now spending money at the following rates per diem:

Great Britain	\$30,000,000
Germany	22,000,000
France	15,500,000
Russia	16,000,000
Austria	12,000,000
Italy	8,000,000
Turkey	1,500,000
Bulgaria	1,500,000
Belgium	1,500,000
Total	\$108,000,000

loaded with dyes, appeared at Baltimore. But German shipping has been virtually shut off from the sea, and German commerce by any channel has been cut down almost to extinction. Without declaring a blockade, because, as Premier Asquith said, "the government are not going to allow their efforts to be strangled in a network of judicial niceties," the British Government inspects the cargo and mails of all ships bound for European ports, whatever their flag or destination, and no goods are allowed to pass if suspected of being intended for Germany. The United States, in maintenance of its historic principle that "free ships make free goods," has protested against the illegality and stringency of the British procedure, but without avail.

The sinking of passenger vessels like the "Lusitania" aroused such indignation in neutral countries that the party in Germany which was opposed to such tactics secured the ascendancy, and the United States was assured that the German submarines would not in the future attack unarmed merchantmen without fair warning. But this promise was made upon the condition that England's blockade practises be brought within the scope of international law, so it is possible that the submarine raids may be resumed at any time that Germany is willing to incur the displeasure of the United States.

The dreadnoughts and battle-cruisers of the two fleets came into conflict for the first time near the mouth of the Skagerrak and off the coast of Jutland on the afternoon of the last day of May. The result is indecisive from the standpoint of naval power. The British losses were about twice those of the Germans, but since the British navy is about twice as strong, the ratio is not materially changed.

CHANGES IN THE MAP

Publishers of geographies are holding back on new editions because it is anticipated that there will be many alterations to be made in national boundaries however the war

may turn out. A map of the world made now would show that since August, 1914, an area almost equal to the whole of Europe has changed hands at least temporarily. On page 195 we summarize the chief of these changes. The figures given are, of course, only approximate for the area actually held by the armies is not definitely determinable and the population is still more uncertain because millions of people who were in the war zones have fled to other countries or else have perished by war, massacre, privation and plague.

From the table it will be seen that the lion's share of the spoils has gone to Great Britain. With the assistance of the Japanese and Australians she took possession of all of the German islands in the Pacific and with the assistance of the French and Boers she has conquered all of the German colonies in Africa except German East Africa, of which the central portion is still unsubdued. In the conquest of Togo and Kamerun, French and British troops coöperated, so I have calculated these colonies as divided equally between the two powers altho it is quite likely that France will be given a much larger share in the final settlement. Egypt, Sudan and Cyprus, which before the war belonged nominally to Turkey, altho under the administrative control of England, are now listed as part of the British Empire. The southern half of Persia has now virtually passed under British rule, as well as a considerable part of Arabia. The troops that were sent up the Tigris and Euphrates have control of the vilayet of Busra.

To the French I have tentatively assigned half of the German colonies of Togo and Kamerun. In Alsace the French still hold a strip a few miles wide and about forty-five miles long on the German side of the border.

Germany has Luxemburg, nearly all of Belgium and a large slice of France. On the Russian side the German troops are in possession of all Poland, almost all of Courland and a large part of the governments of Vilna, Kovno, Grodno and Volhynia.

Austrian, Bulgarian and German troops joined in the Balkan campaign. How the territory gained in it will be divided no man knows. The figures given in the accompanying table are based upon the assumption that Austria for the present has no session of the northern half of Serbia and Albania and the whole of Montenegro, and that Bulgaria has the balance of Serbia.

THE NATIONS AT WAR	
THE ENTENTE ALLIES	THE CENTRAL POWERS
<i>Great Britain</i>	<i>Germany</i>
<i>France</i>	<i>Austria-Hungary</i>
<i>Russia</i>	<i>Bulgaria</i>
<i>Italy</i>	<i>Turkey</i>
<i>Japan</i>	
<i>Belgium</i>	
<i>Serbia</i>	
<i>Montenegro</i>	
<i>Portugal</i>	

#### PAYING FOR IT

According to David Lloyd George the war will be won by "silver bullets." Since England is the country with the greatest store of this sort of ammunition her part in the burden of war becomes increasingly important as the months drag on. Parliament has just been asked to provide \$2,550,000,000 more, making a total of \$14,160,000,000 appropriated during the past two years. These credits have been granted without opposition and almost without debate and the government has not been required even to specify the various uses for which the money was to be applied. Never before in the history of the world has any government had such enormous sums placed at its disposal without restriction.

It must not be hastily assumed that these billions spent are altogether wasted. In the first place a billion and a quarter of England's expenditure consists of money advanced to her allies and her oversea dominions. These are loans which presumably will be repaid with interest unless the Allies are ruined.

Then, too, the appropriations of Parliament include all of the running expenses of the government, now higher than usual because the government has taken on more functions. The ordinary expenditure of

the British Government before the war was about one billion dollars. Of this some \$380,000,000 a year went for army and navy and of course were "wasted" in the same sense as the larger sums now spent for the purpose. But altho soldiering in peace or war must be classed among the unproductive occupations and the money expended for explosives is speedily consumed either fruitlessly or in the destruction of lives and property, yet we must avoid the common fallacy of regarding the expenditures of the belligerent governments as so much wealth lost to the world, in excess of the normal consumption of peaceful times. In large part it represents a transfer of expenditure from individuals to the government. It means, for instance, that there are some two million young Englishmen in France supported by the government who formerly had to "support themselves." Most of them are being supported more expensively than ever before and in so far as this means better food, clothing and sanitary care it is not to be regretted. Altho they are from an economic standpoint to be considered as idle, yet this also is not an unprecedented strain upon the community. In 1908, according to Kier Hardie, labor member of Parliament, there were 2,250,000 men out of work in England and Scotland, three-fourths of them skilled artizans. Now there are more people working and they are working harder than ever before. Unemployment is wiped out and wages in some industries more than doubled. The cost of living has risen but not so much as the wage rate. In many cases the allowance made for the government to the wife of a soldier, tho it seems meager to us, is more than she has had before for the support of the family including the husband. This accounts for the curious fact that the poorer classes are spending money more lavishly than formerly. Imitation jewelry is in great demand and all sorts of cheap amusements are extensively patronized. The consumption of alcoholic liquor in the United Kingdom has risen to the unprecedented height of \$900,000,000 a year, a hundred million more than it was before the war, notwithstanding the fact that a large proportion of the men are in the army where they get only their ration of rum. So far it is chiefly the wealthy and well-to-do who have begun the practise of economy and this under compulsion since the burden of increased taxation has in many cases cut their income in two.

#### THE WAR OF RACES

The chief races taking part in the Great War are:

<i>Afridis</i>	<i>Kurds</i>
<i>Albanians</i>	<i>Lithuanians</i>
<i>Algerians</i>	<i>Magyars</i>
<i>Annamites</i>	<i>Mahrattas</i>
<i>Armenians</i>	<i>Malagasy</i>
<i>Arabs</i>	<i>Maoris</i>
<i>Austrians</i>	<i>Montenegrins</i>
<i>Bantus</i>	<i>Mongols</i>
<i>Belgians</i>	<i>Fathans</i>
<i>Boers</i>	<i>Persians</i>
<i>British</i>	<i>Poles</i>
<i>Bulgars</i>	<i>Portuguese</i>
<i>Circassians</i>	<i>Rumanians</i>
<i>Croatians</i>	<i>Russians</i>
<i>Czechs</i>	<i>Ruthenians</i>
<i>Egyptians</i>	<i>Senegalese</i>
<i>Finn</i>	<i>Serbs</i>
<i>French</i>	<i>Sikhs</i>
<i>Gauls</i>	<i>Slavaks</i>
<i>Georgians</i>	<i>Slovaks</i>
<i>Germans</i>	<i>Socians</i>
<i>Gurkhas</i>	<i>Tatars</i>
<i>Italians</i>	<i>Tonkinese</i>
<i>Japanese</i>	<i>Turks</i>
<i>Jews</i>	<i>West Indians</i>

### SHAW DISCOVERS CHRISTIANITY

Bernard Shaw's latest volume of plays and prefaces, *Androcles and the Lion, Overruled, Pygmalion*, marks a very interesting stage in his intellectual development. He has at last discovered the existence of Christianity, and been so struck by it that he wrote an excellent play and a preface of 115 pages to tell us what he thought about it all. *Androcles and the Lion* is a sympathetic comedy of the Christian martyr. The play is full of Shaw's merriest laughter, but no one who has read or seen it can fail to note that he is laughing with the Christians rather than at them. It is the emperor and the Roman mob that are made to look the fool; not Lavinia who outfaces death and laughs it down, not Androcles who is shamefully bullied by his wife but has no fear of lions, not Ferrovius who slays six gladiators in a moment of moral weakness and is made a member of the Pretorian Guard. In the submission of Ferrovius to the cult of Mars on the ground that force still rules the world and "the Christian God is not yet," Shaw tells us that he has exprest the antagonism between the Christian ideal and the conduct of the nations of Christendom which still, with the full approval of the organized church, settle their destinies on the battlefield.

In the long theological essay which precedes this play Shaw discusses the value and meaning of Christianity. He concludes that Jesus was one of the greatest and wisest of men, and that his principles of human brotherhood, communism, repudiation of revenge and rejection of private interests in the service of God (whom Mr. Shaw will persist in making a hyphenated deity, the Life-Force) would redeem society if there were any serious attempt to put them into practise. But the Christian Church, he insists, immediately wandered from the ideals of Jesus as fast and as far as it could and erected in His name an elaborate metaphysics of original sin, the atonement, salvation by orthodoxy, and essential sacraments.

Paul was largely to blame. "The conversion of Paul was no conversion at all; it was Paul who converted the religion that had raised one man above sin and death into a religion that delivered millions of men so completely into their dominion that their own common nature became a horror to them, and the religious life became a denial of life." We are sorry that a critic who has seen so much (tho far from enough) of the greatness of the Master should see so little of the greatness of the Apostle. He forgets entirely the strong

**FREE** Catalogs of all Boarding Schools (for camps) in U. S. Expert Advice free. Write for girls or boys. Maintained for all Schools American Schools' Association, 1011 Times Building, New York or 1516 Masonic Temple, Chicago.

### "Home-Making, the New Profession"

Is a 100-pp. ill. handbook—it's FREE. Home-study Domestic Science courses. For home making, teaching and well paid positions. Am. School of Home Economics, 69th St., Chicago, Ill.

### Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence is removed from the hospital, is homelike and ideally located.

**Requirements:** At least one year of high school or equivalent. Age limit—18 to 35 years.

**Fees:** \$10.00, \$12.00 and \$15.00 per month; the increase made yearly.

For information address Superintendent, MRS AGNES S. WARD

points of Paul's character and teaching: his unflinching dignity and tact; the urbanity with which he faced dignitaries while in chains and seemed the greater for them; his patriotism ("I am a citizen of no mean city") and civic sense; the faith that never faltered and the courage that never broke; the good common sense of most of his practical regulations for the early church; the mingled fervor and philosophical grasp which have made his epistles the model textbooks of theologians from that time to this. Shaw's failure to appreciate Paul is unfortunately but typical of his failure to understand the worth of the organized Christian Church and the great work it has done in the world. If it has rarely been what its Founder would have wished, it is not wholly the Church of Barabbas that Shaw would make it out.

*Overruled* is one of Shaw's farces-comedies of sex relationship, adding little to what he has often said before. *Pygmalion*, on the other hand, is a play of importance. Shaw takes the driest of earthly topics, phonetics, and turns it into an interesting human play; quite as remarkable a feat as the subject of the plot, the transformation of a flower girl into a society lady, by cultivating her pronunciation. The author becomes so enamored of the creations of his hand that he supplements the play by a very long prose narrative which details the future career of all the principal characters. So far as we know, this has never been done before in literature, at least on such an elaborate scale. People are fond of looking at the last pages of books; why not extend Mr. Shaw's idea to serial stories and publish in each number not the conventional summary of previous instalments, but an abstract of the subsequent instalments? This would destroy forever the torment of Tantalus which has hitherto afflicted all readers of the serial-story magazines.

*Androcles and the Lion, Overruled, Pygmalion*, by George Bernard Shaw. Brentano. \$1.50.

## TWO VETERAN POETS

Amid all the roar and clash of modern and ultra-modern verse, two thin volumes of poetry, daintily bound and printed, even as they are written, are likely to be forgotten. But Bliss Carman's *April Awe*, and *Poems of War and Peace*, by Robert Underwood Johnson, certainly merit attention. To many persons they will be a welcome relief from the strife and tumult of "emancipated" verse of all sorts. To others they will be just old fashioned poetry, pretty enough, but hardly lasting art.

Both writers have the unmistakable note of sincerity, felicitous expression, and rather conservative verse-forms. Bliss Carman's poems are almost all nature lyrics—the reactions of a beauty loving person to

"April now in morning clad

Like a gleaming oread,

With the south wind in her voice . . ."

Mr. Johnson's work, tho anything but ultra-modern, has a lustier note, a more articulate message. The ode, *Goethals of Panama*, sings of

## AN INSTITUTION.

One of the pioneers in the manufacture of dry plates and sensitized papers, first in the manufacture of films, a leader in the manufacture of cameras, the Kodak organization, has for thirty-five years, been in the forefront of photographic progress. Just as its transparent film, (first made for the Kodak) made the motion picture possible, so has its work in the perfection of its products for the professional photographer, for the X-Ray specialist and for the scientist, broadened its usefulness.

The great volume of its world-wide business enables it to mobilize, for the further improvement of photography, the most efficient men in the photographic world, enables it to maintain a Research Laboratory that is not only solving the problems of to-day but the problems of to-morrow, regardless of present profit. Yet this laboratory is by no means a house of mere theory. It provides not only for experiment, but is in itself a small factory wherein practical tests are made daily under actual manufacturing conditions.

With its experience-acquired ability, its courage to cast aside mere talking-point-improvements and exploit only those things that mean the betterment of photography, with intelligently guided employees in whom honest workmanship has become a habit, the Eastman organization is something more than a great industry—it is an institution.

*If it isn't an Eastman, it isn't a Kodak.*

EASTMAN KODAK CO., ROCHESTER, N. Y., *The Kodak City*

# Stop Eating Foods That Poison!

**Why Wrong Eating is Responsible for More Sickness than Any Other Cause. How Right Eating Removes the Cause of Sickness.**

By Arthur True Buswell, M. D.

EUGENE CHRISTIAN

Not long ago I had a talk with Eugene Christian, the noted food scientist, and he told me of some of his experiences in the treatment of disease through food. Incidentally Eugene Christian has personally treated over 23,000 people for almost every non-organic ailment known with almost unvaried success.

An enviable record when one considers that people nearly always go to him after every other known method has failed.

One case which interested me greatly was that of a young business man whose efficiency had been practically wrecked through stomach acidity, fermentation and constipation resulting in physical sluggishness which was naturally reflected in his ability to use his mind. He was twenty pounds underweight when he first went to see Christian and was so nervous he couldn't sleep. Stomach and intestinal gases were so severe that they caused irregular heart action and often fits of great mental depression. As Christian describes it he was not 50 per cent efficient either mentally or physically. Yet in a few days, by following Christian's suggestions as to food, his constipation had completely gone although he had formerly been in the habit of taking large daily doses of a strong cathartic. In five weeks every abnormal symptom had disappeared—his weight having increased 6 lbs. In addition to this he acquired a store of physical and mental energy so great in comparison with his former self as to almost belie the fact that it was the same man.

Another instance of what proper food combinations can do was that of a man one hundred pounds overweight whose only other discomfort was rheumatism. This man's greatest pleasure in life was eating. Though convinced of the necessity, he hesitated for months to go under treatment believing he would be deprived of the pleasures of the table. He finally, however, decided to try it out. Not only did he begin losing weight at once, quickly regaining his normal figure, all signs of rheumatism disappearing, but he found the new diet far more delicious to the taste and afforded a much keener quality of enjoyment than his old method of eating and wrote Christian a letter to that effect.

But perhaps the most interesting case that Christian told me of was that of a multi-millionaire—a man 70 years old who had been traveling with his doctor for several years in a search for health. He was extremely emaciated, had chronic constipation, lumbago and rheumatism. For over twenty years he had suffered with stomach and intestinal trouble which in reality was superaciduous secretions in the stomach. The first menus given him were designed to

remove the causes of acidity, which was accomplished in about thirty days. And after this was done he seemed to undergo a complete rejuvenation. His eyesight, hearing, taste and all of his mental faculties became keener and more alert. He had had no organic trouble—but he was starving to death from malnutrition and decomposition—all caused by the wrong selection and combination of foods. After six months' treatment this man was as well and strong as he had ever been in his life.

These instances of the efficacy of right eating I have simply chosen at random from perhaps a dozen Eugene Christian told me of, every one of which was fully as interesting and they applied to as many different ailments. Surely this man Christian is doing a great work.

I know of several instances where rich men and women have been so pleased with what he has done for them that they have sent him checks for \$500 or \$1000 in addition to the amount of the bill when paying him.

Food is the fuel of the human system, yet some of the combinations of food we put into our systems are as dangerous as dynamite, soggy wood and a little coal would be in a furnace—and just about as effective. Is it any wonder that the average life of man today is but 39 years—and that diseases of the stomach, liver and kidneys have increased 103 per cent during the past few years!

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally that he has written a little course of lessons which tells you exactly what to eat for health, strength and efficiency. This course is published by The Corrective Eating Society of New York.

These lessons, there are 24 of them, contain actual menus for breakfast, luncheon and dinner, curative as well as corrective, covering every condition of health and sickness from infancy to old age and for all occupations, climates and seasons, including special summer menus which enable you to withstand the heat and retain winter's rigor.

Reasons are given for every recommendation based upon actual results secured in the author's many years of practice although technical terms have been avoided. Every point is explained so clearly that there can be no possible misunderstanding.

With these lessons at hand it is just as though you were in personal contact with the great food specialist because every possible point is so thoroughly covered that you can scarcely think of a question which isn't answered. You can start eating the very things that will produce the increased physical and mental energy you are seeking the day you receive the lessons and you will find that you secure results with the first meal.

If you would like to examine these 24 Little Lessons in Corrective Eating simply write The Corrective Eating Society, Department 48, 460 Fourth Avenue, New York City. It is not necessary to enclose any money with your request. Merely ask them to send the lessons on five days' trial with the understanding that you will either return them within that time or remit \$3.00, the small fee asked.

**Please clip out and mail the following form instead of writing a letter. as this is a copy of the official blank adopted by the Society and will be honored at once.**

## CORRECTIVE EATING SOCIETY

Department 48, 460 Fourth Ave., New York City

You may send me prepaid a copy of Corrective Eating in 24 Lessons. I will either remail them to you within five days after receipt or send you \$3.00.

Name ..... Address .....  
City ..... State .....

the heroic in an heroic way, and the poems on The Hague, Rheims, Edith Cavell, and the "Lusitania" tragedy ring true. By far the most spirited poem is the robust and gallant ode to Embattled France, first published in The Independent, ending with this Envoi to the Republic, which it is a pleasure to print again:

"When Peace and Toil shall guard thy soil in all its ancient girth,  
And Freedom, by thy fortitude, has found a newer birth,  
We still shall cry, 'My France, Our France, the France of all the Earth!'"

Neither poet grapples fiercely with social problems; neither strips life of all its sham; neither gives us merciless realism. Now this may be either praise or blame—according to your conception of poetry.

*April Airs*, by Bliss Carman. Boston. Small Maynard. \$1. *Poems of War and Peace*, by Robert Underwood Johnson. Bobbs-Merrill. \$1.

## SOUTHERN SOUTH AMERICA

Out of the host of writers who have written more or less comprehensively of South America, there are few who stand out with such distinction and merit as Father Zahm. Added to his scientific training his is the true gift of narrative, and many little anecdotes carry the reader with interest thru his somewhat lengthy book. Companion of Colonel Roosevelt in his South American expedition, Father Zahm had every advantage for seeing the country, and his former travels (beginning thirty-three years before) had prepared him to choose important and dismiss trifling knowledge.

He has a solid admiration for our South American neighbors and their past history, beginning with Vasco Nunez de Balboa and his astounding proclamation as discoverer of the Pacific, which exprest not the vainglorious words of the individual, but rather the promise of power and the supremacy of an empire.

If the extraordinary display of hospitality offered to the party did not tinge Father Zahm's views of the customs and temper of the race, it would be remarkable. The one word of criticism we would make bears on this point. To ordinary travelers or foreign residents in South American republics, the natives are incomprehensible and often frankly unfriendly, and one does not ordinarily come in contact with the society which has been influenced by travel and intercourse with other nationalities. Aside from this, *Through South America's Southland* is a book of extraordinary interest by one who knows his subject thoroly.

J. A. Hammerton's *Real Argentine* is refreshing in its freedom from the fulsome praise that fills three-quarters of the literature written on the South American continent. It chronicles life in this remarkable republic as the ordinary man, free from official tutelage, will find it and should be read by every prospective traveler to rid his mind of the often mischievous influence of writers who have seen only what is flatter-

ing and who really know nothing of the true conditions or people. Mr. Hammeton has chronicled his impressions after a year's residence away from the country, so as to enter only settled judgments. Statistics are left to other writers, since they prove "merely whatever the writer most wishes to establish." Under his impressions there is often a shrewd commonsense which will make the reader grasp at once the impossibility of knowing or becoming familiar with a race actually molded not in European ideals, but in archaic traditions and Moorish notions.

The author agrees with that incomparable raconteur and voyager, Mons. Huret, that this country of many shams is decidedly hard to "get into to understand." In judging Buenos Aires other great cities should be borne in mind, and in judging the country as a whole, its deceptions should be unveiled at the same time that its truly commendable qualities are praised.

*Through South America's Southland*, by J. A. Zahm. Appleton. \$3.50. *The Real Argentine*, by J. A. Hammeton. Dodd, Mead. \$2.50.

#### MOHAMMEDANISM TODAY

It is a little difficult to entirely follow Dr. Zwemer in his evidently sincere work, *Mohammed or Christ*, because he does not seem to emphasize sufficiently the essential difference between Christianity and Islam. While Christianity is of the spirit with spiritual reward promised as the chief hope of the believer, Mohammedanism is, for the most part, under Allah, a higher code of materialism reinforced by a democratic militant faith. Every Mohammedan convert becomes socially the equal of his fellow, so far as any advancement here or hereafter is concerned. If, therefore, Mohammedanism is to be won by Christianity, it will be by its spiritual appeal.

Not that one would question Dr. Zwemer's spiritual conviction, but in his very earnestness to further it, he now and then appears to take in hand the forceful weapon of the enemy. That places him in danger of a challenge out of the New Testament by some learned Mohammedan. His disclosure of the vitality of modern Islam, however, should stir those of his religious principles to renewed missionary effort.

*Mohammedanism*, by C. Snouck Hurgronje, is doubtless not intended to be a comprehensive study of Islam. Otherwise it would be astonishing that the author nowhere mentions the enlightened and tolerant influence of Akbar upon Mohammedan thought in India, and overlooks the former position of Herat in Afghanistan as a conspicuous center of Mohammedan culture. Neither does he touch upon the orthodox influence in Persian literature, whereby Omar never was given in the East the appreciation bestowed upon him in the West. We, therefore, accept Professor Hurgronje's volume to be chiefly the Arabian conception and development of Mohammedanism, in which field the author displays accomplished learning, especially as to the religious aspects.

*Mohammed or Christ*, by E. M. Zwemer. Revell. \$1.50. *Mohammedanism*, by C. Snouck Hurgronje. Putnam. \$1.50.

## The Highest Choice

Do not let it be merely a question of initial cost when you make your choice of pianos. The matchless music of the Steinway has lifted it above the "price" atmosphere for all time.

It is true, the Steinway does cost a little more. But no one who owns a Steinway has ever a shadow of regret for the price paid. It is but little higher than the cost of other pianos, and the Steinway carries within its perfect mechanism the guarantee of a satisfaction beyond all price.

For more than three-score years it has been the ideal of the greatest music masters of their day. So the Steinway must command your respectful attention before your choice is made.

## A REVIEW OF FINANCE AND TRADE

### THE INVESTOR'S SERVICE

*The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.*

### WHEN BOND TITLES MISLEAD

AS has been stated before in these columns, there are bonds and bonds. The investor often fails to realize that a bond is not always secured by mortgage on real property, plants or railways, but often thru deposit of other bonds which may or may not be secured by mortgage, or by stocks, or both bonds and stocks as well as some real property.

While all bonds contain a promise to pay a specific amount at a certain time, as well as semi-annual interest, some are secured by a mortgage on real property or by deposit of collateral; while others are purely unsecured promises to pay, secured by whatever assets the issuing corporation may possess. This can never be ascertained by reading the bond, but the information is found in the company's last annual report, which should contain general remarks as to the company's condition, a balance sheet, statement of income and expenses, etc.

A bond may be called a "first mortgage and collateral trust 5 per cent bond" and be secured by a first mortgage on a comparatively valueless piece of realty, while the collateral may consist of an entire issue, or a part of an issue, of first mortgage bonds; it may be secured by bonds or stocks, or both. But the value of the collateral trust bond will depend upon the market value, or actual intrinsic value in case no market has been made, of the collateral and upon the value of the company's promise to pay.

It must be always borne in mind that the collateral may have a par value greatly in excess of the amount of bonds issued, but that the collateral may be secured by a mortgage on a railroad that is not operating or upon land that has no immediate market possibilities; that the stocks may not be paying dividends and have little or no market value, or they may be stocks of a company that is of great strategic importance to the parent corporation. If the parent corporation has other earnings and other assets to permit of its paying interest on its collateral trust bonds, no fear may be felt with re-

spect to the interest. However, if the bonds mature and the collateral have value greatly under the par value of the bonds issued, the holders stand to lose unless the corporation's credit be exceedingly good.

The uninitiated investor is unable to judge the value of the collateral behind such issues; if he cannot secure the advice of an expert, he should refrain from investing in collateral trust issues, or in fact in any bonds whose security is not clearly known.

Some bonds are secured by collateral consisting of stocks only. As they bear the corporation's promise to pay they are called bonds, but they are in reality stocks inasmuch as in case of insolvency the collateral would be about the only security available to satisfy their claims. Take the case of Interborough Consolidated  $4\frac{1}{2}$ s; these are secured by stock of the Interborough Rapid Transit Company, which operates the subway system of New York City. The Interborough Consolidated is a holding company for traction lines in New York City, the principal assets consisting of \$33,912,800 out of \$35,000,000 Interborough Rapid Transit Company stock; this stock is deposited as security for the Interborough Consolidated collateral  $4\frac{1}{2}$ s, of which \$67,825,000 are outstanding.

The company also owns a large proportion of the stock of the New York Railways Company, from which it receives no dividends. So as far as the income of the company is concerned, it is entirely dependent upon dividends from Interborough Rapid Transit stock for funds to pay interest on its Collateral Trust  $4\frac{1}{2}$ s. At the present time these dividends are greatly in excess of requirements, but it is not inconceivable that with the new construction at an extensive rate and no income from new lines for some years, the Interborough Rapid Transit might not be so liberal with its dividends when it had to charge interest on its entire \$170,000,000 bonds to earnings instead of to construction account. For this reason these collateral trust bonds are considered more as a stock than a bond issue.

The Chicago, Rock Island & Pacific Railway Company was purchased years ago by a group of speculators. Not possessing the necessary funds to finance the entire proposition, a holding company was formed and called Chicago, Rock Island & Pacific Railroad Company. The latter was capitalized at \$145,000,000, and it purchased \$71,353,000 of the railway company's stock, which it deposited as security for an equal amount of Collateral Trust 4 per cent bonds No. 2002; these bonds were sold or exchanged for the stock of the railway company. The railroad company was in turn controlled by a third company, which issued \$54,000,000 preferred stock and \$96,000,000 common. Thus a \$75,000,000 proposition was inflated to a \$150,000,000 proposition thru two holding companies and a Collateral Trust bond issue.

The holders of the Collateral Trust 4s had nothing to fear so long as the railway company paid dividends on its stock, inasmuch as the amount of the dividends paid always exceeded the 4 per cent required to pay interest on the bonds. But early in 1914 the railway company decided that it could not continue to pay dividends on its stock, so when the May 1st interest became due on the bonds a default occurred. The bondholders had to sue and take the collateral, while those who did not join the protective committee received but \$98.50 in cash for a \$1000 bond and, but recently, \$8.50 additional. The \$150,000,000 Rock Island Company stocks are now practically valueless altho the preferred once sold at over 94 and the common as high as 81.

This case illustrates quite clearly what the investor has to contend with in placing his funds and how careful he must be in selecting a reputable banker to assist him in making investments. There are many good collateral trust bonds, but it must always be borne in mind that not only will the company that issued the bonds bear close watching, but also the company or companies whose securities are deposited as collateral. Investors who buy bonds of this class, even the best ones, must not feel that their duty is fulfilled when the bonds have been carefully stowed away in a safe deposit box. Either the investor should place himself in a position to be advised of changing conditions in the corporations whose securities he owns, or he should send a complete list of his holdings to a banking firm which maintains a highly organized statistical department for this purpose.

The investor who does not want to worry about his investments should not purchase collateral trust bonds of any sort. "Investments without worry" are confined to United States Government issues and state and municipal bonds, railroad bonds which are legal for New York savings banks, etc. The yield on such bonds rarely exceeds 4.75 per cent.

## SELLING COSTS

Occasionally there appears in the public press an editorial discussion of some insurance question in which, for the lack of exact information by the writers, the practises of the companies are misrepresented. There recently appeared in a leading weekly periodical, *The Saturday Evening Post*, a criticism of the sales methods of life insurance companies, comparing them unfavorably with fire insurance and the automobile industry. "But very little fire insurance is sold," observes *The Post*, "through the personal importunities of agents. Almost always the buyer seeks the agent." Referring to the automobile business, it says: "Comparatively few automobiles are sold because of the personal importunities of agents."

My experience in the fire insurance business does not square with the statement made. Altho fire insurance protection is absolutely necessary to almost all those who buy it, few of them are given the opportunity or are put to the personal trouble of securing it. They are constantly subject to a brisk canvass by competing agents. But I am satisfied that if there were no agents, those who need fire insurance policies would go after them. Why? Because it is indispensable, is comparatively cheap, protects against direct personal loss and, among business men, is a prop to credit. All of them prefer, however, that the work be done by middlemen.

But the argument made tends to the inference that because of the methods used in selling the three things, that followed in life insurance renders the cost too high. But the automobile business spends millions for advertising. There are other heavy expenses for salesrooms equipt with a force of high salaried salesmen, mechanics and demonstrators. Certainly the selling cost is 20 per cent.

Several years ago I compiled some figures from the Insurance Department reports which showed that the commissions received by fire insurance agents during the preceding year averaged between 21 and 22 per cent. of the premiums. They are probably higher now.

Now as to the cost for agents' commissions in life insurance. Referring to the Connecticut insurance report on the business for the year ending December 31, 1915, I find that the total premiums of the companies reporting to that Insurance Department for that year were \$220,073,297, and that the total commissions paid agents amounted to \$33,213,373. This is 15 per cent., and it includes both getting the business and keeping it on the books.

## August Investments

Securities suitable for the varied requirements of individuals, trustees, savings banks and other financial institutions.

The selection comprises municipal, railroad and public utility bonds yielding from 4.00% to 6.00%.

## WHAT TO WEAR— AND WHY

BY JOHN B. HUBER, M. D.

THE time: The afternoon of a summer day, when the weather man's thermometer registered above ninety in the shade. The place: Fifth avenue in the metropolis. Everybody was doing it. Doing what? Gazing at a most imposing personage prom-enading down the thoroughfare.

But what was remarkable in that? Why the rapt attention, the people in groups smiling, winking to one another, touching the forehead, the girls sniggeling? "How oddly costumed," observed a lady, clad herself in a dress the skirt of which appeared to have been made out of material designed originally for an umbrella. How very eccentric; how very queer; how odd; he must be crazy; and like expressions were forthcoming. I interrogated the cop: "Yes, he's nutty all right, drest the way he is; I know he must be, because the other day I see him carry a flower in his hand."

This man was indeed of superb physique, well above six feet, smooth faced and very straight; and quite without the bay window effect so many large men become addicted to. Manifest magnificent he was, as Walt Whitman might have averred; also picturesque, pulchritudinous, and covering the ground as majestically as one of those Albany boats coursing along the Hudson. And, like the pretty girl in the story, he certainly did stop the traffic. For, from tip to toe he was "clothed in white samite, mystic, wonderful," the same as Mark Twain used to be. Only he was without coat, vest or hat; immaculately shirted in a negligé fabric; and his white trousers neatly belted.

I have since learned that this gentleman goes about thus garbed by way of advertising a certain personal accomplishment, with a view to stipendiary emolument. But no matter as to that. Pause, rather, and think without prejudice, unfettering yourself for the moment of the shackles of custom; consider if after all this man, thus attired, was not the most sensible being "on the avenue" that broiling day. "But how," you ask, "about the flower"; that circumstance, to my mind, most likely showed he had more appreciation of the beauty in the cosmos, and got more of the essence out of existence, than the rest of us know how to extract for ourselves. I certainly did envy him his nerve. Not having the like I go along every hot day, summer after summer, just like the rest of my fellow sufferers, wearing a coat from which heat waves emanate just as the heat rises from hot sand; and I wear a hat—or rather, since that goads my temples insupportably, I compromise with the proprieties by carrying that dog-day nuisance in my hand. Truly, ours is the land of the free and the home of the slave to custom.

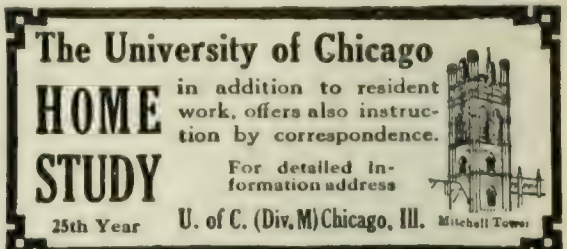

In rural districts men have, without being remarked, long discarded coats and hats; why should they not all the

more in cities, where the weather is hottest. Suppose now a hundred of us should league ourselves into a company of noble innovators, should go about the business we have to do in town this coming summer garbed like the heretofore mentioned Hercules. But to do this requires courage. Of course it does, equalling almost that now displayed in those European trenches. But it is only the first appearance that is hard; after which we will wonder how on earth we have ever endured going about as we do now. And it is certain the rest of masculinity, we having once made the break, will fall into line, or rather follow suit, throwing their coats and hats into the discard. Let us go to it, gentlemen, and if the flower seems rather too much, we can omit that detail for the present. Have we not for that matter already made some advance toward common sense summer gear; who now save the colored clergyman wears a top hat and a frock coat, come the dog days?

What visitor from the East or from between the tropics does not observe our irrational hot weather clothing? Americans in Manila dress coolly in linen, mohair, duck, Madras—and are comfortable; whilst we here gasp, perspire and disintegrate both physically and as to temper, become afflicted with "the tropical wrath," in garb that has no relation whatever to the thermometer. The shirt waists of the women seem always cool, as certainly their wearers are comely in them. Nobody objects to them on the score of propriety, as worn by the modester sex, as why should any one. Why, then, should many consider it highly improper for men to go about without coats; why should a man going about nattily shirted and neck-tied, and his trousers trimly belted, occasion a fair sized riot? Even an ornery looking customer might hope to look handsome that way. And why should men go hatted, either? Away with headgear in the good old summertime. A whole lot of baldness will also then be obviated if not remedied.

And why isn't more of linen, cotton, silk and white duck worn by us in June?

The admirable Chinese habit as to underclothing is to wear next the skin a net or mesh weave, over this a thin silken undershirt; the latter absorbs the perspiration whilst the net prevents the silk adhering to the skin. Linen gives always a feeling of freshness, but it is more expensive than cotton, which is for all practical purposes the better texture—strong, durable, not easily shrinking. No matter about the color of the underclothing—but no aniline dyes. Light colors, yellow or white, absorb fewest of the sun's rays, and are, therefore, the most suitable for summer clothing.

The penny in the slot gas meter has revolutionized young England's concept of the lighting question. On the occasion of a threatened air raid orders were received in a house that been to extinguish all lights. There was sudden darkness and confusion. Said a small child in the corner of a room: "Mother, quick put a penny in." *Christian Science Monitor*

## You Take No Risk

This Razor is  
GUARANTEED FOR LIFE

This Shumate "Barber" razor is so good that we dare guarantee it to you for life. Here's the reason—the blade is made from Tungsten Alloy Steel, which takes a keener edge than any ordinary steel can—and it holds it. You can use it for years without honing. The secret of this wonderful steel is *ours alone*, and we guard it jealously.

Here's our *unqualified guarantee*: Buy a Shumate "Barber" razor and use it—not once, but as long as you like. If you say after an exacting trial that you don't like it, we'll exchange it *without a word*.

Sent postpaid, **\$2.00**

In remitting, mention your dealer's name, and a chamois lined, rust-proof case will be included with your razor.

State whether you want light, medium or heavy blade. Heavy blade for very strong beards.

Established 1884  
Capacity 6,000 razors daily

Shumate Razor Co., 612 Locust St., St. Louis, U.S.A.

## An Income for Life

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

# JAMES WHITCOMB RILEY—THE PEOPLE'S POET

Because his poems told them the happy, common things of life "jes' as they air, in Country and in Town," the "real folks" for whom he wrote loved James Whitcomb Riley. They liked his use of the homely Hoosier dialect, his championship of the spirit of the Middle West; but most of all they appreciated his keeping them young with tales of "Little Orphant Annie," and "The Old Swimmin' Hole." Thruout his life Mr. Riley was loyal to Indiana; he was born there—in Greenfield, in 1853—and he died there—in Indianapolis, on July 22, 1916. These poems are republished thru the courtesy of Bobbs-Merrill Company, from the biographical edition of the *Complete Works of James Whitcomb Riley*, copyright, 1913, by James Whitcomb Riley.

## THE POEMS HERE AT HOME

The poems here at home! Who'll write 'em down,  
Jes' as they air, in Country and in Town?  
Sowed thick as clods is crost the fields and lanes  
Er these 'ere little hop toads when it rains!  
Who'll "voice 'em"?—as I heard a feller say  
'At speechified on Freedom t'other day,  
And soared the Eagle tel, it 'peared to me,  
She wasn't bigger 'n a bumble bee!  
Who'll sort 'em out and set 'em down, says I,  
'At's got a stiddy hand enough to try,  
To do 'em jestic thout a foolin' some,  
And headin' facts off when they want to come?  
Who's got the lovin' eye and heart and brain  
To recognize 'at nothin's made in vain—  
'At the Good Bein' made the bees and birds  
And brutes first choice, and us folks afterwards?  
What We want, as I sense it, in the line  
O' poetry is somepin' Yours and Mine—  
Somepin' with live stock in it, and out-doors,  
And old crick bottoms, swags, and sycamores:

Putt weeds in—pizen vines, and underbresh  
As well as johnny-jump-ups, all so fresh  
And sassy-like, and ground-squir'ls—yes, and "We,"  
As sayin' is, "We, Us and Company."  
Putt in old Nature's sermons,—them's the best,  
And 'casionally hang up a hornet's nest  
'At boys 'at's run away from school can git  
At handy-like, and let 'em tackle it!  
Let us be wrought on, of a truth, to feel  
Our proneness fer to hurt more than we heal  
In ministratin' to our vain delights,—  
Fergittin' even insect's has their rights!  
No "Ladies' Amaranth," ner "Treasury" book,  
Ner "Night Thoughts," neither, ner no "Lally Rook"!  
We want some poetry 'at's to Our Taste  
Made out o' truck 'at's jes' a-going to waste  
'Cause smart folks thinks it's altogether too  
Outrageous common—'cept fer me and you!  
Which goes to argy all sich poetry  
Is 'bliged to rest its hopes on You and Me.

Paul Thompson

I believe *all* childern's good,  
Ef they're only *understood*,—

Even *bad* ones, 'pears to me,  
'S jes' as good as they kin be!

## JAMES WHITCOMB RILEY

He didn't write of gods and kings  
And all such highfalutin' things;  
But folks and boys and bumblebees.  
And when he talked of Summer, say,  
The printing smelled of clover hay.  
And you could see the lazy breeze  
Go nosin' through the locust trees  
Around the house where you were born.  
And hear the old tin dinner horn.

He didn't read up Persian tales,  
Of these bulbuls and nightingales;  
But went and sat out on the rails  
And listened to the thrush and wren  
Cheep in the meadow brambles, when  
The song of birds was in his pen;  
The whippoorwill and bobolink  
Gave music lessons to his ink.

He turned words into wishing rings  
That made forgotten memories start  
Tears trickling in your lonely heart;  
And painted signposts all the way  
Along the pike to Yesterday.

God must be feeling mighty good  
To have him 'round (I know I would)  
A-telling tales of lazy scamps  
And runaways and dogs and tramps.

It don't seem queer to picture him  
All fussed with golden robes and wings  
Up there upon an armchair cloud  
Inventing stories for a crowd  
Of breathless little cherubim—  
Of fairy, goblin, witch and elf.

When he rode by the other day,  
There wasn't anything to say  
But "Good-bye, Jim, take keer yourself."  
—By permission of Herbert Kaufman  
and the *Philadelphia Public Ledger*.

## J U S T A W O R D

From Mr. Herbert J. Carr, of S. Pearson, Limited, the British firm whose operations in Mexico have been the subject of much discussion, we have a letter from which we quote, as follows:

Our attention has been called to certain statements published in your issue of July 24, under the signature of David Starr Jordan:

Exploiters, American, British, German says Dr. Jordan monopolized the mines and oil fields some concessions honorably obtained, a large percentage held by rank robbery—the oil concessions of Lord Cowdray standing perhaps first in this regard.

For this charge against Lord Cowdray, to which you have given publicity, there is not a shadow of foundation. The concessions held by the Cowdray interests were obtained by open and honorable

means and have been honorably held, as any investigation of the matter would have convinced your correspondent and yourself. Nor would such investigation have been difficult, for the text of the concessions has been duly published in the *Diario Oficial* of Mexico and is accessible to anyone desirous of learning the truth.

The statement above quoted can be attributed to one who is well intentioned but misinformed. That the Cowdray interests were given certain concessions in Mexico, is true: that they have large holdings of oil lands, is equally true; but the large holdings were not acquired thru concession but by lease or purchase in precisely the same manner as such lands are acquired in Pennsylvania, Oklahoma, Texas or California. And the amount of oil produced from lands held under our concessions is negligible.

At the recent sessions of the American Oriental Society particular recognition was paid to the services rendered to Oriental studies in this country by the Rev. Dr. William Hayes Ward, honorary editor of The Independent. It was decided to dedicate to Dr. Ward the current volume of the *Journal of the American Oriental Society*. In commemoration also of Dr. Ward having reached his eightieth birthday, it is proposed to attach to the volume a picture of Dr. Ward, together with a sketch of his many-sided and remarkably active career, crowned by the publication a few years ago of the standard work on the "Seal Cylinders of Western Asia," which forms one of the most valuable publications of the Carnegie Institution.

## REMARKABLE REMARKS

GENERAL JOFFRE—Victory is certain.  
PRESIDENT POINCARE—Justice is on its way.  
CHARLES E. HUGHES—I play according to rule.  
ED. HOWE—I once believed that piffle was dying out.  
FOOD DICTATOR VON BATOCKI—England cannot starve Germany.  
KAISER WILHELM—Going to church once a week is not enough.  
CLARENCE DAY, JR.—Suppose Edison's parents had taught him contentment.  
CAPTAIN KOENIG—If I have done anything for Baltimore, I will not present a bill.  
KARL LEMMERMAN—Every time a man looks into a mirror he admires his wife's taste.  
KING PETER—The victory of France is going to reestablish the harmony of the world.  
GENERAL HAIG—England will not achieve her full strength on land till next summer.  
DR. KATHARINE BLACKFORD—There is no wife who likes to have a domineering husband.  
MRS. ROBERT B. LIGGETT—It is about time we got away from the sacredness of motherhood.  
LADY DUFF-GORDON—You can wear a gown for six seasons provided your boots and hat are smart.  
GENERAL BRUSHLOFF—The prisoners I am now taking seem to be the ghosts of those I took in the Carpathians.  
WOODROW WILSON—College boys are the greatest conservatives I ever tackled in my life, largely because they have associated too much with their fathers.  
DAVID LLOYD GEORGE—We brought the representatives of the Irish Nationalists and the Ulster Unionists to the point of shaking hands, instead of shaking fists at each other.

# When you take to the Woods

When you take to the woods you will want to take with you an out-door food that is easily and quickly prepared, that supplies the greatest amount of body-building nutriment in smallest bulk,

that will stand up fresh and clean and sanitary in any climate. All these requirements are met in

## Shredded Wheat

the ready-cooked whole wheat food, the favorite out-door food for the camp in the woods, bungalow in the country, for the long tramp or the automobile tour. A diet of Shredded Wheat in Summer means good digestion, buoyant energy, mental alertness and top-notch physical condition.

Shredded Wheat is deliciously nourishing with milk or cream, or in combination with berries or other fresh fruits. Triscuit is the Shredded Whole Wheat Wafer—a crisp, tasty snack for luncheon or out-door picnics or excursions by land or sea. Serve it with butter, soft cheese or marmalades

Made only by

**The Shredded Wheat Company, Niagara Falls, N. Y.**

## THE FIRST LADY OF THE CAMPAIGN

MRS. HUGHES IS TAKING AN USUALLY LARGE SHARE IN THE PRESIDENTIAL CAMPAIGN, IN ACCOMPANYING HER HUSBAND ON HIS LONG PERCHAMOND TOUR IN THE WEST. SHE HAS NOT DECLARED HERSELF PERSONALLY ON THE QUESTION OF SUFFRAGE, BUT SAID IN A RECENT INTERVIEW THAT SHE WOULD BE GLAD TO SEE WHAT THE WESTERN WOMEN ARE DOING WITH THEIR VOTES.

## MR. HUGHES ACCEPTS

THE speech of acceptance of Mr. Hughes was a disappointment to most Progressives, to many Progressive Republicans who were not among the "come-outers" of 1912, and probably to some who have been content to wear the party name without any qualifying adjective. We wonder if it was not also a disappointment to the candidate himself. But if this surmise be correct, the cause is not so much any lack in Mr. Hughes's convictions as the nature of his conception of what a candidate's speech of acceptance should be.

Mr. Hughes believes—and he never compromises with his beliefs—that in accepting a nomination to run upon a party platform a man should not step outside the limits of the platform. He believes in "speaking to the question." We shall be surprised if, as the campaign goes on, he does not supplement his speech, and the platform, in many directions. An earnest of this, indeed, was found the very next day in his supplementary declaration on the subject of woman suffrage.

The speech of Mr. Hughes lacks constructiveness. He does not tell us in comprehensive and impressive fashion what he proposes to do if elected President. He contents himself with a minimum of positive declaration, and devotes two-thirds of his eight thousand words of speech to destructive criticism. But that is precisely what the Republican platform does.

The gravamen of Mr. Hughes's charge of ineptitude and delinquency against the Wilson administration lies in the realm of executive action. He specifies the Mexican situation, the maintenance of American rights in the Great War, appointments in the diplomatic service. To these executive shortcomings he adds legislative shortcomings in relation to preparedness for national defense, the tariff, the merchant marine, the Philippines and economy.

The strongest case that he makes is in relation to the President's course on Mexico. Mr. Hughes is at his best when he is dealing with facts. He presents a detailed summary of our dealings with Mexico which gives strong color to his characterization of the administration's record as "a confused chapter of blunders." "Decrying interference," he says, "we interfered most exasperatingly." He charges, with the force that always comes from an indictment made specific with facts, the administration with vacillation, ineffectiveness, inconsistency, the abjuring of responsibility for American lives and American property rights. It is a harsh indictment; but it carries conviction. It will not be an easy one to meet. It is true that Mr. Hughes does not tell us what he would have done about Mexico—tho he does suggest by implication many things that he would not have done—or specifically what he will do about Mexico if he is elected. But if the counts of his indictment are upheld, his declaration of a policy of "firmness and consistency," of demanding from Mexico "the protection of the lives and the property of our citizens and the security of our border from depredations," and of refraining from "meddlesome insistence with what does not concern us," offers general assurance of a policy quite other than that which the administration has maintained.

On the subject of our relations with the nations involved in the Great War Mr. Hughes is less specific. He

charges the administration with failure in the "safeguarding of American rights" thru lack of a "firm American policy," thru the "manifest lack of disposition to back words with action." He declares that "the chief function of diplomacy is prevention," and that in the performance of this function the administration's diplomacy has failed. He believes that "had this government, by the use of both informal and formal diplomatic opportunities, left no doubt that when we said 'strict accountability' we meant precisely what we said, and that we should unhesitatingly vindicate that position, I am confident that there would have been no destruction of American lives by the sinking of the 'Lusitania.'" Mr. Hughes further asserts his conviction that it is not true that resoluteness in protecting American lives would have led to war; he is convinced that during this critical period the only danger of war has lain in the weak course of the administration.

On this portion of his indictment Mr. Hughes is less convincing, and, we believe, inevitably so. The strength of the administration's position has a double foundation: we have been "kept out of war," and the assaults upon American lives, of which the "Lusitania" case was the most flagrant, have stopped. The judgment of the American voter on this point will largely depend upon his type of mind and his national predilections.

On the subject of the diplomatic service Mr. Hughes has a good case. He does not elaborate. But in his reference to the "deserving Democrats" incident in San Domingo, and to the displacement of trained and veteran diplomats in Latin-America by new and untried men, he puts a finger upon a weak spot in the administration's record which no amount of explanation can strengthen. The only possible defense—lamentably inadequate—is that Mr. Bryan is no longer in the Cabinet.

IN relation to national defense Mr. Hughes declares that "we are shockingly unprepared." He points to the "object lesson on our Mexican border." Since all our available regular troops are there and the entire National Guard has been ordered out for service there, "we are summoning practically all our movable military forces in order to prevent bandit incursions." Mr. Hughes denominates it as "little short of absurd" that we should be compelled to call men from their shops, their factories, their offices and their professions for such a purpose." In relation to preparedness Mr. Hughes accuses the President of instability and changeableness. He first denied that the question of preparedness was not a pressing one, then urged a certain program on Congress, then yielded up half his program under pressure from his party associates in Congress, losing a valuable Secretary of War by the change, then contenting himself with a paper increase in the regular army which purported to be much greater than it really was.

Mr. Hughes declares his belief in a larger regular army, and the creation of a first citizen reserve enlisted as a federal army and trained under federal authority. He sees in such a program no militarism, but a "simple insistence on common sense in providing reasonable measures of security and avoiding the perils of neglect."

In the criticism leveled by Mr. Hughes at the stand taken by the administration on preparedness those who are deeply concerned over the subject of national security and defense will doubtless find much that is sound and weighty; while those who naturally take the opposite view of these problems will find him hypercritical and ultra-partizan. But he presents his case with ability and effectiveness.

On the tariff, the position taken by Mr. Hughes is just what would be expected. He believes in protection; therefore he finds the attempts of the Democratic party at tariff reform a failure. He further accuses the administration of inefficiency, violation of sound principles of civil service, extravagance and waste. He favors a national budget proposed by the Executive. He declares his belief in woman suffrage.

The most important constructive proposal that Mr. Hughes makes is on behalf of what he calls the "organization of peace." He advocates an international tribunal to decide controversies susceptible of judicial determination; conferences of the nations to formulate international rules, to establish principles, to modify and extend international law so as to adapt it to new conditions; the development of instrumentalities of conciliation. He declares that "behind this international organization, if it is to be effective, must be the coöperation of the nations to prevent resort to hostilities before the appropriate agencies of peaceful settlement have been utilized."

This is an important endorsement of the principles of the League to Enforce Peace. It must be heartily welcome to every one who sees in this need for the "organization of peace" one of the most exigent problems that will confront the United States as a world power when the Great War has run its course.

On the whole, the speech of Mr. Hughes is a strong attack upon the record of the administration. It should be supplemented, as the campaign goes on, with affirmative proposals and the propounding of constructive policies. Mr. Hughes's record as governor of New York warrants the belief that he will so supplement it. He must if he is to make an effective campaign.

## AFTER THE WAR

WHEN the European war is over how will mankind probably behave as it takes up again the normal activities of peace? Will it be faint-hearted and conservative and go back to ideas and practises that we thought were abandoned, or will it be irritable, impatient and radical?

There are only two historical periods that offer us suggestions of much value for answering these questions. On a relatively small scale the years that immediately followed the Napoleonic wars in Europe and the years that followed the Civil War in America were in many ways like the years that reasonably may be expected after the termination of the war now at its height. They were years of exhaustion and poverty, and the men and women that lived thru them, taking up their tasks and bearing their burdens as best they could, were sorrowing men and women for whom life had plenty of work and duty but no great joys. Nevertheless, in those years certain great achievements were realized which the world has profited by enormously.

Important scientific discoveries were made and great inventions were perfected in the earlier period. In America, in the later period, the first transcontinental railway was completed, telegraphic communication was extended over the continent and American enterprise laid the Atlantic cable. On the whole, however, the years from 1820 to 1830 were a time of comparative inactivity in Europe, and the years from 1865 to 1875 were a time of comparative inactivity in America. A great immigration movement from Europe to America began in 1820. The South was distracted by the disorders incident to reconstruction from 1866 until after the election of 1876. In both periods the general reaction of mankind to the problems of life was conservative. Then, in each case after a decade of conservatism began an era of rapidly developing radicalism.

The reasons for these reactions, first of conservatism, subsequently of radicalism, were fundamental, as inferring in the nature of things, and the same reasons hold good now. Radicalism is often ascribed to misery, but it never gets a great start so long as mankind is really miserable. It is in fact a product of surplus energy and surplus wealth. Also, radicalism is an activity of youth. It gets relatively little support from age, and all great wars leave a population composed of childhood and age. The ranks of the young men have been thinned.

To an extent never before equaled and to a degree equaled but seldom the present war has destroyed the surplus of energy and of wealth and has killed and maimed the young men. The European male population of 1925 will be made up in a relatively small measure of men born between 1880 and 1900 and their offspring. The European population of 1935 will be made up predominantly of the offspring of boys now ranging in age from seven to fifteen years. The death rate of children under seven in the last two years has been exceedingly high.

Therefore, in the next ten years all important affairs, industrial, political and scientific, will be in the hands of the relatively old men, rejected for military service, helped out by an army of cripples and invalids capable at the best of doing half work, and by the uninjured survivors of the horrors of trench warfare who will find the task of getting back into industrial and professional life by no means easy. There will not be much ebullition of radicalism in those years.

But unless another great war shall intervene the years from 1930 on will see a radical movement of large proportions. The boys of today, taking up the problems of life in their own way with less than normal guidance from fathers, uncles and elder brothers, will be in full control of the situation and it will be one calling for vigorous constructive measures. An enormous burden of debt and taxation will provoke efforts to shift it from class to class. The necessity of achieving a collective efficiency more productive than the anarchistic individualism of the opening years of the century will compel the world to think and experiment in the field of social economy as never before. The lesson that this war was waged by science as well as by courage will not be forgotten. The fact that women have demonstrated their ability to share in the tasks of men will make any return to an earlier status impossible.

Conservatism will once more have its day for ten

years or so after the war. But that will be the end of it for a generation or more to come, unless, unhappily, another war shall follow upon the heels of the present calamity.

### A SETTLEMENT THAT DOES NOT SETTLE

THE great strike in the cloak, suit and skirt branch of the women's garment industry of New York City was settled last week—but not settled right. The workers gain an increase in wages and a decrease in hours, the manufacturers gain their main contention—the absolute right, subject to strike if it is abused, to hire and discharge their employees. Thus the industry reverts to the conditions that obtained prior to the strike of 1910 as far as the relations of employers and employees are concerned. Then the only restraint upon their actions were those provided in the laws of the state. Under these laws the employers have the absolute and unlimited right to discharge; the employees the absolute and unlimited right to strike.

But when the Peace Protocol was established in 1910 the unions relinquished their right to strike and, under a very far-reaching opinion of the Board of Arbitration delivered by Louis D. Brandeis, they acquired thereby the right to have a judicial review by the Board of any discharge they thought unjust. This was the cornerstone of the Protocol under which manufacturers and unions worked together for the next five years. But abuses sprang up. The unions tried to make as much use as possible of the machinery of the Protocol; the employers tried to get away from using it at all. The unions began to dispute every discharge and soon a tremendous volume of litigation was on the calendar of the Board of Grievances. The manufacturers, in order to get rid of these troubles with their own employees, began to give out much of their business to submanufacturers. But this only conveyed them from the frying pan into the fire, for the boosted submanufacturers began to enlarge their plants and shortly entered the field as rival manufacturers.

It was the situation growing out of this dilemma that caused the manufacturers to abrogate the Protocol and later the joint agreement with the unions established thru the mediation of Mayor Mitchel. Naturally, when they locked out their workers, a strike followed.

Thus it will be seen that the manufacturers, instead of getting together with the unions to remedy the defects of the Protocol, proceeded to destroy it entirely.

As the cure for the evils of democracy is more democracy, so the cure for the Protocol would have been more protocol. The Protocol could easily have been perfected by imposing penalties on the side that brought about useless litigation. That is what has been done in the dress and waist industry where the Protocol still flourishes. It is a misfortune that the Manufacturers' Association and the unions have gone back to the days of force as the ultimate arbiter of their disputes. It is as tho the forty-eight American states should abolish the Constitution and agree to adjust their disputes by war. But fortunately the forces that brought order out of chaos in 1910 are still operative. Sooner or later the course of events will bring into being a new and perfected Protocol. That is what the enlightened members of the Manufacturers' Association and the unions must constantly work for.

### MAKING THE TAXPAYER FEEL IT

AMONG the proposals of the administration and the Democratic majority in Congress for the raising of the additional revenue required for national defense and other purposes are several connected with the income tax. It is proposed in the bill already in committee not only to make those with big incomes pay more but to subject every one who pays any income tax at all to a doubled rate.

It is now announced to be the intention of the Democratic leaders also to set the limit of exemption at a lower figure. Now if you have a net income under \$3000 you pay no tax on it. If husband and wife together have a net income under \$4000, they pay no tax. If the present purpose of the administration is carried out, \$2000 will be the exemption limit for single taxpayers and \$3000 for married couples.

This is wise and sound. The best thing about the income tax is that the taxpayer pays it straight out of his own pocket. It is not hidden away in the purchase price of goods as in the case of the tariff and internal revenue taxes. The taxpayer feels it. He realizes, as he does not with any other form of federal taxation, that it is he and his fellows who are paying the expenses of government.

This is an eminently desirable condition. It helps to make for national economy, or it presumably would if it could be carried far enough.

The new proposal is a step in the right direction. It will largely increase the number of those who pay income tax. It will bring home for the first time to additional tens of thousands that the expenses of government are a part of their individual responsibility. It may help to awaken their slumbering interest in governmental economy. It may give them a new point of view on the "pork barrel."

### JUST A LITTLE LONGER

WHEN both great political parties declared in their platforms for woman suffrage a great new day dawned for the believers in democracy, full and untrammelled. Now that a candidate for the presidency has announced his support of the suffrage amendment to the Federal Constitution, the sun of political equality stands high in the heavens.

Equal suffrage is almost here. The conversions to its cause, whether they spring from conviction, from expediency, or from sheer political funk, are coming fast and faster.

The coming of equal suffrage is no longer debatable. It can be obstructed, retarded, hampered—somewhat. It cannot be prevented.

### FOR OUR ENTOMOLOGICAL READERS

WHEN we try to picture the hardships of Mexican campaigning, it may not be uninteresting to take down the "Biglow Papers" and read Lowell's description of the country:

The country here that Mister Bolles declared to be so charmin'  
Thruout is swarmin' with the most alarmin' kind of varmin' . . .  
You never see such darned gret bugs (it may not be irrelevant  
To say I've seen a *Scorabacus pilularius* big as a year old elephant).  
The regiment come up one day in time to stop a red bug  
From runnin' off with Cunnle Wright, 'twas just a common *Coccus lectularius*.

# THE STORY OF THE WEEK

## Mr. Hughes for National Suffrage

The day after he had been notified of his nomination for the presidency, Mr. Hughes announced that he favored unqualifiedly an amendment to the Federal Constitution giving the right to vote to women. In so doing, he went beyond his party platform, which declared for suffrage but added that the matter should be left to the states to settle for themselves.

In his speech of acceptance, Mr. Hughes had this to say on the question of suffrage:

Some time ago a consideration of our economic conditions and tendencies, of the position of women in gainful occupations, of the nature and course of the demand, led me to the conclusion that the granting of suffrage to women is inevitable. Opposition may delay but in my judgment cannot defeat this movement. Nor can I see any advantages in the delay which can possibly offset the disadvantages which are necessarily incident to the continued agitation. . . . We shall have a struggle constantly increasing in bitterness, which I believe to be inimical to our welfare. If women are to have the vote, as I believe they are, it seems to me entirely clear that in the interest of the public life of this country the contest should be ended promptly.

In supplementing this statement he made it clear that he had not gone further in accepting the nomination because he felt constrained to speak then only of matters set forth in the party platform. He then declared his support of the Susan B. Anthony amendment, and said:

I see nothing but danger to our security, to our unity, to our proper attitude toward political questions, in continued agitation of the subject; and I would take the shortest cut to its solution.

I further believe that it is a matter affecting the whole country. It is one of those matters where we must have a uniform policy. The country must decide on what that policy should be. I have indicated my belief as to what it should be;

but it is a question which affects the whole country—the composition of our electorate; and therefore I believe that the federal amendment should be submitted and should be ratified.

Suffragists thruout the country were naturally delighted at Mr. Hughes's complete championing of their cause. Mrs. Carrie Chapman Catt, president of the National American Woman Suffrage Association, in commenting upon it said: "I predict that all women in the United States will be voting by 1922, if not before."

Mr. Wilson subsequently let it be known that he had not changed his view that the matter should be determined by each state for itself.

On Saturday of last week Mr. Hughes began his first speaking trip of the campaign. The journey will occupy a month and will take the Republican candidate through seventeen states from coast to coast.

Sunday was spent by the party at Niagara Falls, where they attended church, and were entertained by the president of the State Reservation at Niagara, Mr. William B. Howland, and his fellow commissioner, Mr. Paul A. Schoellkopf. The feature of the afternoon was a fifty mile motor drive, beginning with an informal visit to the Niagara Park on both sides of the river. Just before leaving for Detroit, in the evening the party witnessed a very remarkable illumination of the Falls, which has just been installed. The chairman of the Republican National Committee, Mr. William R. Willcox, and the president of the Republican League of Clubs, Mr. John A. Stewart, accompanied Mr. and Mrs. Hughes on the motor drive. The first speech of the trip was at Detroit on Monday night. Mr. Hughes announced that he was "entering

upon this trip with zest." He long ago proved himself a tremendously effective campaigner, as the Democratic party in New York State has good reason to remember. One of the most effective speeches of the first Taft campaign was made by Mr. Hughes at Youngstown, Ohio.

Just before the trip began an important event from the Republican point of view occurred in the announced adhesion of Raymond Robins, of Chicago, to the Hughes cause. Mr. Robins was a prominent and radical Progressive. In announcing his support of Mr. Hughes, Mr. Robins said:

While I had hoped against hope that the extraordinary events in this epochal hour might overrule the verdict of the voters, and under the leadership of Colonel Roosevelt the Progressive party might yet dominate the situation, nevertheless, when the Progressive convention had adjourned and the entire situation was considered it was manifest that the end which the voters had decreed had come—that the Progressive party was dead.

Comprehending our national necessities, how can a Progressive hesitate long to choose between the party of nationalism and the party of sectionalism?

The present leader of the Republican party won his reputation as the progressive Republican Governor of New York. He there proved himself completely independent of all boss control and demonstrated that he will take advice from many, but dictation from none. His words have been made good by deeds. His leadership is the fruit of progressive movement in American politics. The forced retirement of William Barnes, Jr., was the "high sign" to all who wish to know and understand that the control of the Republican party had passed forever from the "Old Guard" of 1912. Mr. Hughes's recognition of the Progressives in the appointment of his campaign committee is a guarantee of the good faith in which he appeals for Progressive support.

The Democratic campaign is not yet under way. The date for Mr. Wilson's notification was to be decided upon this week.

The effort of certain In Congress Southern Democrats in the Senate to hamper the passage of the Federal Child Labor bill by attaching to it as a rider the Immigration bill has been decisively frustrated. Action on the Immigration bill is to be postponed until the next session which begins in December. The child labor bill, on the other hand, has been given a preferred place on the Senate calendar. This action was taken, at the urgent request of President Wilson, by the Democratic caucus. The vote in the caucus on the proposal to keep the Child Labor bill unencumbered was 32 to 7, senators from Alabama, Virginia, North Carolina and Kentucky voting in the negative.

The conference report on the army appropriation bill is all ready for submission to both Houses of Congress. The conference has cut forty-six millions from the Senate appropriations, and added eighty-five millions to the amount carried by the bill as it passed the House. The bill, as it now stands, carries two hundred and sixty-seven millions for military defense. The Navy bill is still in conference. If the Senate figures on the navy appropriations were to be accepted, the total appropriations for national defense would amount to six hundred and thirty-seven millions; but the conference is much more likely to split the difference as it has done in the case of the Army bill.

**Carranza Snubs Us Again** Carranza has appointed three commissioners to meet American representatives in the conference he suggested, but his last note declares that they are instructed to consider "preferably" the matters mentioned in his original proposal; namely: the withdrawal of our troops, the responsibility for border raids and arrangements for a border patrol. He ignores Secretary

commissioner of the International Peace Forum and has conferred repeatedly with Mexican leaders.

On the border the outstanding event of the week was a bandit raid near Fort Hancock, Texas, in which two Americans, a private in the Eighth Cavalry and a customs inspector, and five Mexicans were killed. It attracted special attention because, at the invitation of an American customs agent a band of eight Carranzistas, who had pursued the bandits to the Rio Grande, crossed the river, helped the Americans to round them up, and took up the chase again when they were driven back into Mexico. This is the first recorded case of actual coöperation in bandit hunting between Mexican national troops and our own.

Colonel H. J. Slocum of the Thirteenth Cavalry, commanding at Columbus when that post was raided, has been officially cleared of blame for the incident by the Department of War, chiefly on the ground that the probabilities were strongly against a Villa raid at the time and that since he could not send patrols over the line he had no means of discovering the approach of the bandits.

**Present Conditions in Mexico** Carranza is reported as denying the existence of the widely rumored plot on the part of his more conservative supporters and the remnants of the old Cientifico faction which supported President Diaz for so many years to overthrow the existing government and call a new election. He claims that the only important hostile force on Mexican soil today is a small and rapidly dwindling band of rebels under the leadership of Villa. No elections will be held for the presidency until after the meeting of a constitutional convention, to be chosen in October, to consider laws and amendments laid

before it by the revolutionary government. Carranza intends to retire from the provisional presidency and become a candidate at the presidential election which will follow the completion of the Constitutionalist program.

From the military point of view the situation of the de facto government is at least as satisfactory as it has been at any time, altho to say that is not to say very much. General Trevino, the Carranzista leader in the north, claims to have Villa's forces surrounded in the state of Durango. Guillermo Escantale, a prominent follower of the bandit Zapata in southern Mexico, has been captured and executed by the supporters of the existing government. The Carranzistas claim another victory over an outlaw band in the state of Oaxaca.

The conduct of the present Constitutionalist Government and the moral and material support accorded it at various times by the administration of President Wilson is vigorously attacked by H. L. Wilson, who was ambassador from the United States to Mexico at the time of the assassination of Madero and the accession of Huerta. Mr. Wilson has just published a series of his confidential despatches to the Secretary of State during his ambassadorship in order to vindicate his support of the Huerta administration in defiance of the policy of his official superiors at Washington. Mr. Wilson asserts that the past three years of anarchy have cost the lives of two hundred thousand Mexicans and four or five hundred American citizens; while American property interests to the amount of more than a billion dollars have been ruined or neglected and twenty-five or thirty thousand American residents forced to flee the country. All of this, in his opinion, could have been avoided had the American Government followed his advice.

**New York Car Strike** On Saturday night, August 5, not a single surface car ran on the streets of New York City, except in Brooklyn. Service on the lines of the New York Railways Company, the Third Avenue Railway Company, operating in Manhattan, and their various subsidiaries and smaller companies in other boroughs was crippled by strikes which,

originating in Yonkers, Mount Vernon and New Rochelle on July 22, had gradually spread over the city till about 3000 New York motormen and conductors had left work.

There has been no such strike in Manhattan since 1905, when a hasty strike of subway and elevated employees, not fully backed by the national organizations, was soon broken. But now when times are good and the comparative absence of unemployment makes conditions favorable for a strike, the officials of the Amalgamated Association of Street and Electric Railway Employees of America are making a vigorous attempt to unionize the traction employees of the metropolis.

The Yonkers, Mount Vernon and New Rochelle lines, owned by the Third Avenue Company, of which Frederick W. Whitridge is president, have not been in use since July 22. Mr. Whitridge refused to arbitrate or grant the demands of these men for a third increase of pay within six months, and, after the Board of Directors had given him exclusive power to treat with the men, took himself to Europe. In refusing arbitration he seems to have repudiated a promise made in 1913, and the Public Service Commission condemned him for causing the series of strikes.

Four days after this strike began service was suspended on the Bronx lines, and on July 29 the strike entered Manhattan, where the same Third Avenue Company operates the important lines on Forty-second street, upper Broadway and others. By Saturday the men of the New York Railways Company—which runs most of the other Manhattan lines—and those in Queens Borough and Staten Island had walked out. Service was not entirely stopped; on Sunday almost the normal number of cars ran on some lines, but at night no cars were sent out. There were some accidents—one fatal—owing to the use of inexperienced motormen, and a good deal of disorder, but no serious violence.

The Mayor called representatives of both systems to meet union men at his office, but neither conference was successful. On Sunday, however, Chairman Oscar S. Straus of the Public Service Commission and the Mayor succeeded in bringing the New York Railways management and the union into a ten-

tative agreement which it was hoped would lead to a settlement of all the strikes. The terms of this treaty gave the men the right to organize and to present grievances thru committees composed of bona fide employees, with a board of arbitration as a court of appeal, and provided either for a five per cent wage increase or for arbitration of this question. The strikers voted to accept the agreement, but the company had not done so by Monday night.

**The Issues** In the matter of wages the men seem to be justified in their demands, as according to their figures their pay—from 25 to 28 cents per hour for conductors and 26 to 29½ cents for motormen—is lower than that in many other cities, including Chicago, Boston, Pittsburgh, Cleveland, Detroit, Des Moines and San Francisco. They ask a wage of 30 cents an hour for the first year of service and 33 cents thereafter, for both motormen and conductors. On the essential issue—recognition of the union—neither side would consent to arbitration. President Shonts of the New York Railways Company, professed his willingness to meet employees as such, but refused to treat with the "alien" organization. As the men do not ask the closed shop (the Amalgamated Association's model agreement, recently signed in Boston, specifically pledges the union not to discriminate against nonunion employees), their demand appears to be no more than is necessary to make collective bargaining effective.

The union leaders, William D. Mahon, president, and William B. Fitzgerald, chief organizer, were enrolling subway and elevated employees. Altho these men were given wage increases of from ten to thirty cents an hour on August 2, and a temporary bonus of a dollar a day on August 6, in the hope of averting trouble, they were expected to join the other strikers if a settlement was not reached promptly. The police have been detailed to strike duty on cars and at barns, but under strict orders to remain neutral and to allow peaceful picketing and persuasion. The employees of all the lines already involved number 6500, and two and a half million people, it is estimated, use the cars every day.

#### OFF TO RUN THE BLOCKADE AGAIN

The "Dentzeland" being towed out to the channel at the start of her homeward trip, late in the afternoon of August 1. She apparently succeeded in slipping thru the British guard outside the three-mile limit.

**Other Strikes** In Philadelphia, also, a street car tie-up was threatened. There the union is already organized, but the officials of the Rapid Transit Company claim that its membership is negligible. The men ask a flat wage of forty cents an hour as against the present graduated scale of twenty-six to thirty-one cents, recognition of the union, a union grievance committee, and other concessions. The company has refused to meet their committee and a strike was called at the beginning of the week.

The conference between representatives of 225 American railroads and the "Big Four" brotherhoods, which were broken off on June 14, were resumed on August 8 in New York. The four unions demand an eight hour day, with time and a half for overtime, and insist upon a flat concession without arbitration. The railroads made counter-proposals and urge that the dispute be submitted either to the

Board of Mediation and Conciliation (under the Newlands act) or to the Interstate Commerce Commission. No agreement was reached.

In the interval between the conferences, the 400,000 union men have voted in favor of allowing their officers to call a strike at their discretion. If this additional weapon fails to win sufficient concessions from the railroads, a strike which would paralyze the country's trade may be begun.

Several movements to prevent such a disaster are on foot. The railroads are advertising freely:

A \$100,000,000 wage increase for men in freight and yard service (less than one-fifth of all employees) is equal to a 5 per cent advance in all freight rates.

The managers of the railroads, as trustees for the public, have no right to place this burden on the cost of transportation to you without a clear mandate from a public tribunal speaking for you.

Shall a nation-wide strike or an investigation under the government determine this issue?

The National Chamber of Commerce has urged an investigation by the Interstate Commerce Commission, but a resolution providing for this has been tabled in committee in the Senate at the request of brotherhood officials, pending the outcome of the present conferences. President Wilson has completed the Newlands Act Board of Mediation and Conciliation by appointing G. W. W. Hangar, assistant commissioner of the board, to full membership.

The "settlement" of the cloakmakers' strike on July 22, was repudiated by the union members after their officers had drawn up an agreement with the Manufacturers' Association, and not till August 3—just as a Board of Mediation, appointed by Secretary of Labor Wilson, was beginning work—did the strike actually come to an end with the ratification of a new treaty. Substantially the same as the earlier one, it included the contractors' shops in its provisions, pledged the Manufacturers' Association to discipline any shop which violated the agreement, and added minor concessions. The workers went back to their machines Monday with pomp and ceremony.

#### Filipinos Taking The policy of the Wilson Administration has been to advance Filipinos to high administrative positions whenever it was possible to do so, and recent appointments carry this program further than ever before.

An act of the last session of the Insular Legislature permits government employees, after a certain term of service, to retire with one year's full pay. Together with the growing uncertainty of American officeholders as to their tenure, in view of the Wilson policy, this has led to a number of resignations. Harry T. Edwards, fifteen years Director of Agriculture, has retired. Adriano Hernandez, an assistant director, has been promoted to take his place—the first Filipino to hold an administrative office of such rank. The resignation of Stephen Bonsal as member of the Board of Utility Commissioners, thru a series of promotions, makes room in the Bureau of Customs for Vicente Aldanese; and José Escaler becomes first assistant director of Education. Both appointments are new high-water marks in these departments. An especially interesting experiment is the placing of Joaquin de Luna in the governor's chair of the mountain province inhabited by the Igorrotes and other tribes just coming out of savagery. Under Governor Luna are American sub-governors.

#### The Drive at Kovel

The second anniversary of the beginning of the Great War was marked by increased intensity of fighting in almost every theater of war. The Entente Allies have everywhere assumed the initiative, but everywhere the determined attack has encountered an equally stubborn resistance. Their most important success was won on July 31 in the advance of the Russians

toward Kovel. The sharp bend of the Stokhod River to the east of that city has for some time halted the westward movement of the Russian army and created an inconvenient irregularity in the Russian line. The difficulty of crossing the Stokhod was greatly increased by the rainy weather which had turned the flat country about the river into a vast marsh. But General Kaledines advanced his army across the Stokhod and forced the Germans to abandon the salient formed by the bend of the river. The Russians followed up their victory and advanced to within ten miles of Kovel. The Germans made a vigorous counter-attack and on August 4 recaptured the village of Rudka-Miryanskaia on the Stavok River, a tributary of the Stokhod.

The capture of Kovel would probably force the entire Austro-German line back of the Bug River. Kovel is an important railroad center and the Russians have had the advantage in their westward drive of the railroads from Sarny and from Rovno which converge at Kovel. The Germans are alive to the seriousness of the eastern situation and have placed their most famous general, Field Marshal von Hindenburg, in supreme command over all Austrian and German troops in the East. Germany has greeted the appointment with enthusiastic approval. In order to forestall any possible feeling of jealousy among the Austrian and Hungarian forces, Hindenburg at once appointed the Archduke Charles Francis, heir to the Austrian throne, in command of the Austrian forces in the center, hitherto led by General Count von Bothmer. Berlin claims that the appointment of Von Hindenburg to supreme command was a decisive factor in Rumania's decision to remain neutral in spite of recent Russian successes.

In Galicia the Russian offensive has consisted in a continuous pressure to the southwest of Brody with the ultimate object of capturing Lemberg. The Russians are striving to gain complete control of the river Sereth and have already crossed it at several points. In this region also, the floods have acted as effective allies of the Austrians in halting the drive toward Lemberg. It is reported that Turkish soldiers are now being used to strengthen the Austrian defensive in Galicia.

#### The War in the West

Almost all the activity of the western front is concentrated in two sectors, the forts and trenches before Verdun and the region about the Somme where the French and British lines meet. In both of these areas the recent advantage has been with the Allies, tho their gains have been costly and the Germans are still unshaken. The Germans are estimated to have more than two million soldiers actively engaged in the west, and they have not dared to transfer any appreciable number of them to meet the new Russian offensive, because to do so might weaken their struggle against the already more numerous French and Brit-

THE ONWARD MARCH OF THE RUSSIANS

The solid line shows the Russian position before the present movement began. The broken line shows approximately their new front. The light lines are railroads

ish forces. Admitted British casualties on all fronts during the month of July totaled 7084 officers and 52,591 men. The Germans claim that the Somme offensive has cost the Allied armies 350,000 men.

For several days the further advance on the Somme was practically halted, perhaps to await a new accumulation of high explosive shells. The Germans took advantage of the brief respite to dig new trenches behind those which they had lost and to carry out several counter-attacks. During the last day of July and the first of August the Germans made no less than sixteen assaults on a French position at Hem Wood, just north of the Somme, and succeeded in driving the British from an advanced post in Fourceaux Wood. There was no important change in the situation, however, until Saturday, August 5, when the British captured

over two thousand yards of second line trenches to the north and west of Pozières. The attack was carried out with "Anzac" (Australian and New Zealander) veterans and soldiers of the new army from England. The victory not only enabled the British to straighten their line, but it gave them a fresh start on the road to Bapaume.

Even more important successes were won by the Allies at Verdun. On August 2 the French began a vigorous offensive, and on the following day they announced the capture of the village of Fleury. This position was speedily lost, but the French returned to the attack, reoccupied Fleury, and also took and held the entrenchments at Thiaumont. German defeats before Verdun are felt by both sides to be doubly important, since there is no other position in any theater of war which the Germans have sacrificed so much to win.

**The "Deutschland" Risks It** On August 1, the German submersible merchantman "Deutschland" escaped past the hostile warships waiting outside the three mile limit from the mouth of Chesapeake Bay. It carried a small but extremely valuable cargo of nickel, rubber and gold. The submersible slipped past under cover of a moonless night with the additional advantage of "protective coloration," the ship being painted a sea-green with wavy white lines indistinguishable at a distance from water and foam. A crowd cheered the boat on its way when it left the docks at Baltimore. Whether the "Deutschland" has since been picked up by the British or has met with an accident under the high seas or is now nearing the German coast no one in this country knows. Equally unknown is the question of the whereabouts of its sister ship the "Bremen" which is supposed to be now on its way to the United States but which has not yet been located.

**Blockade and Trade War** During the week many vexatious problems concerning the rigorous Entente blockade of the territory occupied by the Central Powers have perplexed belligerents and neutrals. The most important of these concerns the relief which President Wilson is anxious to have extended to the famine-stricken districts in Poland. Great Britain and France are willing to permit the importation of foodstuffs into Poland, but only on condition that the occupying armies do not seize either the imported food or the native crops. Germany is willing to reserve the harvest for the inhabitants of the occupied districts and the policing forces of the army of occupation, but finds the full conditions of the Allies impossible to accept. It is doubtful, therefore, if any important quantity of relief will be permitted to enter Poland. Batocki, Germany's food dictator, laughs at the British threats to hold the German Government responsible for civilian lives lost thru famine as a

### THE GREAT WAR

*July 31*—Russians cross the Stokhod River between the Kovel Sarny and Kovel Rovno railroads. Socialist conference opens at The Hague. Arabs capture Yembo.

*August 1*—Germans make counter-attacks along the Somme. "Deutschland" escapes to sea.

*August 2*—Russians advance within ten miles of Kovel. French undertake offensive at Verdun.

*August 3*—Hindenburg assumes supreme command against Russians. French recapture Fleury. Roger Casement executed.

*August 4*—Germans recapture village west of the Stokhod. French take Thiaumont.

*August 5*—Russians take villages on the Sereth. British advance north of Pozieres.

*August 6*—British repulse Turks east of Suez.

consequence of German occupation. He declares that the Central Powers have an ample food supply both for the present and the future and that "England cannot starve Germany, nor Poland, nor Belgium, nor northern France either."

The British blacklist of firms with which British subjects are advised not to trade is reported to contain over 1500 business houses in about twenty-five different countries. The protest of the United States has not as yet received any reply, but it is generally approved in this country and among all other neutrals, and even in England a portion of the press admits the force of its arguments. Perhaps with a view to conciliating American opinion, the British Government has ordered the release of large consignments of securities sent from Germany to this country by way of Holland, which had been confiscated as contraband of war.

Premier Asquith has promised in the House of Commons to carry on a commercial war against Germany after the close of military operations. The chief aim of the measures adopted by the government would be to make the Brit-

ish Empire wholly independent of the Central Powers for any products that might be needed in time of war. He promised that every endeavor would be used to prevent neutrals from suffering the consequences of the economic campaign against Germany.

Germany is renewing the vigor of her submarine campaign. Many traders, belligerent and neutral, have been sunk, and many persons were killed on the Italian mail steamer "Letimbro," shelled by a submarine.

**Sir Roger Casement Executed** On the third of August Sir Roger Casement (to give him his old title) was hanged at Pentonville jail for high treason in having attempted to secure German aid for an Irish rebellion. He met death with the greatest calmness and courage. Every effort was made to save him, but the ministry rejected all petitions for commutation of sentence.

It was most unfortunate for the British Government that the execution occurred at a moment when the alliance between the official Irish Nationalist party and the coalition government was less secure than it had ever been before. On July 31, Henry Edward Duke, Unionist member for Parliament from Exeter, was appointed to be the new Chief Secretary for Ireland in place of Augustine Birrell who recently resigned as a consequence of his failure to prevent the Sinn Fein rebellion. Mr. Redmond protested against the appointment, declaring that it meant a purely Unionist government for Ireland. Mr. Duke is understood to favor Home Rule and he is in no way personally objectionable to the Irish, but the political party with which he has been associated owes its very name to its championship of the existing union between Great Britain and Ireland, and the Nationalists in their present suspicious mood fear that the appointment means that the government is determined to supplant the Home Rule bill by some compromise which will permanently exclude Ulster.

Copyright International Film

THE BIGGEST OF ALL THE MUNITION DISASTERS—TWO VIEWS OF LAST WEEK'S GREAT EXPLOSION AT JERSEY CITY

# FOUNDATIONS OF NATIONAL POWER

BY FRANKLIN K. LANE

SECRETARY OF THE INTERIOR

THE world is teaching us that war is no longer a set contest between more or less mobile armed forces, but an enduring contest between all the life forces of the opposing parties, their financial strength, their industrial organization and adaptability, their crop yields, and their mineral resources, and that it ultimately comes to a test of the very genius of the peoples involved. For to mobilize an army is now no more than an idle evidence of a single form of strength if behind this army the nation is not organized. An army is no longer merely so many rifles and men, cartridges and horses; but chemists and inventors, mines and farms, automobiles and roads, airships and gasoline, barbed wire and turning lathes, railroads and weather prophets—indeed, the complete machinery of an industrial nation's life. Some months since I sought to learn what I could of the assets of this country; where we were in point of development, and what we had with which to meet the world. And from the reports certain facts stand out.

With the exception of one or two minor minerals, the United States produces every mineral that is needed in industry. This can be said of no other country. We can build a battleship, a railroad or a factory, entirely from the products of American mines and forests. To replenish the soil we have phosphorus; potash is known to exist in California; and nitrogen can be extracted from the air by cheap hydro-electric power. So we can feed the earth and keep it sustained. And to crown all these we have water power that can be made to generate perhaps as much as 60,000,000 horsepower.

When Benjamin Franklin caught the lightning on the tail of his kite, he did many strange things for this world, of which we are only beginning to learn. The old-fashioned water wheel, which was the motive power of our early industries, is now converted into a turbine which generates electricity. An added and peculiar value has been given to the ledges of granite which confine our western streams and turn them into dam sites, useful for the generation of power.

How many of these there are on public land not yet disposed of no one knows, but we have several hundred under withdrawal, which should be freed from withdrawal and turned into use just as quickly as possible, to pump millions of barrels of water to irrigate alfalfa farms or orchards,

for instance. This is now one of the most common uses of electric power in the West, and, in fact, in some of the eastern states where irrigation is of value. The waters that flow down our streams are only a small portion of the rain and snow which fall. There are streams that follow their courses underground just as clearly marked and as valuable, if once discovered, as the streams above ground. And to tap these is part of the task of making America. Cheap gasoline is doing it in some places; cheap coal in a few; but cheaper electricity is doing it in a large way.

Harro & Ewing

SECRETARY LANE

Then, too, there is that mystifying miracle of drawing nitrogen from the air for chemical use, which can be done only with great power, but is being done in Germany, Norway, Sweden, France, Switzerland, and elsewhere. Thru this process an inexhaustible substitute for the almost exhausted nitrates of Chile has been found. This is already a great industry in Europe, and will of necessity become greater in the United States than elsewhere, because of our size and need and opportunity. To increase the yield of our farms and to give us an independent and adequate supply of nitrogen for the explosives used in war, we must set water wheels at work that will fix nitrogen in lime. And there are still more intimate uses for this power: in places in Montana it is so cheap that it operates the churn, the sewing machine, and the vacuum cleaner, and supplies light to the house and fuel to the kitchen range. Indeed to the possible uses of electricity there is no limit.

Accompanying the general development bill in its passage thru the House of Representatives was a measure intended to promote hydro-electric development on public lands, named after the chairman of the Public Lands Committee of the House, Mr. Ferris. This bill was called for by the fact that existing legislation permitted only a revocable permit to be granted for such use, and this was regarded by engineers and financiers as too tentative and hazardous a tenure where millions of money were needed for the installation of the necessary plant.

The Ferris bill meets this difficulty by proposing a lease for these lands for a definite term of fifty years. The objection is made that the lands should be given outright. To this there are several answers; no enlightened government gives such a franchise. There is danger, too, of a complete monopolization of such power sites if the lands go forever from the people. The value of water power is not yet fully realized, and its full value cannot be known at this stage in our industrial life. The purpose of the government in transferring these lands is to secure their use, because it does not choose to use them itself, but the time may come when it may be most desirable, for the full development of our life, that they shall be operated by the nation or the states or the municipalities in the states. To transfer them forever would cast a burden upon the future

which would be unforgivable, and is, moreover, unnecessary. The people desire these lands used, *not held as a mere basis for speculation in stocks or bonds*. Where there is need for such a plant the lands should be available on most generous terms.

At the end of the fifty-year period, if the plant had been managed so as to serve the country well, there would be no reason why the holding company should not have a new lease. If it had not been so managed the plant should be bought at its value, the purchaser being the new lessee, or whoever took over the lands on which it was situated, the state, for instance.

The state owns the water, it is

said, and should therefore command the right to the use of the land. This line of reasoning leads to an *impasse*. We are not considering rights, but the wisest course. Quite evidently the state cannot command the use of the land and it is not proposed that the nation shall command the use of the water, for no one can have the land at all unless he first gain the right to use the water from the state. We have given no other land to the state except for the sustaining of schools and colleges or for reclamation. If a state wishes coal land, it must buy it. The traditional policy of the government has been to deal directly with the people in disposing of their domain.

With the passage of the general development bill providing for a practicable method of disposing of our oil, gas, coal, phosphate, and potash without danger of monopoly or misuse, and the water-power bill governing the use of public lands for hydro-electric development—which bills failed of passage in the Senate after having been successful in the House—there will be no land or resource that will not be at the full service of the people. And yet the romantic enterprise of revealing America will by no means be ended then. To get from all our resources their fullest use—this is our goal.

Washington, D. C.

## INFANTILE PARALYSIS

BY JOHN B. HUBER, M. D.

THE epidemic of infantile paralysis which is now afflicting New York is also spreading to other parts of the country—Massachusetts, Connecticut, Pennsylvania, Ohio, Louisiana and Tennessee.

Physicians call this malady acute *anterior poliomyelitis*, because the inflammation invades mostly the anterior nerve roots (the telegraph stations, as it were) in the gray marrow or matter (polio, myel) of the spinal cord. It is from those roots or ganglia, that muscular movements, especially those of the extremities, are normally directed, controlled and coordinated. Besides the anterior nerve roots the gray matter of the brain may also be affected.

During several years past zealous and sympathetic physicians have been laying the chain by which the germ origin of infantile paralysis has become established. Dr. Simon Flexner and his associates of the Rockefeller Institute in New York, have now demonstrated that a virus is the essential specific cause of infantile paralysis. Blows, accidents, falls, previous weakening ailments are but predisposing, making the body susceptible to the inroads of the virus. This latter belongs to the class of well-nigh infinitely minute, filterable, ultra-microscopic viruses, akin to those of smallpox, measles, scarlet fever and other infections, the existence of which poisons are proven, in the main, only by their effects.

The virus, or germ, of infantile paralysis enters the body by way of the nose and throat, whence it traverses, in the blood and lymph channels, the honeycomb-like bony tissue at the base of the brain, thence to invade the anterior nerve roots. Some-

times also the inflammation ascends to the neck and the brain, producing respiratory paralyses and death.

And so an infant of perhaps no more than nine months may be put to bed seemingly well, to awake in the morning with a high fever, vomiting and convulsions. Or, if the child be old enough to tell of its sufferings it will complain of headache, of pain and tenderness in the neck and back, along the spine. It will be restless, irritable and sleepless; or it will be drowsy and stuporous. In from twelve hours to two or four days will ensue flaccid paralyses of one or more members, and in time wasting away of the affected muscles.

Children of from one to five years are most frequently attacked; but adults may suffer. And, as with diphtheria and other infections, there may be carriers of the infantile paralysis germ who do not themselves come down with the disease. The virus is communicated from the sick to the well either directly or thru a third person, by contact with the nasal, throat or buccal discharges of the sick, on handkerchiefs, towels, eating utensils, toys and the like, or by kissing, coughing or sneezing. The contagium is also no doubt excreted by the bowels and the kidneys; wherefore these must also be thoroly disinfected. The bites of insects appear to have nothing to do with the spread of infantile paralysis; but flies, bedbugs, lice, fleas, mosquitoes—all ideal germ sponges—may convey the virus on their bodies.

The mortality of infantile paralysis, may be anywhere from 5 to more than 20 per cent. In the present New York City epidemic, as we have noted, the latter figure has been exceed-

ed. The summer months are a favorable season for this disease. No anti-toxin serum, either preventive or curative, is as yet assured; nor is any cure, medicinal or otherwise, as yet perfected. The incubation period is from three to twenty-one days.

Much good is accomplished for the sufferer by rest in bed, diet, medicines address to the fever, the pain and other symptoms, with electricity and massage after the acute symptoms have subsided, and other means familiar to the physician. Much is accomplished to prevent the permanent crippling and deforming of children who do not die. Even so, more than half the survivors are likely to suffer afterward from paralyses. And in the recovered ones the affected muscles are likely to remain small, with retarded bone development, poor circulation and impaired constitution.

Obviously then, since there is no certain cure, our efforts are most wisely directed to preventive measures. The sick of infantile paralysis must be quarantined; Dr. Haven Emerson, Health Commissioner of New York, has fixed the quarantine period at six weeks.

The disease must, in all respects, be managed as any infectious disease; and according to the directions of one's physician or health department. Especially must healthy children be debarred, during the period of the epidemic, from parties, picnics, movie shows, outings and the like; nor may they play with children in whose homes there is sickness. Here, as in disease prevention generally, the basic factor is personal hygiene.

New York City

# EDUCATING A NATION

BY PHILANDER P. CLAXTON

UNITED STATES COMMISSIONER OF EDUCATION

**T**WENTY-TWO MILLION persons in round numbers were enrolled in educational institutions in the United States in 1914. Of these more than 19,000,000 were in elementary schools, and the rest in secondary schools and in colleges and universities. The teachers for this educational army numbered 700,000. In point of rapid growth the public high school still presents the most impressive figures; the enrollment for last year is greater by nearly 100,000 than for the preceding year. The cost of education was, as nearly as can be estimated, \$750,000,000, a relatively small amount when compared with many items in the public expense; less than one-third the nation's expenditure for alcoholic liquors, and less by a hundred millions than the value of exports from the harbor of New York in 1913.

The average school attendance of the American citizen in 1800, according to Dr. E. A. Ross of the University of Wisconsin, was only 82 days. It is now 1057 days. A generation ago free education in most communities consisted of an elementary school course in which children were taught the three R's, together with a modicum of history and geography. Public high schools had, of course, begun to develop, but attendance there was small, and the majority of communities made no such provision for public education. Now we have reached the point where we consider that it requires twelve years to give an individual an education that fits for life and prepares for the duties of citizenship. Public education has become our greatest single social enterprise.

Great strides have been made in bettering our educational system during recent years. Education begins at birth, and the first years of life are the most important. American children are in school less than four per cent of their time from birth to their twenty-first year. Loss of life or health, arrest of development, the formation of vicious habits, or the acquirement of false ideas and

ideals in these years may render impossible or ineffective all efforts at education in later years. Realizing the supreme importance of the proper care of children in these earliest years, the Division of Home Education was formed to investigate means and methods of improving education in the home, to assist parents in directing the play of their young children, and above all to bring about a more intelligent coöperation between the home and the school, so that both may work together intelligently for the welfare of the children, and to extend the education of boys and girls who have quit school, by stimulating and directing their home reading and study.

The home, the primitive and primary institution for the education of children, is still the most important agency for education for life—mental, moral, physical, industrial, economic, social, civic. The school is still only supplementary. Any agency, therefore, that would promote right education most effectually must find some means of coöperating with the home and of helping parents, who are the most constant—and should be the most effective—teachers of their children.

Last year two new divisions were established in the Bureau of Education, the Division of Civic Education and the Division of Education of Immigrants; the first in coöperation with the National Municipal League, the second with the North American Civic League. The Division of Home Education, maintained in coöperation with the National Congress of Mothers and Parent-Teacher Associations,

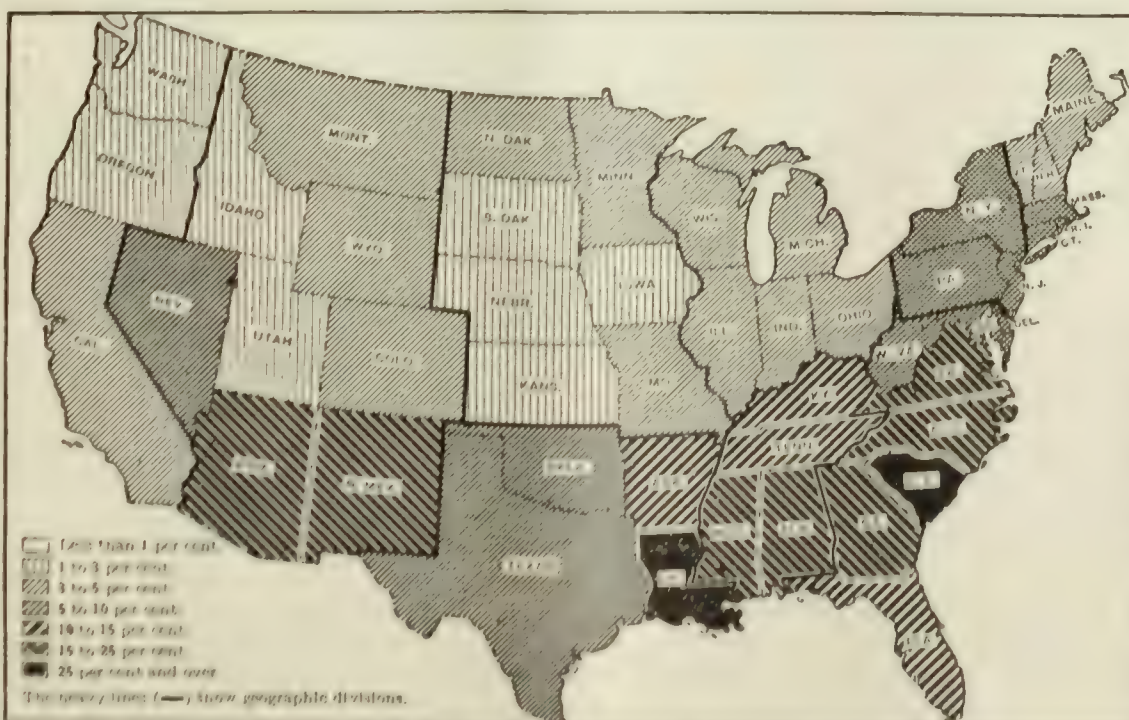

has been enlarged since its establishment two years ago. Other special divisions are that of Vocational Education, including trade and industries; School and Home Gardening in coöperation with the International Child Welfare League; Rural Education, and Higher Education.

The Kindergarten Division has already developed into an important agency for the promotion of the education of young children, altho it was established only in the spring of 1913. There are in the United States approximately 4,000,000 children between the ages of four and six years, which is ordinarily considered the kindergarten age. While some formal education in the kindergarten or elsewhere would be helpful for all or most of these, the home conditions of at least half of them are such as to make the demand for such education imperative. Only about 300,000 of these children are enrolled in the kindergarten. There is little hope of reaching this huge army of children except by making the kindergarten a part of the public school system in every city, town or village. By doing this, not only would two years be added to the period of education of millions of children whose educational life must at best be all too short, but a beginning in the formation of moral and social habits—not possible later—could be made, and much could be added to the individual development of the children in these very important years of their lives.

The Division of Civic Education aims to investigate methods of teaching, in the schools and elsewhere, those things that pertain directly to the duties and responsibilities of cit-

izenship in a democracy, and of membership in larger and smaller communities, and to foster the desire and will so to live and act as to promote the public welfare.

It is generally conceded that the methods now in common use for teaching the duties of citizenship are inadequate, and there is a strong demand for help in developing better methods. On the other hand, successful experi-

From the Abstract of the Census 1910

OUR PERCENTAGE OF ILLITERATES TEN YEARS OLD OR OVER

ments have been made here and there which seem to show the way to better results. To find and bring together the best thought and experience on this subject has been the first work of this division. Plans have also been begun and have since been continued for the development of more adequate methods of civic instruction for adult immigrants and for the stimulation and promotion of public discussion and debate of questions of general and local public interest in colleges, schools, clubs and social centers.

The problem of rural education continues to occupy the attention of our educators and school authorities. Its progress during the last year is seen not alone in the actual achievements of the year, but in the advanced position taken by leading educators relative to rural education and rural-life problems. Nearly four million illiterate persons in this country live in rural communities, in small towns, villages, and the open country. In some parts of the United States illiteracy in the rural population is from two to five times greater than in the urban population. Interest in consolidation of rural schools has greatly increased. The people are slowly but surely becoming convinced that the one-room, one-teacher rural school has, in the main, outlived its usefulness and that, wherever feasible and possible, the consolidated rural school must take its place. Progress in rural education is still slow, however. The states and the Government, meanwhile, are doing their best to eliminate the causes which may bring about illiteracy.

Education, as a national problem, has two fields: one the child, from the kindergarten age until the age of majority has been reached; the other, the illiterate adults.

The problem of adult illiteracy as it confronts us today is no longer one

of race or section. The importance of the task of eliminating illiteracy cannot be underestimated, when we consider that there are nearly 6,000,000 illiterates in the United States, nearly all of whom have reached their majority. The full meaning of these figures will be better understood if I say that in double line of march, at intervals of three feet, these illiterate persons would extend over a distance of about 1500 miles; that marching at the rate of twenty-five miles a day it would require more than two months for them to pass a given point. A mighty army is this, with banners of darkness inscribed with the legends of illiteracy and ignorance, helplessness and hopelessness—too large for the greatest degree of material prosperity and for the safety of our democratic institutions. The last census showed that there were more than two million illiterate males of voting age; in some states and in many counties the illiterate voters hold the balance of power in any closely contested election.

Illiteracy, as I have said, prevails to a greater extent in rural districts than in cities; the greatest number of illiterates is between the ages of twenty-five and thirty-five years. In 1910 the total number of white illiterates was greater by nearly one million than the total of negro illiterates. Massachusetts had more illiterate men of voting age than Arkansas; Pennsylvania more than Tennessee and Kentucky combined. Boston had nearly 25,000 illiterates, Baltimore 20,000, New Orleans 19,000, Memphis 9000.

Sporadic efforts show us that there is a shorter way to the reduction and elimination of illiteracy than to wait for time to do away with it. These grown-ups can be taught in schools organized especially for them.

One of the most notable attempts recently made to teach these illit-

erates is that begun by Mrs. Cora Wilson Stewart, superintendent of schools in Rowan County, Kentucky. After having studied the conditions of the county, Mrs. Stewart decided to open night schools for adults on moonlight nights in the public school houses. All the teachers of the neighborhood responded, and began by visiting the people thruout the county and explaining the plan.

More than 1200 men and women from eighteen to eighty-six years of age were enrolled the first evening! They came trooping over the hills and out of the hollows, some to add to the meager education received in the inadequate schools of their childhood, some to receive their first lessons in reading and writing. Among these pupils were not only illiterate farmers and their illiterate wives, sons, daughters, but also illiterate merchants, illiterate ministers and landowners. Think of the tragedy in these words, uttered by a woman of seventy: "Oh, to be able to read my Bible and to write to my grandchildren!" Other schools, of similar character, were established here and there in the United States. Pupils were willing and eager to enroll.

These scattered experiments and their success, even under very difficult circumstances, have been such as to inspire the hope that, with the coöperation of schools, churches, philanthropic societies, cities, counties, states and the Federal Government, the great majority of the five and one-half million illiterates in the United States may, in a few years, be taught reading, writing and something more; while millions of those whose school days were very few and who are little above the line of total illiteracy, may be helped to make good to some extent their deficiencies due to lack of opportunity in childhood.

*Washington, D. C.*

## A MIDSUMMER GARDEN

BY CLINTON SCOLLARD

There is a little garden-close,  
Girdled by golden apple trees,  
That thru the long sweet summer hours  
Is haunted by the hum of bees.

The poppy tosses here its torch,  
And the tall bee-balm flaunts its fire,  
And regally the larkspur lifts  
The slender azure of its spire.

And from the phlox and mignonette  
Rich attars drift on every hand;  
And when star-vestured twilight comes  
The pale moths weave a saraband.

And crickets in the aisles of grass  
With their clear fifeing pierce the hush;  
And somewhere you may hear anear  
The passion of the hermit-thrush.

It is a place where dreams convene,  
Dreams of the dead years gone astray,  
Of love and loveliness borne back  
From some forgotten yesterday.

It is a memory-hallowed spot  
Where joy assumes its vernal guise,  
And two walk silent side by side,  
Youth's glory shining in their eyes.

# DO SCHOOLBOYS PLAY TOO MUCH?

BY GEORGE H. BROWNE

HEADMASTER OF THE BROWNE AND NICHOLS SCHOOL, CAMBRIDGE, MASSACHUSETTS

**T**HIRTY-SEVEN years ago this fall I took an active part in my first Teachers' Convention. Every year since I have attended at least three or four; and in a third of these years I have helped to prepare the programs of at least two each year. In all these years, no matter what the kind of meeting—general or departmental, classical or vocational, no matter what the topic of discussion, the type of school, or the educational theory involved, the only essentials invariably agreed upon as indispensable to educational success, have been (1) personality of the teacher; (2) individual initiative of the pupil; (3) concentration and imagination.

I have just finished my thirty-third year of teaching in the same school—a secondary school for boys, all of whom continue their education in higher institutions. They have therefore suffered less from the "traditional" course of study than the pupils who represent the other ninety-five per cent of the school population; but they have been, perhaps, no less affected by the rapidly changing social conditions and distractions of modern life. This long experience with so-called "favored" material has led me to convictions bearing on these educational essentials which apply equally to the other ninety-five per cent; let me briefly state seven of the most commonplace:

(1) The prizes of this life, in big things as well as in little, are generally won on a very, very small margin of superiority, which is chiefly mental.

(2) Mental discipline is a valid, not a make-believe purpose of education (the Assistant Secretary of the General Education Board to the contrary, notwithstanding). Abraham Flexner, author of "A Modern School," "Parents and Schools," writes that "Even if 'all intellectual gain is specific, and transferable only with great loss,' enough may carry over from one subject to another to ensure success, and thus pay for the training."

Professor M. V. O'Shea, of the University of Wisconsin, says: "An hour's successful application to algebra can be transferred to Greek, but only in the habit of attack and in the concentration of the will." This admission seems to me to vitiate the whole case against "mental discipline"; for its most ardent rational advocates never believed that it could do more, or that it needed to.

(3) The best topic of success, at

any stage, is a feeling of achievement; but the abiding "usefulness" of any kind of achievement is to be gaged not merely by the individual student's pleasurable interest at the moment, but also by the accumulated experience of mankind in the same lines of thought or action.

(4) "There is no satisfactory substitute for knowledge." As your newspaper philosopher would say, you must not only put some p (pep) into your luck (pluck), but also kick up some dust in your try (industry.)

(5) There is no knowledge, the possession of which is of much value or the acquisition of which is of the slightest mental discipline, that can be acquired without some genuine individual initiative and some honest hard work sometime, somewhere.

(6) The "moving-picture mind" is no satisfactory substitute for an efficiently working, self-directed, "picture-moving" mind.

(7) It is still harder to go up the moral and intellectual stairway (in spite of the moving-picture escalator), because it is easier to go down than it was thirty-seven years ago, for at least seven reasons.

That is to say, pupils of today have at least seven things that pupils thirty-seven years ago—and less—did not have to weaken their initiative, blight their concentration, and impoverish their imagination. Don't misunderstand me. I am not an ostrich—yet. I would not have the "good old times" back again. I do not mean to imply that the seven things I am going to specify are not without great possibilities for good. We could not remove them if we would. They are here to stay. The problem is, what are we going to do with them? The perfected gasoline engine, the wireless telegraph and telephone, the phonograph, the motion-picture, etc., are contributions of the last ten years of incalculable possibilities for education,—but they are just now complicating the educational situation in school as it has never been complicated before.

No matter what be the psychology which may properly determine the curriculum of your *Modern School* (A. Flexner), or the readjustment to the *School of Tomorrow* (J. Dewey), or the extension of *Public Education for National Service in a Democracy* (Pres. Vincent), the ubiquitous distractions must be met here and now with some concrete, specific, administrative efficiency. The world is so full of a number of things, all

good in their proper places and proportions, that the "elective system" must be adopted by parents from the very beginning of their babies' conscious life to this extent, at least, that some principles of choice must be inculcated that will enable their children as they grow up not only to choose the good from the bad, but also to choose from the many available good things the *few* that they can afford to indulge in at the various stages of their development. "One of the most fundamental works of reform," says the Federal Director of the Rural Organization Service, "is the persuading of men to like the right things." The choice of the wrong things has not only been helping to depopulate rural districts, but has been complicating the town life of young people as never before. Consider the following "seven deadly sins," then, merely in relation to these acknowledged educational essentials—the cultivation of individual initiative, concentration, and imagination:

(1) Cheap periodicals and magazines (written down to a taste that balks at the slightest mental exertion).

(2) Cheap theatrical shows (adapted to the tired business man's standard—no mental effort).

(3) Cheap (canned) music, which might be excellent and often is; but too often degenerates into the "empty singer of an idle day"—mere amusement and accompaniment to dancing.

(4) The apotheosis of amusement (the dancing craze, the exaggeration of athletics, the domination of play—Johnny must be out of doors *all* the afternoon, till he is too tired and sleepy to study in the evening).

(5) Premature assumption of the manners of club life (dependence upon the comforts, conveniences, and luxuries of life—too many servants, no responsibilities; press the button, and somebody else does the rest).

(6) The automobile (the devil's own as a seductive time consumer).

(7) The moving-picture show (and the better the picture the cheaper the show, and vice versa).

The mere enumeration of these general distractions is sufficient to indicate that if "the modern school" is to cultivate the pupils' individual initiative in eliminating irrelevant interests and in concentrating on the abstract principles behind the usually interesting concrete details, where "lie difficult and involved intellectual processes," a kind of thinking never so necessary as now—but,

don't forget, just as uninteresting to *young* people in science and sociology as in language and mathematics—the school must have assistance from outside. No school under the conditions here brought to mind is adequate to solve the educational problem single-handed.

A school's most natural ally in combating these general distractions and its own special distractions is obviously home coöperation. This may be secured in at least four ways: united prohibition; adjustment (particularly of such special distractions as dentists' appointments, parties, theaters, outside lessons in music, dancing, skating, riding, etc.); regulation and control, especially of collections (stamps, insects, birds, etc.), scientific enthusiasms (wireless, motorboats, autos, etc.), sports, games, movies, etc.; substitution (science trips, original public speaking, regular pupil morning talks to the whole school, debates, Chautauqua, summer work, companionship of parents, mind-fertilization at home, etc.).

If the mind is stored early with profitable matter, tastes and standards, the antidote to these distractions is already partly secured; but if, as too often occurs, even in the homes of educated parents, the children's minds are void of seriousness, the wills weak, and the desires and passions ill-controlled, the results, no matter what the school, are inevitable. It is obvious, therefore, that the "modern school," to be efficient under present distracting conditions, must include something besides teachers of efficient personality and a course of study based on the psychology that "mental discipline is not a real purpose" and that modern education "includes nothing for which an affirmative case can not now be made out." Useful for what? Already one American generation educated (!) on this utilitarian abuse of the elective system has come to middle life; and there is no more pathetic despair than that of the affluent engineer or bridge-builder who tries to "retire and live," only to find that he cannot, by paying extra for the years that are passed, buy appreciation and enjoyment of those "useless" things which he scorned in school. To avoid his own hapless fate, he is now sending *his* boys to the classical school to prepare in these "useless" things first. Eighty-three per cent of the engineers of the United States of America who responded to a recent nation-wide investigation as to the essentials of preparation for their profession, put character and mental training first—special technical training, some of them, as low as eighth!

An educator, therefore, who thinks that the only "humanities" of today are "economics and sociology," and who offers other inadequate substitutes for the tried and genuine humanities, may well beware of becoming a foe to real civilization.

"A man educated in the modern sense," says Flexner, "will be trained to know, to care about, and to understand the world we live in, both the physical world and the social world." Good, as far as it goes; but there is a world of ideas and ideals and visions, of equal or even greater importance, in the spirit of which young people may be so intensely developed at home and in the right school, as to make it possible for them, to their everlasting profit, "to go thru the world never knowing what they have missed, and what kind of a world it actually is."

That the curriculum should "contain only what can be shown to serve a purpose," is a most commendable fundamental proposition; but to make "what is taught, when it is taught, and how it is taught, depend altogether on what is needed, when it is needed, and in the form in which it is needed"; and to determine those needs according to the tastes and inclinations of immature students from present-day city homes amid present-day city distractions—while it may avoid some vocational misfits, cannot fail to produce more vocational miscarriages.

But will not the "modern school" in the city take over some of the beneficent work that used to be done in the home, and supply the deplorable lack of home coöperation now, where there is no home life? Undoubtedly, and therefore all the more welcome. Waifs and foundlings in asylums and institutions, like incubator chickens, may have more intelligent care, and often do fare better than children in some homes favored by circumstance. I am old-fashioned enough, however, tho still a progressive, to believe that there is no satisfactory substitute for a good home and a good mother; and I am the more resigned to my apparent old-fogyism, because I remember hearing the high priest of the new psychology admit to the Headmasters' Association that "more depends upon the habit of concentration than on anything else," and that "the distractions of the last ten years have been disastrous."

These distractions no school can successfully meet without home coöperation. To be most successful, the fertilization of the child mind at home must be intensive and continuous—begun even before children go to school; and the coöperation should be taken up before the "dis-

aster" has been wrought. The modern doctrine of salvation, in practise under present conditions in education as well as in business and industry, is elimination of waste. Elimination of educational waste should be put into practise as soon as the child is born; and by right choice, reasonable apportionment, and continuous coöperative effort, kept up to the very end. What can be more wasteful than for the home to tolerate the premature and excessive indulgence in the distractions I have specified until there is often left for school so little interest and initiative, or power of concentration and intelligent imagination, on the part of the pupil, that no subject, traditional or modern, of itself, "can be *shown* to serve a purpose" in providing such minds with any pleasure or facility in abstract thinking? For the ability to think and to take pleasure in thinking is the most profitable result to be derived from any training whatsoever.

"The common run of school failures," says Dr. Flexner, "represents, not the defect of the children, but the resourcelessness of the schools." Often, too true. Oftener, it represents the shirking or the shifting of parental responsibilities. The pupils of day-schools, public and private, are under outside influences twice as many waking hours as they are in school; and outside influences today require seven times the vigilance of any other period. The home coöperation I have in mind involves no interference by parents that need impair the control of the school by expert professionals. Special daily or weekly, and regular monthly, individual reports to parents invite frequent afternoon and evening interviews; and several joint parents' meetings a year, conducted sometimes by the parents, sometimes by the teachers, provide opportunities for frank general discussion and wholesome mutual understanding. Of course, a live school "resembles a clinic." Of course, "parents have a right to be shown." Of course, "there is something the matter if a school principal or a school teacher cannot convince parents that there is a good reason 'why.'" But there is something equally, if not more, serious the matter if the school cannot be shown—if parents cannot convince the school that there is a reason "why" there should be so much waste, dissipation, inefficiency in home and society outside of school. "The matter" with secondary education today is less in the subjects taught in school than in the lack of home coöperation in meeting the multiplicity of distractions out of school.

# THINKING ON THE THIRD RAIL

BY DAVID LAMBUTH

NEWSPAPERS and college faculties have been bear-baiting the undergraduate. It is a safe sport, tho scarcely a graceful one. "The undergraduate doesn't think." "The undergraduate doesn't know anything about the contemporary world." "The undergraduate doesn't read." "The undergraduate, if he had anything to express—which he hasn't—could not express it in effective English."

Well, and who's to blame? Not the undergraduate, but we of the colleges, who haven't let him think. We have insisted on doing it for him. We have crammed him with our own pet ideas while he sat taking notes—or dozing. In the one course where he should have learned to think and to give his thoughts a vital expression—his "composition" course—we have surfeited him with the terminology of rhetoric, decked him out in borrowed styles of several generations ago, and set him to rehash stale criticism or discuss bygone matters for which he does not—and should not—care a fig.

This article, which is primarily concerned with writing as it affects thinking, is partly a record and partly a creed. The creed affirms that the undergraduate can think, and also that he can write, and write well, if we let him think. Literary style, after all, is only the way a man has of saying something he wants to say. But we must italicize the word *want*. A man does not *want* to write until his idea takes hold of him. The trouble with our college courses in writing has been that they have lived too long in a vacuum. They have prated learnedly of the form, but they have omitted the substance; they have spent more time searching for the suggestive word than for the living and useful idea. The colleges have been on the wrong track. Good writing is the product of the personality of the writer and a vitalizing idea, and a vitalizing idea is nothing less than one which genuinely concerns the present world of men and things. The undergraduate too often loses interest in his college work, not because he is inherently lazy or indifferent, but because his work seems academic and futile, getting nowhere, affecting nothing.

Hence it was that at Dartmouth College we tried an experiment in an elective course in composition. We threw over familiar essays and literary re-appreciations and word-pictures, because they were vapid and stale. We went instead to the daily and weekly records of men and events. Each student picked out the

*An enterprising young professor in Dartmouth has devised a new way of putting life into two college institutions that are very apt to become conventionalized and dull, the English course and the student magazine. How he did it or rather how he got his boys to do it, he tells below. His success is perhaps due to the fact that Mr. Lambuth has had a more varied experience than most teachers, for he has lived in Japan and Brazil as well as California, New Hampshire, Virginia and New York.—THE EDITOR.*

subject that to him meant most, and treated it in whatever style effectiveness and clarity demanded. We decided that grace, elegance, that indefinable thing called "style," grew out of lucidity and force and the man himself, and grew no otherwise. And let the "style" be what it might, we rejected every contribution—we no longer called it a "theme"—that did not seem humanly valuable. What is culture and what is literature, after all, but the product of the widest knowledge and human sympathy applied to the life of today?

In our attempt to vivify composition by approximating the conditions of the actual world the first problem had been that of subject matter. That settled, we were faced with the problem of grading. The college marking system as it stands is based on a fiction. Is there such a thing as a composition seventy-five per cent good? Did ever an editor return a "not quite good enough" contribution with a check for three-quarters of the amount he would have paid for an acceptable article? The answer to that question gave us the clue. Contributions were accepted if the subject was of genuine and timely interest and the handling effective, and a man's grade was based on the number of acceptances. All other contributions were rejected as worthless; figuratively they went into the editorial waste-basket. We reserved the editor's right to return a manuscript for revision, when it showed promise; but gave absolutely no credit for any article unless accepted. The motive thus furnished for careful and repeated revision—the novice's particular detestation—proved one of the most effective devices of the system.

The third problem in the adjustment of the course was the setting up of what should be, not a collegiate, but an outside world standard of judgment. What was an acceptable article? How good did it have to be? We concluded that it had to be good enough to print in a well edited week-

ly—The Independent, The Nation, The New Republic. In the attempt to maintain such a standard and to keep the standard before the class, we decided to simulate a magazine. We made up a dummy of the accepted articles for the month—editorials, special articles, stories, reviews—and the class dubbed it *The Third Rail*. Everybody crowded to see the copy and somebody whispered, "Why not print it?" We took the matter up in executive session of the class and decided to print. A small laboratory fee from the men, together with a little advertising, supports the publication and provides each man with five copies of each issue. This year there will be five issues, each consisting of twenty-four pages of The Independent size. An edition of 600, selling at ten cents a copy, is distributed among the undergraduates, the local community, and the friends and families of the contributors.

It was the actual publication of the magazine that made the system complete. To take college composition out of its vacuum two things were necessary: the subjects discussed had to be vital, subjects somehow commensurate with the time and effort put on them, and there had to be a genuine incentive to write. But the final and strongest incentive will always be lacking until the writer finds his audience. The desire to *express* is founded on the desire to *impress*. The writer wants to be read. Moreover, only as it fronts him on the printed page can the writer justly estimate the effectiveness of his work. The printed magazine furnished a practical criterion as well as the only real incentive to self-expression. It stimulated competition. It encouraged revision in the hope of getting into print. It became a circulating medium for what a man considered worth the saying.

That the system has brought out effective writing of a high grade is evidenced by the pages of *The Third Rail*. That it has encouraged clear thinking and an intelligent interest in the affairs of the nation and the world, affairs political, commercial, and literary, is equally apparent. That it is one solution of the composition question is suggested by the fact that the course, which is elective, and open to the three upper classes, has grown in a year and a half from twenty-two to just over a hundred men. And it is not a "lunch" course. Two required articles a week, with revisions, keep the men at work. But what is more to the point: they think. That is why they like it.

Dartmouth College

# THE NEW SCHOOLBOOKS

## THE SEASON'S OUTPUT OF EDUCATIONAL TEXTS REVIEWED

### HISTORY

THERE is nothing that changes so much as the past, at least that part of the past that gets written. Nowadays history has lengthened at both ends, and broadened, too, and includes all sorts of interesting things about Greek architecture, medieval municipal government, life on the feudal manor, the introduction of machinery, the whereabouts of Europe's coal mines, and social reform in distant British colonies. There is no question of the pedagogical superiority of the new style text-book to the old.

One of the best general surveys of the modern type is Professor James Harvey Robinson's *Medieval and Modern Times*, enlarged and much revised from his "History of Western Europe." Another attractive and lucid general history is Roscoe Lewis Ashley's *Early European Civilization*, a text-book for the secondary schools. Despite its title this covers the history of Europe as near to modern times as 1648. The latter half is also published separately under the title *Medieval Civilization*. Of a similar type and excellence is *A Short History of England*, by Professor Laurence M. Larson, of the University of Illinois. *A Social and Industrial History of England*, by F. W. Tickner, is an ambitious but fairly successful attempt to condense into a single manual the whole richness and fullness of the life of England. Literature, art, religion and education are given quite as much space as economic and industrial changes, and even political history is not neglected. Professor C. W. Oman's *England in the Nineteenth Century* is a very different sort of book. It is an orthodox political chronicle for general readers or college students, full of facts well and clearly presented, but with a very obvious conservative and imperialist bias, perhaps not unnatural in an Oxford scholar.

The shadow of the Great War has begun to fall across the schoolroom. *The Story of the Map of Europe*, by L. P. Benezet, superintendent of schools in La Crosse, Wisconsin, is a creditable, though rather superficial, attempt to explain the origins of the present war for children in the elementary schools by a review of European history. The last chapters of the book are devoted to an impassioned plea for peace and immediate disarmament. Professor James A. Woodburn, of Indiana University, and Professor Thomas F. Moran, of Purdue, have prepared an *Introduction to American History* for use in the elementary grades. This work is not an American history at all, but a history of the nations, ancient and modern, from which we have derived our civilization. It is lavishly illustrated and contains all the customary anecdotes about Diogenes, King Alfred, Sir

Walter Raleigh and the other heroes of history. *Our Ancestors in Europe*, by Jennie Hall, is a work of very similar scope and purpose. The book contains little narrative, but its full, detailed and vivid account of past civilizations from the early Greeks to the settlers of America is in every way admirable. Two very similar surveys of American history, well adapted for use in elementary schools, are *An American History*, by Eleanor Riggs, and *The Plain Story of American History*, by Professor John Spencer Bassett. For New York students who are as curious about the history of their native state as they are about that of the nation, Professor Charles F. Horne, of the College of the City of New York, has prepared a *History of the State of New York*. This book tells the story of the Empire State from the time of the earliest Dutch settlements to the present day, but it devotes fully three-fourths of its space to the colonial and revolutionary periods. *Elementary Civics* shows social history in the making. The topic is made broader and more interesting by a study of the growth of government and of present methods in other lands. The progress of legislation is illustrated by definite incidents which have awakened the people to the need of better laws.

*Medieval and Modern History*, by J. H. Robinson. Ginn. \$1.60. *Early European Civilization, Medieval Civilization*, by Roscoe Lewis Ashley. Macmillan. \$1.50, \$1.10. *Short History of England*, by L. M. Larson. Holt. \$1.40. *Social and Industrial History of England*, by F. W. Tickner. Longmans, Green. \$1. *England in the Nineteenth Century*, by C. W. Oman. Longmans, Green. \$1.25. *The Story of the Map of Europe*, by L. P. Benezet. Scott, Foresman. 60 cents. *Introduction to American History*, by J. A. Woodburn and T. F. Moran. Longmans, Green. 72 cents. *Our Ancestors in Europe*, by Jennie Hall. Silver, Burdett. 76 cents. *An American History*, by E. E. Riggs. Macmillan. \$1. *The Plain Story of American History*, by J. S. Bassett. Macmillan. \$1. *History of the State of New York*, by C. F. Horne. Heath. \$1.20. *An Elementary Civics*, by McCarthy, Swan and McMullen. Thompson, Brown. 85 cents.

### SPELLING AND GRAMMAR

TO careful training in phonetic spelling, the successful teacher must add a constant drill both in list form and in sentence use. For this work especially helpful in the first two grades would be *The Daily Speller*, with its attractive pictures. So thoro is the drill in correct form and in sentence use that almost every member of a class would master the whole list. While the *Modern Spellers I and II* furnish good phonetic training in the lower grades, and suitable lists for all classes, their strongest point is in dictation work.

For the lower grades the language work should be mostly composition, with a little technical grammar, and many drills on the correct use of verbs and pronouns; for the upper, thoro teaching in grammatical construction and in clear thinking and expression.

The interesting topics and helpful outlines found in the *Gate to English I and II* would draw his best from every child, while the practical exercises are an encouragement to correct usage. *Longmans' English Grammar*, a revision of a standard book, gives an unusual training in grammatical technique, and is an excellent preparation for the study of foreign languages.

*Constructive English* for upper grades presents an entirely new method of teaching oral and written English. The topics, taken wholly from the pupil's every day life or from nature, are developed by carefully planned outlines where several alternatives start the child thinking and give opportunity for his own individuality. A pupil trained by this somewhat heavy constructive method would have an excellent mastery of his mother tongue. The greatest difficulty with which the English teacher contends is the inability of the pupil to understand words. Such a definite study as that given in *English Derivatives*, with its five hundred root words, and their common derivatives, would clear many a fog in the child's mind as to a word's real meaning.

*The Daily Speller, I, II*, by M. L. Bartlett. Philadelphia. Lippincott. 16, 20 cents. *The Modern Speller, I, II*, by Van Wagenen. Macmillan. 20 and 24 cents. *Gate to English, I, II*, by Howe, O'Hair and Pritchard. Longmans, Green. 48 and 65 cents. *English Grammar*, by G. J. Smith. Longmans, Green. 65 cents. *Constructive English*, by I. C. Emery. Scribner. 80 cents. *English Derivatives*, by B. K. Benson. Heath. 44 cents.

### COLLEGE ENGLISH

AN excellent *English Literature*, in small compass, is prepared by J. W. Abernethy. It is comprehensive, without being too detailed or dry. Well and interestingly illustrated, it will serve as a reference book, while the lists for reading and topics for discussion following each chapter will prove practical and suggestive to teacher and student in class work. "I suspect that to teach a child to read and not what to read is to give him a loaded gun and not show him how to use it," writes Henry S. Pancoast in the preface to *English Prose and Verse*, a collection prepared for students of the history of English literature. His selection runs from Beowulf to Stevenson, his plan being to give with longer specimens from the greater writers many less known treasures. He has succeeded in making an uncommonly attractive and not heavy collection. Up to Chaucer, the selections are translated, mainly by Professor Spaight, while in the appendix is a series of examples showing the development of the language from the eighth to the sixteenth century. *A Book of English Literature* arranged by Professors Snyder and Martin of the Northwestern University begins with Chaucer, includes few of the lesser names, but gives much space to

# OUR NATIONAL PROBLEMS

Frances A. Kellor's New Book

## STRAIGHT AMERICA

"A Genuine Contribution to the Subject"

"A frank and vigorous little volume. . . . Clear-sightedness, justice and earnestness. . . . Ought to be read from every pulpit in the country and studied by every woman's club and public forum. . . . Practical, candid and most earnest. It gets down to the first principles of American needs and discusses them with honesty, ability, and a straight-from-the-shoulder forcefulness that ought to prove inspiring and infectious."—*N. Y. Times*.

"Miss Frances Kellor, by reason of her devoted efforts to better conditions among immigrants . . . is exceptionally well-fitted to discuss the question of their Americanization. No one else, we are sure, knows more intimately the difficulties that confront foreign-born laborers on their arrival here. . . . In 'STRAIGHT AMERICA' she sets forth the results of her observations so clearly and compactly as to make the book a genuine contribution to the subject. . . . Clear thinking and frank statement."—*N. Y. Post*.

"May be read to advantage by Americans regardless of party affiliations."—*N. Y. Evening Sun*. Fifty Cents.

Uniform with "Straight America"

# OUR NATIONAL PROBLEMS

50c *Little Books on Big Subjects* 50c

## AMERICANIZATION

By *Royal Dixon*. What are we doing to Americanize the alien? How can we make sure that he will emerge from the melting-pot willing to support and to contribute to our institutions? These are questions which Mr. Dixon asks and to which he offers a clear and simple answer, broad and practical in vision. Fifty Cents.

## THE FORKS OF THE ROAD

By *Dr. Washington Gladden*. Awarded the prize offered by the Church Peace Union for the best essay on war and peace.

"An inquiry, calm, concise, logical and marked throughout by practical commonsense, into the reasons why war persists in a civilization founded upon Christianity."—*N. Y. Times*. Fifty Cents.

## THE HERITAGE OF TYRE

By *William Brown Meloney*. A direct, uncompromising demand for a new American merchant marine. "In terse, thrilling, forceful language the author shows us the greatest weakness America has."—*Boston Transcript*.

Fifty Cents.

## THE PENTECOST OF CALAMITY

By *Owen Wister*. "In this book speaks the man, not the diplomat . . . the interpreter of the feelings of the American who comprehends the divinity that is in history. . . . It is a flaming thing, itself a tongue of Pentecost."—*Boston Advertiser, Nineteenth Century*. Fifty Cents.

## THEIR TRUE FAITH AND ALLEGIANCE

By *Gustavus Ohlinger*

With an introduction by OWEN WISTER.

"A highly edifying exhibit of the political intrigues of Germany throughout the United States. . . . Hundreds of thousands of this book should be distributed as tracts for all honest, loyal, decent American citizens to read and digest."—*N. Y. Sun*. Fifty Cents.

*These important little books are each fifty cents. The six including "Straight America" will be sent to you at once for three dollars.*

**The Macmillan Company, Publishers, New York**

each writer mentioned, thirty-four pages to Matthew Arnold, for instance. *English Prose and Poetry*, by J. M. Manly, of Chicago University, is a handier volume, printed on excellent thin paper. It contains fewer authors than Mr. Pancoast's book, shorter extracts than the Snyder and Martin. Its selection goes back to the eleventh century, the early English being printed beside Mr. Manly's translations.

To meet the growing demand for study of the drama Professors Tatlock and Martin have made a most useful selection of *Representative English Plays*. We have a survey from the Middle Ages to our contemporary dramatists. The book is in pleasant, clear type, two columns with the briefest footnotes. There is a helpful bibliography, and the short essays introducing each play are excellent.

Collections of *American Prose* often manage to be a bit dull, but W. C. Bronson, of Brown University, has made a selection always interesting, frequently entertaining, and especially successful in the Colonial period. The selections do not go beyond the Civil War, and complete orations, essays and tales are taken from the later writers.

It is when one takes up the special collections that one suspects the personal tastes of the collectors have sometimes had more to do with the production than the needs of the students. *The English Familiar Essay* is edited by two devout classicists. They have made an attractive volume to put in any handbag and one hopes it may lure some student away from the present frantic cult of the short story. An odd collection is *Essays for College English*, being especially prepared for the use of agricultural schools; this is mainly of present day papers, opening with one by C. M. Harger, reprinted from *The Independent*. Bailey, Plunkett and Bruère are some of the writers on economic and agricultural subjects. Another book, also for agricultural schools, is *The Promise of Country Life*. One doubts its value as a text-book, but it has a delightful miscellany, including Stevenson's "Will of the Mill" and Leigh Hunt's little known and inimitable "Graces and Anxieties of Pig Driving." One is at a loss to see precisely the reason for *Selections from Lanier* as a text-book. His boys' books hardly need to be introduced to the college student, and his poetry and criticism is so sadly little, that to serve him up in fragments seems a needless indignity. There will never be an end to the *Selections from Carlyle*, however, and with good reason. From such an output something must be chosen and much left. These selections by Professors Hemingway and Seymour are taken from "Sartor Resartus," "The French Revolution," and "Past and Present," and with the large amount from each book there is a very good critical and historical essay.

Many works on Robert Browning have proved to be more involved or difficult than the poems themselves, but Professor Harrington's *Browning Studies* give just the help one needs to sort out the real treasures from the

mass of poet's work, and the facts and clues necessary to their full enjoyment. The very class room plan of the volume adds to its usefulness and enough biographical, historical, and philological materials are given to form a complete introduction to Browning.

David Watson Rannie, of Winchester, in his *Elements of Style*, considers the subject from the simplicities of punctuation on to delicate analyses of fitness and of word use. It is hardly a class book, tho intended for the advanced student. *Methods and Aims in the Study of Literature*, by Lane Cooper, of Cornell, is for the already fairly erudite. It is largely a symposium drawn from great writers on the way in which they read books and wrote books, a matter rather curious than of intrinsic moment.

*English Literature*, by J. W. Abernethy. Merrill. \$1.35. *English Prose and Verse*, ed. by H. S. Pancoast. Holt. \$1.75. *A Book of English Literature*, ed. by Snyder and Martin. Macmillan. \$2.25. *English Prose and Poetry*, ed. by J. M. Manly. Ginn. \$2. *Representative English Plays*, ed. by Tatlock and Martin. Century. \$2. *American Prose*, by W. C. Bronson. Univ. of Chicago Press. \$1.50. *The English Familiar Essay*, ed. by Bryan and Crane. Ginn. \$1.25. *Essays for College English. The Promise of Country Life*, ed. by J. C. Bowman. Heath. \$1.25, \$1. *Selections from Lanier*, ed. by H. W. Lanier. Scribner. 50 cents. *Selections from Carlyle*, ed. by Hemingway and Seymour. Heath. 75 cents. *Browning Studies*, by V. C. Harrington. Badger. \$1.50. *Elements of Style*, by D. W. Rannie. Dutton. \$1.50. *Methods and Aims in the Study of Literature*, by Lane Cooper. Ginn. \$1.20.

## HIGH SCHOOL ENGLISH

IN the grammar grades and high school the work of the English teacher becomes more and more the teaching of literary appreciation and of oral and written use of English. In the latter emphasis is justly put on practical oral work. *American Speech* deals largely with the vocal side of this work. The good illustrations of the position of the speech organs for each sound, the table of the common spellings of those sounds, and the drills on enunciation make it a practical book for class use with any teacher. In *Oral English* the student is trained in posture and enunciation, in the collecting and arranging of material, in the common phraseology used in the business world, and in parliamentary law and debate. The good training in speech making and parliamentary usage is given in *English for Business*, more stress is laid on written work. In Part I there are ample exercises in grammar and rhetoric, in Part II practice in newspaper work, advertising and similar business subjects.

*Business English* is a simpler book, dealing with letter writing on orders, claims, sales and similar topics. Only the essential principles of rhetoric and grammar are treated. *Practical English* is an effort to make English training apply closely to every day life. Its quotations are well adapted for imitation and for arousing the imagination. It suggests a recent experiment in one of our high schools where a special book for direct imitative work was given the freshman class. The gain in form, material and force was surprising. But the same work given to the older pupils produced little effect.

To many teachers it seems a waste

# SELECTED TEXTS

## For Elementary Schools

### Gate to English

It provides a complete course in elementary school English and insures an accurate knowledge of what is right and wrong in English speech. Book I, grades 4, 5 and 6, 48 cents. Book II, grades 7 and 8, 68 cents.

### The Horace Mann Readers

Independence and power in reading are developed in the children by the Horace Mann method. Complete set of readers with teachers' manuals.

### The Alexander Speller

Now includes Dr. Leonard P. Ayres' Measuring Scale of Ability in Spelling. Two Editions: 1, Syllabicated; 2, Non-syllabicated. Part I, grades 1-4, 16 cents. Part II, grades 5-8, 20 cents. Complete, 25 cents.

### Woodburn & Moran's Introduction to American History

Wonderfully interesting text based upon the report of the Committee of Eight. For sixth year. 72 cents.

### Woodburn & Moran's Elementary American History and Government

It explains to the pupil the America of to-day, the evolution of our political institutions and the rights, privileges and duties of American citizenship. For the 7th and 8th years. \$1.00.

### Wood's Dramatic Reader

Dramatic scenes from *Standish of Standish*, *The Talisman*, *Lorna Doone*, *Sevenoaks* and *The Pilot*. For grammar grades. 60 cents.

## For High Schools

### Howe's Essentials in Early European History

This text meets fully the requirements of the new course of study suggested by the Committee on Social Studies of the N. E. A. \$1.50.

### Howe & Knowlton's Essentials in Modern European History

A companion volume to Howe's Essentials. (*In the press.*)

### Thomas & Howe's Composition and Rhetoric

Solves many of the most vexing problems of high school English. Exceptionally effective in securing continuous and thoughtful practice. \$1.20.

### Longmans' Modern French Course

Meets the requirements of teachers who wish to work on modern lines, but with due attention to definite grammar teaching. In two parts, 50 cents each. Teachers' edition—price on application.

### Frank's Elements of High School English

Abundant material for training in composition, oral and written. Thorough drill in spelling, punctuation, capitalization and word formation. 75 cents.

### Frank's High School Exercises in Grammar

College entrance examination specifications require grammar in high schools. Frank's text provides precisely the kind of work needed. 75 cents.

### Knight's Practice Work in English

Deals with those weaknesses of the first year student that are most difficult to root out. 60 cents.

### Baldwin's Writing and Speaking

This book departs from the customary order of treatment. It teaches composition as a useful art. Oral composition is developed with written composition. \$1.20. Part I and II, each 70 cents.

### Mayne's Business Spelling Book

For high schools. It contains the necessary words of business. 30 cents.

### Longmans' English Classics

Sixty volumes to choose from. Write for descriptive booklet.

### Ritchie's First and Second Steps in Latin

Make the study of Latin easy by the superior organization of the subject matter, and not by cutting any of the fundamental, or trying to make Latin easy. First Steps, 60 cents. Second Steps, 75 cents. Complete, \$1.25.

### Ritchie's Fabulae Faciles

Easy, interesting Latin stories, skillfully graded and arranged. An excellent "bridge to Caesar." 75 cents.

**Longmans, Green, & Co., Fourth Ave. and 30th St., N. Y.**  
CHICAGO: 2457 Prairie Avenue BOSTON: 120 Boylston Street

## BOOKS THAT COMPEL INTEREST

### ANCIENT TIMES

James Henry Breasted

Perhaps the most remarkable thing about this remarkable book is its freshness and vitality of style, its breadth and thoroughness, and the perfection of its makeup. The several hundred illustrations, many in colors, are among the features which set this volume apart from the ordinary textbook. For a one-year course in high schools.

*Nearly Ready*

### MEDIEVAL AND MODERN TIMES

James Harvey Robinson

A source of inspiration as well as instruction. One of the world's leading authorities on medieval history and its teaching has produced a brilliant and scholarly survey of Western Europe from the fall of the Roman Empire to the present. Profusely illustrated. Many plates in colors. For a one-year course in high schools.

**\$1.60**

### OCCUPATIONS

Gowin and Wheatley

**\$1.20**

The first textbook on vocational guidance for the pupils' use. It treats fully of the necessity for such preparation, reviews the various occupations, and finally gives definite suggestions for applying this knowledge.

### A FIRST GERMAN GRAMMAR

Allen and Phillipson

**\$1.00**

The new and original plan upon which this book is built contains many suggestions along the lines of the best modern ideas on German teaching. Its fresh material and adaptation to present-day needs in vocabulary mark it as unique.

### Books for Children

#### THE YOUNG AND FIELD LITERARY READERS

Six books of a remarkable series are now ready. Every one of these is a unified whole, drawing upon the greatest literature of the world for content, and inspiring young readers to enthusiasm and a love for good reading.

#### THE GULICK HYGIENE SERIES *Two new books by*

Frances Gulick Jewett

Health and Safety

40 cents

Physiology, Hygiene, and Sanitation

65 cents

Emphasis is upon health rather than upon dry physiological facts. Lessons of health are taught by appealing to the ambitions and tastes of the normal child.

#### GEOGRAPHICAL AND INDUSTRIAL STUDIES:

##### ASIA

Nellie B. Allen

**80 cents**

The third volume of a series which is successfully teaching the broader and more human geography. The actual life of the people is the framework around which is built an interesting and vivid description of each country.

### GINN AND COMPANY

Boston

New York

Chicago

London

of time to study the history of English literature in detail. They feel that more can be gained by the pupil in actual reading. By them *A Brief Survey of English and American Literature* will be welcomed. From it an author can be quickly placed in the proper historical or literary period. That is enough; reading will do the rest. As remarkable and fuller, with most intelligently chosen illustrations, is Hinchman's *History of English Literature*. In this book also only the typical writers of a period are discussed and the others merely listed in the chronological tables.

School editions of the classics greatly simplify the work of the literature teacher. To be of the most service in schools with small libraries, or in rooms with several classes where the pupils must depend largely on themselves, these should contain a simple but complete life of the author, the setting of the book, a few notes, and some form, preferably suggestive questions, of literary criticism. *The Alhambra* and *Treasure Island* give few of these helps, tho in the latter the glossary of nautical terms and the diagram of the ship make the text clearer. Daniel's edition of Macaulay's *Lays and Ballads* has smoothed the way to using these poems with young readers by its simple introduction on Roman life and the short, clear historical setting which precedes each lay. *Hamlet*, Emerson's *Essay on Manners with Other Essays*, Macaulay's *Speeches on Copyright* and *Lincoln's Cooper Institute Address* and selections from Boswell's *Life of Johnson*, fit college entrance requirements. Letters by great writers have recently formed a part of the high school curriculum. For this course Greenlaw's *Familiar Letters* is arranged to show easily the different types. As the short story is the form of literature most often read outside of school assignments, a study of its development, use and literary value may profitably form a part of the secondary school work. Alone, or better yet, accompanied by the study of the short story given in *A Brief Survey of English and American Literature*, the charming series of tales in *Short Stories for High Schools* forms a striking study in literary progress.

Many pupils who are unable to take the high school course learn in their daily work the value of further study and are eager for aids to home study. One of the most practical books for such students is *Human Interest Composition Subjects*. Tho planned for secondary schools, its wide range of vital topics and its suggestiveness in planning both paragraph and essay make it unusually helpful to the home student. In close association with such students are the immigrants who come to our shores in the prime of life. They need help in the quick mastery of the essentials of our language. For them, *Studies for Immigrants*, prepared to follow the excellent Y. M. C. A. leaflets, presents a carefully condensed outline of American history and institutions, with excellent memory passages, expressing the essential principles of

## The Independent Investor's Service

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

American life. The study of words which precedes each chapter greatly aids the student. Another satisfactory book for the home student of mature years is *English Grammar Simplified*. Tho much too detailed and lacking sufficient practise exercises for a school text-book, its simple statements of recognized principles of English grammar, its clear illustrations, and few suggestive exercises fit it especially for reference or for home training. *Good English in Good Form*, which gives in a brief, perhaps too concise form, the essential rules of rhetoric and punctuation, with a long study of derivations, would also be helpful to the independent student, as would *Why We Punctuate* with its thoro discussion of the principles. But the printing of the correct and the incorrect sentences in the same type is very confusing.

*American Speech*, by C. L. Lewis. Scott, Foresman. 80 cents. *Oral English*, by J. M. Brewer. Ginn. \$1. *English for Business*, by E. H. Webster. Newson. \$1.20. *Business English*, by Hotchkiss and Drew. *Practical English*, by Lewis and Hsieh. Am. Bk. Co. \$1.68. \$1. *A Brief Survey of English and American Literature*, by F. M. Tisdell. Macmillan. 85 cents. *History of English Literature*, by W. S. Hinckman. Century. \$1.30. *The Alhambra*, by Washington Irving. Ginn. 50 cents. *Treasure Island*, by R. L. Stevenson. Allyn and Bacon. 45 cents. *Lays and Ballads*, by T. B. Macaulay. Ginn. 30 cents. *Hamlet*, ed. by D. F. Pottinger. *Essay on Manners with Other Essays*, by R. W. Emerson. Macaulay's *Speeches on Copyright and Lincoln's Cooper Institute Address*, ed. by D. H. Miles. Longmans, Green. 25 cents each. *Life of Johnson*, by James Boswell. Heath. 40 cents. *Familiar Letters*, ed. by E. Greenlaw. Scott, Foresman. 40 cents. *Short Stories for High School*, ed. by R. M. R. Mikels. Scribner. 90 cents. *Human Interest Composition Subjects*, by G. F. Paul. Syracuse. Bardeen. \$1.25. *Studies for Immigrants*, by C. Roads. Abingdon Press. 25 cents. *English Grammar Simplified*, by J. C. Fernald. Funk and Wagnalls. 75 cents. *Good English in Good Form*, by D. K. Ranous. Sturgis and Walton. \$1. *Why We Punctuate*, by W. L. Klein. Minneapolis. Lancet Press. \$1.25.

## READING IN THE GRADES

NOWHERE is the old saying, "Practice makes perfect," truer than in primary reading. By whatever method the words are taught, to make the teaching a part of himself, the child in the first two years must not only read much—four books in the first and ten or more in the second year is a small estimate—but he must enjoy that reading. For this he needs several books with a simple, constantly repeated vocabulary, two or three hundred words for the first year. In the older style of book this was furnished by a page of short sentences grouped around a picture with many review lessons. This is the form of the *Wide Awake Junior*, a bright, well planned primer. But the *Horace Mann Practice Primer*, arranged to accompany the regular book, with its longer stories based on Mother Goose and its good nonsense alphabet for phonic drill will be more popular with the little folks. Moreover, the placing of phonic drills in the book does aid the pupil and saves valuable time for the teacher. The dialog form of much of *Storyland in Play*, a dramatic reader, will delight the advanced pupils of these grades, while *Bunny Rabbit's Diary* of his visits to the other animals will arouse great enthusiasm. In both these the child would hardly notice the mechanical difficulties, so eager would he be for the story.

Now is the time to replenish your Sketching Outfit.

Easels, Camp Stools, Umbrellas, Canvas, Academy Boards, Colors, Brushes, etc.

## Into Your Life Comes the Knowledge You Crave

—and with it all the power and respect that follow those who can back their opinions with solid facts. That's what it means to you to introduce into your reading circle round your library lamp the twenty-four beautiful volumes of

## The New International Encyclopaedia SECOND EDITION

Of this famous work, more copies are sold to schools, libraries, colleges and universities than of any other modern encyclopaedia. Long ago the New International won its definite place as an American institution of learning. Not only in libraries, colleges and the retreats of scholars, but in the homes of business and professional men, the New International has long since proved itself indispensable to those who would speak with authority on the thousand and one questions that arise in the daily life of every man and woman in this country.

**Every Article Rewritten    Thousands of New Articles**  
**Every Page Reset    Profuse Illustrations**  
**Remarkable New Maps—Complete—Accurate**

**The Builders**—To find the men best competent to write on the subjects in which they specialize, to submit their articles to other authorities, to check and counter-check until at last all that can be written on any aspect of human interest is set down readily—that was the task before the editors of the New International.

**Their Work**—The 30,000 subjects and the comprehensive and illuminating way in which they are treated is evidence to you of how well these men have builded.

**With Your Needs in Mind**—Because the value of a modern encyclopaedia is enhanced by the quickness and convenience with which you can turn to any subject, every part has been carefully and thoroughly revised for you to search through an index—the cross references are extremely clear and positive.

**Bibliography**—At the end of all the more important articles is a list of the books on that subject—a complete library for those desiring further reading.

**Thin Paper**—For home and office use there is an edition printed on easily handled thin paper. A *Special Library Edition* is printed on regular book paper and bound in Library Buckram after specifications of the American Library Association.

That some day you must own this most convenient and modern of all encyclopaedias is beyond dispute. That today is your golden opportunity to have the New International for your own, is evident when you realize that the price must be increased soon. And that time is very near.

### The Editor as Schoolmaster

which was delivered at the University of Kansas by Hamilton Holt, Editor of The Independent. A copy will be furnished free.

Address: Educational Department, THE INDEPENDENT, 119 West 40th Street, New York

For these same grades, *Literary Readers, I and II* provide excellent phonic tables, many familiar folklore tales, and in the second book some new ones from Hindu and Russian legends. As stated in the *Manual for Teachers of the Ideal Catholic Readers*, in which is found a discriminating discussion of the merits of each method, this series of four books, primer and first three grades, uses a combination of all methods. The first three have good drills on sight words and phonic forms, many folk tales, and rimes and stories of the child Jesus and His mother with a few on church life. The *Third Reader*, with its many poems and stories on Bible history, would stimulate the child to service for the church. The *Natural Method Readers* are suitable for use with any group of children, and the third especially meets the requirements of the child's widening view of life by its hero studies and its fresh tales of every-day science.

Above the third grade the type of reader changes. Tho many approve the informational type, the better plan is to make the informational reader distinct in itself and use the general reader for word formation and for developing oral expression and literary appreciation. A third edition of the *Horace Mann Fifth Reader* in fourteen months shows how fully its well chosen selections, its excellent training in suffixes and prefixes, and its carefully arranged dictionary meet the requirements of the grade. A *Sixth Reader* of this series, new this year, with selections largely informational on American history or by American writers, has an excellent, workable outline for word studies in derivation and roots. The selections are of high rank, and are followed by a careful drill on meaning, and by questions admirably fitted to produce literary understanding and appreciation. Of the many editions of children's classics that now enables the teacher to place the best literature in the pupil's hands, Stickney's edition of Kingsley's *Water Babies* is most attractive.

In the group of historical readers for intermediate and grammar grades, *Heroes of Conquest and Empire* deals in an attractive manner with six world heroes, including Kublai and Mahomet. As a supplementary reader it would add greatly to the interest of sixth grade work in European history. *Heroic Deeds of American Sailors* meets a long-felt want for navy stories, simple enough to appeal to the younger readers. *Lafayette* of the True Stories of Great Americans series gives in simple but wide-awake language the story of the great Frenchman. From it pupils would gain not only a clearer view of his services to this country but a better idea of European life and struggles. *Daniel Boone*, another book of the same series, tells in an equally interesting manner the story of the pioneer of Kentucky. Sure of popularity in the class room is *The Wanderers of the Jungle*. While giving accurate scientific facts, the author develops the imagination and the reasoning

power of the child by his sympathetic portrayal of five large animals of the jungle and a few bright colored birds.

The lack of wise training in the homes of many of our pupils necessitates more ethical training in the schools. Two books of the King's Highway Series. *The Way of the Rivers* and *The Way of the Hills* combine well-told lives of Bible heroes and stories illustrating the social virtues. Tho unfitted for public school use by reason of the diversity of religious belief there met with, they would add greatly to the curriculum of the private school for which they are intended. Another book illustrates the social and the individual virtues by an excellent grouping of the great proverbs and passages of the Bible. These *Ethical Readings from the Bible* are particularly adapted for use in the opening exercises of a school.

*The Avoidance of Fires* gives much needed information on the causes of fires and the necessary precautions. An excellent set of questions review each chapter. So great is the call for such training that the wise teacher will welcome the book as an addition to practical civic work. *Community Civics* is mainly confined to social life in the rural districts, makes many excellent suggestions, but gives no definite plan for using them. Were sufficient material given, either in the text or by references, the thought-producing questions at the end of each chapter would be useful. In contrast to this vagueness *The Story of Agriculture in the United States* is a surprizingly interesting book, well adapted for supplementary reading with any grammar school history. With a clear and concise outline of American history as its basis, it gives in a stimulating form the development of American farming and farm implements. To this is added a good outline of the present work of our agricultural department.

*Wide Awake Junior*, by C. Murray. Little, Brown, 30 cents. *The Horace Mann Readers: Pictorial Primer, Fifth, Sixth Readers*, by Henry and Hae. Longman, Green, 20, 75, 75 cents. *Starland in Play*, by A. M. Swinner. Rand, McNally, 45 cents. *Bunny Rabbit's Lesson*, by M. E. Babel. Lavee, Brown, 49 cents. *Literary Readers, I, II*, by Young and Ford, Ginn, 40 and 50 cents. *The Ideal Catholic Reader: Manual for Teachers, Primer, First, Second, Third Readers*, by a Sister of St. Joseph. Macmillan, 20, 25, 35, 40 cents. *Natural Method Readers, III*, by McManus and Huxson. Lavee, 25 cents. *Water Babies*, by Charles Kingsley. Ginn, 45 cents. *Heroes of Chivalry and Empire*, by E. M. Underwood. Macmillan, 40 cents. *Home Deeds of American Heroes*, by Blodgett and Bal. Little, Brown, 75 cents. *Lafayette*, by M. F. Cross. Laurel Books, by L. G. Foster. Macmillan, 50 cents each. *Wonders of the Jungle*, by Prince George. Heath, 40 cents. *The Way of the Rivers and The Way of the Hills*, by S. H. Wooddy. Macmillan, 55 cents each. *Ethical Readings from the Bible*, and by Keeler and Sins. Lavee, 40 cents. *Avoidance of Fires*, by A. D. Woods. Heath, 95 cents. *Community Civics*, by Ford and Neering. Macmillan, 60 cents. *The Story of Agriculture in the United States*, by A. H. Sanford. Heath, 21.

## SCIENCE

ONE of the arguments in favor of courses in *General Science* for all save the exceptional high school pupil is that they tend to increase the number of scientists! However that may be, they certainly spread general intelligence among those who can never spe-

First Printing ½ Million—Just Published

# WHEN A MAN'S A MAN

By Harold Bell Wright

Illustrated by the Author Cloth 12mo \$1.35

WHEN A MAN'S A MAN is a fine, big, wholesome novel of simple sweetness and virile strength. While the pages are crowded with the thrilling incidents that belong to the adventurous life of the unfenced land depicted, one feels, always, beneath the surface of the stirring scenes the great, primitive and enduring life forces that the men and women of this story portray. In the Dean, Philip Acton, Patches, Little Billy, Curly Elson, Kitty Reid and Helen Manning the author has created real living, breathing men and women, and we are made to feel and understand that there come to everyone those times when in spite of all, above all and at any cost, a man *must* be a man.

CANADA STEAMSHIP LINES

## Engineering the Telephone

THE great Bell System, with its telephone highways connecting the farthest points of the country, is primarily a brain creation.

The telephone engineer is the genius of communication. Like the general of an army, he plans, projects, and directs his campaigns far ahead. He deals with the seemingly impossible—transforming ideas and ideals into concrete facts.

His problems may involve doubling the capacity of a city's underground telephone system, or the building of a transcontinental line, or a serious war-shortage of supplies needed in telephone work.

Whatever the difficulties, they must be overcome so that the progress of the telephone shall continue equal to the ever-growing needs of the people.

It is not enough to provide only for the present—the future must be anticipated and discounted.

In the Bell System, more than two thousand highly efficient engineers and scientists are constantly working on the complex problems of the telephone business.

As a result, the service keeps step with present requirements and the assurance is given to every subscriber that the Bell System is prepared for whatever the future develops.

cialize. Elhuff's text manages to treat matters relating to common life, health, and industry along with the more definite sciences without making them trivial.

Physiology and hygiene rank high in the output of scientific books for the schools. If Americans do not know the effects of cleanliness and fresh air, it is thru no fault of writer or publisher. *Physiology and Health*, I and II, by Dr. Conn, are for use in the grammar grades, and teach physiology in terms of health needs, and of the control relationships, once considered only in psychology. *Principles of Health Control* is a book for older students, treating of exercise, posture, chemical agencies, nervous conservation, effects of environment, and of social controls. Dr. Rettger's *Physiology and Sanitation* considers these topics in the light of "service values." *Community Hygiene* is an excellent and easily read manual of health for the home, school, and community. One of the valuable public health talks given at the Harvard Medical School was by Dr. Brackett on the *Care of the Teeth*. Here parent and teacher will find just what all should know of this central problem of hygiene.

To even an amateur in bird lore the name of Frank Chapman represents both knowledge and accuracy. In *Travels of Birds* he gives the child an interesting description of bird migrations with study questions at the end of each chapter. For the last two grammar grades *Notes on Plants*, one of the Cornell extension series, places in easy reach of the pupil the necessary facts for a study of plant life. The blank spaces for simple sketches of the plant add greatly to the value of the book.

The two volumes of *Essentials of Geography* meet completely the present requirement for fuller work in geography as related to industrial and commercial life. The illustrations, colored plates and smaller cuts are uncommonly stimulating to interest.

Mrs. Brown offers suggestions of approach to *Present Day Geography* of European countries which mean more than usual to children in these times of war. Her advantage lies in a sensible method of leaving out the unimportant.

The first thing that strikes one on opening Cleland's *Geology* is its attractiveness. Its first section treats of the earth in relation to other planets, glaciers, streams, oceans and all physical features. Part second gives the history of the formation and development by periods of the present geologic structure.

The *Origin of the Earth*, by T. C. Chamberlain, reads like a story. It is, however, a presentation of the most complete statement yet made of the formation of the polar systems. La Place's nebular theory yields to one more adequate and far reaching.

A new edition of Mrs. Williams' *Cookery* provides a two year course for older girls of the elementary schools. This goes beyond cooking into home and health problems.

Ten formulas, only those which apply directly to home life are found in *Cookery*.

## *In the Heart of the Open Country*

# THE STONE SCHOOL

Cornwall-on-the-Hudson, New York

FIFTIETH YEAR

**H**ERE is a school in the heart of the open country for boys from nine to nineteen years of age. Fifty miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. The Stone School offers the health and vigor of a sane and simple out-door life. With good health and sound body building as its foundation, this School prepares for college or business life. Its recent graduates are found

in twelve leading colleges. The Stone School boy means one equipped and trained for individual efficiency, and each boy is studied physically and mentally with that in view. There is a teacher for every six boys. Athletics are important at the school which has two fields with excellent facilities for every sport, under supervision. Woods life and hiking are features. Come and see for yourself.

*Write Personally for full particulars to Alvan E. Duerr, Head Master*

istry in the Home. Here the up-to-date housekeeper and the student of household science will find just the chemistry that she needs.

Dr. McFarland's *Practical Elementary Chemistry* for high school use makes as little as possible of the text and builds almost entirely on laboratory work. The third edition of Thorp's *Outlines of Industrial Chemistry* shows the amazing progress recently made in this field. The three parts of the work are Inorganic Industries, Organic Industries, and Metallurgy.

*Physiology and Health, I, II*, by H. W. Conn. Silver, Burdett. 40, 66 cents. *Principles of Health Control*, by F. M. Walters. Heath. \$1.50. *Physiology and Sanitation*, by L. J. Rettger. Barnes. 80 cents. *Community Hygiene*, by Woods Hutchinson. Houghton, Mifflin. 60 cents. *Care of the Teeth*, by C. A. Brackett. Harvard Univ. Press. 50 cents. *General Science*, by L. Elhuff. Heath. \$1.20. *Travels of Birds*, by F. Chapman. Appleton. 40 cents. *Notes on Plants*. Comstock 30 cents. *Essentials of Geography, I, II*, by Brigham and McFarlane. Am. Bk. Co. 72 cents. \$1.24. *Present Day Geography*, by Mrs. R. E. Brown. Bardeen. *Geology*, by Cleland. Am. Bk. Co. \$3.50. *Cookery*, by Williams and Fisher. Macmillan. \$1. *Chemistry in the Home*, by H. T. Weed. Am. Bk. Co. \$1.20. *Outlines of Industrial Chemistry*, by F. L. Thorp. Macmillan. \$3.75.

## MATHEMATICS

IN recent years, in an endeavor to meet the demands of the business world, the motto of the mathematics teacher in the elementary schools has been "fundamentals automatic." Starting with the child's entrance into school, *Lippincott's Practical Primary Arithmetics* make slow progress for the first two years, but give thoro, attractive drill on the fundamentals, with special attention to the forty-five combinations. Plenty of problem work makes for a good start in reasoning, quite as essential as mere mechanical accuracy. Both books are well adapted for use by untrained teachers, or in one-room schools where the child must largely solve his own difficulties.

*Modern Business Arithmetic* is a brief course in fundamental business problems. Omitting many of the usual subjects its range is yet wide enough for introductory drill and thoro enough for the mastery of the given principles. *Community Arithmetic*, for grammar grades or first year high, is a simplified commercial arithmetic. It deals with such practical problems as buying meat, poultry accounts, roofing. Boys and girls trained in this would turn out better workmen and housekeepers.

It is interesting to note how the algebras of the year, all from western educators, meet the demand for the practical. From California comes the most radical of the four elementary books. *Practical Algebra for Beginners* is a carefully prepared treatise, applied and symbolic algebra alternating chapter by chapter. Assuming a large and comprehensive study of mensuration formulas and mechanical principles in the grades, the transition from arithmetic, arranged in the introduction, would be simple. Some of the usual difficulties are simplified by a thoro study of synthetic division and factoring, by square root tables, and by an excellent and complete development of graphs. Slaughter and Lennes' *Elementary Algebra* (from Montana and Illi-

nois) changes the old order of subjects only by an early study of proportion and the application of factoring at once to quadratics. Its clear explanations and large number of practical problems furnish excellent drill for the slow pupil. In the *Intermediate Algebra*, by the same authors, the thoro review, abundant problems, and clear work in quadratics and determinates meet easily the college requirements. Cajori and Odell's *Elementary Algebra*, this from Colorado, changes the usual order in that fractions and radicals are the last topics presented, the necessary rules for fractional coefficients and equations being given as required. Graphs are combined with proportion, and the problems are from business rather than mechanics. Milne's *Second Course in Algebra* has little advanced work and few applied problems. It seems rather a hard beginner's book than an advanced course. *School Algebra, First Course*, from Illinois, is admirably fitted to the study of either pure or applied algebra. The transition from arithmetic to algebra is so carefully planned that the student slips over the difficulties without conscious effort and a clear comprehension of algebra is won by simple drills on puzzling details; by comparisons of English and algebraic expressions; and by illustrations with rectangles and circles. By a skilful tabulation of business questions, the principle of graphs is used so constantly that the final plotting of points and lines presents no difficulties.

As a year or two generally intervenes between the use of the *First Course* and the *Second Course* of the *School Algebra* in the well-known Townsend series, the latter, following the best features of the first book, starts with a well-planned review. The problems in physics and geometry fully meet the demands of applied algebra, while the work in pure algebra is sufficient to satisfy college requirements.

As in the other two books of the Townsend series, *Plane Geometry* enables the student to pass easily the usual difficulties. With a thoro training in the theoretical part is found abundant work in designing and mechanics, and the simple trigonometric functions. The best of the old system is supplemented by the best of the new. *Plane Geometry*, by Palmer and Taylor, gives enough pure geometry for college entrance, but accompanies it with many every-day problems and excellent introductory work on simple constructions. By starting with a review of plane geometry and by a constant use of cardboard and wire models for upper grammar or first year high, *Constructive Geometry* furnishes a capital introduction to the theoretical side of the study. Its many examples train the student by practise to understand the fundamentals of the theoretical study and to apply those principles to simple designing. To the pupil who continues the study of mathematics it simplifies the advanced work; to the others it gives a practical conception of a difficult subject. *Solid Geometry*, by Betz and Webb, simplifies the projection of solids on to

## SCHOOLS AND COLLEGES

INDIANA

# VALPARAISO UNIVERSITY

FOUNDED 1873

VALPARAISO, INDIANA

One of the Largest Institutions of Learning  
in the United States

Thorough Instruction at Lowest Expense

**V**ALPARAISO UNIVERSITY was founded with 3 departments, 4 instructors, and an annual enrollment of 210 different students. Now there are 21 departments, 220 instructors and an annual enrollment of more than 5000 different students.

THE REASON for this growth is in the fact that this University constantly increases its facilities, strengthens its courses of study, and offers additional advantages without making the expense to the student any greater.

**Departments** Preparatory, High School, Primary Methods, Kindergarten Methods, Commerce, Phonography and Typewriting, Review for Teachers, Education, Arts and Sciences, Engineering, Architecture, Manual Training, Agriculture, Expression and Public Speaking, Music, Fine Arts, Domestic Science, Pharmacy, Law, Medicine and Dentistry.

While the expense in all the Departments is exceedingly low, it has not been made so at the sacrifice of a high grade of instruction, but by applying business principles to

**The Cost of Living** so that the most satisfactory accommodations for board and room may be had at from \$29 to \$41 per quarter of twelve weeks. Tuition \$20.00 per quarter, or \$65.00 if paid in advance, for a year of forty-eight weeks. If the entire tuition is paid in advance for the year, it includes all the departments, except Medical, Dental and private lessons in Music.

The total expense of board, tuition and furnished room for the regular school year (thirty-six weeks), need not exceed \$142, or for forty-eight weeks \$181. For Free Catalog Address

Distinctive management and house mother. Illustrated booklet. JOSEPH H. SAWYER, L.H.D., Principal, Easthampton, Mass.

## BROOKFIELD

### The Open Air School for Her

Teaches your daughter how to realize the durable satisfactions of life. The Directors believe that this end is attained through helping the growing girl to establish habits which keep her well, make her think clearly, make her live in right relations to her world.

The aim at Brookfield is to give the girl her fullest power, rather than to cram her mind with a specified quantity of book-learning.

Open air sleeping, study and recitations. Open air dining room. Domestic arts, gardening, physical training, summer and winter sports, dancing, story telling, dramatic training, music.

Write personally to Miss Helen Fairman Cooke,  
The Brookfield School, North Brookfield, Mass.

a plane surface. Here again is a correlation with other subjects by the introduction of problems of mechanics.

Two books on higher mathematics both aim at accuracy in concrete results. The clear explanations and well-chosen illustrations of *Theory of Errors and Least Squares* enables the trained worker to apply at once the methods presented to correcting errors in the minute measurements necessary for the research and practical work of the sciences. *The Mathematical Theory of Probabilities*, a scholarly and complete treatise on the laws of probability as applied to insurance problems and similar vital statistics, gives the English student the benefit of the careful researches of continental statisticians. The aim of the *Historical Introduction to Mathematical Literature* is to afford the student a general knowledge of the great mathematical principles which have been stepping stones in the progress of the science and an acquaintance with leading mathematicians and their individual work. *Principles of Accounting*, for trained bookkeepers, is a complete discussion, made clearer by careful illustration, of the forms and values of accurate accounting in its modern meaning where the aim of the business man is not merely a balancing of accounts, but such a comparison of facts and values as will give him the truest estimate of his business transactions.

*Practical Primary Arithmetic, I, II*, by Bruff, Hayden and Watkins. Lippincott. *Modern Business Arithmetic*, by Finney and Brown. Holt. *Community Arithmetic*, by B. Hunt. Am. Bk. Co. 60 cents. *A Practical Algebra for Beginners*, by T. A. Brookman. Scribner. \$1.12. *Elementary Algebra and Intermediate Algebra*, by Slaughter and Lennes. Allyn and Bacon. \$1 each. *Elementary Algebra*, by Cajori and Odell. Macmillan. 65 cents. *Second Course in Algebra*, by W. J. Milne. Am. Bk. Co. 88 cents. *School Algebra, I, II*, by Rietz, Crathorne and Taylor. Holt. \$1.75 cents. *Constructive Geometry*, by E. R. Hedrick. Macmillan. 40 cents. *Plane Geometry*, by Palmer and Taylor. Scott, Foresman. 80 cents. *Solid Geometry*, by Betz and Webb. Ginn. 75 cents. *Theory of Errors and Least Squares*, by L. D. Weld. Macmillan. \$1.25. *The Mathematical Theory of Probabilities*, by A. Fisher. Macmillan. \$2. *Historical Introduction to Mathematical Literature*, by G. A. Miller. Macmillan. \$1.60. *Principles of Accounting*, by S. Gilman. La Salle. Extension Univ.

## LATIN AND GREEK

THE high school with its vocational, industrial and commercial courses, now reaches a far larger number of pupils than was ever possible for the purely classical school. But to some of us the dropping of Latin brings regret. To us the study meant not only a knowledge of Latin literature but a more thoro mastery of English grammar and an appreciation of the full value of our English derivatives. Such should be the result of the study of every student of Latin today. Lewis' *Latin Dictionary* is unusual, being planned as is an English dictionary. The definitions are clear, with quotations from standard authors, and roots carefully marked so that the student may easily see the relations of words.

*Latin Plays* are planned for supplementary class reading or for acting. Here are found sketches of Caesar's camp life, the Helvetian home, Cicero's

outwitting of the conspirators and Perseus' meeting with his betrothed Andromeda, and more, all told with true historical appreciation and sufficient action to hold the pupil's interest. They furnish an excellent drill in expressive reading and a positive aid to the assimilation of the language.

Gunnison and Harley's *Latin for the First Year*, tho confusing modifiers and complements, aids the pupil by good review questions, by illustrations of Roman life and examples of the grammatical constructions of Cæsar. In Scott's *Elementary Latin* the explanations are clear and concise; suggestive drills are placed in each chapter, and emphasis is given to English derivatives. Early in the book short readings from Cæsar are begun and continued till the whole of the first two books of the Gallic wars has been read in easy Latin. From elementary books this year's publication jump to *The Germania of Tacitus*. Its well written introduction suggests the book's value today and the aim and style of its author. The historical explanations of the notes are full, with cross references to contemporary writers.

After all Greek is not dead yet and its friends will be glad of the *Greek Grammar* that comes from Harvard. It is planned to do away with a beginner's book. It is purely grammatical, but simple, with emphasis on phonetic changes. Its pages on verbs are especially good and remarkably full indices make the contents immediately accessible.

*Elementary Latin Dictionary*, by C. T. Lewis. Am. Bk. Co. \$2. *Latin Plays*, by J. J. Schlicher. Ginn. 75 cents. *Latin for the First Year*, by Gunnison and Harley. Silver, Burdett. \$1. *Elementary Latin*, by H. F. Scott. Scott, Foresman. \$1. *The Germania of Tacitus*, ed. by D. R. Stuart. Macmillan. 60 cents. *Greek Grammar*, by H. W. Smyth. Am. Bk. Co. \$1.50.

## GERMAN

BECAUSE at ten or twelve the memory power of the child is at its height, many schools now begin one modern language in the grades. Among books for children starting German early *Lese-Ubungen für Kinder* in English type and *Des Kindes Erstes Lesebuch* in German type both furnish good poems and songs whose rhythm will greatly appeal to the child. Excellent pictures, in one on home life, in the other on the experiences of the pupil, form the basis of reading and conversation lessons. Both are attractive, thoro, and adapted to the grade child, but the grammatical constructions of the latter book are simpler with a better drill on irregular verb forms.

Bacon's *New German Grammar* uses an excellent method in beginning with easy continuous readings and from these developing the grammar of the language. Only a small vocabulary is given in each lesson, the idioms are mastered by frequent repetition, while the pacing of many oral drills before the written exercises secures fewer mistakes in the latter. Story telling by the pupils is one of the many ways in which to relieve the monotony of the drill on pronunciation, vocabularies and

## New England CONSERVATORY OF MUSIC

George W. Chadwick  
Director

Year opens  
Sept. 21st, 1916

BOSTON, MASS.

### The Largest and Best Equipped School of Music

Located in the music center of America. It affords pupils the environment and atmosphere so necessary to a musical education. Its complete organization, its imposing Conservatory Building, splendid equipment, and the Residence Building offer exceptional facilities for students. Complete Curriculum. Courses in every branch of Music, applied and theoretical, including Opera. Owing to the practical training in our Normal Department, graduates are much in demand as teachers.

The free privileges of lectures, concerts and recitals, the opportunities of ensemble practice and appearing before audiences, and the daily associations are invaluable advantages to the music student.

A Complete Orchestra offers advanced pupils in voice, piano, organ and violin experience in rehearsals and public appearances with orchestral accompaniment.

Dramatic Department. Practical training in acting.

Address RALPH L. FLANDERS, General Manager.

## BOSTON UNIVERSITY

Law Medicine  
College of Liberal Arts  
Theology Graduate Department

The College of Liberal Arts now occupies its new building next to the Boston Public Library and offers the advantages of a modern college course. The building is equipped with Laboratories, Department Libraries and has fullest use of the Boston Public Library. The professional schools located in the heart of the city not only offer the usual courses of instruction but afford unusual opportunities for self support and for the practical training in the several professions. The Graduate School offers exceptional opportunity for research work.

LEMUEL HERBERT MURLIN, President  
Copley Square, Boston, Mass.

idioms. *Deutsche Anekdoten* places within reach fifty anecdotes admirably fitted for class use. Deering's edition of *Wilhelm Tell* has good type, clarifying questions on each scene, and clear, pointed notes.

Goethe's wide range makes any study of his poems difficult. But the arrangement given in the Schütze edition, by which poems of the same type and rank, as we judge today, can be studied together, is an improvement on either of the more usual groupings. The best feature of this edition of *Goethe's Poems* is the special study of twelve lyrics which are loved by all German students.

Of the two modern books, *Asmus Sempers Jungenland* and *Der Wilddieb*, the first is the autobiography of the author's youth in story form. Though it portrays fairly the life of the child of the poorer class and charms by its quiet humor, it is not as attractive a tale as the second with its simple plot and clear picture of German village life in the past century. The composition exercises of the latter, both in German and English, based on the text, but grouped under grammatical topics, make the book better for younger pupils.

*Lese-Übungen für Kinder*, by M. Schmidhofer. Heath. 35 cents. *Des Kindes Erstes Lesebuch*, by K. M. Jones. Heath. 35 cents. *New German Grammar*, by P. V. Bacon. Allyn and Bacon. \$1.25. *Deutsche Anekdoten*, by L. L. Stroebe. Heath. 15 cents. *Schiller's Wilhelm Tell*, ed. by R. W. Deering. Heath. 75 cents. *Goethe's Poems*, ed. by M. Schütze. Ginn. 75 cents. *Asmus Sempers Jungenland*, ed. by C. Osthaus. Heath. 60 cents. *Gerstäcker's Der Wilddieb*, ed. by W. R. Myers. Heath. 60 cents.

## SPANISH AND FRENCH

THE study of Spanish has made amazing strides in this country in the last two years and is of increasing practical importance. All the textbooks reflect the purely business character of this interest. DeVitis' *Spanish Grammar* is a clear and thorough text-book beginning with the simple grammatical forms and exercises, but becoming a comprehensive reference book. The appendix on Spanish usage in social and business correspondence is important, and distinction is made between the usage in Spain itself and in South America. A shorter though not simpler book is Espinosa and Allen's *Elementary Spanish Grammar*. This has several maps, and conversations and exercises on mercantile topics. The *First Spanish Reader* is for beginners, short prose, a few poems and Spanish songs, all in the simplest wording. An up-to-date little reader, also very easy, is *A Trip to South America*, by S. M. Waxman. In lively monolog and dialog it gives much practical and entertaining information about our southern neighbors.

A new edition of the excellent Charbonnel's *Complete French Course* is altered slightly as to exercises, and by the addition to its selections for reading of clever anecdotes. Meras' *Primer* and *Second Livres* are combination grammars and readers. All the exercises of the first are woven about Malot's "Sans Famille," and those of

the second made from "Around the World in Eighty Days." The pictures by Kerr Eby, especially those of the second book, are most amusing. With the exception of Jules Verne, writers for French children seem still to belong to the Edgeworth period, so that our teachers are driven to writing a few children's books themselves. One of the best of these is *French Plays for Children*, by J. E. Spinx. Brittany customs, fables, and for the longest, the story of Jeanne d'Arc, are the foundations for these bright little plays.

Professor Fontaine of Columbia has sought to meet this need for children's literature by a book of travel, *En France*. This is attractively illustrated, but is amusingly reminiscent of Rollo and his Uncle Frank, whom, we grieve to admit, are not intimates of the coming generation. Professor Roux of the New York University in his *Elementary French Reader* has adapted into simple French an excellent and entertaining collection of anecdotes and short stories by the great French writers. The short stories of the *Conversational French Reader*, arranged by Bierman and Frank, of the New York high schools, are of one lesson length, and are planned to utilize the dramatic instinct of youngsters. In the first twenty lessons the sounded final consonants and the liason are indicated by the type, a helpful plan. For more advanced students and fitting with courses in French history, are *Lectures Historiques* arranged by Emma Moffett. These are taken from the French historians and essayists and deal with the period from Louis XIII thru the empire.

Among stories arranged with notes and vocabularies for class reading is a second edition of Merimée's *Colomba* arranged by J. A. Fontaine, of Bryn Mawr, and a new edition of the perennially popular *L'Abbé Constantin*. The list of irregular verbs, the full and intelligent notes, the exercises based on each chapter, make this in itself a surprisingly complete text-book. The cuts are from the original illustration by Lemaire. Less simple but not difficult and most interesting is Dumas' *La Tulipe Noire*, somewhat shortened and supplied with historical notes and vocabulary by O. B. Super. Professor Whittin of Harvard has prepared Loti's exquisite *Roman d'un Enfant* for class use. Altho its French is simple, the charm of the book will appeal to older students.

*Spanish Grammar*, by M. A. DeVitia, Allyn and Bacon, \$1.25. *Elementary Spanish Grammar*, by M. A. DeVitia, Allyn and Bacon, \$1.25. *First Spanish Reader*, by M. A. DeVitia, Allyn and Bacon, 50 cents. *A Trip to South America*, by M. A. DeVitia, Allyn and Bacon, 50 cents. *The New Cathedral*, by M. A. DeVitia, Allyn and Bacon, 50 cents. *Le Premier and Le Second*, by A. A. and B. Morris, Allyn and Bacon, 50 cents each. *French Plays for Children*, by J. E. Spinx, Heath, 35 cents. *En France*, by J. E. Spinx, Heath, 35 cents. *Elementary French Reader*, ed. by Roux, Macmillan, 50 cents. *Conversational French Reader*, ed. by Bierman and Frank, Allyn and Bacon, 25 cents. *Lectures Historiques*, ed. by Emma Moffett, Heath, 45 cents. *Colomba*, by Prosper Merimée, Heath, 50 cents. *L'Abbé Constantin*, by Louis Huet, Allyn and Bacon, 50 cents. *La Tulipe Noire*, by Alexandre Dumas, Allyn and Bacon, 50 cents. *Roman d'un Enfant*, by Pierre Loti, Heath, 50 cents.

NEW JERSEY

## PEDDIE a school that educates the boy on all sides

Education consists not wholly of "book lore." Cultured morals, mental ability and physical fitness are of far greater value in life's undertaking. These are the traits that Peddie seeks to develop in the boy through its wholesome environment, selected faculty and extensive athletic equipment.

There is a 60-acre campus, lake, cinder track, baseball and football fields, gymnasium, swimming-pool—in short, just every sort of athletic encouragement to gladden the heart of any young American.

Woodrow Wilson says of Peddie: "These quiet schools, into which so much devotion and unheralded work go, certainly sustain

the education of the country, and supply the universities with some of the most useful material they get. We hold Peddie Institute in high esteem here at Princeton."

Graduates have certificate privileges. Students are instructed in public speaking, debating and music without extra charge. The equipment includes fireproof dormitories, laboratories, library, observatory, etc. The school is located at Hightstown, New Jersey—9 miles from Princeton, on the Pennsylvania Railroad, between Philadelphia and New York.

**Lower School for boys of 11 to 14 years.** Address Roger W. Swetland, Headmaster, Box 8-S., for catalog and booklets.

## VIRGINIA

**Eastern College** Co-ed. 30 m. from Wash., D.C., a 20th Century College. Fine new bldgs. Standard A. B. course. Also two year degree courses in Lit., Ped., Dom. Sci., Express. and Bus. for high school graduates. Superior Music Conservatory. Select academy for boys and girls. \$80 a year. Gym. and athletics. DR. H. U. ROOP, Pres.

## Randolph-Macon Woman's College, Lynchburg, Va.

One of the leading colleges for women in the United States, offering courses for A.B. and A.M.; also Music and Art. Four laboratories, library, astronomical observatory, modern residence halls. Scientific course in physical development. \$20,000 gymnasium with swimming pool, large athletic field. Fifty acres in college grounds. Healthful climate free from extremes of temperature. Endowment, recently increased by \$250,000. Expenses moderate. Officers and instructors, 60; students, 624, from 40 states and foreign countries. For catalogue and book of views illustrating student life, address WILLIAM A. WEBB, President, Box A.

**STUART HALL** STAUNTON, VIRGINIA. Formerly Virginia Female Institute. Founded 1843. Diocesan School for Girls in the Virginia Mountains. General and Preparatory Courses. Music, Art and Expression Departments. Entirely new equipment, including pianos. Gymnastics and field sports. JANE COLSTON HOWARD, A.B. (Bryn Mawr), Principal.

## ROANOKE COLLEGE 64th Year

For Men. Courses for Degrees; also Commercial Course. Library 25,000 volumes. Mountain location. Six Churches; no bar-rooms. Expenses small. Catalogue free. Address The President, Salem, Va.

## PENNSYLVANIA

## YEATES SCHOOL

Our experience indicates that every boy is different and must be handled individually to be handled successfully. We have an interest in the boy and a most complete equipment for him to enjoy as he grows. For details address HEADMASTER.

Box 504, LANCASTER, PA.

## KISKIMINETAS SPRINGS SCHOOL

For Boys. Endorsed by every American University. Individualized instruction. College preparatory course and a good training for business life. Special course in agriculture. Second year physical care. 12th year opens September 19th. Write for catalog. KISKIMINETAS SPRINGS SCHOOL, Dept. 15, Sadsbury, Pa.

## The Birmingham School

FOR GIRLS (Inc.) Founded 1853  
"The Mountain School"

Individualized instruction. College preparatory course and a good training for business life. Special course in agriculture. Second year physical care. 12th year opens September 19th. Write for catalog. KISKIMINETAS SPRINGS SCHOOL, Dept. 15, Sadsbury, Pa.

A. R. CHIFFR, President Box 117, Birmingham, Pa.

**The Pennington School** An efficient school at moderate cost. 75 minutes from N. Y., 50 from Phila. Prepares for College, Technical Schools or Business. Gymnasium. Strong faculty. Swimming pool, all athletics. Junior school with home care for boys 9 to 13.

FRANK MACDANIEL, D. D., Headmaster, Box 80  
NEW JERSEY, Pennington.

## Mary Baldwin Seminary for Young Ladies

Established 1842. Term begins Sept. 14th. In the beautiful and historic Shenandoah Valley of Virginia. Unsurpassed climate, modern equipment. Students from 35 states. Courses: Collegiate (3 years); Preparatory (4 years), with certificate privileges. Music, Art and Domestic Science. Catalog. STAUNTON, VA.

**LATSHAW SCHOOL** FOR BACKWARD CHILDREN. Do you want your child to become bright, interesting and happy, with a possible future of usefulness? The history of our School warrants this offer to you. Kindly individual care in a small family group. Rates \$1,200 upwards. ALLEN LATSHAW, Founder and Director, Pennsylvania, Berwyn. "The Maples," 3412-14 Sansom Street, Philadelphia.

**BELLEfonte ACADEMY** Ideal home school for boys. Prepares for leading universities or business. Subjects selected to suit chosen career. New buildings. Gymnasium. Swimming pool. Athletic field. 11th year. Send for catalog. JAMES R. HUGHES, A.M., Headmaster. PENNSYLVANIA, Bellefonte, Box 2100.

## Mercersburg Academy

**AIM OF THE SCHOOL** A thorough physical, mental and moral training for college entrance or business.  
**SPIRIT OF SCHOOL**—A manly tone of self-reliance under Christian influences from the great universities. Personal attention given to each boy.  
**LOCATION**—In the country, on the western slope of the famous Cumberland Valley, one of the most beautiful and healthful spots of America.  
**EQUIPMENT**—Modern and complete. New Gymnasium. Write for catalogue. Address Box 1.  
William Mann Irvine, LL.D., Headmaster, Mercersburg, Pa.

FORTY-EIGHTH YEAR

## Pennsylvania College for Women

Woodland Road, Pittsburgh, Pa.

Location combines advantages of city and country. Collegiate and Special Courses. Exceptional advantages in Social Service, Music and Expression.

John Carey Acheson, LL.D., President

## MR. PURINTON'S EFFICIENCY QUESTION BOX

293. Miss G. F. R., Pennsylvania. "I am deeply interested in religious work, social service and ethical education in particular. Can you refer me (a) to institutions making a special feature of work on these lines, and also (b) to publications serving a like purpose?"

(a) American Institute of Social Service, Bible House, New York; Society for Ethical Culture, Central Park West, New York; Moody Institute, Northfield, Massachusetts; Temple College, Philadelphia; International Sunday School Association, Mollers Building, Chicago. (b) Annual Reports, Federal Council of the Churches of Christ in America, 612 United Charities Building, 105 East Twenty-second street, New York. "World-Wide Sunday School Work," published by the World's Sunday School Association, Metropolitan Tower, New York; and you can secure their books from the Efficiency Publishing Company, Woolworth Building, New York City; "The Church School," by Walter Athearn, the Pilgrim Press, Boston; "Christian Service and the Modern World," by Charles S. Macfarland, Fleming H. Revell Company, New York.

294. Miss E. L. B., New Jersey. "I have had a course in Simmons College, Boston, and a training in the Massachusetts General Hospital; have been doing social service work for some time, but am interested in efficiency and scientific management, and desire a position along the newer lines of service. I know that large firms are doing much for the employees, and should like to act as welfare secretary and efficiency helper to the women in a large store, factory or other institution. How can I achieve success for my plan?"

Take a modern course in efficiency, buy various books on the subject, and formulate your plan with scientific detail before submitting to employers. Make it brief but comprehensive, showing what you expect to accomplish, and why and how; typewrite it on best legal cap, and arm yourself personally with abundant references on character of your past and present work.

Then put an advertisement in *Efficiency Magazine*; ask Mr. Gilbreth, whom you say you know personally, for introductions to large employers; investigate welfare work of such modern stores as Filene's in Boston and Wanamaker's in New York—perhaps take first a position as assistant welfare secretary; join a business woman's club and make new connections; evolve ideas from study of Women's Educational and Industrial Union, Boston; National Civic Federation, Metropolitan Tower; Life Extension Institute, 25 West Forty-fifth street; National League of Women Workers, 35 East Thirtieth street; all of New York.

295. Mr. E. G. F., California. "I am a very busy young man who spends all his time and energy in his chosen profession, but is fond of the arts and sciences, and would like to keep posted on the interests germane to the well-rounded citizen of this planet. I read two hours a day, on the trolley and at bedtime. It is mostly trash. What magazines do you recommend, in business, art, general culture, science, and nonsense? Look upon my case as that of a 'tired business man' who wants to keep up with the procession tho in a sugar-coated manner."

We do not admire the tone of your letter. It sounds mawkish and insincere. A real man doesn't want to "keep up with the procession"—he is too far ahead of it to know what it looks like. Nor has he any use for the "sugar-coated" methods used on invalids and children.

You say you read "trash" for a long time each day. Why—when you know it is

trash? Read less; ponder, plan, meditate more. Spend an evening in a large library, look thru the current periodicals and answer your own question.

296. Miss J. F., Kansas. "How can I put my talent to account? I am a graduate reader, particularly good in children's pieces. Have done public speaking, am fond of children, would like to accomplish more with my gift than mere entertainment. How can I help children and at the same time earn my own living?"

Forget your "gift" and weigh your talent only by the results you produce. Oratory is empty sound unless you get action in the audience. Elocution no longer pays. We tell you this now, so that you may quickly remove any false notions you may entertain about the value of elocution.

You might become a traveling secretary for Home Department of University Society, 44 East Twenty-third street, New York; an organizer for Camp Fire Girls of America, 461 Fourth avenue, New York, a lecturer for woman suffrage in child labor districts of anti-suffrage states; a representative for children's magazines and mothers' journals; a social service worker; a state or national Sunday school official.

Ask the principal of the school that graduated you how other graduates have succeeded. Then apply the lessons to your own case.

297. A Reader from Pennsylvania. "My husband and myself are both twenty-four years of age. I taught school before marriage; but he has worked in the oil fields since fifteen, is now a blacksmith's helper, and hopes soon to become a blacksmith. He has mathematical ability and is a good, fast worker. I think we shall not be satisfied if he remains a blacksmith. Could you suggest any course of study or line of work that might be open to him?"

He might become a steel mill operative, a structural iron worker, a shop foreman, a draughtsman, a mechanical engineer, a master plumber, a specialist in various kinds of metal construction. Write Vocational Department of International Correspondence Schools, Scranton, Pennsylvania, for catalog and advice. Take a trip to Bethlehem or Homestead, look thru the mills, obtain printed matter, visit homes of workers, ask questions, make notes. Get a friend in Pittsburgh to copy names of manufacturing companies under heading "Metal" in Pittsburgh classified business directory. Then write for details of most appealing products, and figure how your husband might learn the business. Look thru advertising pages of magazines such as *The American*, *McClure's*, *Cosmopolitan*, and write all correspondence schools that look favorable. Your husband, with your help, should become a highly-skilled, highly-paid workman.

298. Rev. R. L. L., Ohio. "As a young minister eager to render the most efficient service to my parish, I find calling upon the sick a perplexing problem. I want a layman's viewpoint, a few suggestions to start me on a method of my own, which will remove the sense of futility and failure to render a real service that now accompanies most of my calls on the sick."

Good for you—if more pastors would seek advice from laymen, there would be fuller pews and happier pastors.

Make your "sick calls" fewer—when possible send a cheery personal note or telephone inquiry. Before going, learn when the patient would most like to see you. Wear a business suit, your black minister clothes look funeral. Be quiet, calm, hopeful—but not laboriously so. Bring some good news from the outside world that will specially interest the sick, and take his mind off himself. Treat him not like a sick man, but like a man getting well. Be more his friend than his parson. Don't preach at him, or quote much Scripture. Be human.

Ask advice of an experienced, kindly family physician. Study books like Bishop Samuel Falson's "Health and Happiness" learn how the minister can help the doctor. Master the science of mental suggestion.

## SCHOOLS AND COLLEGES

(CONTINUED)

### CONNECTICUT

## HARTFORD

W. Douglas Mackenzie  
President

### Theological Seminary

Scholarly and practical training for the ministry. Faculty of thirteen resident professors besides special lectures. Notable library of 95,000 volumes. Liberal scholarships to students of high rank and graduate fellowships. Open to college graduates of all Christian denominations. Address  
Dean M. W. JACOBUS.

### School of Religious Pedagogy

Degree Course for graduates of colleges and theological seminaries. Diploma Course prepares lay workers for salaried positions in all kinds of Christian service, church, Sunday-school, mission and settlement work. Correspondence Courses for teacher training. Demand for trained workers greater than supply. Address  
Dean E. H. KNIGHT.

### The Kennedy School of Missions

A Graduate School for Special Preparation. Interdenominational. For candidates, appointees and missionaries. Large faculty and library. Courses in phonetics, certain vernaculars, history and religions of mission fields, sociology, Bible, business methods, etc. Address The Secretary, E. W. CAPEN.

## The Sanford School FOR BOYS

Ridgewold, Redding Ridge  
Connecticut

### A Real Country School for Boys

On a three-hundred acre farm

Varied out-of-door life as well as athletics. Horseback riding, camping, and all manly sports. Farm, shops and electric power-house used as laboratories. Emphasis on fundamentals. Music and drawing. Preparation for all colleges and technical schools. Lower School. Address D. S. SANFORD, A.M., Headmaster, Box B

ELY SCHOOL FOR GIRLS, Ely Court, Greenwich, Conn.  
One hour from New York City. College Prep, General Courses. Separate departments for Girls under 15.

### HILLSIDE Norwalk Ct. For Girls.

Founded by Elizabeth B. Mead, 1883. One hour from N. Y. From primary to college. General and special courses. Separate school house. Lodge for younger girls. New gymnasium. Small classes. Outdoor sports. Margaret R. Brendlinger, A.B., Vida Hunt Francis, B.L., Principals.

## HARTFORD

Scientific methods with practical training for the ministry. Large faculty and library.

## THEOLOGICAL

Graduate fellowships, both foreign and resident. Open to college graduates of all churches.

## SEMINARY

Associated with Hartford School of Religious Pedagogy Training Sunday School and other lay workers.

Kennedy School of Missions, fitting for foreign service

Address M. W. JACOBUS, Dean of Seminary  
Hartford, Conn.

## Ridgefield School For Boys

800 feet above the sea in the foothills of the Berkshires, 50 miles from New York City. 115 acres. Lake, one mile in length, provides all water sports. New Boat-house. Athletic fields, gymnasium, new buildings. College preparatory and general courses. The limited number of boys gives each student individual attention. Catalog. Address

Roland J. Mulford, Ph.D., Headmaster  
Ridgefield, Connecticut

## THE WHEELER SCHOOL

A country school for boys and girls, offering college certificate privileges, domestic science and general courses. Modern buildings, athletic fields, tennis courts, baseball diamond. Endowment permits low expense of \$350 a year. Address

ROYAL A. MOORE, A.M., Principal, North Stonington, Conn.

# 10,000 VACATIONS WANTED

Health Commissioner Emerson says:

"One of the best things the New York Association for Improving the Condition of the Poor can do to co-operate in the effort to control the epidemic of infantile paralysis is to extend its fresh air work at Sea Breeze for the children of the tenements."

To meet the situation, Sea Breeze has been enlarged and will extend its season as late as possible into the Fall.

## SEA BREEZE

Cool—Restful—Health-giving

Allow 50 cents a day or \$3 a week for each one you will send as your guest and make the amount payable to George Blagden, Treasurer.

New York Association for Improving the Condition of the Poor

CORNELIUS N. BLISS, Jr., President

# SAVE WORK

and Half the Time in  
**TYPEWRITING**

Entirely New Way—  
Learn at Home

Typewrite the New Way, the easy way. Only 10 lessons and you increase your speed to 80 to 100 words a

minute, guaranteed. This revolutionary method is totally different from the old "touch system." It is based on simple little gymnastic finger exercises, practised away from the machine. Learn at home, in spare time. First day shows results. No interference with regular work. Entire course on trial. No money unless you are fully satisfied.

## 80 to 100 Words a Minute Guaranteed

Increased speed doubles and trebles salaries. Hundreds formerly earning only \$8 to \$15 per week are now drawing \$25, \$30 and even \$40 weekly—and their work is easier than ever before.

## 48-Page Book FREE

We cannot describe the wonderful secret principles of the New Way in Typewriting here, but mail coupon or postal today for big 48-page book, describing in detail this marvelous system, the greatest step in advance since the invention of the typewriter itself. Learn of the surprising salary increases it is bringing everywhere. Easy for any one. Quick results. At least investigate. Send coupon or postal TODAY.

Please send me your free book about the New Way in Typewriting. This incurs no obligation on my part.

# The Market Place

## OUR FOREIGN TRADE

The extraordinary growth of our exports in May and June pointed to a great total in the figures which were to show the extent of our foreign trade for the fiscal year. In February the exports in one month for the first time exceeded \$400,000,000. They were less than \$400,000,00 in April, but in May there was an upward leap to \$473,498,000, and June, with \$464,824,000, had a record showing only a slight recession. Our exports are now at the rate of more than \$5,500,000,000 a year. Six years ago they reached the \$2,000,000,000 mark for the first time.

An official statement covering the entire year has been published. It shows that our foreign trade amounted to the great total of \$6,531,683,445. To this sum have the figures risen from about \$1,000,000,000 in 1872 and less than \$3,000,000,000 in 1906. Last year the exports were \$4,333,698,604 and the imports \$2,197,984,842. The excess in our favor, \$2,135,713,762, was more than twice the excess of the preceding year, while the average excess for the four years beginning with 1911 was less than \$550,000,000. Our net gains of gold last year were \$404,000,000. This sum may be compared with only \$25,000,000 in 1915, and a net loss of \$45,000,000 in 1914. Much of the year's gain in exports was due, of course, to the sale of war supplies. The character of the growth is indicated by the increase of shipments of iron and steel from \$226,000,000 to \$618,000,000, while those of explosives advanced from \$41,000,000 to \$473,000,000.

## STILL BUYING MUNITIONS

New orders from the Allies for munitions have encouraged those who began some weeks ago to think that only a few more were to come. This "second wave" of orders, as it has been called, has checked the decline of war order share prices on the Stock Exchange, altho there has been no considerable upward movement. There had been large purchases of steel bars and rounds to be used by foreign manufacturers of munitions, but these were apparently overlooked by the inventors and traders, who were thinking only of contracts for ammunition ready to be used. Definite information as to all of the new orders is not yet available, but there is evidence that they exceed \$100,000,000. They include one for \$12,000,000 worth of shells, given to the Midvale Steel Company; three, of

**Tear Off That Blindfold!**

Your chance to be somebody, to hold a position of responsibility, to have an income that will provide every comfort of life, is within your reach.

Just one thing keeps you from finding it, grasping it: you're not prepared. Through the door of opportunity big jobs are waiting in every field of work. But only trained men will get them. Don't play blindman's buff with your future! Start today and train yourself to do some one thing better than others.

You can get that training in spare time through the International Correspondence Schools, just as others have done for twenty-five years—just as more than 130,000 ambitious men and boys are doing right now.

Choose your own career. The I. C. S. will train you for the position you want in the work you like best. And you need not lose a day or a dollar in your present occupation.

**Tear off that blindfold!**

Your chance is here. The time to start is now. The way is to ask the I. C. S. to show you what they can do for you. Mark and mail this coupon—it costs nothing, but the evidence it will bring you will open your eyes.

## INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4520, SCRANTON, PA.

If name of Course you want is not in this list, write it below.

# Deaf?

No need to worry any longer! Clear, easy hearing restored, thanks to the patient, tireless study of a Swedish authority on electric collaboration with an American inventor; based on the conclusions of the leading ear specialists.

## At Last

A simple, tiny, practical hearing device—nothing to put into the ear, no treatment, no medicine, an external magnetic device so simple, so easy, seems like a miracle when you use it and suddenly hear everything plainly, clearly, distinctly.

# The Telonor

The Telonor! The Telonor! The Telonor!

You use the Sensitone with the new Telonor, the first and only instrument to regulate the quality and quantity of the sound to each person's ear. The Telonor-Sensitone is no larger than a pocket knife, and you carry it in your vest pocket (or for a woman, in the belt)—that's all.

## Book for the Deaf

sent free. With the Telonor booklet we send simple, important instructions to the deaf, authoritative information on methods of care of the ear. This information is important and no deaf person should be without it. Address me personally, saying, "send booklet."

H. O. N. Lindstrom, Consultant  
The Telonor Corporation 168 N. Michigan Avenue  
Suite C 248 Chicago, Ill.  
No obligation whatever in writing for booklet.

## DIVIDENDS

The Board of Directors of The American Cotton Oil Company, on August 1, 1916, declared a quarterly dividend of one per cent. upon the Common Stock of the Company, payable September 1, 1916, at the Banking House of Winslow, Lanier & Co., 59 Cedar Street, New York City, to holders of record of such stock at the close of business on August 15, 1916.

The Stock Transfer Books of the Company will not be closed.

JUSTUS E. RALPH, Secretary.

## LIGGETT & MYERS TOBACCO CO.

St. Louis, Mo., July 27, 1916.

A quarterly dividend of three per cent (3%) was this day declared upon the Common Stock of Liggett & Myers Tobacco Company, payable on September 1st, 1916, to Common stockholders of record at the close of business on August 15th, 1916. Checks will be mailed.

T. T. ANDERSON, Treasurer.

# Interlaken A School on a Farm

"Where boys learn by doing" **School**

Thorough instruction in sciences and languages. Prepares for all universities. Academic work applied in practical agricultural and mechanical training. The school, located on a 700-acre farm, with its own electric light, power plant, wood and metal shops, makes two hours of useful work each day part of the course. Boy leadership. Self-government under university-trained men counselors.

(Summer Camp Mid-June to Sept. 1st)  
For particulars address Headmaster, Box 128, Rolling Prairie, La Porte Co., Indiana. Chicago Representative, Phone Kenwood 4355.

\$18,000,000 each, to three other companies; one of \$22,000,000 to a Western company that will erect two new factories, and a contract for 600,000 fuses. A steel manufacturer who knows much about the new movement predicts that similar orders amounting to \$300,000,000 will be placed here in the coming six months. Russia has ordered 28,000 steel axles for cars, and 56,000 car wheels. A trade authority asserts that new contracts for 1,000,000 large shells have been signed. The companies that are to make shells of this kind will need, it is said, 500,000 tons of steel. Owing to demand, present and prospective, \$2 a ton was added last week to the price of steel bars.

It should be noted that the new orders are for shells of large caliber, from 8 to 12 inches. The smaller ones are now produced in sufficient quantity by England and France in their own factories. England has 4,000 of these, almost all of them new, and it is asserted that they turn out in three weeks as much war material as was made in that country during the entire first year of the great conflict. But 60,000 of the employees are women. For this reason, because suitable machinery has not been provided, and also because the consumption of large shells in recent movements has greatly exceeded expectations, a supply of the big and heavy explosive missiles is sought in this country.

It can be seen that altho we may receive scarcely any additional orders for rifles or cartridges or small shells, the demand from abroad for large shells and crude steel will probably require the full capacity of our steel mills for several months to come. And our exports may be sustained by this demand.

#### WHEAT AND COTTON

The government's July report increased the indicated yield of wheat from 715,000,000 to 759,000,000 bushels. No one had expected that the preceding year's phenomenal crop of 1,012,000,000 would be equaled, but it was encouraging to see that official estimates were rising, from month to month. That report showed gains also for corn and oats. Within the last few days, however, all estimates have been sharply reduced by unfavorable reports from the fields. These were to the effect that the growing wheat in our north-western states and in Canada had been hurt by black rust.

There has been what is called a nervous market at Chicago, where the current prices of American wheat are determined by exchange trading. Beginning on the first day of the month, the price of wheat for September delivery rose in four days from \$1.21 to \$1.34 per bushel. Crop experts were saying that the yield of spring wheat in the Dakotas and Minnesota would not exceed 120,000,000 bushels, altho the government's July report had indicated 294,000,000, and 285,000,000 were harvested last year. One of the experts, whose reports have much weight, estimated the entire wheat crop at 681,000,000 bushels, instead of the 759,000,000 promised a few weeks ago, and

**DO YOURS  
LOOK LIKE THESE?**

Brown-faced, vigorous, healthy youngsters—sickness never troubles them.

Do yours look like these?

Or does constipation, the chief foe to a healthy childhood, handicap them and make them the prey of the many ills that less sturdy little folk are heir to?

NUJOL is particularly valuable for relieving constipation in children, as well as in grown-ups because it doesn't upset the stomach, cause diarrhoea or form a habit. It acts as a simple internal lubricant, encouraging and facilitating the natural activity of the bowels.

Your druggist has NUJOL. Avoid substitutes and imitations. Sold in pint bottles only.

another's estimate was 672,000,000, a quantity that would permit the exportation of not more than 50,000,000 or 75,000,000. The first reports from Canada cut off more than one-third of the expected yield in the three provinces of Alberta, Saskatchewan, and Manitoba. Denials were published by officers of the Canadian Government, but they had little effect in the Chicago market. There seems to be convincing evidence that the crop in this country will be less than 700,000,000 bushels.

A large reduction of the preceding estimate of our crop of cotton was indicated by the government's August report. Condition had declined in thirty days from 81.1 to 72.8, the ten years' average having been 78.5. Therefore a yield of only 12,916,000 bales was indicated, against 14,266,000 promised a month earlier. It will be recalled that last year's crop was a small one, a little more than 11,000,000 bales, acreage having been reduced after the great yield of 16,134,000 bales in 1914, owing to the low prices obtained. An acreage increase of 12 per cent this year has had some effect, but the fields have suffered by reason of tropical storms, continuous rain, floods in the lowlands, and the boll weevil.

Owing to the official report and news confirming it, the price of cotton advanced to about 14 cents a pound, the addition in four days, for near deliveries, being about \$3 a bale. This movement was assisted by the annual report of the secretary of the New Orleans Exchange, showing that 14,813,000 bales of American cotton were consumed by our own and by foreign mills in the year that ended with July. This quantity exceeds the new crop by nearly 2,000,000 bales.

### GREAT STEEL EARNINGS

Even the most optimistic predictions were surpassed by the official figures, which showed that the Steel Corporation's net earnings for the quarter ending with June had been \$81,126,148. As the balance above all dividend and interest requirements was equivalent to nearly 12 per cent on the common stock for the quarter, there was ample warrant for the directors' declaration of an extra dividend of 1 per cent on this stock, which is \$508,302,500. Dividend payments, now at the rate of 6 per cent, were discontinued in 1914 and resumed in January of last year. The quarterly net has risen to \$81,000,000 from only \$12,500,000 in the first quarter of 1915, and \$28,000,000 in the second.

This exhibition of great profits, with an extra dividend, did not cause the price of shares to advance in the stock market. It remained in the neighborhood of 86. At the end of ten days it was 86½. Various explanations are given. One is that advance was prevented by the continuous sale here of shares sent by the British Government in accordance with its mobilization plan. Crop losses and the railroad labor controversy have affected the entire market for securities, and some say that the upward movement may be temporary because it is due to the war.

# Insurance

Conducted by

W. E. UNDERWOOD

## BROKERS AND AGENTS

Under the heading "Startling News for Insurers," *The New York Times*, of a late date, commenting on an incident in the fire insurance business, has unwittingly misled the public and rendered an unfortunate disservice to the fire insurance companies.

The case was that of a person who for a series of years had secured his policy thru a broker. Everything connected with the service was satisfactory until this year, when the policyholder received a notice from the company that the policy had been in force several months, that the premium on it remained unpaid and that unless settlement was made, the policy would be canceled. Having paid the premium in due course to the broker, who had retired from business in the meantime and could not be located, the insured was astonished. He laid the matter before the Superintendent of Insurance, who informed him that payment to the broker was payment to his own agent and did not bind the company.

In discussing the matter *The Times* falls into one serious error and, necessarily, its conclusions are wrong. It states that the insured held a receipt from the company's agent.

Brokers are not agents of the companies, have no authority to act for them, and do not attempt to exercise any. An agent, on the other hand, is formally appointed by his company and holds a duly executed commission in writing. Under that commission, within the boundaries of the territory assigned him, the agent is the company. He may bind the company on any risk and, in so far as the insured is concerned, for any amount, his responsibility to the company, obedience to its instructions and the delivery of money due it being secured by a surety bond. Had the complainant in this case transacted his business with the company's agent, the latter would have issued the policy himself, and in doing so would have become responsible to the company for the premium. Payment of the premium to the agent would have been a settlement of the account with the company.

In confusing the respective relationships of brokers and agents to the companies, *The Times* has inadvertently placed the companies in a false position. As pointed out by the Superintendent of Insurance, the broker is a "free lance," securing and placing insurance of every kind wherever he can get a company to accept it; and for more than a generation the courts have continuously held that he is the agent of the insured and not of the company.

## Why burden your wife with the care of your estate?

**I**F you wish to appoint your wife or other woman relative as executrix and trustee under your will, why not assist her to carry the heavy burden by appointing this company as co-executor and co-trustee?

Your estate will thus have the advantage of the personal direction which she can give, and she will be relieved of the burdensome details necessarily involved in the management of any large estate. Also she will receive invaluable assistance in regard to investments.

Our officers will be glad to confer with you regarding any trust or banking business you may have in mind.

# THE CHAUTAUQUA IDEA

THE MOST AMERICAN THING IN AMERICA

**T**HAT something impels the same birds to come back year after year and build in the same thorn bush is of more than passing interest without regard to the particular thorn bush that may be so adhered to. That some influence draws human beings together, again and again, not only in pairs but in vast numbers, with a habit as persistent as life, to repeat familiar ceremonials in familiar places, with well remembered companions, is also of inexpressible interest, and its interest also owes little to locality. The place is but a tab for mental convenience, by aid of which the memory or actual repetition of the experience may be found. Whether the event occurs at Oberammergau or at some other village among the Alps, whether at Chautauqua or on the shores of some other beautiful American lake, does not profoundly matter.

Chautauqua and Oberammergau are mentioned together because last week at the annual celebration of "Old First Night" at Chautauqua, the Mary Magdalene of 1910 at Oberammergau expressed a feeling of reminiscence, a sense of being again—as six years ago in her Bavarian village—one of a group of the specially devoted, enacting a drama of solemn meaning, and as she looked out upon the sea of witnesses finding herself face to face with the idealism of the world.

It was forty-two years ago, on the first Tuesday evening in August, that the now venerable Bishop Vincent and a company of people enthusiastic about Sunday school work, having come together for two weeks of study, held their first vesper service. The same words with which that service was opened, "The day goeth away," were read again now in the mellow sonorous tones for which the Bishop has become famous, and when the antiphony rose from among the packed benches of the great, rude amphitheater, it would need a Homeric simile to describe the mighty hum of voices. The multiplied whiteness of many bits of white linen held aloft by and by was as if they had all been whitened on the shores of a Homeric sea. Drooping from uplifted hands, there were perhaps six thousand, a calculating reporter said; but the impression was of a number that could not be counted, all blossoming white for early Chautauquans who now come to these annual ceremonials no more. This was the Chautauqua salute, once seen never forgotten, whether all aflutter in a breeze of welcome as to the honored presiding officer, or thus drooping in the stillness of memory.

When Bishop Vincent later asked any who had read the service in 1874 to take special seats on the platform, twenty-five men and women responded. These same men and women will continue to come, year by year, till "on some tomorrow" not long ahead, they were charged to remember, their assembly will be in "the eternal realm."

Every part of the country was represented by these survivors from 1874. As for the general concourse, it was shown, by the testimony of rising as each state or section was called, to come from cities, towns, and hamlets in every state of the Union and from lands abroad. New York, Pennsylvania, and Ohio, which almost meet at a point near Chautauqua, were strongest in number; but after them Texas, Kentucky, and Alabama surpassed any other trio. Every class graduated in the Chautauqua Circle of home readers since the beginning had its delegation, and each group was applauded as it rose.

Speeches from those who remember gave way to challenging and compelling speeches from those who must look toward the future because the responsibility rests upon them. These laid stress upon what Chautauqua has become, no longer an "institute" for Sunday school workers alone, but a system of popular education attracting fifty thousand people each summer, enrolling three thousand of these for formal class room instruction in various departments of study, directing the home reading of ten thousand thruout the year, expounding everywhere the

Olman

HORATIO CONNELL

An American baritone who is favorably known in England and Germany as well as in this country for his lieder and oratorio singing. He has toured with the New York Symphony Orchestra and Minneapolis Symphony Orchestra. He heads the vocal department of the Chautauqua summer schools.

value of vacation weeks and the spare moments of time. These speakers dwelt also on the needs of Chautauqua for coming years, insisting that now and always, like any worthy educational institution, it is poor, since the needs revealed to its managers are more than it can meet; and the audience listened to them. The one most attentively heard repeated over and over the assurance that the investments suggested would pay no dividends, and that the projects were all, in a business sense, impractical. The woman who last year presided over the General Federation of Women's Clubs, Mrs. Percy V. Pennybacker; the man who has studied Americans in the making more, perhaps, than any other living person, E. A. Steiner; and one of the foremost educators in the country, Earl Barnes; all declared that a gift to Chautauqua is a contribution to the most significant enterprise for adult education in the world.

Without frenzy but with manifest oneness of impulse, when gifts were invited, some two thousand gave each a separate dollar, probably three thousand in all gave something, and the gifts ranged in value from a thousand dollars down to the small coin that a child put in. One of the largest came from a Canadian whose name is widely known, and who declared that in spite of war obligations and war burdens at home, he could not withhold this token that his mind turned with interest and longing toward Chautauqua. Those who had been awarded free scholarships in the Summer Schools made a collective offering to extend like advantages to others next year. State delegations gave in the name of their states, religious bodies in the name of their denominations, strangers gave anonymously.

When the gifts were all in, the people did not all sigh relief and go home. They stayed, reluctant to end an evening of so much meaning for them. When, after two or three more addresses prophesying good things for the Chautauqua of tomorrow, they were dismissed, the movement was very slow toward the circumference of the gigantic and formless unwallled shed and thence out into the night. Groups of two and three and a dozen could be seen halting in the half shadow to confirm one another in what they had thought or felt. Old First Night is one of those rare events that bring many minds together and fuse them into a composite social mind. Old First Night at Chautauqua is a spectacle and a phenomenon which a Buddhist philosopher or a migrant from some other world, if he came to visit among us, should be advised to witness at all costs. For there is no other ceremony that would so well exhibit to him one of the moods of America.

## FOR GERMAN WIDOWS

While relief agencies for the help of the helpless in the Allied countries have multiplied in America, the isolation of the Central Powers has inevitably curbed to some extent similar services to the needy in Germany. The American Relief Committee, however, it at work, in coöperation with the committee organized by American residents in Berlin, to aid German war widows and orphans. Since goods cannot be sent, all help must be in the form of money. The members of the committee have themselves provided for the expenses of administration, and the money that is telegraphed to Germany is used entirely for the relief of want and suffering among these women and children who are victims of the war no less than those in Belgium or France. Contributions may be sent to the American Relief Committee, John D. Crimmins, treasurer, 13 Park Row, New York.

## ON THE BORDER

The Army and Navy Department of the International Committee of Young Men's Christian Associations is carrying out comprehensive plans for work among the troops on the Mexican border. Army camps are always surrounded by a class of camp followers whose influences are for evil. George A. Reeder, the secretary of the Army and Navy Department, who is in charge of the border work, investigated the border conditions in June and reported that the moral risks of the troops are greater than the Association has ever faced before.

At least twenty-five fully equipped association branches are to be established at camps where there are brigades or single regiments of troops. The outfit for an Association branch comprizes a frame building of simple construction, in charge of a secretary and assistants. It is the business of the secretaries to make the Association building a social headquarters for the men and a cheerful spot in the tiresome monotony of camp life. Basket and volley ball will be organized as well as other outdoor games. Where the routine of the camp will permit, baseball nines will be formed and a league started, using teams out of various companies or regiments for the series of games. The religious feature will be provided for by a series of gospel meetings and by Bible classes. Every secretary is expected to conduct a steady program of personal work. Their instructions are to be a big brother to every man in the camp and to help them by counsel and advice. The average cost of the army branch building, including full equipment, is about \$2000.

Fresh supplies of reading matter are always needed. Relatives and friends of the troops who desire to coöperate in furnishing literature should forward it in large packages, charges prepaid, address to the Army and Navy Department, Y. M. C. A., 120 East 28th Street, New York.

## NOT REPORTED IN THE NEWSPAPERS

A small flower shop in the humbler quarters of a Southern city. A young hospital nurse, still in training, is asking the price of roses, her rounded cheek, itself a rose, half turned to the open door.

The daily tasks of the hospital training school are exhausting. But she has managed to embroider a workbag—a wedding present wrought by her own hands—and she seeks to adorn the package with a few buds.

To the question she puts there is no reply; only a thoughtful look.

Such voice as is "an excellent thing in woman" repeats it. Then the woman of the shop, quietly: "I heard you the first time, dear, and I've heard your voice before. You were good, so good, to my Alice at the hospital. How badly she was burned by that overturned lamp! And how patient to the end!" Then, turning to her boy, she bids him give the lady all the flowers she may need. And she herself pins a white rose on the young nurse's bosom.

T. M.

## REMARKABLE REMARKS

HENRY FORD—Peace is a state of mind.  
ED. HOWE—I don't like a man with little feet.

DAVID LLOYD-GEORGE—This is a war of equipment.

GENERAL HAIG—Our men only ask to keep on attacking.

REV. REGINALD J. CAMPBELL—We must exact a life for a life.

KAISER WILHELM—It is my earnest desire to take my place in the trenches.

LADY RANDOLPH CHURCHILL—No "war baby" problem exists in Great Britain.

CHARLES E. HUGHES—There is not a particle of militarism in my composition.

WOODROW WILSON—America has raised up an extraordinary number of provincial thinkers.

MRS. ROBERT B. LIGGETT—The propagation of life should be confined to women of the lower type.

NAGAHISA UYESHIMA—The English gentleman is a peaceful Samurai and the Japanese Samurai is an armed gentleman.

ADMIRAL DEWEY—Give me two submarines and I'll defend the port of Galveston against the combined navies of the world.

THEODORE ROOSEVELT—Unless we return to a protective tariff we shall face widespread economic disaster at the end of the war.

SENATOR JOHN S. WILLIAMS—So far as I know Wilson is the only man in the world that ever made the Kaiser "too the mark."

DON MARQUIS—A great Chinese wall is not detrimental merely because it keeps new ideas out of a country. It keeps some old ones in.

CARDINAL GIBBONS—The time is fast coming when, like the duel between individuals, the international duel will be relegated to the museum of social curiosities.

And here now is a new fulfilment of a *great idea*—an idea that won in an unprecedented way

Up—up to still higher levels the Twin six advances—time tested by nearly eight thousand exultant owners.

*Fine* has been *re-fined*—by an added year's development.

And the new series 2-25 and 2-35 are here announced.

A *transcendent* Packard—unchanged in essentials—enriched in details—fixes new standards of usefulness and luxury.

To better the best Packard has been the aim—and the inspiration—of the day's work.

How we have succeeded is told in the fact that our *three-fold* output has not met the ascending demand.

But—you must see the new car itself to appreciate what these newer developments of the Twin-six idea mean for you. Prices—open cars—\$2865-\$3265, f. o. b. Detroit.

## LABOR, CAPITAL AND THE COMMUNITY

**T**HERE are two ways to settle controversies between employers and workers. One way is by force, thru the strike, the lockout, the boycott. The other is by—some other way. As in the case of the disputes between nations, the way of war has become standardized; it is only the way of peace toward which our approach is experimental, tentative, step-at-a-time.

We know that the strike and the lockout must go. But we are not yet certain—or agreed—what should be put in their place. Nevertheless, every time a difficulty between capital and labor in an important industry is composed without the stopping of work there is a distinct gain to the cause of industrial justice, a definite contribution to the ultimate solution of the problem. It is almost as good when a strike is brought to a speedy end, not because one side is decisively defeated, but because both sides are brought together in a spirit of conciliation to effect a reasonable settlement.

The second of these things is what has just happened in the street railway strike in New York City. The first of them is what ought to happen in the threatened strike on the entire railway system of the United States.

The New York strike lasted but three days. It brought to the people of New York a minimum of inconvenience and annoyance. It was not only settled quickly; it was settled right and in a way to afford to one side in the controversy a maximum of satisfaction, to the other a maximum saving of its self-respect.

For these eminently desirable consummations the three parties in interest, traction managers, workers, public, are deeply indebted, in the first instance, to Mayor Mitchel, and in somewhat lesser degree to Chairman Straus, of the Public Service Commission, who co-operated with the mayor to the full extent of the powers of his office. John Purroy Mitchel has once more shown himself a man of broad vision and high ability. By his successful intervention in this dispute he not only rendered a great service to his own community, but was the instrument thru which a valuable object lesson in industrial adjustment was offered to communities all over the country.

The employees on the New York traction lines had a good case. They suffered from insufficient wages, long hours, and other oppressive conditions. But what was vastly more important, they were unorganized and unprepared for any effective effort to secure justice by collective bargaining. The men, convinced in their own ex-

perience of the injustice of their working conditions, were easily aroused by the educative efforts of representatives of a national labor organization to the indispensability of cohesive organization. They quickly made, therefore, the recognition of the union the crucial point in their demands upon the companies that employed them. Of these companies there are several, but the Interborough (New York Railways), being the largest, was naturally the most important from the point of view of such a struggle as this. It was quickly recognized on all sides that what the Interborough did the other companies would have to do too.

Now, the Interborough officials are stanch believers in feudalism in industry. They conceive of their employees and themselves as, to use the phrase of Mr. Shonts, "a happy family," with themselves obviously and logically *in loco parentis*. The very thought of organization among their employees connected in any organic way with a larger organization extending beyond the confines of New York City, was anathema to them. They would deal with their own employees individually; but recognize a national union? Never!

So there the deadlock loomed—and the strike began. Most of their men were loyal, said Mr. Shonts; the company would run the cars, if only the city would give them police protection against violence and intimidation.

**H**ERE entered the mayor. He knew that it was his duty to prevent violence and disorder; but, being a man of vision far removed from the age of feudalism, he conceived his duty in larger terms. He believed the function of the chief magistrate of a great city to be not merely that of keeping peace on the city's streets, but that of working for peace and justice within an industry vital to the city's well being and much more than tinged with a public interest.

He put police upon the cars; but he asserted the indisputable right of the strikers peaceably to persuade the carmen still at work to quit, even tho the persuasion were offered on the cars themselves under the very noses of the police officers. He did more. He quietly investigated the claim of the company officials that most of their men were loyal, and found the exact opposite to be the fact. A majority of the men were on strike and the proportion was increasing every moment. Armed with this vital piece of information, he used the great influence of his position to bring employers and workers to-

Drawn for The Independent by W. C. Morris

THEY THAT TAKE THE SWORD SHALL PERISH WITH THE SWORD

gether in agreement upon a plan of settlement. He succeeded.

The men obtained the substance of their demand: the right of unrestricted organization and of collective bargaining with their employers, and of being represented in such proceedings by any spokesmen or advisers they might select, without objection on the part of the company. The company was permitted to preserve the appearance of victory in its opposition to recognition of the union. But the victory is an empty one, for the employees are perfectly free to select as their representatives in any dispute with the company officials of the national union or indeed any spokesman or advisers they may choose, no matter where they come from.

The specific grievances at issue—wages and working conditions—are to be the subject of immediate arbitration.

An unusual and significant feature of the agreement is its final clause, which reads: "This agreement to be underwritten by Mayor Mitchel and by Oscar S. Straus, chairman of the Public Service Commission for the First District."

This is a recognition that such a controversy as this is no private matter between two groups of individuals—employers and workers—but a public matter in which the community is concerned as a community. It establishes the right of public officials to have a real and influential part in the determination of the relations of capital and labor in an industry dedicated to the public service.

The outcome of this strike has thus had three results. It has brought the street railway industry in New York City out of the darkness of feudalism into the penumbra of the light of industrial coöperation. It has demonstrated the value of another way of settling labor difficulties than private war. It has brought about the recognition of the principle that to a dispute between labor and capital in a public service industry there are not two parties but three, employers, workers, the community. It demonstrates further that the right of the community is not merely the passive one of not being deprived of the service it needs, but the active one of using its influence to prevent the exploitation and oppression of any class in the community by any other.

A GREATER opportunity for the application of this broad principle confronts the whole country. Ninety-four per cent of the members of four great unions of railway operatives have voted for a general railway strike if their demand for an eight-hour day is not conceded. Railway managers and union leaders have consented to avail themselves of the services of the Federal Board of Mediation and Conciliation. But the efforts of the board have not been successful, and an opportunity like that of which Mayor Mitchel made such good use confronts President Wilson on a tremendously larger scale. He has been quick to seize it. That a general strike should be permitted on the railways of the United States is unthinkable. The destructive effect upon commerce and industry and daily life would be too appalling. But if the present attempt at mediation is of no avail, the President must act swiftly and decisively. He must use the influence and the power of his office on behalf not only of peace and good order, but of industrial justice. Not only must there be no strike; there must be no oppres-

sion by the might of capital, no bulldozing by the power of organized labor. Justice must be brought out of the conflict by the overmastering influence of the public interest.

## ARISTOCRACY AND RESPONSIBILITY

HAVE we a natural aristocracy in America? The answer depends on a number of things.

A natural aristocracy, as Harrington explained in the "Oceana," and as Aristotle before him explained in the "Politics," is an aristocracy of persons superior to the mass of men in qualities of mind, character, cultivation and knowledge. It may or may not be more or less closely identified with an aristocracy of birth or inherited privilege or with a wealthy class. A republic may have a natural aristocracy; indeed, it is an interesting question whether a stable and progressive republic without a natural aristocracy is a possibility.

Ability and character alone, however, do not make a natural aristocracy. There is no aristocracy unless the personally or otherwise superior group has a lively sense of social responsibility and of responsibility to civilization. It must live for other than personal ends, and for other than class ends. Aristocracies by birth and privilege, becoming class conscious and forgetting their social obligations, have invariably become objects of objugation to the masses, or of contempt to tyrants, and, in either case, they have come to violent ends.

We have men and women of great ability in America, and not a few of them are men and women of strong character. The question whether or not they constitute a natural aristocracy in our social order turns upon their sense of obligation to the nation and to civilization.

Attention has recently been called in the American press to an observation, many times made and printed since our Civil War, upon the difference between the American self-made rich man and the European self-made rich man. When the American who started with nothing has amassed wealth what does he do? Exceptions to the rule are plenty, but the rule is that he first of all employs his wealth to obtain some kind of power, industrial, financial or political, and to use the power to get more wealth. In the second place, he uses such part of his wealth as he is willing to spend non-productively, to pay bills incurred in the social struggles of his too often uncultivated and not well educated wife and daughters, and for club privileges, heavy cigars and high power cars for himself. When the self-made European gets wealth, what does he do with it? Again there are exceptions to the rule, but the rule is that before going further in business ventures, and, in particular, before attempting political ventures, he sets about improving himself. He has somehow or other caught and been caught by the idea that he must become a gentleman, and to become a gentleman according to the standards of the class that he wants to belong to, he must acquire good manners and a careful speech. Also he must know something—really know something and not merely talk—of music, art and history. If his ambition is beyond the ordinary, he will try as well to know something of science and philosophy.

Self-improvement does not necessarily awaken a sense of social obligation or of obligation to civilization. But again, as a rule, exceptions being recognized, the three

things are found together. You are more likely to find that the man who in middle life sets out seriously to improve his mind and his manners feels his responsibilities as a citizen, than to find a like feeling in the man who cannot stop for such things in his struggle to get more power and to drive faster.

It looks, then, as if we had not yet developed a natural aristocracy in America. And perhaps this is why so many things go wrong in our political life and in our public policy. Mr. Hughes is rendering an important public service in calling attention sharply to some of these wrong things. It is unhappily true that our government service is knowingly, deliberately and scandalously made a political almshouse and house of refuge for public deadbeats. Our Congress for more than one hundred years on end has contained a high percentage of men unfit for any occupation above manual labor or menial bookkeeping. And there has seldom been any difficulty in obtaining a majority vote in House and Senate to sacrifice the interest of civilization—moral, scientific, or humane—in a “pork” carving mêlée.

It is unthinkable that these things, which make our national disgrace, could go on generation after generation if we had a true natural aristocracy in America. If our men and women of character and ability who are developing our natural resources, organizing our industries, controlling our finances, manipulating our politics, cared adequately for the finer things of civilization, could they fail to feel a livelier sense of social responsibility? It is a nice question.

### EVERYBODY'S TAX

THE Democrats in the Senate have receded from their intention of lowering the limit of exemption in the income tax. Single taxpayers with incomes less than \$3000 and married couples with incomes less than \$4000 will continue to pay no tax.

This is a grave mistake. Everybody ought to pay income tax. The only limit of exemption ought to be the point at which it would cost more to collect the tax than the tax itself would amount to. The incidence of the income tax ought to be broad and indiscriminating.

It ought not to be a rich man's tax, tho it is perfectly fair that the rich man should pay a higher rate on his surplus income. It ought to be everybody's tax.

### CHARLES STIELOW

ON the morning of August 11 Charles Stielow sat in his cell in the “death house” in Sing Sing prison. He was ready for his last journey on earth—to the electric chair which would take his life in expiation of the death of two persons he had been convicted of murdering. Three times already he had been reprieved and each time the law had reaffirmed his guilt and commanded again his death. His last hope was gone.

In twenty-six minutes he would take up his march to the execution room. Suddenly the warden of the prison appeared at the grated door of the cell. For the fourth time he brought a reprieve, and this time something more. The real murderer had confest. Stielow's innocence had been discovered. The terrible death that day by day for a year had crept closer and closer till it stood on the very threshold of his cell had suddenly vanished away. He would be a free man again.

Stolid, insensitive, dull creature that he is, he only answered, “That's fine,” and turned to sit on his bed again. Then he was heard to murmur, “Thank God.”

But Charles Stielow is not the only one who should be giving thanks to a Divine Providence for this eleventh hour revelation.

The Law had once more been protected from its own bungling ineptitude. The People—that great sovereign conception whose name stands grim in every indictment in the courts of justice—had been snatched back from a disgraceful crime.

The case of Charles Stielow adds one more stern count to the indictment against capital punishment. In a short half hour the state would have taken the life of an innocent man. The state in its sovereignty has the power of life and death. But unless it can use that power with infallible justice, it ought to abstain from its use at all. Who can believe that human justice is infallible? Who can be blind to its grievous blunders? Who can find, in any benefits which flow to society from the general operation of the death penalty, a counterbalance for the possible murder in the name of justice of even so humble a unit of society as Charles Stielow?

### THE KEYS OF THE CARIBBEAN

THE Danish Rigsdag is hesitating whether to accept our offer of \$25,000,000 for the Danish West Indies, but there should be no hesitation on the part of our Senate in ratifying the treaty of purchase, for such a favorable opportunity for the acquisition of the islands is not likely to come again. Lincoln, Seward, Grant and Roosevelt were foiled in their efforts to get possession of the keys of the Caribbean, partly thru the supineness of the Senate, partly by the secret opposition of certain European powers. Before the war the Hamburg-American Company had become the dominant power in the harbor of Charlotte Amalia, and it seemed likely that in the course of time the islands would become virtually, if not actually, German territory. This would be a contravention of our latest authoritative expression of the Monroe Doctrine, the Lodge resolution, passed by the Senate in 1912, which was aimed directly at the acquisition by a foreign power “under the thin veil of a corporation” of any harbor commanding either entrance to the Panama Canal.

At the present moment Germany is too busily engaged elsewhere to pay much attention to the West Indies. Great Britain and France, who formerly opposed our acquisition of the islands, would now look with more favor upon it. Denmark, which in 1912 was under German influence, is now alienated from Germany. The islands bring neither profit nor prestige to Denmark, while in our hands they would add to the security of the United States and profit by American trade and tourism.

In our issue of December 27, 1915, we gave an account of the efforts of American diplomacy to secure these islands during the past fifty years. The price we offer now is much higher than ever before, but it must be remembered that tropical real estate has risen rapidly in recent years. If the islands in 1902 were worth the five millions that Roosevelt offered for them they are easily worth twenty-five millions now. The great powers are today fighting for tropical territory which thirty years ago they did not think worth the trouble of raising a flag

over. The reason for the amazing advance in values is very easy to see. It is due to the introduction of steam navigation and cold storage. In the old days the tropics could only furnish spices, sugar, hides, coffee, and other products that would not spoil on the way. Now we can get fruit and meat of all kinds from the fertile lands of the globe, even those near the equator. The Danish Islands are small and will add little to our territory, but the construction of the Panama Canal has given them a new value.

That the people of the Danish islands would prefer to come under the American flag is proved by the fact that they are constantly coming under the American flag. Hundreds of them have recently emigrated to the United States or to Porto Rico to share in the prosperity which our administration has brought to their nearest neighbor. Not long ago they threatened the Danish Government that unless certain grievances were removed they would move in mass to America.

Most of the inhabitants are colored, but since there are only 27,000 of them they would not appreciably add to our negro problem. They speak English and the efforts of the Danish Government to force them to learn the Danish language is one of the causes of their present dissatisfaction. Their commercial interests attach them to the United States rather than to Denmark, and if our duty on sugar is not to be removed they would have the strongest of inducements to come within the American tariff wall.

It has seemed to us that Mr. Wilson's policy in Mexico has been lacking in firmness and foresight, but in regard to other countries south of us he has shown himself alert to promote American interests and willing to assume American obligations. He has guaranteed to Hayti as well as to Santo Domingo internal peace and financial stability. He has helped Nicaragua out of her difficulties and secured an option on the only isthmian canal route likely to rival the Panama Canal. And if besides this he has obtained the cession of the three Danish islands, he will secure an honorable page in the history of American foreign relations.

#### WHAT CANADA IS FIGHTING FOR

THE other evening in this city a dinner was being given to a very distinguished visiting Englishman, by an equally distinguished group of Americans. After the more formal speeches were over some one asked the guest of the evening what would be Great Britain's attitude toward Canada, Australia and South Africa after the war was over. Would the British Empire become a great federation of self-governing sovereign and equal states, or would Great Britain refuse equal recognition to the overseas dominions? Sir Somebody did not give a very satisfactory answer, possibly under the circumstances he could not. Whereupon a Canadian arose and said: "I have four sons in Flanders—one a boy of sixteen who has already been a year in the trenches." Then turning directly to the distinguished guest he said: "What do you suppose we Canadians are fighting for? Why are we making these stupendous sacrifices? We don't hate the Germans. We have no particular feeling against them. No. Canada is fighting for recognition and a place in the Empire. Unless England gives us that when the war is over we shall join the United States." This may or may not represent an extreme Canadian

point of view. But this is certain: if a closer federation of the British Empire is to ensue at the close of the war, it will have to be democratic thru and thru. Such vigorous, lusty and downright democratic peoples as the Canadians, Australians and South Africans will be satisfied with nothing less.

#### RELIGION IN THE PUBLIC SCHOOLS

DURING the educational conferences held in this city a number of sermons were preached in favor of religious teachings in the public schools. At St. Patrick's Cathedral Father John D. McCarthy was the preacher and he said:

In our public schools there is a place for everything except God. Tho Christian, they teach everything except Christ. If religion is worth while, it has a place in education. If it is not worth while, it has no place in the world.

The deterioration of the standards of our national life, the lowering of rules of probity and integrity in our business and civic life, too patent in recent times, are due in my opinion to the serious defect in our educational system, brought about thru the exclusion of religion from our public schools.

What is here said is mainly nonsense; it is doubtful if a public school can be found in the country from which God is excluded. Nor is it true that there is any such deterioration in the standards of national life. It would be quite as just to say that the uplift of our national integrity is due to the exclusion of religion from the public schools as to assume that the lack of religious teaching has lowered public integrity. It is a fair position to take that the church shall teach religion and the school teach reading and writing and the shop and the farm teach thrift.

#### HIS TESTS

IN a modest home in a quiet neighborhood in a great city not far from New York there lives a merchant who has amassed a fortune by treating his customers and employees with consideration and justice. But, not satisfied with being an exemplary business man and a generous employer, he has recently turned the management of his concern over to his employees and admitted them into its ownership upon a coöperative basis. He is thus enabled to devote practically all his time, talents and money to the public service.

He was in New York last week attending a committee meeting where the principal business was the selection for employment of a group of men to carry on a very important public work. This is what he said as to the tests he has applied to men in the past and proposed to apply in the future:

When a merchant from a distant city comes to request me to open an account with him, I first ask him whether he is a member of his local chamber of commerce or board of trade. If he says "No," then I hesitate before proceeding further. I find that the man who exhibits no more public spirit than that is sure somehow and some way to fail when the crisis comes.

When this war is over, however, I am going to apply another test, not only to business men, but to others. If I am asked to pass upon the qualifications of a man, my first enquiry shall be how he has conducted himself, his household and his business during the war. If he has made no readjustments or sacrifices, but has continued to live his normal life, callous to the death of his brothers across the sea and the destruction of civilization, he shall never pass muster with me.

These are novel tests, but we wonder if there are many better ones.

# THE STORY OF THE WEEK

## Railway Strike Imminent

When the conferences between the officers of the four "brotherhoods" of railway employees and representatives of 225 American railway systems were resumed in New York on August 8, the unions announced that ninety-four per cent of their members had voted to strike at the discretion of the officers. The railways, however, declined to grant the union demands (for the eight-hour day, with "time and a half" for overtime work) and invited the Federal Board of Mediation and Conciliation to enter the controversy. Its three members, Judge William L. Chambers, Judge Martin A. Knapp and G. W. W. Hanger, were waiting in New York for this invitation, and began promptly to treat with both sides.

The board was created under the Newlands act, rushed thru Congress in July, 1913, to avert a strike of the conductors and trainmen of the eastern roads. It settled that dispute by persuading both parties to accept arbitration, and has since warded off forty-six other strikes, thirty-nine directly by mediation and seven by arbitration. It had just persuaded the switchmen's union, with 30,000 members, to refer its demands for the eight-hour day and increased wages to arbiters. Twelve eastern roads and terminals were threatened with a strike by this union.

But after three days of effort to bring the railways and the brotherhoods into agreement, the board announced that it had failed. It then asked the unions to arbitrate. The railways had already urged this, but the union leaders refused, on Sunday, to consent to arbitration of their case either with or without the "contingent proposals" of the railroads.

President Wilson acted promptly, calling the chairman of the National Railway Conference Committee, Elisha Lee, and the four brotherhood heads to Washington in order to make a final effort to prevent the strike.

## The Issues

The reluctance of the unions to accept arbitration has several grounds.

They claim that the award of a commission composed of other than railroad men is neither satisfactory nor decisive, because its terms are likely to be prejudiced or unscientific and liable to evasion, and that the railroads have actually deprived them of the full fruits of former arbitrations. They point out that no trade has won the eight-hour day except by striking.

Another obstacle is the injection into the situation of the railways' "contingent proposals." These center in the provision that no man shall be paid twice for the same time. This rule would abolish certain excess payments now given under the ten-hour wage

scale, and the men refused to sacrifice any of these established privileges, even to gain the eight-hour day. The railroads insist on arbitration of the whole situation—demands and counter-proposals—in which case a compromise which might take from the men some existing advantages would probably result. The unions especially object to this unrestricted arbitration.

The union program is analyzed by both sides as follows:

### By the brotherhoods—

To fix the pay of all freight train employees in the United States on a basis of  $12\frac{1}{2}$  miles per hour and to fix the day at 100 miles or less. The prevailing speed basis is 10 miles an hour, 100 miles or less, for a freight train day. This will mean that instead of giving ten hours for a typical day's work, freight trainmen will give eight hours.

One hundred miles or less, eight hours or less, means that the men will work eight hours if it is necessary to use that time to make 100 miles; if it takes more than eight hours they will go into overtime; if they can make 100 miles in less than eight hours they will demand the pay for the full period, for they will have given its full equivalent.

### By the railways—

The train service employees of all railroad lines in the United States have united in a demand for a new basis of pay for all men engaged in operating trains, except those in passenger service. At the present time they are paid on the basis of ten hours of time or 100 miles of distance, whichever gives them the higher pay; and every man receives a full day's pay, no matter how short a time he works.

The trainmen now demand that in all but passenger service, (1) the present ten hours' pay shall be given for eight hours, or less, with a guarantee of a full day's pay, no matter how little service is performed; (2) overtime to begin after eight hours, instead of after ten hours, and to be paid for at one and a half times the hourly rate.

These demands would increase the hourly rate of pay 25 per cent and the overtime rate  $87\frac{1}{2}$  per cent.

They also insist that all special extra pay provisions in the ten-hour schedules shall be included in the proposed eight-hour schedule.

These special rules frequently give double pay for the same service, and enable the employee to earn two and three days' pay in a single day of ordinary working hours.

The railways make this statement in opposing the demands:

As the increase for all lines is estimated to amount to \$100,000,000 a year the railroads say that they cannot pay it unless they are allowed to increase passenger and freight rates.

The average wages of the men engaged in train service are already very much higher than those of other employees, and they receive 28 per cent of the total pay roll, altho constituting only 18 per cent of the whole number of railroad workers.

The unions deny that the increased expense would reach \$100,000,000, putting the figure at \$25,000,000, and declare that if the trains were shorter they could be run faster and thus make the standard day's run without overtime payments. The railways reply that the economy of operating

long, heavy trains makes low freight rates possible, and that such a change would work to the disadvantage of shippers.

Some of the eighty-two per cent of railway employees not included in the brotherhoods—which are composed only of the engineers, trainmen, conductors, firemen and enginemen—have petitioned Congress to forbid the strike. They protest that it is unjust for them to be thrown out of work in order that a minority may profit at their expense.

The date of the opening of the Democratic campaign has not yet been set. Mr. Wilson is still inclined to wait until Congress has adjourned before being notified of his nomination and making his speech of acceptance. He has decided to make a campaign trip to the Pacific coast, starting about the middle of September.

Meanwhile, Mr. Hughes goes on hammering at the record of the administration. Last week he spoke at Detroit, Chicago, St. Paul, Fargo, North Dakota, Helena and Butte, Montana—and way stations. He addressed large and enthusiastic crowds, made speeches long, short, and all the way between, shook hands, vigorously and sincerely, with thousands, and did a lot to overcome the reputation for coldness and lack of human responsiveness that had preceded him. In each speech he attacked the Wilson administration on grounds of waste, extravagance, "pork" legislation, sectionalism, unfit appointments, violations of sound, civil service principles, unstable and weak Mexican policy. The burden of his charges is to be found in succinct form in a little speech he made to a couple of hundred people at Mandan, Montana:

I propose, if elected, that men appointed to office shall be fit for the office to which they are appointed. I propose that the government shall be economically, not wastefully and extravagantly, administered, and I propose that the American name shall be honored thruout the world, because we stand firmly for every American right.

Mr. Hughes has begun to meet the criticisms of opponents that he offers no constructive program by suggesting some of the things he will do if elected. In relation to Mexico, he says:

We are going to have our platform understood—protection to American citizens, protection to the property of American citizens, protection to our border from incursions, the rights that we have as one nation relatively to another nation at our doors. We are going to insist that these obligations be performed; that we do not propose any meddlesome policy, that because we wish well for all in Mexico we do not propose to do anything that is contrary to their wishes, if they do what we are entitled to have done. Put that clearly before them, insist upon that, and we shall make some progress toward having it done at the earliest opportunity, and our policy should be to see that it is done, and that promptly.

For the prevention of waste and extravagance, he proposes a national budget:

We have today no conspectus, no examination in a critical and proper way of the demands upon the government, such as any corporation would expect. I am glad that the Republican platform put forth a keynote when it demanded a businesslike, responsible budget, and if I am elected President I propose to see, so far as executive authority will permit, that we get rid of this travesty of administration and have a businesslike budget by which we can understand what we ought to pay, what our comparative needs are, what our income is to satisfy them, and by which responsible administration can be secured. I am a lawyer, but I have grown up alongside of business men and I have respect for facts. I do not want any hot air in mine.

**Campaign Controversies** The vigorous and specific attacks of Mr. Hughes have aroused members of the administration to reply to his accusations. The Republican candidate, in support of his assertion that the appointing power had been used under President Wilson for partisan purposes in defiance of sound civil service principles, brought forward the case of Mr. E. Dana Durand, former head of the Census Bureau. Mr. Durand, Mr. Hughes declared, has been forced out because his place was wanted for a Democrat.

Secretary Redfield promptly denied the charge, and maintained that Mr. Durand had retired voluntarily. The next day, Mr. Hughes came back with a letter from Mr. Durand himself declaring that the charge was true: he had been forced to resign because the administration wanted "to create a vacancy" there.

Mr. Hughes further charged that the head of the Coast and Geodetic Survey, an eminent scientist, had been displaced to make way for a stock breeder. To this assertion the reply was made that Dr. Tittman's retirement had been entirely voluntary and that his successor was promoted from the office of Deputy Commissioner of Fisheries and was in fact a very competent man.

To this Mr. Hughes retorted that even if the retirement of Dr. Tittman was voluntary, his successor was not a scientist or especially fitted for the post. In fact, he had been appointed to his first position in the Bureau of Fisheries directly from his stock farm by the Wilson Administration.

Another specific criticism of the administration's attitude toward the civil service Mr. Hughes made in relation to the office of Assistant Appraiser of Merchandise at the Port of New York. The holder of the position, Mr. H. N. Clapp, who had served twenty-five years in the department and possessed just the expert knowledge needed for the exacting duties of the place, was displaced to make way for a Democratic district leader. So much criticism was aroused by his displacement, said Mr. Hughes, that a few months later he was given another place in the customs service, at a much lower compensation than he had received before.

Now another point of attack upon

the administration was the famous letter of Mr. Bryan, then Secretary of State, in which he inquired about places for "deserving Democrats" in Santo Domingo. Mr. Bryan was evidently stung by Mr. Hughes's criticisms, for he retorted in an elaborate statement, in the course of which he attacked the candidate with vehemence:

But while I observed the Civil Service Law wherever it was in force, I felt myself free to aid in rewarding deserving Democrats wherever it could be done without detriment to the service. The "deserving Democrat" is not to be despised—he is as much entitled to recognition as a "deserving Republican."

When he was a candidate for Governor Mr. Hughes received the support of the railroads of New York, and he generously repaid the debt by vetoing the Two-cent Passenger Rate Bill. He did not describe that as shameful. When a candidate for Governor he received the support of the New York tax-dodgers, the owners of "swollen fortunes," and he paid his debt by sending a message to the Legislature protesting against the income tax amendment to the Federal Constitution. He does not describe that as shameful.

He is now being supported by the railroads of the United States, and he expects to pay them back by aiding them to escape state legislation and find a haven of security in "exclusive federal control" over the railroads. He is being supported by the Shipping Trust, and expects to pay them back by helping them to prevent government competition. He is supported by the trust magnates, and expects to pay them back by shielding them from punishment for the extortion which they desire to practise. He is supported by Wall Street, and expects to pay them back by spending American blood and squandering money raised by taxation in order to guarantee profits on speculative investments.

And yet, with the record which he has made in paying his political obligations at the expense of the public and with the pledges his speeches contain to those who are now aiding his ambitions, he has the impudence to hold up for criticism a legitimate effort to reward competent men for the service which they have rendered to the cause of reform.

Such wild criticism throws much more light, of an unpleasantly searching kind, upon its author than upon its subject. Mr. Wilson is to be congratulated that his cabinet no longer con-

tains such views on the proper use of the appointing power.

**Suffrage in the Campaign** The National Woman's Party is to work against Wilson. At a conference at Colorado Springs of delegates from the twelve suffrage states resolutions were adopted to this effect. The first resolution pledges the Woman's Party to work for the defeat of the Democratic candidate for President; the second congratulates the Progressive, Prohibition and Socialist parties on their indorsement of suffrage for women by national action; the third commends the position taken by Mr. Hughes in favor of the Anthony amendment.

Miss Anne Martin, the party's national chairman, at an open air meeting held after the conference, expressed the party's policy thus:

Our single plank is suffrage first, the political freedom of women before the interests of any national political party. We ask the women voters to know no party until all the women of this country are free. The record of the Democratic party is one of continued hostility and obstruction. President Wilson and the Democratic party must inevitably lose the West thru their unjust denials of freedom to half the people of this country.

President Wilson has written a letter to the Jane Jefferson Club of Denver, in which he declares again his belief in suffrage for women, but reiterates his inability to endorse the movement for an amendment to the Federal Constitution. In the letter he says:

One of the strongest forces behind the equal suffrage sentiment of the country is the now demonstrated fact that in the suffrage states women interest themselves in public questions, study them thoroly, form their opinions and divide as men do concerning them.

Those who believe in equal suffrage are divided into those who believe that each state should determine for itself when and in what direction to extend the suffrage and those who believe that it should be immediately extended by the action of the National Government by means of an amendment to the Federal Constitution. Both the great political parties of the nation have in their recent platforms favored the extension of the suffrage to women

#### WHERE THE RAILROADS MET THEIR MEN

The auditorium of the Engineering Societies' Building in New York, on August 8, during one of the unproductive sessions of the railway conference. Here representatives of the railroad and the Brotherhoods tried without success to break down each other's defenses. The conference was adjourned *non die* after two days.

then state action, and I do not see how their conclusions can consistently disregard these official declarations. I shall endeavor to make the declaration of my own party in this matter effectual by every influence that I can properly and legitimately exercise.

As far as the two candidates for the presidency are concerned, therefore, the distinction remains as before. Both favor woman suffrage, Hughes by federal action, Wilson by state action.

**Marking Time in Mexico** Mexico has figured more largely in campaign speeches than in the news this week. President Wilson waited for his appointees to the joint commission to accept, so that he could announce their names and put them to work. Dr. Arredondo, Carranza's representative at Washington, cleared up the misapprehension caused by the First Chief's last note by explaining the word translated as "preferably." Carranza was willing to have the commission broaden its inquiry, he said, but wished it to discuss the punitive expedition first.

On the border the militia continues its drilling and maneuvering. The New York regiments, for instance, were planning a twelve-day hike thru the Texas deserts. The plan to reorganize the troops on the border by dividing the department into three commands, has been abandoned, and Major General Funston will remain in command. As the plan was prepared with a view to the possible invasion of Mexico from three bases, the change is regarded as an additional indication that the military crisis has passed. But it was thought that the militia would stay the year out.

The War Department has ordered to

the border 25,000 men who have been mobilized at their militia camps waiting till their units were recruited to minimum strength. It was explained that no international crisis prompted the order, but that recruiting would in all probability be stimulated by this completion of President Wilson's program. Alabama, Florida, Georgia, Kentucky, Mississippi, North and South Carolina, Tennessee and West Virginia have so far sent no men to the border, and the National Guard of the entire Eastern Department is 48,000 short of war strength.

**Allies Make Gains in West** The fighting on the Somme is the greatest possible contrast to the struggle along the Dniester. The Russians, where they make any gains at all, are advancing at the rate of several miles a day, while the gains of the French and the British must still be measured in yards. The eastern offensive extends for hundreds of miles from the Pripet to the Rumanian frontier, while the western offensive is concentrated in a small sector of the front spanning the Somme valley. But, in spite of the difference in scale, the Franco-British drive is quite as successful and quite as important in its influence upon the fortunes of the war as the more striking advance in Galicia and Poland. Nearly every day has brought some slight advance and the most determined German counter-offensives have hitherto not been able to regain the lost positions.

The Germans endeavored especially to retake the trenches recently captured by the British north and west of Pozières. The general who ordered the attack is said to have threatened

to court-martial any officer who retreated from a position once won on the Pozières plateau "which, if it remains in the hands of the English would give them a precious advantage." The British held their own at most points, and attacking in their turn, captured a few yards of trenches at Guillemont and Pozières. The only gains of importance, however, were made by the French. A vigorous offensive continued for several days brought the French thru Hem Wood, and further north carried them as far as Maurepas. The extent of the advance was from a quarter to half a mile over a front of more than four miles. Fighting before Verdun continues incessantly but with little gain either for the French or for the Germans.

**Russians Capture Stanislaw** During the week there has been no decisive action before Kovel. The chief advance of the Russian troops has been along the Dniester in the drive toward Lemberg. North of the Dniester the Austrians have had the advantage of a parallel series of the river's branches, the Sereth, the Stripa, and the Zlota Lipa, which form successive lines of natural fortification to check the Russian advance. The main course of the Sereth and the Stripa are already in Russian hands, and on August 10 the Zlota Lipa was crossed at its junction with the Dniester. The capture of this river removed the last natural obstacle before Halicz, a railroad center, which has been called the key to Lemberg. All of the Austrian winter trenches between Tarnopol and Buczac have been taken, thus eliminating the salient west of Tarnopol and giving the Russians a tolerably straight line from the Brody-Lemberg railway to the Dniester.

South of the Dniester the Russian offensive was even more fortunate, since it has resulted in the capture of the important railroad town of Stanislaw. On Thursday evening, August 10, the Russian troops entered Stanislaw. The Austrians, realizing that the position was untenable, made no attempt to contest the occupation. General Count von Bothmer's lines are being pressed inward toward Lemberg from three directions, Brody, Tarnopol, and Stanislaw, and it is a question whether the city can be held. There are said to be fully 150,000 Turkish troops aiding the Austrian defense on the Galician front.

The recent appointment of Premier Sturmer as foreign minister in place of Sazonoff was thought by many to forecast a separate peace with Germany, since the new minister is one of the reactionary party which favors a pro-German policy and has done what it could to hinder the successful prosecution of the war. For that reason the appointment was very coldly received by the western Allies. But Foreign Minister Sturmer has made a most emphatic denial that there will be any relaxation of the present alliance so long as he holds office. It would certainly

#### MEDIATORS WHOSE MEDIATION FAILED

The railroads, failing to make any progress in dealing with the demands of the brotherhoods, appealed to the Federal Board of Mediation and Conciliation, Judge W. L. Chambers, Judge Martin A. Knapp and G. W. W. Hanger (left to right). They could not win concessions from either side.

#### THE FIRST ITALIAN SUCCESS

The capture of Görz, or Gorizia, is the first step in the campaign for Trieste. Since occupying the city on August 9 the Italians have pushed on toward their main objective

be strange if Russia were now to withdraw from the war after tasting the first fruits of victory.

**Italians Take Gorizia** The most important achievement of Italian arms thus far in the Great War was the capture on the 9th of August of the Austrian town of Görz, which will probably be known henceforth by the Italian form of its name, Gorizia. From the military point of view the importance of Gorizia is little more than that of a station on the road to Trieste, but its political importance is considerable, since it has been the main objective of the Italian forces ever since Italy entered the war. The fall of the city was the inevitable consequence of the capture on August 8 of the bridgehead on the Isonzo River. As in all other important offensive actions of this war, the victory was due to a superior artillery fire, which literally blasted away the opposing entrenchments and made possible an effective infantry attack. Either the mass of the heavy Austrian artillery had been removed to the Russian front or the Austrians are beginning to fall behind in munitionment, for the resistance was unexpectedly weak. The Italians claim the capture of over 12,000 prisoners in their offensive movement.

The Italian advance along the Isonzo was not confined to the capture of Gorizia. The Isonzo was crossed at several points below Gorizia, the offensive

beginning with an attack on Monfalcone. To the east of the lower reaches of the Isonzo are two desolate heights which the Austrians have turned into entrenched camps defending Trieste, the plateau of Doberdo and the Carso plateau. By August 11, the entire Doberdo plateau was in Italian hands. Then the Italian troops crossed the Valone River and advanced on the Carso plateau as far as Oppachiasella. At the same time, they pushed eastward in the Gorizia valley and occupied many small villages.

**Turkish Activities** The Turks are busy upon many battle fronts. News concerning their military operations has been reported within the last few days from Persia, Armenia, the Caucasus, Arabia, the Suez region and even Galicia. On July 31, a force of Arab rebels captured the Turkish town and fort of Yembo and made prisoners of the garrison. Yembo is the Red Sea port of the holy city of Medina 125 miles distant. To counterbalance the success of the Arabian rebellion, the Turks claim important victories over the Russian troops in Persia. In Armenia and on the Caucasus front the Russians made several advances but lost Antuck mountain, near Mush, to a Turkish counter attack. The most important Turkish action of the week was the drive toward the Suez Canal. A force estimated at 14,000 advanced by caravan route from El Arish to the neighborhood of Romani where

they came into contact with the British troops. In the meantime, the Turks sent aeroplanes over the Suez Canal to bombard the shipping. Fighting continued for several days around Katia, ten miles from Romani, but the British held their own and by Sunday began to drive back the foe. There are said to be about a thousand German and Austrian soldiers in the Turkish expedition. Military experts surmise that the movement is directed less to the conquest of the canal, for which it is probably inadequate, than to preventing the British from sending aid to the Arabs before the Turkish Government had an opportunity to stamp out the rebellion.

The Turkish offensive against the Suez Canal which was checked at Romani ended in complete rout. The British pursued the retreating army for eighteen miles into the desert and made more than 3000 prisoners, including a number of German officers. Afterwards the fleeing Turks rallied and again attacked the British, having received the support of a fresh regiment which had not suffered during the engagement at Romani.

The Turks claim further victories against the Russians. On August 7, they occupied Bitlis and on the following day the town of Mush. The possession of these important places and of the heights and mountain passes about them seriously menaces both the Russian advance into Armenia and the position of the Allies in Persia. Coincident with the Turkish successes comes the report that Great Britain and Russia have concluded a new secret agreement with each other and with the Persian Government regulating the future status of Persia. The report, which comes from a semi-official Russian news agency, is so guardedly phrased that it is not easy to guess its exact tenor, but

#### DRAINING OFF AUSTRIA'S STRENGTH

A long line of prisoners taken by the Russians in their unchecked onset. The military resources of the Dual Monarchy are being seriously depleted apparently in a deliberate, concerted effort by the Allies to eliminate Austria from the war

it would seem to foreshadow a new arrangement of the British and Russian "spheres of influence" of that country.

**British Politics** The Irish question is as far as ever from satisfactory settlement, altho no new crisis has arisen. Last week's appointment of the Unionist, Henry Duke, to succeed Augustine Birrell as Chief Secretary for Ireland has been followed by the appointment of Baron Wimborne to succeed himself as Lord Lieutenant of Ireland. Baron Wimborne, like Mr. Birrell, resigned after the quelling of the Sinn Fein rebellion, but the Royal Commission which investigated the outbreak exonerated him from all personal responsibility on the ground that not he but Secretary Birrell was in actual charge of the situation. The refusal of John Redmond, as leader of the Irish Nationalists, to accept the Home Rule compromise agreed upon by the Liberal and Unionist leaders has caused the old system of "Castle government" to be revived, and so the Lord Lieutenant and the Chief Secretary for Ireland will probably govern Ireland without regard to any scheme of Home Rule until the war is over and the whole question can be reopened.

Reginald McKenna, Chancellor of the Exchequer, has had to encounter much criticism in the House of Commons for not covering the outstanding treasury bills with another war loan. In his reply, Chancellor McKenna estimated the total debt of Great Britain as about \$17,000,000,000. Deducting from this total the four billion dollars loaned to the British Dominions and to the other Allies left a sum no greater in his judgment than the annual income of the nation. A debt equal to a year's income was not a matter for concern.

The failure of the Mesopotamian expedition which led to the surrender of a British army of over 12,000, if we may accept the Turkish official statement, is still a subject of sharp debate in Parliament. The government yielded to the demand for a full investigation

and has conceded the appointment of a select committee with full power to carry out an inquiry. This step is hailed as a sign of renewed Parliamentary vigor, since the ministry was forced to grant the inquiry into its conduct of the war by pressure of opinion.

**The Last German Colony** German East Africa is now the only part of the world, except Asiatic Turkey, which the Central powers control outside of Europe. Here the German colonial army is still continuing an admittedly hopeless struggle in order to save the prestige of the German name. The British have at their command a considerable army under the sometime Boer general, Jan Christian Smuts, and they have the Portuguese and the Belgian colonial forces as allies. One town after another has been wrested from the Germans, but, owing to the immense territory to be occupied and the difficulties of campaigning in tropical Africa, all resistance is not ended yet.

One of the most remarkable features of the campaign is that it has enabled

the Belgians, who have no navy at all in the modern sense, to win a naval victory over the Germans, who, next to the British, are the greatest sea power in the world. On July 28, the Belgian gunboat "Netta," commanded by Lieutenant Lenaerts, engaged the German gunboat "Graf von Gotzen," on Lake Tanganyika, and sank the latter ship in fifteen minutes. The Belgians report that they suffered no losses in the fight.

The railroad lines and the chief ports along the coast of German East Africa are now in the hands of the British. The Belgians have taken the town of Ujiji, and defeated the Germans in a sharp battle in the Mariahili region on July 13 and 14. The German losses in killed and wounded exceeded 300, and ninety-six prisoners were taken. These recent Allied successes are regarded as the beginning of the end of Germany's last stand in Africa.

**Problems of Relief** The benevolent intentions of the United States are being frustrated in more than one quarter. The Germans have rejected absolutely the only terms which the British Government regarded as admissible for feeding the civilian population of Poland, and a new difficulty has arisen in regard to Syria. Here the Turks have been carrying on the same measures of terrorization that were used in Armenia, deporting the population of entire districts and killing all persons suspected of disloyalty. The forcible removals have intensified the suffering which would in any case be the lot of so poor a country as Syria in time of war. The Government of the United States requested that a neutral committee be permitted to undertake relief work in Syria, but the Turkish Government answered that such relief was unnecessary. The state department thereupon instructed the American chargé d'affaires at Constantinople to say that failure to heed the request would put a severe strain on the relations existing between the American and the Ottoman governments.

#### THE GREAT WAR

August 7—Russians take Austrian positions on the Sereth. Turkish army routed near Suez. Germans attempt to regain Pozieres plateau.

August 8—Italians take Gorizia bridgehead. Russians advance south of the Dniester.

August 9—Italians occupy city of Gorizia.

August 10—Austrians evacuate Stanislau. Russians cross the Zlota Lipa.

August 11—Anglo-French force attacks Bulgarians forty miles from Saloniki. Italians seize heights east of the Isonzo. French advance north of the Somme.

August 12—French reach Maurepas in big drive. Austrians abandon Stripa River defenses. Italians occupy new positions on the Carso plateau.

August 13—British renew drive northwest of Pozieres. French repel German attacks at Maurepas.

# LET THE IRISH WORK IT OUT

BY SYDNEY BROOKS

LONDON CORRESPONDENT OF THE INDEPENDENT

**I**N all politics one has to allow for a difference between appearances and realities. But in no politics is that difference so profound as in Irish politics. To get to the truth that lies behind the animated surface of Irish affairs is always a supremely difficult task and often an impossible one. The average man in London is pretty completely in the dark as to what it was that wrecked the Lloyd George settlement. He classes its failure among the many incomprehensible mysteries of Irish politics. The average man in New York must be floundering still more hopelessly for an explanation that will really explain. It is such an explanation that I propose to attempt now.

**A**MONG the causes of the breakdown some give the first place to the secrecy in which the negotiations were conducted. Others put it down to the delay in throwing the agreement that had been reached into the form of a bill. Still others hold that the Prime Minister's hesitancy in the face of Lord Lansdowne's opposition was the fatal turning point. And others again declare that the differences between the settlement that Sir E. Carson and Mr. Redmond had assented to and the provisions of the bill that was supposed to embody the terms of that settlement were what really brought the scheme to the ground. Undoubtedly all these factors helped. It was a mistake not to publish the agreement as soon as it had been arrived at and so enlist as much public opinion as possible on its side. It was a not less serious error to allow a whole month to go by without putting the agreement into legislative shape and submitting it to Parliament. It was a blunder, but a very characteristic one, on Mr. Asquith's part not to stretch his authority to the utmost, summon up all his driving power and insist on the Unionist opposition either accepting the proposals or leaving the Cabinet. And it was a grave misfortune that the draft bill departed in one or two not unimportant particulars from the terms of the settlement to which Mr. Lloyd George had won the reluctant assent of the Irish Nationalist and the Irish Unionist leaders.

But while each and all of these factors contributed to the ultimate fiasco they were not the determining factors. They were much less potent, both singly and collectively, than another factor, the existence

of which is still almost unrealized in Great Britain and very possibly is not even suspected in the United States—I mean the intense and universal unpopularity of the Lloyd George settlement in Ireland itself. It had no friends. About two Irish papers apologized for it; the rest busily and without difficulty tore it to pieces. You could not have got a free public meeting in any of the four provinces to endorse it. That is the fundamental thing to be understood in the whole wretched business. It was not a case of England refusing Home Rule to Ireland. It was a case of Ireland declining to accept Home Rule on the terms on which it was offered to her.

**B**UT how, it may be urged, can that possibly be the case? Were not the terms of the Lloyd George settlement accepted by Sir E. Carson and ratified at a convention of Ulster Unionists? Were they not equally accepted by the official representatives of the Irish Nationalists and also endorsed by a party convention? They were. And in that fact lies the mystery which the ordinary Englishman finds insoluble. But it ought not to be insoluble by Americans. Americans know what preposterous authority such gatherings throw into the hands of the political machine and how very far the machine leaders may be from representing the views of their professed followers. They know all this. But Englishmen do not. Conventions are not a device of English politics. Similarly, Englishmen have next to no experience in their own country of the realities of machine politics. There exist, of course, political organizations in England, but they are infinitely less rigid and mechanical than similar bodies in Ireland and the United States. There is nothing in England that at all corresponds to that common phenomenon of Irish and American affairs—the spectacle of a compact and disciplined group of politicians, with their hands on every lever of the party machine and claiming to speak for “the people” when they are really only speaking for themselves. When Englishmen heard that, as the result of Mr. Lloyd George's efforts, Sir E. Carson and Mr. Redmond had reached an agreement, they regarded the whole question as settled. It never occurred to them to ask how far these leaders were actually entitled to commit their followers or whether Irish opinion was behind them.

Irish opinion, as a matter of fact, very largely diagnosed the Lloyd George scheme as an attempt to save the face of the Nationalist party; and Irish opinion, and especially Irish Nationalist opinion, has no particular affection just now for the Nationalist party. The root causes of the Easter Monday rising in Dublin were at least as much anti-Redmond as they were anti-British. The Sinn Féin element, the remnants of the old Fenian element and the new syndicalist labor element were united by a common antagonism to the Nationalist organization. The insurrection that they engineered brought down Dublin Castle, but it also severely damaged the Parliamentarians. Something had happened, a very dramatic something, which they had said would never happen. The rebellion was conceived without their knowledge; it was aimed directly at their policies and their authority; on their advice all the signs that it was coming had been disregarded; they believed the storm would never burst; and when it did burst their influence and standing were the first to suffer.

**T**HE government made nearly every possible mistake in dealing with the aftermath of the revolt. It courtmartialed and shot about a dozen of the leaders without publishing either the charge against them or the evidence on which they were convicted. It then plunged into a policy of indiscriminate arrests all over the country, filled the prisons with pretty nearly all against whom the police cared to lay information, and is now releasing them by scores and hundreds to carry back to their villages tales of their sufferings in “British dungeons” and so pose as the victims of “British tyranny.” I do not know for certain what the great mass of the Irish people thought of the rebellion. But there is no doubt that the actions of the government have driven them into a tumult of sympathy with the rebels and that Ireland at this moment is a seething pot of passions unknown since the agrarian troubles and only restrained by Sir John Maxwell's 40,000 troops. Neither do I know for certain whether the “golden opportunity,” which the Prime Minister during his visit to Dublin thought he detected, for a settlement of the Irish problem, had any real existence. But there can be little question that, even assuming it to have been a

thing of substance and not a mirage, he went about the business of grasping it in the wrong way.

The wrong way, because if anything has been underscored time and again of recent years in Ireland, and especially by the disturbances of Easter Monday, it is the failure of the Nationalist party to reflect or even to understand the true sentiments of Nationalist Ireland. The same disability applies to some extent to the Irish Unionist party, but it is conspicuous and undeniable in the case of the Nationalists; and there are large bodies of Irish opinion that find no expression in either party. When, therefore, the Prime Minister entrusted the settlement solely to the Nationalist and Unionist organizations, with Mr. Lloyd George as the mediator between them, it meant that he was seeking a purely political and Parliamentary solution and had no intention of consulting or eliciting the genuine opinion of Ireland. The moral of the Councils Bill fiasco of 1907—a bill accepted by the Nationalist leaders at Westminster and heatedly rejected by Nationalist opinion in Ireland—was something he clean forgot.

**B**UT if his method of approach was faulty, still more so was the scheme that was evolved from the negotiations. It had in the eyes of all Nationalists in Ireland, of all the moderate men, and, I should say of nearly all Ulster, two fatal defects. The first was that it dismembered Ireland. It placed three-fourths of the country under Home Rule and it left six counties in Ulster under the Imperial Parliament. Now the whole claim of the Nationalist party to Home Rule is based upon the argument that Ireland is a nation. Yet here was this same party agreeing to a scheme that flatly contradicted the very idea of nationality. They did it, of course, because there was no other way of getting round the Ulster difficulty, and they probably had little idea of how vehemently their followers in the country would resent this sacrilege offered to the ideal of a united Ireland. The second defect of the Lloyd George scheme was that it proposed to set up in Dublin without an election, without in any way consulting the Irish people, a parliament that was to be mainly nominated from the ranks of the present Nationalist M. P.'s at Westminster—of men, that is to say, who were chosen some years ago on dead and forgotten issues to represent Nationalist Ireland in the British Parliament, who had just proved how signally they were out of touch with

the Irish mind and Irish activities, who were in many instances not at all the sort of men whom Irishmen would think of sending to a parliament of their own, and who none the less were to be imposed upon their disgusted fellow-countrymen and put in complete possession of the patronage that would enable them to build up an indestructible machine.

But why, it may be asked, could not an election have been specially held to inaugurate the new Home Rule parliament? For many reasons, two of which were final. The first was that in the present temper of Ireland it was doubtful how many of the existing Nationalist M. P.'s stood any chance of being returned to the Dublin legislature. The second was that to keep the peace among the innumerable factions that would at once have jumped into the arena, the British Government would have had to double and perhaps more than double Sir John Maxwell's force.

**A**GAINST these features of the settlement popular feeling throughout Ireland was not merely arrayed but inflamed. Had it been otherwise, had the scheme been received with even tolerable favor, had it been possible to pretend that it was anything but nauseating to Irish instincts, would Mr. Redmond have thrown it overboard on a clearly minor pretext?

Yet this is what he did. It is clear, from the debates in Parliament, that the position of Ulster was settled in fact if not in words between the parties. But Mr. Redmond had asked for an undiminished representation of the Irish members at Westminster for the term of the agreement—that is, for the duration of the war, for twelve months afterward, and possibly for considerably longer. Sir E. Carson and Mr. Lloyd George had both agreed to this, but the British Unionists in the cabinet took alarm at it. They pointed out that the Home Rule act provided that when Home Rule was in operation the Irish members in the Parliament at Westminster should be cut down from 103 to 42; and they refused to assent to the proposal that the Irish, while governing three-fourths of Ireland from Dublin, should also govern, or very largely govern, Great Britain from Westminster by continuing to send 103 members to the Imperial Legislature. What, therefore, Mr. Redmond was ultimately offered was (1) an undiminished representation until the next general election; (2) after that the smaller contingent of 42 provided in the Home Rule act; and (3) a full representation of 103 whenever Parlia-

ment took in hand the permanent settlement of the form of Irish government. A difference certainly. But not a difference big enough to warrant the abandonment of any scheme on which Ireland had really set its heart. It was because on this scheme Ireland had set not its heart but its boot, that the Nationalist leader could not merely afford to make a mountain out of a molehill but found it politically expedient to do so.

**T**HE unqualified hostility of Irish opinion in Ireland was thus what killed the Lloyd George settlement. Whether the Home Rule act has also died with it remains to be seen. From all the turmoil of the last few weeks there do, at any rate, seem to emerge two established facts. One is that Ulster must be excluded from the scope of Home Rule. The other is that Home Rule without Ulster is unacceptable to Nationalist feeling in Ireland. I see no chance yet awhile of persuading Ulster to abandon her opposition and the idea of coercing her has been given up, even if it were ever entertained, by common consent. Nor do I see a much better chance of educating Nationalist feeling into the belief that half a loaf is better than no bread and that a Home Rule parliament, once established in Dublin, would sooner or later, providing it conducted itself with good sense, attract within its orbit the men of the "black North."

Is there then no way out? I believe there is if only we British, who have just added one more to our numberless blunders in Irish affairs, would now confess our incapacity and turn over to the Irish themselves the problem of deciding how Ireland is to be governed during the war and the first crucial year of peace. The land question, remember, a far older and more contentious question, was settled by a round-table and really representative conference of Irishmen only. If a similar gathering were summoned today a solution of the problem of Irish government would, I think, be forthcoming. I doubt whether any solution is possible at Westminster. A solution can come only from Ireland as the handiwork of Irish statesmanship. An authoritative conference of Irishmen only, including the politicians but not confined to them, and expressive of genuine Irish thought and sentiment, is in my judgment the only agency that can work out a satisfactory scheme of Irish government. But both Great Britain and Ireland may have to go thru some distressing times before that fact becomes universally recognized and acted upon.

Mr. Hughes has been welcomed warmly on his first campaign tour thru the north and west. Here he is talking to over 15,000 workmen at an automobile plant in Detroit. He has not forgotten how to campaign since his speechmaking days in New York State.

Central News

The late Associate Justice of the Supreme Court fraternizing in Detroit with the somewhat more popular group of citizens who play ball. He was photographed with Ty Cobb and behaved in every way like the 100 per cent candidate he claims to be. His western trip is destroying the popular impression that he is cold and reserved, and his speeches are full of "pop."

# SOMEWHERE IN TEXAS

BY CHESTER T. CROWELL

EDITOR OF THE AUSTIN "STATESMAN"

"SOMEWHERE in Texas" there was the thunder and pounding of a long train of mixt passenger and box cars and long steel flat cars on which field artillery reposed grimly. The people of the town of Blank gathered near the station as the train stopt a few minutes for orders. Farm wagons drew near and busy lads under broad straw hats passed watermelons in thru the windows as fast as the soldier boys could bargain for them.

On the station platform was a woman whose husband fought in Hood's famous Texas Brigade. Her face was stern, but not sad—expressive of a sort of grim patriotic fervor—until the train stopt and heads popped out to view those watermelons. Then tears came into her eyes.

"They are so pretty," she whimpered. "Just like girls." This seemed rather a doubtful compliment for fighting men, but on second look my own impression was the same. They are pretty—to southwest Texas folks—because they have complexions like those our more favored women manage to maintain. Nearly all the men hereabouts get sunburned to a leathery brown. These boys were from a part of the country where clear complexions and rosy checks are the rule.

This train, like every other one that has passed thru Texas, was most elaborately decorated by the budding artists on board. One car was painted up with chalk in imitation of the way a circus car is adorned. Another car announced quite soberly: "Going to quiet Mexico."

An amusing fact in connection with these billboard effects was that nearly every train carried the names of the units aboard in very conspicuous places, together with the destination of the soldiers.

Newspapers in Texas were requested not to print anything about the passing of troop trains and especially not to mention destinations or specific units. But the specific units were going forward about as silently and secretly as Barnum and Bailey.

Even if these youngsters never save their country the mobilization has already had a most wholesome effect upon their lives and given them a broadening experience that many would otherwise have lacked. They have managed to maintain most gentlemanly deportment. The border district is accustomed to reg-

ulars and doesn't expect to find them at prayer meeting every evening. Supposing the militia would be a lot of youngsters on a lark, it expected them to be a bit wild. Some of them may be, but the impression they have made as a whole is that they are a gentlemanly gathering of young men who are fully entitled to every bit of the enthusiastic and hospitable welcome that has been showered upon them. When thousands of mere boys go far from home without taking their "women folks" along and then behave themselves those who observe the feat take off their hats. San Antonio is a tourist town and San Antonio knows that it isn't generally done either this season or any other season.

Most of the boys are having the time of their lives. They find their own clowns in their several companies and the whole thing is a delightful vacation. They are also learning things at every puff of the engine. They have discovered that the millions of acres of string beans along the railroads in Texas are cotton and that the thousands of native born Mexicans in southwest Texas are not prisoners of war captured by Pershing. Austin, Texas, is still laughing because one militiaman with a head poked out of the car window of a passing train yelled to another peering from the adjoining window: "Hey, Bill, looky, a Packard

car 'way down here!" If there are any cars any Texas city doesn't boast they have never been advertised and are as yet undiscovered.

The militiamen are also learning with interest something about the distances in the noble country they have come to defend. It is a shock to them when they arrive in San Antonio to discover that the very straightest line to "the front" leads to Laredo and that they still have 150 miles to go to get there, while it is considerably further to Brownsville and 620 miles to El Paso.

Army officers are not very communicative persons, but there are a few facts one can get hold of by persistent effort. The officers regard the militiamen as excellent material, a little lacking in training, but not fatally lacking by any means. The militia is far below regular army standards but still by no means valueless. The militiamen cannot shoot as well as they should, but they can shoot better than any Mexican army that ever carried rifles. The mobilization is being better handled than when President Taft tried to place 20,000 regulars on the border. It lacks much of being a rapid movement of a great military force, but it is a vast improvement and encouraging for the future.

The army officers doubt that there will be war with Mexico and they have doubted it for a long time. Their logic is perfectly simple. They study international law and they figure that (according to precedent) an unavoidable casus belli has turned up and died so frequently that there is no use expecting the next crisis to be any more effective than the one which just passed. Nor are they bitter about it. Being soldiers they would like to do a little fighting. It is the nature of the men.

But they are just a little bit higher class men than the person who thinks they hate Mr. Woodrow Wilson would suppose. They don't waste time discussing such matters. They are very efficient, very busy and very ethical. Whatever Mr. Wilson tells them to do or not to do is going to be done or not done without question. Coming in touch with that sort of discipline will be excellent for the militiamen. It will introduce them to military men in whom there is no militarism. It is an inspiration to meet persons who practise so devoutly the ethics of their profession even tho that profession be the much criticized one of arms.

*Austin, Texas*

## THE BORDER

BY ROSE HENDERSON

Stretches of yellow, glaring sand,  
Gray dust smarting with alkali,  
Mesquite huddled on either hand,  
And a beaming, sun-drenched sky.

Creak of leather and clank of steel,  
Khaki village and sun-burned men,  
Rising clouds when the horses wheel  
Back to the camp again.

Mess and gossip and drill and rest,  
Night with the white stars thickly sown,  
Moonrise over the ragged crest,  
And the coyote's dreary moan.

Hot gray rocks where the lizard runs,  
Skulking greasers in haggard bands,  
Swift brown horsemen, the click of guns,  
And a splash of blood on the sands.

## IS HUGHES GOING DOWN HILL?

BY NORMAN HAPGOOD

FORMER EDITOR OF HARPER'S WEEKLY

**S**PEAKING of the Wilson government's record in Mexico, Charles E. Hughes said in Detroit: "We showed our disposition to favor any bandit in the land."

Think of it. The man who descends to this political tone is the man with the halo; the apostle of holiness; the leader and judge who once seemed far above the mean and petty things of politics. Such lowering is often seen in the minds of those who start out to belittle for the sake of making a case.

A few escape it. Lincoln's tone toward his political opponents was never a note that his followers need be ashamed of. But Lincoln had great issues to defend. Mr. Wilson's campaign for election in 1912 was based on a program, not on attacking Mr. Roosevelt or Mr. Taft. It is sad to be in a situation where all you can do is to pick what flaws you can in the labors of that President who has carried the heaviest burden since Lincoln. Not yet, as this paper goes to press, has it been unmistakably stated by Mr. Hughes that if President he would have intervened in Mexico; broken off relations with Germany; ordered Americans to keep off the Lusitania; put an embargo on arms to the Allies; kept the old currency system instead of the new Federal reserve act; vetoed the rural credits act; vetoed the Seamen's act; vetoed the labor clauses of the Clayton act. The nearest to an issue is created when Mr. Hughes recommends a return to the tariff system of Mark Hanna, and to the whole industrial system of Mark Hanna.

## LINCOLN ON MEXICO.

**I**T will interest the public, more than any speeches Mr. Hughes has yet made, if he will point out the difference between Lincoln's view of Mexico and Wilson's. Among other things he will find these words addressed by Lincoln to President Polk:

I shall be fully convinced of what I more than suspect already--that he is deeply conscious of being in the wrong; that he feels the blood of this war, like the blood of Abel, is crying to Heaven against him; that originally having some strong motive . . . to involve the two countries in a war, and trusting to escape scrutiny by fixing the public gaze upon the exceeding brightness of military glory, that attractive rainbow that arises in showers of blood . . . he plunged into it.

Is Polk's example the one Mr. Hughes would have had Wilson fol-

low? Is it the example he would have followed himself? "Well-meaning" and "incompetent" were two of the favorite words hurled at Lincoln when he was President, by much the same kind of an opposition that confronts Wilson now. Caution and patience were exactly the qualities for which Lincoln was most frequently attacked. As a matter of fact, the theoretical cock-sureness being shown by Mr. Hughes would be the very worst quality to carry us thru a situation so delicate as the Mexican or the European. My friend Raymond Robins spoke the truth when he said:

The most skillful, the most courageous, the greatest statesmanship of the last two years in this world was the manner in which Wilson averted war between this country and Mexico. The reason that the blood of American men—sons of our homes—is not today reddening the hot sands of Mexico, to serve the interests of a few corporation magnates and speculators, is due more to the courage and constancy of Woodrow Wilson than to any other factor in American life. I would count myself poor and small, indeed, if I were not able to recognize wisdom, courage and public service, even if it had been shown by the chief of an opposing party.

## PATRIOTISM

**W**HAT is meant by the saying that partizanship should stop at the water's edge? The meaning is that criticism of foreign diplomacy, especially in pending questions, most of all in crises, shall be sparing; the citizen should support his President where possible, not seek to blacken his every move because he happens to belong to another party. It means that in our present difficult task of being friendly with Mexico, gaining the confidence of the Mexican people, likewise of all Latin America, thus establishing stable relations, a candidate should not say we favored every bandit unless he thinks we did. Our present ambassador to China, Paul S. Reinsch, in his book on "World Politics," says: "Questions of international relations, of measures undertaken against foreign nations or in concert with them, cannot effectively be made the subject of party controversies." Mr. Hughes should not ask us to treat Mexico as if it were England or Germany. Mr. Hughes should not, for his own glory, continue to talk as if Carranza had the ability but not the will to do everything smoothly.

Mr. Hughes should think less of how he can hold the German vote

without losing the American vote than he should think of the truth. If we must have tricks and insincerities in our politics, let us distort about home affairs, not about as complicated a set of foreign negotiations as any President could be burdened with. Being "100 per cent a candidate" drags down any man.

## EFFICIENCY

**A**NOTHER example of unexpectedly low-class campaigning by Mr. Hughes is the inaccuracy of his attack on the administration's record of appointments. Some of his concrete misstatements have already been pointed out. The Herrick case is one instance of misrepresentation. Herrick had resigned and his successor had accepted before the war broke out. Moreover, if Herrick should have been kept in office because of the crisis, why does Mr. Hughes try to have President Wilson thrown out in a crisis? I shall take up the record more fully in my next Independent article, for it is important to realize just how far Mr. Hughes can be swung by his partisan environment. It is absurd to suppose that a President who has accomplished much more than any other President since the war could do all that work if he did not have strong men around him. One of the things he has to be most proud of is the presence in his Cabinet of such men as Lansing, Baker, Houston, Lane, McAdoo, Wilson and Gregory. Can Mr. Hughes name any administration that has retained as many men in the diplomatic service as Mr. Wilson's administration—and this in spite of the temporary difficulty caused by Mr. Bryan's belief in the spoils system? Can he name any administration that has made fewer changes, even when one Republican administration has followed another Republican administration? Mr. Wilson could not have put his first year's program thru without Mr. Bryan, and Mr. Bryan made great and generous sacrifices for the President. What the President yielded in return was insignificant in comparison. It is extremely doubtful if in mere detailed efficiency any administration can be pointed out that equals this one. Its greatest weakness is in its ignorance of advertising.

Has Mr. Hughes any issue, any program, or has he nothing but a lawyer's criticism of detail?

## THE WEAKNESS OF MR. WILSON

BY JACOB GOULD SCHURMAN

PRESIDENT OF CORNELL UNIVERSITY

IN the presidential campaign of 1908 Governor Hughes, in his great "keynote" speech at Youngstown, Ohio, pointed out that the business in hand was not primarily one of adopting party platforms or endorsing legislative records, but "electing a President, the executive of the nation." And he went on to specify that

the character of our diplomacy, the concerns of our insular possessions, the management of our vast internal business, and the many intricate questions which lie within the range of executive discretion are in the hands of the President for the weal or woe of the nation.

How has President Wilson performed these executive duties? That is the question Mr. Hughes has been discussing in his formal address of acceptance in New York and in his subsequent speeches.

## THE SPOILS SYSTEM AT WORK

HIS first indictment of the administration is that it has put "incompetent men into important positions." It was the first duty of the Chief Executive "to command the respect of the world by the personnel of our State Department and our representation abroad." But this high national obligation was not performed. The interests of the nation were sacrificed to the exigencies of partizan politics. Let one example suffice. The Secretary of State himself wrote to the American representative in San Domingo instructing him to report "what positions you have at your disposal with which to reward deserving Democrats." This policy, tho peculiarly disastrous in its effects on the diplomatic service, was not limited to appointments in that field. It has been equally conspicuous, says Mr. Hughes, "in appointments to important administrative positions in our domestic service." Even in the technical bureaus scientists have been driven out and supplanted by politicians. Nor have the barriers of the civil service laws protected worthy officials, while statutes creating hosts of new offices have specifically exempted them from the operation of the merit system.

It used to be said of Mr. Hughes, when he was Governor of New York, that no party worker need apply for office! So inexorable was he in demanding fitness as the sole qualification for a position in the public service.

This brings out a fundamental difference between the two candidates

for the presidency. Both are men of great intellect, of high character and of marked, tho different, power of speech. But Mr. Wilson is in addition a man of imagination and sentiment, capable also of strong passion, and liable to become what Dr. Johnson used to call a "good hater." He is naturally a party man, and a strong partizan. He was born to be a propagandist, and his mind responds promptly to the appeal both of reform programs and humanitarian ideals. He is in his element in leading such movements, whether conceived in the interest of the Democratic party, or America, or humanity. And having as he himself said four years ago a "one-track mind," when a reformatory cause takes possession of him all other concerns are apt to be subordinated to it if not completely ignored.

Now this is not the mental outfit of a good executive or administrator. What is *his* function? Surely to conduct the business of his firm, company, institution, department, state or nation. For the successful performance of that work his first duty is the selection of competent subordinates, his second duty the encouragement and stimulation of those officials, and his third duty the promotion of the most competent and the elimination of the incompetent. Furthermore, it is essential to success that the chief executive of any business should be capable of estimating existing facts and making forecasts of future developments. Only by such sagacity and prevision will he be able to formulate wise policies. And these policies, finally, must be executed by prompt and vigorous action.

## A POOR EXECUTIVE

MR. HUGHES' detailed criticisms of the administration point to fundamental defects in President Wilson's capacity as an executive. Take Mexico, for example. Did President Wilson select capable experts to advise him? Did he grasp and truly assess the facts of the situation? Did he then formulate a sound Mexican policy? Did he recognize his duty to protect the lives and property of American citizens? Did he announce that however deeply and sincerely his fellow-citizens sympathized with the democratic movement in Mexico the American Government could not interfere with the domestic concerns of that country? Or did he, in the words of Mr. Hughes, "take Vera

Cruz to get Huerta out of office and trust to other nations to get our citizens out of peril?"

A good administrator would have maintained a firm, vigorous and consistent policy in Mexico. But the President has tried everything from unwarranted interference and actual war to doing nothing and washing his hands of the entire business. This policy he calls Watchful Waiting: all the world knows it is a policy of Woeful Wobbling.

## BEHIND TIME

PRESIDENT WILSON'S administration gives at many vital points the impression of belatedness, due to a lack not of extraordinary, but merely of reasonable sagacity and foresight. Action has been too slow, vision too confused, prevision too rare. Many admirable notes and despatches have been written from the State Department about deplorable events, but it seems to have been overlooked that the real business of the department was by prompt and wise anticipatory action to have prevented those occurrences. "The chief function of diplomacy," says Mr. Hughes very truly, "is prevention."

The President was too late in recognizing the necessity of the policy of preparedness. The time to have begun preparations for the national defense was in 1914 when the world-war started. But the President opposed it till this year, tho every argument he has since used in support of it was sound and pertinent in 1914. A prompt increase of the military and naval forces of the country would have put something besides paper and ink behind the diplomatic arm of our government. And can any one who knows how the business of governments is carried on doubt that under those circumstances belligerents would have hesitated to violate American rights?

Without such force the administration trusted to strong language. But ambassadors got the impression that the words were not to be taken seriously. "Had this government," says Mr. Hughes, "by the use of both informal and formal diplomatic opportunities left no doubt that when we said 'strict accountability,' we meant precisely what we said, and that we should unhesitatingly vindicate that position, I am confident that there would have been no destruction of American lives by the sinking of the Lusitania."

## “MURALS” FOR ALL

**I**F the number of art students now “going in” for interior decorating be any indication, it would seem that people generally are becoming dissatisfied with the haphazard arrangement of their homes and are calling in expert advice. The result of this trend must be a more orderly type of home that, while reflecting the true individuality of its inmates, will not be perpetually littered with all their personal vagaries and transitory belongings.

The photograph is doomed, and the autotype must soon follow it into the brown limbo of stained oak invented by the last century. The movement of things now is all toward more and better color; which is being rendered possible by our chemists of today. There seems to be a general feeling that the domestic wall-painting will come into vogue before long as a democratic possibility, especially for porches and the more public parts of the house, for it lends to a room rather more than anything else that desirable sense of having been lived in and loved—connecting the architecture with the more intimate details of the house and with the people who live in it.

Hitherto it has seemed that the cost of mural work has been so great that few have been able to have it. It is probably as true to say, however, that so few people have wished to have it that the artist has been obliged to charge a high price for the work. A mural painting, too, has been thought of too much as a rather pompous and very large group of people centering in Napoleon, Washington or some one of that kind in extremely unbecoming clothes; a composition that would weigh rather heavily upon a family at supper.

The modern young man (or more often woman) who is out to decorate our houses for us will scarcely advise this sort of thing. She will probably tell us that there is no necessity for figures at all, and that a basket of flowers or a decoration of landscape motive is much more suitable and much less expensive. There is no reason whatever why the mural part of an ordinary apartment room should not be quite effectively done in a simple way for a sum within reach of almost every one. There is no expensive framing and glazing to consider, for one thing, and the work ought to be quickly done when it is planned well.

And surely the business person will not be left much longer to his bare and vacuous cell. It has occurred

to some renters of offices in New York that the time has come for consideration of this vital matter. They remind clients that, as they spend most of their waking hours in their office, it is scarcely wise to live in airless or dingy rooms of appalling bareness. We shall next begin to doubt the wisdom of living in unlovely conditions, and especially of keeping visitors waiting in them. There would seem to be no valid reason why an office wall should not be a perpetual source of rest and refreshment. One's work would surely gain from an occasional glance at green leaves, dancing waves, or the solemn bulk of some gigantic mountain whose very outline seemed to speak of quiet and the cool stillness of high places.

And there is no doubt that mural decoration gives quite a different feeling from that obtained by hanging up pictures in frames, that always have somewhat the air of *objets d'art*. In this kind of work, with a few simple tones of well-chosen

color, or a small panel filled with gay hues, a room may be given the restfulness of far horizons and still waters, or the gaiety and animation of a flower garden. The reason is that the pictures are designed for specific conditions and the artist takes the whole room into consideration. In this way everything is made as far as possible to help the effect he wishes to produce, whereas in the case of inconsequent pictures in frames everything else is too apt to hinder their message. Nothing is quite so satisfactory as a true fresco, painted while the plaster of the wall is still wet. Nothing short of breaking the plaster can interfere with its color; it can be washed, and it has the air of being what it is—an integral part of the wall itself. Panels of all sorts may be made movable, but as time goes on we shall take intelligent interest in the decoration of rooms apart from the idea of possessing them, making them as beautiful as we can for the subsequent tenant, and rejoicing in the prospect of handling different conditions in new surroundings.

## CHOOSE YOUR SERMON

**W**HAT the average layman wants to hear about in church has been determined in an interesting manner by a California clergyman, the Rev. Bryant C. Preston, who submitted lists of suggested sermon topics to several hundred business men, professional men and educators of the town.

Since the subjects suggested were for Sunday evening treatment, it was not a little surprising that much attention was devoted to devotional and doctrinal subjects as opposed to historical, travel and literary subjects. Leading the list was the subject, “Are the Objections to Worldly Amusements Reasonable?” Closely following this came, “The Good in Bad People—and the Bad in Good People.” A social and political subject was third in popular favor, “Wanted? A More Powerful Navy and a Larger Army! By Whom?” Fourth came the topic, “Are Secret Societies a Blessing or a Curse?” Fifth in favor was a general subject, “The Best Medicine—A Merry Heart,” especially favored by the doctors.

The seven next popular subjects, in the order of their selection were, “The Christian Science of Prayer,” “Thomas the Doubter and His Present Prototype” tied with “Judas Iscariot, An Illustration of Spiritual Gravitation,” “The Narrowness of

Orthodoxy,” “Does the Open Shop Mean the Closed Heart?” “Kipling, the Poet-Prophet of the Strenuous Life,” “The Will to Believe,” and “The Eternal Question” (“Whom say, ye that I am?”).

To get the referendum started, twenty-five men of the church congregation submitted fifty names each, to which letters were sent. A number was written on an inconspicuous corner of the return blank and the corresponding number set down opposite the name of the man addrest on the list. Thus, when the answers and suggestions came in, the pastor could tell, even from unsigned letters, what classification the writer belonged to—doctor, lawyer, craftsman or business man.

The lists of names were then turned over to the original twenty-five men, who are responsible for notifying the men on their list of the date on which the pastor will speak on their respectively chosen topics.

More than seventy per cent of the men answered the letter. About two hundred of the five hundred addrest were not church members.

Many ministers have tried a referendum before but have failed because the “follow-up” system was incomplete. The entire success of such a plan depends upon the thoroughness with which it is put into operation.

# SAVE YOUR NERVES

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**T**HE great American folly is hurry. We do everything in a hurry. We work, play, eat, sleep, talk, walk, think, read, write, pray, love and marry—all in a hurry. We are the greatest hurriers—and the greatest worriers—on the globe.

The end of hurry is worry; since hurry makes blunders and blunders breed confusion. Whether we know it or not, half of worry is hurry. When a man does his best and takes his time doing it, he instinctively trusts God to crown his work with happiness.

As a nation, we are tense without being intense—a psychological waste and physiological menace. The great worrier is tense without being intense—the great worker intense without being tense. A common trait of the captains of industry and the leaders of science is their nerve poise; whether it be Rodin carving a statue, or Burbank evolving a plant, or Edison moulding an invention, or Morgan building a railroad, or Kitchener calling five million men to the colors—the mark of the man is calm, a supreme certainty born of a supreme skill. He who frets fears failure.

More and more do our nerves become the channels of our destiny. Thru them pours the energy, by them grows the courage, in them lies the health to achieve great things. Of all the portions and functions of the body, the nerves are the most difficult of repair. And the greatest waste in American life is waste of nerve force.

## HOW WE WASTE NERVE FORCE

**W**E eat too much, too fast and too often. We talk with the reserve, sweetness and composure of a boiler factory. We live and work amid countless and needless noises. We measure our neighbor by his speed-record and his bank-book. We put the clock where the altar used to be. We entertain too frequently, gaudily and politely. We read bales of trash, and wonder why our thought scatters and our memory fades out. We tie ourselves to a schedule as we tie a dog to his post, then we cannot see why we lack initiative, courage, magnetism. We dress to enrich the fashion-mongers, not to ennoble ourselves. We roam where the bright lights dazzle, but never look at the darkness ahead. We buy more and more tonics, and habit-forming drugs. Millions of us go to the moving pictures every day—and a three-

hour focus of the mind on the film play and vaudeville wastes enough energy to start a man well toward a better job. We batter our nerves this way and that for no reason except that we follow the crowd, and refuse to listen to ourselves.

I know of many a speed-maniac and efficiency fanatic who rather takes pride in the fact that he keeps going all the time. So does an empty hogshead, going down hill. The quickest way to run down is to be always speeding up. When you watch your watch and not yourself, watch out!

A regular duty of an efficient man is to forget to be efficient. The time to observe this duty is every Sunday, two or three evenings a week, and three or four weeks a year. Otherwise, efficiency becomes an obsession; and the more moral an obsession is, the more dangerous it is. Very earnest souls often ask me if the loss of time does not worry me fearfully? I tell them "Surely—I don't lose enough!" No system is complete without a system to forget system. First lesson in achievement—how to work; second lesson—how to stop working. The productive mind is creative; and essential to the finest creations are the long relaxations between.

Fifty years ago about two-thirds of the people of the United States lived in the country. Now, only about one-third live there; the rest have moved business or home, or both, to the city centers of noise, congestion, irritation, competition and worry. No such rapid and complete change of national environment was ever known before in the history of the nations of the world.

We have not become properly adjusted to the new conditions. Our grandfathers needed health of muscle—and they got it on the farm. We need health of nerve—and we get it nowhere. The subject is not taught or even understood, by parents or physicians or college professors. We are never trained in the function, use and care of the nerves until the nerves break down and we are laid on the shelf. Moreover, it is the people of fine talents and great possibilities who are subject to nerve disorders; human kine don't get nervous prostration—human lions do. This fact makes nerve protection a vital study and urgent need in the conservation of our best national resources—the men and women who might do great things.

Now relaxation is the key to the

nerve problem. The final efficiency test of a great worker is that he knows how to rest. This knowledge, rightly used, will add five or ten years to his life, will save him future sanitarium bills and loss of time when most needed, will augment the quality and quantity of his yearly brain output by fifteen to thirty per cent, and will help him to be an example of sane living to all his friends.

By "relaxation" I do not mean play, diversion or amusement. Play is merely change of motion. Relaxation is cessation of motion, and solitude. Make your mind a perfect blank, let your nerves and muscles hang as limp as tho you had lost control of them, blur all consciousness of time, care and responsibility, close your eyes and ears to all sensation, feel nothing, want nothing, remember nothing, hold nothing, revel softly in a dreamy haze of oblivion while the hours slip away unmarked and unmeasured, be as calm and inert as a moss-grown log in a shady dell where the soothing willows gently wave and flowers breathe content beside a sleepy brook.

## POWER THRU RELAXATION

**T**HE power to relax is the source of the power to concentrate. The human soul is like a mountain reservoir. Quietly and slowly, away from the multitude, it fills and renews itself with strength, purpose, faith, courage, energy, speed, initiative. Then it pours down thru the world and moves the mills of trade like a Niagara! But first, in relaxation, the power must accumulate. A man can no more be efficient without a proper mode of relaxation than a system of electric light or motion could be without a fully charged battery. When we are dull, tired, cross, perplexed, discouraged, we should simply remember the nerves are electric wires, needing a new life. We must learn to relax, for the sake of our health, work, prosperity, influence, growth.

Our health demands relaxation. In the United States child mortality is decreasing, but middle-age mortality increasing—we have more cases, annually, of heart disease, apoplexy, nervous prostration, exhaustion, pre-senility and insanity. Cause? Too rapid living, candle burnt at both ends, light goes out. Cure? Knowledge and habit of relaxation, in early life. The only sure cure is prevention.

Our work demands relaxation. The

great work is done by the genius, who forgets to eat and sleep while he hammers his dream into shape, melted with divine fire and molded at the forge of concentration. But, his work done, the genius grows lax, idle, care-free as a child. The ebb and flow of spirit, like the ebb and flow of the sea, must be regarded. While we are machines we are bound to routine; but as we learn to create, we must counterbalance creation with relaxation. I know a man who, after a long stress of powerful creative work, slept an average of fourteen hours a day for a month. Then he was ready for a new feat of empire building. To be alert be inert before and after. To do more, do nothing between times.

Our prosperity demands relaxation. The money-making ideas come to the man who is mentally and physically fresh and vigorous. Capacity measures opportunity, and our chance is as great as our power to seize it with all the grip of our magnetic forces. A friend of mine, starting on nothing, has built up a huge business, from which he has taken several fortunes. His secret, you ask? He answers "Money is productivity, productivity is energy and I have learned how to *renew my energy*, pouring a flood of it into my

business whenever the finances threaten to be low."

Our influence demands relaxation. Our neighbors like us, listen to us, follow us, when we are strong, keen, sure, bright and sunny. A fag in a man is a drag on all his friends. To restore cheeriness, cure fatigue. And to be a leader of men, be a follower of Nature; draw from earth and air and water, sun and sky, the magnetic forces to rejuvenate you, and others thru you.

Our growth demands relaxation. We are citizens of Cosmos, dwellers in Eternity, heirs of Infinity. Why then hurry? Why fret and grieve at delay or disappointment? Everything must come right when *we* are right. We cannot sow a panic and reap a destiny. Moral vision, even more than physical vitality, must be conserved and refreshed by wholesome, normal periods of seclusion, meditation, relaxation, reunion with God and Nature.

We are industrial pragmatists. Our answer is to every business theory: "Does it *work*?" Has the regular observance of the need to relax produced results to justify our claim? It has. We cite cases.

One of the world's richest men finds that his afternoon work is greatly improved by a siesta follow-

ing lunch. A famous captain of industry keeps a lounge in his office, and when the cares and duties of his strenuous life press too close, he resorts to silence, locks the door, muffles the telephone, draws the blinds, forgets business, lies limp and relaxed for ten or fifteen minutes—and speeds back to his desk, a new man! Certain large factories have reduced their working hours from ten to nine, or nine and a half, or even eight hours, without diminishing their output—the workers move faster when less tired, and feel better, mentally and physically. New York department stores have tried the experiment of closing all day Saturday in summer, to give their employees more chance to relax; and they have noted an actual increase of business in some cases, by having one business day less in the week. So slight a rest period as a fifteen minute recess in the middle of the afternoon for mill and factory workers has materially reduced the number of errors and accidents, most of which, due to fatigue, have been found to occur late in the afternoon. It pays financially to learn to relax.

The interested reader may ask when, where and how? We offer brief suggestions, particularly for the hard-working, fast-thinking

# EFFICIENCY NERVE TEST

FOR INDICATING PROBABLE CONDITIONS OF STRESS AND STRAIN OF THE KEEN BRAIN WORKER, AND SUGGESTING RELAXATION METHODS FOR HEALTH, POISE AND PRODUCTIVITY

**DIRECTIONS.** Read first the accompanying article by Mr. Purinton for a general view of the subject. Where answer to question is Yes, write numeral 5 in black space opposite. Where answer is No, leave space blank. Add column for your approximate percentage in efficient nerve action. If your percentage is below 80, you need to study and practise the art of relaxation. Queries will be answered if address to Mr. Purinton, care of The Independent Efficiency Service, 119 West Fortieth Street, New York.

1. Can you relax perfectly as described in the article herewith? .....
2. Are you entirely free from hurry, worry, headache, nervousness, mental depression? .....
3. Do you know how to relieve pain, exhaustion or depletion of the nerves? .....
4. Is your doctor a nerve specialist? .....
5. Are you informed on the foods, baths and exercises to build and renew the nerves? .....
6. Have you made a study of personal conservation of energy? .....
7. Do you forget business on Sunday, and most of the evenings of the week? .....
8. Can you smile in the face of panic, epidemic, failure, grief and disappointment? .....
9. Is your daily schedule planned so as to avoid haste, waste, fatigue? .....
10. Do you rest fifteen to thirty minutes after each meal?.....
11. Are you a sound sleeper, and in bed sixty hours a week? .....
12. Are you thoroly rested when you get up in the morning? .....
13. Would you rather be alone than "in society"? .....
14. Are your best friends the great philosophers of the past and present? .....
15. Have you studied a book on nerve control, and do you take a psychological journal? .....
16. Is cathedral music more pleasing to you than dance music? .....
17. Do you feel younger every year, and look much younger than you are? .....
18. Are you two different people—one at home and another at work? .....
19. Is the future a treasure-house of hopes, dreams, plans and purposes? .....
20. Do people, when in trouble, come to you for help and advice? .....

Hall of Philosophy, Chautauqua, Temple of the Home Readers.

## Have You Left School?

with a diploma, or without it? In either case, you of course do not wish to leave off being educated. When education ends, life ends.

## Take a Reading Course

Everybody reads, but too many read without any plan, and to no purpose. The college graduate is like other people in the need of system, but a little more likely to realize his need. The Chautauqua Reading Course is useful alike to the person of limited training, who labors many nights over each book, and the critic or vigorous man of affairs, who can sweep through them all in a few hours. For either, a group of related, intelligible, and competent studies leads to a well rounded result.

## Don't Read at Random

For many years, the very mention of a reading course has meant, without further explanation, the Chautauqua reading course. It was the first and is still the best; and it alone has a world-wide fame. The cost is trifling, \$5 for a year. Are you tired wasting your odd minutes? Write for information.

CHAUTAUQUA  
CHAUTAUQUA

INSTITUTION  
NEW YORK

man or woman who is highly organized, ambitious and intense.

Be on your guard against the hurry habit. Systematize your day and plan your work ahead, so you never need to hurry. When you have appointments to keep, always give yourself a leeway of five or ten minutes to provide for unexpected hindrances and prevent last-moment rushes. Move slowly, speak slowly, think and feel slowly, outside of office hours. Finish every piece of work before you start another. Change the stress and strain of your daily routine from your nerves to your muscles—you can do it by the proper system of mental and physical exercise. Learn to like slow, phlegmatic people, and be much in their company; you will irritate them as much as they do you, and the combined friction should wear away some of the eccentricities of you both. Cultivate the friendship of day-laborers, and spend an evening often with them; people who work their brains only are about as restful, for constant companions, as a roomful of clocks in perfect health.

Study books on nerve-control. Read regularly one hygienic and one psychological magazine; but not more, please, than one each, lest you become a hopeless health crank and sicker than would otherwise be possible. Choose for your doctor one who is a trained psychologist—as every doctor should be—the physical troubles of a keen brain-worker are likely to be mostly nervous in origin, therefore, amenable to psychic treatment only.

Wear soft, loose clothing—no stiff hats or corsets. No high collars, no tight shoes, no wool next the skin. Get the Blucher form of shoe, preferably of vici kid, and have rubber heels on every pair. At home use moccasins or sandals, or a patent cushion slipper, even more restful than these, and obtainable at almost any shoe store. Let all your colors of your dress and your room be quiet, peaceful, harmonizing with your

taste and temperament. Choose plain, simple furniture of the mission or similar type; avoid rocking chairs, but have a reclining steamer or camp chair in your room, to conform to the body and give the perfect relaxation that a hammock does.

Have your only room lamp a powerful desk portable, fully shaded. Find a spot in your room where all the window light will strike your back and none your face. Then put your writing desk or reading table there. Get a miniature clock that ticks almost without being heard, or hang your watch on the wall; a loud ticking timepiece is hard on the nerves. Let your pictures be few and far between and your trinkets and ornaments even less. The proverbial calm of the nun is due partly to the wide spaces in her cloistered cell, and her vision is thus kept clear and tranquil.

#### RELAX RESOLUTELY

**B**E alone some time each day, and suffer motion to yield to meditation. Learn to speak seldom and slowly. When you read books omit the sensational novel of the present day and relax with Emerson, Carlyle, Whitman, Thoreau, Confucius, Epictetus, Marcus Aurelius. And prefer old-fashioned music to the ragtime of the modern cabaret. The chant of the cathedral organ is a clear invitation to repose. Take long walks when time is abundant. Make friends with night; commune with the stars, let them soothe away your cares.

Develop your will and dominate your wishes. Think great thoughts, and sweep away trifles. Plan a daily schedule with the right baths, foods and exercises to keep your nerves ready, steady, strong. Leave the "nerve tonic" sold in a bottle strictly alone, as it merely tones up the pocket-nerve of the maker. Test the regenerating power of slow, calm, deep rhythmic breathing as a life-habit. Experience the wonderful results on the nervous system of the air, light, sun and earth baths, now so popular in Europe.

Investigate the action of heat on the nerves, whether in a hot water bottle at spine or feet, a vapor bath, a prolonged submergence in very hot water, a cabinet for electric-light baths, or a hand thermal device for local use. (But first consult your physician.) When the nerves grow tense from overwork or anxiety have an expert apply massage to the head, spine and nerve branches.

Sleep sixty hours a week or more, and as nearly out doors as possible. Have your bed, springs, mattress, coverlets hygienic and scientific—here economy is out of place. Be asleep at ten o'clock half the nights in the week. Don't be ashamed to rest in the daytime—many a business man, otherwise sane, has gone to pieces and his business with him because when tired and worried he failed to rest by day—he thought he might look foolish, womanish or sickish if he lay down before dark! Always rest a few minutes before and after meals. Relax on the street-car, going to and from business. Lock your work in the office and play with the children, or putter in the garden, or even lead the dog out for an airing, to clear your brain of business cobwebs in advance of dinner. Learn to change your consciousness as you change your coat, and make your home self utterly different from your business self.

A man's work lives to the extent that he lives for his work. To live for your work you must first live wholly in it—then wholly away from it. The force in concentration is the rebound from relaxation.

More work is good, better work is better, greater work is best. The man who does great work is so much greater than his work that he looks on all work as child's play; so he can smile at himself for working, when he is not working, and relax, and let go, and cease to think and do, in order just to be. The crown of achievement is attainment; and the measure of attainment is silent self-command.

## CHAIRS TO COLLECT

Chairs were an evolution from the forms and stools used for seats in the sixteenth and early seventeenth centuries.

In England, when the chair was first used, and even wealthy men only owned one or two, it was the seat of honor, given to a guest as a special mark of favor. The American colonists followed this custom during the first part of the seventeenth century.

Two of the earliest types of chairs were "thrown" or turned chairs and Wainscot, sometimes described as "scrowled" or carved chairs. Both these styles lacked upholstery. Later, chairs were covered with leather or "Turkey Work" and other materials.

The most famous "turned" chair in the United States is the "President's Chair" at Harvard University. Dr. Oliver Wendell Holmes has written of it in his "Parson Turell's Legacy."

High chairs of many sorts were provided for the youngest children in Colonial days. One such was brought to America in 1635 by Richard Mather. It was subsequently used by Samuel, Increase, Cotton, and the rest of the family. This chair is now a show piece at the American Antiquarian Society's rooms at Worcester, Massachusetts.

The so called Jacobean furniture came into vogue in America during the latter part of the seventeenth century. It in-

cluded chairs which are unknown to the Elizabethan period. The Jacobean chairs were often inlaid with colored woods. The arm chairs of this period followed a fashion introduced from Venice and had the legs in a curved X shape across the front. A loose cushion was often introduced which made for comfort. Carving was often used on these chairs, the lines of which were generally graceful.

Queen Anne chairs, with their rush bottoms, sometimes also had Spanish feet. The Dutch splat, as used in these chairs, was afterward developed and elaborated by Chippendale and others. These chairs were contemporaneous with the hoopskirt and the arms were spread to accommodate the gowns.

## PEBBLES

What Mexico needs is the little rift within the loot.—*Wall Street Journal*.

The problem is not licking the Russians but keeping them licked.—*New York Evening Sun*.

Great Britain probably considers the submarine merchantman a D— boat.—*Brooklyn Daily Eagle*.

"Mother, I cinched the prize in English compo and had the rest of the bunch skinned a mile."—*Life*.

As we understand it, "pork" is the money expended on public improvements in some other town.—*Nashville Southern Lumberman*.

She—You know, Mr. Jones, I thought you much older than you are.

He—Oh, no; not a bit, I assure you.—*Boston Transcript*.

"By gorry, I'm tired!"

"There you go! You're tired! Here I be a-standin' over a hot stove all day an' you wurkin' in a nice cool sewer!"—*Masses*.

"How much is thim plums?"

"Ten cents a peck."

"Shure, pwhat do yez think I am, a burrd?"—*Lampoon*.

Wife—I've changed icemen.

Hubby—Why so?

Wife—He says he will give me colder ice for the same money.—*Hartford Gazette*.

"Miserly offered the man who saved his life half a dollar."

"Did the man accept it?"

"Yes, but he handed Miserly twenty cents change."—*Christian Register*.

"I've tried to teach my boy the value of money."

"Good thing!"

"Well, I don't know. He used to behave for ten cents, but now he wants a quarter."—*Life*.

Grad.—This university certainly takes an interest in a fellow, doesn't it?

Tad—How's that?

Grad.—Well, I read that they will be very glad to hear of the death of any of their alumni.—*Siren*.

"I forgot myself and spoke angrily to my wife," remarked Mr. Meekton.

"Did she resent it?"

"For a moment. But Henrietta is a fair-minded woman. After she thought it over she shook hands with me and congratulated me on my bravery."—*Kansas City Star*.

"If a man called me a liar," asserted a braggart, "I'd sail in and lick him, if he weighed three hundred pounds."

"Well, you big bluff," answered one who was tired of listening. "I call you that here and now. You're a liar."

"Bluff yourself," came back the artist, without a minute's hesitation. "You don't weigh more than a hundred and fifty, and you know what I said."—*Tid-Bits*.

A London wholesale provision house, which prides itself on filling all orders correctly, received a letter from a provincial customer recently, complaining bitterly of the very poor quality of the last two lots of eggs supplied.

The reputation of the house for never making an error seemed to be at stake, but the bright mind of the junior partner found a way out of it. He wrote:

"Gentlemen: We are sorry to hear that our consignment did not suit you; there was, however, no mistake on our part. We have looked up your original order, and find that it reads as follows: Rush fifty boxes eggs. We want them bad."—*Tid-Bits*.

## CONSTRUCTION

BOND

## A High Quality Paper for Important Business Stationery

**I**N spite of the difficulty of securing high grade materials for paper making, the quality of Construction Bond has been rigidly maintained. It is now more than ever before the standard paper for high class business stationery—backed by the recommendation of the most competent manufacturing stationers in the 216 principal cities of North America.

Write us on your business letterhead for specimens of fine business stationery produced on Construction Bond and the names of the concerns in your locality who can supply you.

200 E. Illinois Street, CHICAGO, ILL.

## Handle Orders, Billing, Shipping

## One-third Faster

Yes, and save money too.  
You can do it with our easy  
time-saving methods and the

# Commercial

## DUPLICATOR

### Hundreds of Manufacturers and Jobbers Save More Than 1/3

of the time formerly required for this work—and save delays, reduce errors, simplify details, cut expense. One big concern with eight of our machines is filling orders one-third faster and has eliminated 37 typists and 8 checkers. Many manufacturers get copies of orders for shop foremen, billing, bookkeeping, draymen, shipping, bills of lading, etc., all with one writing and without carbon paper. The saving of time is always important; the saving of money frequently pays for the machine in 30 days.

Quicker handling, reduced labor and less expense are all possible in your order, billing and shipping departments and we can prove

it. There are many other jobs around your office which you can put on your Commercial Duplicator saving time and money. One boy or girl does it all. No type to set. No stencils to cut. Copies are made direct from original matter written with pencil, pen or typewriter. Reduces errors. The Commercial Duplicator is the easiest working, fastest, most universally adaptable duplicating machine in the world. It will help you speed up your order, billing and shipping work, reduce errors and cut expense. Tell us how you do that work now and get our money-saving facts by return mail. Write now.

# THE NEW BOOKS

## SIDELIGHTS ON THE WAR

As the war news "beat" probably "the man who dined with the Kaiser" is entitled to the first prize. This not alone because of that much discussed imperial dinner at Nish, but for the Turkish situation as presented in *My Secret Service*. That Germany was in control of the Turkish Government we have gathered, but not to the extent now brought to light, nor that her plans for making Turkey a main theater of war were so vigorously and comprehensively undertaken. The only check upon them would seem to be the food problem, but the author warns the Entente powers, in whose interest he took his perilous trip, that German designs upon the East and Egypt are likely to develop, at any time, into one of the greatest offensives.

Certainly the best picture map we have to hand of Verdun, its curious rock citadel, its detached forts constructed on the principles of Brialmont, but after the fall of Liège and Namur discarded in favor of outlying trenches, is to be found in *They Shall Not Pass*, by Frank H. Simonds, who was granted the exceptional privilege of visiting Verdun during the present German attack. He gathered that the holding of Verdun was regarded as of greater sentimental than strategic value. Another view holds that the French base at Verdun threatens the most important German iron ore deposits lying between that fortress and Metz. The loss of this by a French offensive from Verdun would deal a severe blow at German manufacture of armaments and munitions.

It might be inferred from Mr. Ellery Sedgwick's preface to Edward Morlae's *A Soldier of the Legion* that there is something finer about a "beloved pirate" than the "sweet placidity which wraps the Grand Army of the Republic." We were under the impression that the Grand Army of the Republic fought bravely and honorably at Chancellorsville and Gettysburg; that for so doing its aged veterans were entitled to the respect of a younger generation. In reality a "beloved" or any other kind of pirate would find military discipline an unhealthy atmosphere for the practise of swashbuckling propensities. Granted the French Foreign Legion was composed chiefly of men who found it convenient to take refuge therein from the process of criminal law, does it necessarily follow they were devoid of higher instincts? Evidently the President of the French Republic did not think so, otherwise he would hardly have placed the Legion on an equal footing with the regiments of the Line, and finally ordered their colors, decorated with the Legion of Honor, deposited in the Invalides, where repose Napoleon's standards. In fact Sergeant Morlae gives the key-

note to the underlying spirit of the men with whom he served when referring to one among the slain: "He was a good comrade and a good soldier." In a military sense that term is far removed from the swashbuckler.

*Passed by the Censor* is both a vivid record of tremendous events and a revelation of the change these events wrought in the author. In the opening chapters Wythe Williams and the American Ambassador seem to be directing everything in complete harmony, and what the Ambassador does not quite grasp Mr. Williams is on hand to elucidate! If we lay aside the book here a great injustice is done Mr. Williams. As we read his growingly impressive war scenes, the enforced discipline he underwent by the French military authorities, and the voluntary discipline undertaken as a Red Cross assistant, the reader becomes conscious of another personality in the author, a man stirred to the depths by the heroism and suffering everywhere around him. Frigid indeed would be the nature that could not experience a touch of emotion at his portrayal of Chenal singing the "Marseillaise." That picture is a masterpiece.

A more forceful argument for the total abolishment of alcoholic liquors could hardly be discovered than in *German Atrocities*, by J. H. Morgan. In Belgium, and especially in northern France, were unlimited stores of wines and spirits. What, therefore, was likely to happen when those regions were invaded by temporarily unrestrained soldiers? An orgy of drunkenness followed and from drunkenness to atrocity is but a single downward step. Otherwise, while the evidence in this volume contributes to what we have already learned, we are not convinced that the whole German people are comprehensively guilty.

Houghton, Mifflin \$1. *Passed by the Censor*, by Wythe Williams. Dutton. \$1.50. *German Atrocities*, by J. H. Morgan. Dutton. \$1.

## IT PAYS TO BE HAPPY

Much trash has been written on happiness and optimism. Quack psychology has too often foisted itself upon unsuspecting readers. But in his study of *The Influence of Joy*, Dr. George Van Ness Dearborn has given us a book that is different. It is based on sound knowledge and genuine experimental data. It has enough "cold facts" to satisfy the average "scientific" reader, and enough popular treatment to please the most rabid optimist.

Dr. Dearborn briefly explains the mechanism and the significance of the "basic emotion of joy." He discusses its influence upon nutrition, upon circulation, upon the nervous system, upon work and play, and upon personality.

His conclusions confirm the belief—which has been exploited by the New Thought movement—that joy has a tonic or stimulating effect upon the human organism. If you are joyful, hopeful, optimistic, alert, and active you work better, play better, sleep better, digest better, worry less, and accomplish much more. Thus Dr. Dearborn, with all the restraint of a physiologist and psychologist, gives a firm foundation for the "gospel of joy" and "cult of optimism." But he is not fanatical or platitudinous. His first allegiance is to facts.

*The Influence of Joy*, by Dr. George Van Ness Dearborn. Boston. Little, Brown. \$1.

## WHAT IS SOCIALISM?

Characterized as scientific, this book, *The Socialism of Today*, is a careful compilation of original documents, editorials, addresses, reports, etc., that are calculated to give an objective picture of what the Socialist and labor movements actually mean at the present time. The first part of the book is historical, its sections dealing with the various countries, from Germany to China, in which the socialist movement has taken root, with a chapter on the International. In the second part, the treatment is topical, chapters being devoted to labor unions, social legislation, unemployment, militarism, etc. The book is edited by a committee of the Intercollegiate Socialist Society, and is said to be the first comprehensive source-book dealing with the movement. It is a valuable handbook not only to propagandists for or against socialism, but to students of politics, economics and sociology.

*Socialism of Today*. Holt. \$1.60.

## CHAOTIC VERSE

Chaos is the distinguishing feature of *On the Overland and Other Poems*, by Frederick Mortimer Clapp. The verse has all the beauty of chaos—the challenge of disarray and the passion of turmoil, but it also has the confusion, the vagueness, and the seeming lack of purpose.

In the short, graphic pictures of rough-hewn life, Mr. Clapp is at his best, as when he is shot through space *In the Cab of No. 3303*:

. . . ; far our head-light hurls its white sword through the darkness; earth unfurls reelingly fence and field; the blue rails ring; the black ties scream up under us and fling time back where night, black-eddy, streams and swirls. . . .

The longer poems have many of the characteristics of "Spoon River Anthology," but they lack the compactness, the knife-like clearness, of Masters. All have the typographical eccentricities of the most violent vers libre. Usually they have no rhyme, and sometimes, when the poet lets adjectives run away with him, little reason

*On the Overland and Other Poems*, by F. M. Clapp. Yale Univ. Press. \$1.

## Tear Off That Blindfold!

Your chance to *be somebody*, to hold a position of responsibility, to have an income that will provide every comfort of life, is within your reach.

Just one thing keeps you from finding it, grasping it: you're not *prepared*. Through the door of opportunity big jobs are waiting in every field of work. But only trained men will get them. Don't play blindman's buff with your future! Start today and train yourself to do some one thing better than others.

You can get that training in spare time through the International Correspondence Schools, just as others have done for twenty-five years—just as more than 130,000 ambitious men and boys are doing right now.

Choose your own career. The I. C. S. will train you for the position you want in the work you like best. And you need not lose a day or a dollar in your present occupation.

Tear off that blindfold!

Your chance is here. The time to start is now. The way is to ask the I. C. S. to show you what they can do for you. Mark and mail this coupon—it costs nothing, but the evidence it will bring you will open your eyes.

### TEAR OUT HERE INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4521, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

## An Income for Life

Of all the investment opportunities offered there are few indeed not open to children. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than a policy with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. This a payment of \$5,000 by a man aged 37 would provide an annual income of \$618.35, absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

# The Market Place

## ALL THIS FROM ALASKA

When we bought Alaska, few expected that the investment would yield a good return, in a commercial way. But we received from that ice-bound territory in the year that ended with June about \$67,000,000 worth of products. Copper, valued at \$26,500,000, stood first in the list, and canned salmon, \$18,000,000, second. Shipments of copper were four times the annual average for the three years immediately preceding, and the gain of salmon in one year was 22 per cent. The total, gold and silver excluded, was twice the annual average since 1912.

We received \$16,200,000 worth of gold from Alaska's mines, an increase of \$1,000,000 in one year, and silver valued at \$760,000, or \$500,000 more than was sent to us in 1915. And our imports from Alaska are growing.

## GRAIN CROPS REDUCED

Those who had been encouraged by the government's July crop report, which increased the indicated yield of wheat from 715,000,000 to 759,000,000 bushels, could find nothing in the August report to sustain their hopes. The new and greatly reduced estimates had been foreshadowed by news from the fields which already had affected the markets. Unfavorable weather and injury caused by black rust had led one prominent expert to predict that there would be only 681,000,000 bushels of wheat, while another could expect only 672,000,000. They had not fully measured the effect of the prevailing unfavorable conditions, for the government's estimate was only 654,000,000 bushels, a quantity equivalent to 64 per cent of last year's extraordinary yield of 1,012,000,000, and much less than the average (728,000,000) for the five years immediately preceding 1915. The condition of spring wheat had declined in one month from 89 to 63½, and the quantity to be harvested had been cut down from 270,000,000 bushels to 199,000,000. On the day when the report was published all the grain markets were excited, and there was an advance of 11 cents a bushel at Chicago. Additions since that date have raised the price to \$1.44 for September delivery and \$1.52 for May.

As Canada's wheat crop has been reduced by similar conditions, and the yield in foreign fields is below that of last year, high prices for some time to come can easily be foreseen. Our exports were 333,000,000 bushels in 1914

Gray  
"D Jr."

Now  
Ready

## Your New 1917 Marine Engine

**Yours** because the "D Junior" embodies what your ideal engine calls for—something newer—something better.

**Power?** Yes, tremendous—more power than ever before developed with the same bore and stroke—figures prove it.

**Quiet?** Absolutely—no harsh bark—no discordant clatter—only the soft, even purr of an electric motor.

**Clean?** Perfectly—all moving parts enclosed oil tight—summer white apparel for the ladies possible here.

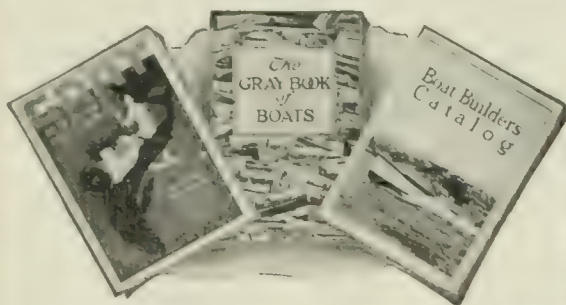

**Control?** Perfect—electric starter if desired—from highest speed to lowest at a touch of the throttle—an engine a girl can operate.

**Speed?** All you want—more snap and pep than ever before shown in a Marine Motor.

**Price?** Surprisingly low—quality considered. GRAY facilities and quantity output the sole reason.

**Yes,** and with it all "D Junior" gives you motor excellence of a degree that furnishes a new sense of boating enjoyment.

## Let These 3 Books Help You

### Products of 225 Leading Boat-Builders to Choose From

The "1916" Boat-Builders' Catalog, published by the Gray Motor Company, in conjunction with the leading boat builders throughout the United States and Canada, shows more boats than you could see at any motor boat show—from a little fishing launch to the most handsome express runabout or cruiser with all the comforts of a home. It also tells you where you can buy the kind of boat you want at the price you want to pay.

**Gray Marine Motors** The new marine engine catalog shows a complete line of both 2 and 4 cycle Guaranteed Gray Motors—3 to 90 H. P.—1 to 6 Cylinders with every feature you have ever hoped for in a marine motor.

**Gray Book of Boats** No theory here—all actual practice. This book solves hundreds of problems that confront everybody considering either a hull or engine.

*These three books will be sent free to anyone writing for them*

**Gray Motor Co. 856 Gray Motor Bldg. Detroit, Mich.**

and 250,000,000 last year, against an average of about 125,000,000 for several years preceding the war. As 620,000,000 are required for home consumption and seeding, we can spare only 34,000,000 from the new crop. From last year's, however, we are carrying over 160,000,000. Therefore, with some allowance for reserves, the quantity that can be sold to foreign buyers during the crop year may be 120,000,000 bushels, or, at most, 150,000,000.

The official estimate of the corn crop was reduced by 90,000,000 bushels to 2,277,000,000, but this exceeds by 45,000,000 the average for five years before 1915. A reduction for oats leaves a yield of 1,274,000,000, against last year's 1,540,000,000. For barley and rye there are losses since the beginning of July, but the rice and flax estimates are substantially without change. Slight gains for tobacco indicate the greatest yield, 1,197,000,000 pounds, ever reported. The crops of potatoes and hay will be above recent averages. There will not be so many apples or peaches as there were last year.

### SALES HERE FROM ABROAD

For a long time the movement of prices in our open market for securities has been affected by the British Government's continuous sale here of American stocks and bonds heretofore owned in Great Britain and recently brought under the government's control or into its possession by its mobilization plan. Almost every week a shipment of from \$15,000,000 to \$25,000,000 worth of these securities has been received in New York. France sent \$43,000,000 worth about two weeks ago. These securities, however, are not to be sold but will be used as the basis of a credit. While a stream of the securities from England has been running into our Stock Exchange market, large sales have also been made outside of the Exchange privately.

The British Government buys or borrows the securities. Those which are purchased the government can sell; the borrowed stocks or bonds can be used as collateral security for credits or loans. Recently there have been about 200 additions to the list of the American securities affected by the mobilization plan. It is a long one, including more than 1,000 issues. A special income tax of ten per cent, in addition to the general income tax, was designed to stimulate the sale, or the loaning, of them to the government by owners, and it has had that effect.

It is now reported that there is to be here a new British credit or loan secured by collateral consisting of the stocks and bonds which the government has borrowed, as well as by some of those which it is free to sell. The amount, it is said, will be \$200,000,000. If the continuous sale of these stocks and bonds should cease, and if the securities—those owned as well as those borrowed—should be used as collateral, this would give much relief to our market, in which prices would then be determined in a normal way, mainly by domestic conditions.

## The Independent Investor's Service

*The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.*

## Insurance

Conducted by

W. E. UNDERWOOD

L. A. E., Orland, Ind.—None of the insurance hand-books available by me contain the name of the Capitol Casualty Company of Indianapolis. Address your inquiry to Hon. Dale J. Crittenger, Auditor of State, Indianapolis, Ind.

G. H. T., Humboldt, Iowa.—The National Temperance Life Insurance Society of New York is classed as a fraternal association transacting business under the assessment system. It maintains no reserve. In 1915 its total income was \$17,028; total disbursements, \$16,724, consisting of death loss, \$1000, and expenses, \$15,724. The society wrote \$67,000 new insurance in 1915 and ended the year with \$418,000 in force. The assets December 31, 1915, were \$5456; liabilities, \$4157.

H. C., Chicago, Ill.—On December 31, 1915, the financial condition of the Missouri State Life was: admitted assets, \$12,000,808; total liabilities (including capital stock of \$1,000,000), \$11,186,683; net surplus, \$814,125. The company is satisfactorily managed, its funds are properly invested, the expense of doing business and the mortality rate are moderate and death claims are promptly paid. I regard it as inferior to many companies because the amount of its capital is unnecessarily large; because the rate of dividends to stockholders on the capital is not restricted; because it writes deferred dividend policies; and because it issues both participating and non-participating policies.

R. D. B., Rouseville, Pa.—The post-office address of the Postal Life Insurance Company is 35 Nassau Street, New York, N. Y. The annual report of the New York Insurance Department shows the financial condition of that company on December 31, 1915, to be as follows: admitted assets, \$9,487,942; total liabilities, exclusive of capital, \$9,196,813; surplus, including capital, \$291,129. As compared with companies doing business thru agents, the amount of new insurance granted yearly is small. The company employs no agents, relying mainly on magazine advertising to attract applications and by making small discounts on premiums. The management is of good average quality. The company's effort to reduce the net cost of insurance below that of the best dividend paying agency companies has not been realized.

G. E. B., Indiana.—The Farmers National Life Insurance Company of America, located at East Chicago, Indiana, with executive offices at Chicago, Illinois, was incorporated under the laws of Indiana in January, 1912, with an authorized capital of \$200,000. During 1912 and 1913 the organizers collected from subscribers to the stock \$150,643 in cash and \$49,357 in promissory notes and a further sum, for use as surplus, of \$116,649 cash and \$83,351 in notes. In 1913 the authorized capital was increased to \$500,000. During 1915 \$79,200 in cash and notes was collected on capital account and \$82,907 on surplus account. At the end of 1914 the company's financial statement showed that its capital was impaired \$3375. At the end of 1915 the paid up capital consisted of \$148,163 cash and \$101,217 stockholders' notes, a total of \$252,380. The notes figure as an asset. Allowing the item (and it is not properly allowable) the net surplus is \$5771. As nearly as I can make out, more than \$300,000 in cash has been received from stockholders in four years. Its assets are \$306,915. In 1915 the total income was \$165,776 and the total outgo was \$262,933.

## Sunny Days Start with Bran

Pettijohn's is a breakfast dainty. But, more than that, it is good-cheer food.

It is 25 per cent bran — flaked bran—Nature's laxative. All hidden in luscious wheat flakes.

Folks who try it for a week don't quit.

### A MONOGRAPH AND ITS READERS

A cordial reception is being accorded the first of the Monographs of Efficiency, just published by the National Institute of Efficiency, and the series, launched with such immediately satisfactory results, seems likely to attain a steadily increasing usefulness. Issued, in the first place, for the benefit of members of the Institute, the monograph—which is entitled “Efficiency and Life,” and written by Mr. Edward Earle Purinton—has already found many “outside” admirers, and the officials have had the pleasure of meeting a big demand from members who have taken advantage of the offer of extra copies. “No man,” says Mr. Melvil Dewey, a member of the Board of Governors, in a brief introduction, “can read this monograph in a fair spirit, willing to assimilate what will best help him, without getting many ideas and practical suggestions that will enable him to improve himself”—a view which is finding ready confirmation among people of widely diverse occupations and interests. Thus Admiral Robert E. Peary, discoverer of the North Pole and one of the Institute Governors, writes: “The Monograph is effective in appearance and ‘meaty’ in contents. I congratulate the Institute.” Hon. Herbert W. Rice, of Providence, another member of the Board, says: “I have read the Monograph carefully and was very much pleased with it. It should have a very wide circulation. It is forceful and tho long, held my interest, and I believe that means that it will hold the interest of the average man clear thru.” “I think both you and the National Institute of Efficiency are to be congratulated upon the first of the monographs,” writes Mr. R. B. Price, vice-president of the U. S. Rubber Company. “I have passed mine around to several people, who all commented favorably, and I am ordering twenty-five for distribution to some of my people.” Representing women readers, Miss N. H. Burroughs, president of the National Training School for Women and Girls, says: “I have already begun to apply some of Mr. Purinton’s practical suggestions.” All such letters which have reached the office of the Institute have the added value of being entirely spontaneous tribute to the Monograph’s timeliness, and it is significant that the public libraries—notably the Free Library of Philadelphia and the State Library of Rhode Island at Providence—are taking up the Institute’s publications, present and prospective.

### TIGHTENING THE UNION

A remarkable plan for developing America’s road system is being put forward by Mr. Henry B. Joy, president of the Lincoln Highway and one of the governors of the National Institute of Efficiency, who advocates the building by the government of a highway, be-

ginning at and returning to New York, which would virtually encircle the United States. It would be so laid as to connect in the most efficient manner with the Lincoln, Dixie, Jefferson, and Columbia River Highways and the Santa Fé Trail and furnish an elastic system of transportation facilities between all the states in the Union. In its commercial aspect the scheme would provide a basis, Mr. Joy believes, for a federal spiderweb system of hard-surfaced highways that would vastly reduce the cost of transportation. In time of war it would make possible the rapid mobilization and concentration of troops at whatever point was threatened.

### AMERICA EFFICIENT

That Mr. Hughes should stake his chance of occupying the presidential chair upon the principle of “America first and America efficient” is a significant tribute to the growing movement for putting the national house in order and keeping it going on an orderly, scientific, businesslike basis. Mr. Hughes’s election slogan might easily have been that of the National Institute of Efficiency, which does not mean that the Institute is in any sense a partizan organization, but simply that Mr. Hughes’s idea transcends politics to the extent that it embodies the simple, enormous and still neglected truth that the country will be better for knowing how to do things in the quickest and best way, and doing them that way. If Mr. Wilson were also to include national efficiency in his program and urge the need of “expert knowledge and thoro organization,” we should welcome the fact equally. Any and every agency thru which its objects may be legitimately gained has the hopeful attention of the Institute, and the fact that the efficiency note is being sounded in high places would seem to ensure its being heard far and near.

### AN AID TO CITIZENSHIP

A thoro understanding of the government under which a man lives would seem the first step toward efficient citizenship. For this reason the “A B C of the Government of the United States,” written by Mr. Perley Morse, a widely-known New York accountant, and published at seventy-five cents by Perley Morse and Company, 61 Broadway, should prove of real value in spreading intelligent Americanism. Its title exactly reflects the book’s contents. The explanations are lucid, compact, and yet adequate for the purpose of a clear, progressive understanding of the citizen’s relation to society, as represented by the village, township, county, state, and federal authority. The “A B C” is an ably arranged statement of

facts, and should be especially welcome to those who have had too often to sort the facts from the mass of philosophy and theory that overlays many of the books that have been written on this subject.

### FROM FAR AND NEAR

States whose territories stretch from coast to coast are contributing to the rapidly expanding and strikingly comprehensive membership roll of the National Institute of Efficiency, in whose ranks Canada is now to be found. Twenty-eight states and the District of Columbia are at present represented in the Institute, which recently has been honored by acceptances of membership from many eminent people. Among these are Hon. Charles W. Fairbanks, Republican candidate for Vice-President; Cardinal Gibbons, of Baltimore; Bishop W. J. O’Connell, of Richmond, Virginia; Professor Irving Fisher, of Yale; Dr. George F. Kunz, Chairman of the Social and Economic Section of the American Association for the Advancement of Science; President Robert J. Aley, of the University of Maine; President W. S. Scarborough, of Wilberforce (Ohio) University; Hon. Louis F. Post, Assistant Secretary Department of Labor; Hon. Robert F. Broussard, United States Representative from Louisiana; Hon. Henry T. Rainey, United States Representative from Illinois; Professor G. L. Macintosh, President of Wabash (Crawfordsville, Indiana) College; Mr. F. A. Seiberling, President of the Goodyear Tire and Rubber Company, and Miss N. H. Burroughs, President of the National Training School for Women and Girls. The frank approval, good wishes and prospective coöperation offered on every hand would seem to assure the future effectiveness and prosperity of the organization.

### THE MAN AND THE METHOD

On the face of it, it would seem that fishing is a province far beyond the reach of efficiency; like, say, the weather, or a woman’s temper, or Congress. Mr. John A. Stewart, a member of the Board of Governors of the National Institute of Efficiency, has proved the contrary, and ably supported the implications of his office, by catching a 7½ pound brook trout at Isle Royale—one of the biggest fish of its kind ever taken in the Northwest. He used a 3½ ounce fly rod, a silver doctor, and, presumably, lots of efficiency. Hooking and landing the monster showed only part of Mr. Stewart’s piscatorial wakefulness. Some doubt arose as to the authenticity of the fish—the doubters fancied it might be a mere shark—whereupon the nearest taxidermist was sought, and he pronounced it a genuine brook trout. It was equally efficient to have the fish photographed—as Mr. Stewart did—thus permanently guarding a big piece of fishy history from the encroachments of cold skepticism.

JUST A WORD

Owing to an unfortunate error, we included among the portraits of the appointees to the Farm Loan Board, on August 14, that of Senator George W. Norris of Nebraska in place of Mr. George W. Norris of Philadelphia, the banker, who was correctly described in the caption.

The poem entitled "James Whitcomb Riley," by Herbert Kaufman, which The Independent was privileged to reprint in its issue of August 14 by special permission of the author and of the Philadelphia *Public Ledger*, failed to carry a notice to the effect that it was copyrighted material, being part of Herbert Kaufman's Weekly Page, which appears in a syndicate of newspapers.

THE ALLIED "PUSH"

The Allied "push"—the correspondents are beginning to tire of "drives" that fail to arrive and are trying a new word—is a tremendous spectacle as well as a military event of the greatest significance. In the *New York Times* an eyewitness describes one of its phases:

While we were visiting the exterminated town the artillery fire had been growing heavier. We went back to a vantage point on the plateau. From the extreme right, where the chateau was still blazing in toward the center, a distance of several kilometers, the French were concentrating their fire for an infantry attack. It was the famous curtain of iron in full action—the first time it was ever seen by any correspondent.

The general bombardment seemed like rolling thunder that never stopped completely, but when it was apparently to die away into silence it would again spring up and reverberate over another portion of the valley. But now before us there was just a constant unending roar, thru which one seemed to feel a sense of heaving and pounding. If one could imagine a giant stable in which a thousand mad horses were all kicking against the walls, while in the rafters overhead were a thousand spitting, fighting cats, one might get some realization how the rideau de fer sounds. But this illustration is inadequate, for it is one's inner sensibility rather than the ear that is affected most; this concentrated pounding seems to act directly on the brain and I could easily understand why men in the trenches go mad.

A welcome relief to the roar of the heavy guns were the rapid cracks of the nearby mitrailleuses and the sharp barks of the seventy-fives, which arose above all the tumult, and, as before, all along the line we could see the spurt of their fire in an unbroken flame.

What had just commenced on that sector was the same as had happened to the village behind us. The order had been given to destroy everything. So as we watched the human sacrifice was going up in the roll of smoke and the roar of guns. And it would continue so for hours.

REMARKABLE REMARKS

GENERAL HAIG—The tide has turned. ED. HOWE—Poetry and painting have disappeared as real forces.

W. J. BRYAN—I notice the Republicans can find no place of attack.

LADY DUFF-GORDON—The stage is the mirror of fashion as of life.

SAMUEL UNTERMAYER—The influence of the lawyer is waning and justly so.

ARTURO GIOVANNITTI—Red visions are in the eyes of all men, everywhere.

E. H. SOTHERN—It is generally difficult to determine the origin of nicknames.

SENATOR LA FOLLETTE—Hughes was not the choice of the reactionary element.

WOODROW WILSON—I know that rhetoric does not get to the heart of things.

THE MIKADO—The indomitable armies of the Allies are now marching forward.

MAXIMILIAN HARDEN—Every nation will fight till the last rattling of the throat.

DR. PAUL CARUS—England has become accustomed to the idea of owning the world.

COL. GEORGE HARVEY—May we not hope that neither of the candidates be likened to Lincoln.

RAYMOND ROBBINS—The freest and most progressive state in the Union is California.

LILLIAN RUSSELL—Girls are just as natural in leap year as they are in any other year.

S. S. MCCLURE—Altho I was a member of the Ford Peace party I only went for the fun of it.

MRS. CHARLES E. HUGHES—I have plenty of views on things, but I do not like to talk about them.

DR. HARVEY S. WILEY—The goat has this advantage over the cow: it rarely suffers from tuberculosis.

CHARLES E. HUGHES—I don't care if I am elected President what becomes of my personal fortunes.

PRINCESS TROUBETZKOY—Perhaps the most trying moment of the twenty-four hours is breakfast time

JOSEPH REINACH—We must abolish the House of Hohenzollern with its feudal castes and all its birds of prey.

A. A. DOUGLAS, of Clark University—The "theory of tolerances" emphasizes the excessive waste from over accuracy.

WILLIAM ALLEN WHITE—The Republicans will make a mistake if they conduct their campaign against the President.

BARON SHIBASAWA—My trip to America persuaded me that the true international intercourse is that between individuals.

EMPEROR WILLIAM—My life must be conserved carefully in order to carry out the duties assigned to me by Divine Providence.

THEODORE ROOSEVELT—A flabby cosmopolitanism, especially if it expresses itself thru a flabby pacificism, is not only silly but degrading. It represents national emasculation.

PROF. H. E. JORDAN—Much confusion is removed by McClung's demonstration that the result of the second spermatocyte division is neither entirely equatorial nor reductional.

ARTHUR PONSONBY, M. P.—If the war goes on conscription will have to go further, and if men under certain age are made to sacrifice their lives, then I think the people above a certain income ought to be made to sacrifice their wealth.

PROF. R. W. STEVENS—The music of the oboe is acrid, that of the flute is crystal sugar, the cello is like good coffee, the clarinet reminds me of a well seasoned grape fruit, the violin intoxicates like claret and the saxophone is as stimulating as buttermilk.

# To Britons Overseas

## Why Britons Overseas should lend their money to their Country

1. Because it is every Briton's duty and privilege to do so whether he is at home or abroad.
2. Because you will be helping your country to win the War.
3. Because it is the one way in which you can fight. If you cannot fight for your country you can make your money fight for you.
4. Because it is a sound investment.

If you invest in 5% Exchequer Bonds your money will be absolutely safe. Capital and interest alike are charged on the Consolidated Fund of the United Kingdom.

If the investor in Exchequer Bonds is resident abroad no British Income Tax whatever is payable. The holder is guaranteed repayment in full on October 5th, 1919, or October 5th, 1921, according to the series which he selects, and these Bonds will be accepted as cash at par in subscribing for a new War Loan.

Bankers will advance money on the security of Exchequer Bonds.

Trustees can hold Exchequer Bonds if registered.

The Bonds will be issued in denominations of £100, £200, £500, £1,000 and £5,000 according to the wishes of the purchaser.

Further application forms can be obtained from any British Consul.

## USE THIS FORM

### 5% EXCHEQUER BONDS

Bearing interest at £5 per Cent. per Annum, payable half-yearly. Repayable at Par on the 5th Oct., 1919 or the 5th Oct., 1921

- (a) Applications must be for not less than £100, and must be for multiples of £100.  
(b) In order to avoid delay and consequent loss of interest, all remittances should be payable in sterling in London. Applications may be forwarded through a Banker or Broker as well as direct to the Bank of England. If application is made direct to the Bank of England, drafts should be drawn in favour of the "Bank of England."  
(c) Applicants who desire to have Bonds forwarded by post must themselves effect any insurance that may be desired.  
(d) Where the intention is to register Bonds, the necessary form of Request for Registration will be forwarded by post for signature by the Applicant.

### ABRIDGED PROSPECTUS EXCHEQUER BONDS

Per Acts 29 Vict. c. 25; 52 Vict. c. 6; and 6 & 7 Geo. V. c. 24.

Bearing Interest from the date of purchase at £5 per cent. per annum, payable Half-yearly on the 5th April and the 5th October.

Repayable at par on:—1. 5th October, 1919.  
2. 5th October, 1921.

Price of Issue fixed by His Majesty's Treasury at £100 per cent.

THE GOVERNOR AND COMPANY OF THE BANK OF ENGLAND are authorized by the Lords Commissioners of His Majesty's Treasury to receive on the 2nd June, 1916, and thereafter until further notice, applications for Exchequer Bonds as above.

The Principal and Interest of the Bonds are chargeable on the Consolidated Fund of the United Kingdom.

The Bonds will be issued in denominations of £100, £200, £500, £1,000 and £5,000 and will bear interest at £5 per cent. per annum, payable half-yearly by coupon, the first coupon on each Bond representing interest from the date upon which payment for the Bond is made until the next succeeding day on which a half-yearly payment of interest is due.

In the event of future loans (other than issues made abroad or issues of Exchequer Bonds, Treasury Bills, or similar short-dated securities) being raised by His Majesty's Government for the purpose of carrying on the War, Bonds of this issue will be accepted, together with all undue Coupons, as the equivalent of cash to the amount of their face value for the purpose of subscription to any such loan. Interest accrued to the date of the surrender of a Bond will be paid in cash.

The interest payable from time to time in respect of Bonds of this issue will be exempt from British Income Tax, present or future, if it is shown in the manner directed by the Treasury that the Bonds are in the beneficial ownership of a person who is not ordinarily resident in the United Kingdom of Great Britain and Ireland.

Bonds of this issue and the interest payable from time to time in respect thereof are exempt from all British taxation, present or future, if it is shown in like manner that they are in the beneficial ownership of a person who is neither domiciled nor ordinarily resident in the United Kingdom.

Where a Bond belongs to such a holder, the relative Coupons will be paid without deduction for Income Tax, or other taxes, if accompanied by a declaration of ownership in such form as may be required by the Treasury.

Every application must specify whether the Bonds applied for are to be repayable on the 5th October, 1919, or on the 5th October, 1921. Two Forms of Application must be used where Bonds of each maturity are required.

Bonds of this issue (Ex the first Coupon, which will be for interest in respect of a broken period), may be lodged for registration in the books of the Bank of England on payment of a fee of one shilling per Bond. Applicants who intend to register their holdings forthwith should notify the fact on the Form of Application, in which case they will not be required to take delivery of the actual Bonds or to pay the fee for registration.

Bonds may be registered in either of the following forms, viz.:—

1. Registered 5% Exchequer Bonds, 1919 or 1921, Transferable in the Bank Transfer Books;
2. Registered 5% Exchequer Bonds, 1919 or 1921, Transferable by Deed.

Dividends on Registered Bonds will be paid without deduction of Income Tax in all cases. Holdings of Registered Bonds, which will be transferable in any sums which are multiples of £5, may be re-converted at any time in whole or in part (in multiples of £100) into Bonds to Bearer with Coupons attached, such re-conversion being effected by means of a transfer executed under the provisions ordinarily applying to the transfer of Government Stocks.

In case of registration the first Coupon, for interest in respect of the broken period, will be detached before Bonds are registered. Such Coupons may, however, be left in the custody of the Bank, in which case a cheque for the amount of the interest payable will be forwarded when due to the Holder, or, in the case of a joint holding, to the first Holder, in whose name the Bonds are originally registered. Subsequent dividends on registered holdings will be paid by warrants, which will be transmitted by post.

## THE EXPANSION OF THE UNITED STATES

**E**UROPEANS laugh at us for our naïve pride in the mere bigness of things; as if we were responsible for the size of the Mississippi and had ourselves carved the Grand Canyon. Certainly bigness is not greatness. But why may not this nation be great as well as big; and, if it can, why should we not rejoice at having more elbow room for greatness? The town of Athens was greater than the Persian empire. But we aim at nothing less than an empire, vaster than the Persian, where every town is an Athens. We are not a barbarian scrawling crude drawings on a cliff side, but a Michel Angelo, able to paint miniatures, yet liking better the whole arm sweep at the ceiling of the Vatican.

We have a right to take pride in the bigness of our country, for we made it big. It was not born big. We conquered the continent from sea to sea and made it a country so good to live in that men came to it from the ends of the earth at the rate of a million a year. America is not an accidental nation. It is a chosen people. A German is born a German and an Irishman is born an Irishman, but the American is the man who has *chosen* to come to America. Gilbert makes fun of the Britisher who "in spite of all temptations to belong to other nations remains an Englishman." But it is "greatly to our credit" (or to that of our immediate forebears) that we are Americans. All of us except the native Indians might have "belonged to other nations" if we had so chosen. That Italy exists is largely the work of nature; that the United States exists is wholly the work of man.

**T**HE Declaration of Independence gave us our start in life, a New England farm and a southern plantation. The rest we have got for ourselves. Not a quarter of the United States as it exists today was ever under the British flag. Our histories have been written too exclusively on the Atlantic coast. Let Easterners, if they like, confine their attention to the Revolution which freed their native land from foreign rulers. Those who were born west of the Mississippi are more concerned with the ways by which their native land was freed from its foreign rulers. George III seems as remote to them as Charlemagne or Artaxerxes. He whose crimes are devoutly recited on the Fourth of July was a pussycat tyrant compared with such as Charles V of the Holy Roman Empire, Philip II of Spain, Catherine II, Paul, Alexander I and II, Nicholas, czars of Russia,

Louis XIV and XV of France, Napoleon Bonaparte and the sixty Mexican presidents who ruled over our western territory.

**O**NE would naturally think that the people of the East who had freed their land from British kings would be eager to rescue the West from worse rule. But no. Each step in the expansion of the United States, whether by war or purchase, has met with the heated opposition of the northeastern corner of the country. For a century and a quarter it has been a continuous fight between frontier and tidewater. Every time the country outgrew its clothes the old folks at home grumble at the expense of the new suit.

When Jefferson bought the Louisiana territory at three cents an acre it was denounced by the New Englanders as an unwarranted extravagance, a surreptitious subsidy to France. Those who own a Kansas or Iowa farm will appreciate the validity of this criticism. Gusnold declared that this "vast unmanageable extent threatens at no distant date the subversion of the Union." It was, on the contrary, the West that saved the Union.

William Cullen Bryant wrote his first volume of poetry, "The Embargo," in criticism of Jefferson for spending money in the purchase of worthless land in the West instead of using it to build up a big navy for the protection of eastern shipping against European oppression. Jefferson, being something of a scientist, had mentioned, in his message to Congress justifying the Louisiana Purchase, that the new territory contained interesting natural curiosities such as fossil bones and horned frogs. To a mind like Bryant's this seemed the height of absurdity, and he scores Jefferson in this lively fashion:

Go, wretch! resign the Presidential chair,  
Disclose thy secret measures, foul or fair;  
Go, search with curious eye for horned frogs  
Mid the wild waste of Louisianian bogs;  
Or where the Ohio rolls his turbid stream  
Dig for huge bones, thy glory and thy theme.

Lowell, like Bryant, was willing enough to write poetry in praise of the Revolutionary War, which freed his state from Great Britain, but when it was a question of freeing from Mexico territory a hundred times as great as Massachusetts he poured upon it the bitterest contempt. The "Biglow Papers" were written in the New England dialect, but this is unnecessary. Even if they had been put in plain English, any one could

have told where they came from, for they were written in the New England spirit.

When Seward bought Alaska at two cents an acre he was accused of giving a surreptitious subsidy to Russia. "What a price to pay for icebergs!" exclaimed his opponents. But Alaska, which cost us \$7,200,000, now produces wealth amounting to \$40,000,000 a year, thus paying more than 500 per cent annually on the investment.

SO generation after generation those who have tried to set bounds to the United States have been left looking as foolish as the courtiers of Canute, who thought to check the rising tide. The Independent, we are proud to say, has never been found in that position. We have sometimes criticized the manner in which the expansion of the United States was being accomplished. But we have always realized the benefits of such expansion both to the United States and to the acquired territory. And we have never ceased to hope and labor for the further expansion of our country.

We say this not in the way of a boast, but as a reply to the many friends of The Independent who have recently written in to remonstrate with us for certain editorials on the Mexican situation which seem to them inconsistent with what they are kind enough to call our "honorable record" or our "glorious past." As to this it is sufficient to say that while we admit that we may be wrong, we deny being inconsistent. If we are wrong now in putting faith in a greater America, we have been wrong for sixty-eight years, and we should hate to believe that.

The editorial which especially grieved our kind friends is that of July 3, "No Binding of Our Hands," in which we said:

It is conceivable that it may become our destiny to extend the borders of the United States to the south—not for our own aggrandizement or profit, but for the sake of the people of those troubled regions, for the sake of the peace and good order of the Western Hemisphere, of which we are in a real sense the rightful guardians. . . . At this critical moment there should be no Platt Amendment.

What is there objectionable about this? It is simply a warning against making unnecessary pledges which later we might find that we cannot or ought not to keep. To take an illustration from the other side of the world; England has just annexed Egypt. This is justifiable not merely as a war measure, but in the interests of the Egyptians and of the world at large. The country has never been so prosperous since the days of the Pharaohs as it has been since 1882 under British administration. The people have never had a more just and liberal government in the six thousand years of its history. The area of irrigable land has been greatly increased and railroads have been constructed. If the British should withdraw now and no other power take possession, the country, in spite of the good start it has now, would probably lapse into its former ruinous condition. But altho the British occupation has justified itself by its works, yet every Englishman, jealous for the honor of his country, must now regret that England is under treaty obligation never to fortify the Suez Canal or to exercise political control over Egypt, and that her statesmen have been in the past so profuse in their promises to evacuate the country.

Now in our Mexican War of 1848 there are some things that we are all sorry for, but we are all glad of

what was most condemned at the time, that a territory greater than the original thirteen states was rescued from misrule and neglect. If the United States should be compelled to intervene in Mexico—as we hope it will not—it is quite likely that the population of part of the occupied territory would want to remain under American administration. We have the best of evidence that many Mexicans prefer the United States to their own government, for 150,000 have left Mexico for the United States within the last eight years.

We are not advocating the conquest of Mexico or any part of it. On the contrary, we should greatly deplore it. We want Mexico to govern herself. But she must *govern* herself; not give way to anarchy and brigandage. We believe that Mexico is capable of self-government, and because we have that confidence in her people we look forward in glad anticipation to a day when Mexico shall voluntarily ask to be admitted to this union of self-governing states. If that day ever comes we hope that none will be so rude as to deny her admission as was the case when Texas and Hawaii first came knocking at the door.

The expansion of the United States to four times its original size has come more by voluntary annexation and purchase than by war, and we hope that all its further expansion will be done peaceably, and never by force. But to say that henceforth the United States shall cease growing seems to us as foolish as it is wicked. Uncle Sam has never been like Peter Pan, the boy who refused to grow up. American ideals are high enough and the American Constitution is wide enough to cover any race or clime. That we know, because it has been tried. So we look forward with hope and eagerness to a Greater United States and a Greater beyond that. We confess that we are unable to see how any patriotic American who loves his country and really believes in her institutions can fail to agree with us.

## THE RECOGNITION OF WOMEN'S RIGHTS

THE announcement of Premier Asquith, that "representatives of the women have presented to me a perfectly unanswerable case" for recognition in the new franchise bill, is not unexpected. It seems to be generally conceded by all parties that woman suffrage is bound to come as the natural result of the change in the status of woman effected by the war. The history of the movement in our own country was the same. Before the Civil War the aspirations of the women were ridiculed, but they did such splendid work, both in relief organizations and home industries, that after the war their property and educational disabilities began to be removed, and in 1869 they gained their political rights for the first time in Wyoming. In times of peace and high living there is a tendency to regard women as playthings rather than helpmates, so usually the most heated opposition to the recognition of woman's right to personal independence is found in the wealthy centers of population and among classes living in luxury. In pioneer communities and in times of privation the real worth of woman is better appreciated.

The foremost, tho by no means the strongest, argument against woman suffrage has always been the supposititious connection between ballots and bullets. Since women could not bear arms it was argued that they ought not to vote. The fact that all voters do not fight

and that fighting men have rarely been voters seemed to have no effect upon the minds of those who raised the objection. It is heard even in America, where almost the only class of men excluded from the polls is the regular army.

But the new mode of warfare has swept away whatever appearance of validity there was in this old anti argument. Lloyd George in his speeches has always insisted that the men making munitions were just as truly fighting the Germans as the men in the trenches. But "the men making munitions" now are largely women. There are over 600,000 women engaged in the British munition factories, practically enlisted in the service under the war department. It seems like a return to the days of our heroic grandmothers who cast bullets and loaded the muskets that the men fired thru the chinks of the log house at the Indians.

A few years ago, in the Parliamentary debate on the suffrage question, Mr. Asquith led the anti side against members of his own cabinet. The Prime Minister is one of the shrewdest politicians alive, and, since he sees that further opposition is hopeless, it is evident that the women's cause is practically won in England. Even in German papers, which formerly sneered at the idea of women voting, we now read that the participation of the German women in the service of the state will entitle them to the franchise in the future.

### SETTLE IT, AND BE JUST

THE primary and immediate purpose of the law, as the lawyers and the political philosophers tell us, is not to render justice but to settle disputes. The secondary and ideal purpose is to establish justice, and the closer approximation decisions make to justice the greater is the probability that settled disputes will stay settled.

These principles of common sense have been exemplified over and over in the history of the relations of the public, organized as the state, to private interests. The state in its early development interposed its good offices to terminate private feuds. Gradually it asserted its authority and compelled quarreling individuals to accept public adjudication. Then, slowly, the courts, the legislatures and the parliaments developed the common sense of justice and the rule of reason as rules of law for general application, and established a solid moral ground upon which to settle disputes.

From time to time these principles and methods have been extended to new fields of application, as the multiplication of human activities and the complication of human relationships in the increasing populations of the modern world have created new antagonisms of interest and new disputes. At the present moment we witness the beginnings of an assertion of the authority of the state to settle disputes between labor and capital, because, after years of increasing stress and waste and annoyance, these quarrels now begin to be intolerable to the general public.

This is the tremendous significance, as we indicated last week, of the interposition of Mayor Mitchel in the street railway strike in New York City, and it is the significance of the part that President Wilson has unhesitatingly taken in the struggle between the steam railway corporations and the organizations of railway employees. The public is fully awake to what these new initiatives mean, and the most responsible organs of

public opinion, including newspapers that have been regarded as of strong capitalistic bias, are saying that the public interest in the railroads is paramount. Neither the employees nor the owners of stocks and bonds as private property can now be given first consideration.

Steps such as have already been taken are never retraced in social evolution. An advance movement of public opinion upon questions of paramount public interest and authority never reverses itself. The relations of federal, state and municipal governments to labor and capital, from this time on, in this country, will be those of bolder and increasingly effective assertion of the right, duty and power of the state to prevent and settle disputes. If at first the settlements are of a rough and ready sort, and not ideally just, never mind. The settlement on some terms or other is the primary business.

But if things settled are to stay settled the approximation to justice must be close and it must progressively be made closer. This, too, the public sees, and a very serious effort will be made by intelligent men to understand the actual labor situation as it is today, and as from year to year it may develop. Because the effort will be sincere it will be useless for managers or brotherhoods to go on handing out the "bunk" that both have been manufacturing and distributing for years. The public, for example, will not accept without proof assertions from the managers' side that this or that concession is "impossible." It is remembered that the railroads most positively declared that steam heating and the abolition of car stoves were "impossible." They said that safety platforms and couplers on all trains were "impossible," and as for getting rid of link and pin couplings on freight trains that was "impossible" in the most absolute sense of the word. Yet not one of these things actually was impossible. State and federal governments said that they must be done, and they were done. The brotherhoods, on their part, have put out "bunk" in bales on the conditions indispensable to the maintenance of successful organization. The preposterous notion that the slackers, incompetents and worse must be protected by the unions against discipline and discharge is a glaring example.

By all means let governments now assert their authority and the paramount public interest in these grave matters. First, let them settle disputes with a vigor that will leave no doubt that they mean business. Let them, however, most assiduously study the possibilities of justice; and strive to attain it. The resulting benefits will reach beyond the economic gains. They will develop the general intelligence of the community, make for common sense, and quicken the public conscience.

### AN ANTI-CAMPAIGN?

AS a candidate Mr. Hughes has not yet come up to expectations. It is true that he has been received everywhere with large and enthusiastic audiences. That was to be expected. It is also true that he has exhibited upon the platform sufficient "pep" and "zing" to dispel the myth, sedulously being cultivated by his opponents, that he is cold and austere. The trouble is that he has not yet told the American people positively and concretely just what he proposes to do if elected President. It is not enough to demonstrate President Wilson's sins of omission and commission. The American people know them already. It is not enough to

promise to instil efficiency into the government service and to eliminate graft. Everybody knows Mr. Hughes will endeavor to do this.

The American people want to know what constructive program Mr. Hughes has to offer them. They demand of a leader a demonstration of leadership. There is a serious danger that the Republican candidate may become an "anti." And it never pays in this world to be an anti-anything.

### A SCHOLASTIC STRAW

THE straw vote taken in the summer school of Columbia University is of unusual interest, since all parts of the country were represented among the eight thousand students gathered there. On presidential preference Wilson led by 1216 to 848 for Hughes. The South and Central states went Democratic by large majorities; the New England and Middle Atlantic states went Republican by smaller majorities. Woman suffrage was carried by 1539 to 347; a remarkable showing, considering that more than a quarter of the students voting came from the South, where suffrage is commonly considered weak. Of the votes against the suffrage, 209 were cast by women and 138 by men. National prohibition received a majority in every state, the total vote being 1566 for and 362 against. On the question of military training in the public schools the vote was more evenly divided, 917 ballots reading "Yes" and 895 reading "No." Of those who took part in the election about three-sevenths were women, mostly school teachers.

### THE CHANNEL TUNNEL

THE war has brought out many instances of the lack of foresight on the part of those whose business it is to think things out for the nation, but one of the most striking was the refusal of the British military authorities to permit the construction of a tunnel connecting France and England. For many years before the war this had been urged in the interests of commerce. It was shown that England was losing trade because the German steamers landed passengers and goods directly on the continent, and the British people were paying more for food and raw material than if they had direct railroad connection. The plans were undeniably feasible and it was calculated that the project would pay a good profit. The French Government gave its approval and the tunnel would have been begun in 1907, but the British war department vetoed it on the ground that it would endanger the safety of England. That it would secure the safety of France, which they were pledged to protect, does not seem to have been

considered. It was pointed out that the tunnel could be arranged so that it could be blown up or inundated at a moment's notice, but even this did not reassure the "experts" and it was gravely argued that the resistance of France would be so weak that a German army might break thru to Calais before the floodgates could be opened.

The objections against the tunnel make most amusing reading in the light of later events. The estimated cost, \$80,000,000, is less than France and England are spending on the war in two days. If the tunnel had been constructed in 1914 the British army might have been got to Belgium before the fall of Namur, and the terrible retreat from Mons need not have taken place. The fleet would not have needed to guard the Channel so vigilantly, and it would no longer be necessary to keep two million men at home and out of the fight to guard against a possible German invasion. If the Germans had had more submarines and used them as ruthlessly as they did before the American protest, England might well have been isolated and starved out in a few months. But with the submarines undermined by a subterranean passage England would be secure from isolation so long as her continental ally held out, and France could receive reinforcements and supplies without danger of German interference. It is now decided that the Channel tunnel is to be constructed—after the war.

### SHALL WE BE PREPARED?

CONGRESS has at last completed its national defense program. Six hundred and thirty-seven million three hundred and forty-four thousand dollars—the largest amount ever authorized in time of peace by any nation on earth—is available next year for our army and navy. Thus the United States spends fifty million more on her navy than England—the greatest naval power on earth—did the year before the war, and only thirty-five million dollars less on her army than Germany—the greatest military power on earth—did the year before the war.

Our security-at-any-cost friends have thus got all they wanted and more than they had any reason to expect. We now look to them to make good their promises that if sufficient funds were provided the United States would be amply protected from any possible danger of war from abroad. We shall also expect them to keep their further promise that a large army and navy shall not promote an aggressive spirit of militarism among the American people.

We also have a right to demand that this enormous and unprecedented sum of money be expended honestly and in accordance with modern efficiency methods.

### WHICH SIDE AND WHY?

*Rarely if ever has there been a presidential campaign in which issues were so hazy or party lines so loosely drawn. Thousands of voters who ordinarily would have made up their mind which party to support as soon as the conventions were held or before are still at sea. It is then all the more important that those who have settled the question for themselves should make known their views. The speeches of the candidates and professional spellbinders or the editorials of the partisan and neutral press cannot be relied upon to give the actual inclinations of the electorate.*

*So we call for speeches from the floor. Can you give us in three sentences or so the chief reason for your choice of presidential candidate? If so, send it into us at once. A postal card will do. Letters of over a hundred words are likely to be so cut down as to be unrecognizable by their authors. Be frank about it and give us the real reason of your preference and the most convincing argument why your candidate should be elected. All replies must be in by September 11. A selection of them will be published two weeks after that date.*

# THE STORY OF THE WEEK

## The Threatened Railway Strike

President Wilson has devoted most of his time and energy thruout the entire week to an attempt to bring together the railroad managers and the representatives of the disaffected labor unions, but with no more success than delaying the coming of the threatened strike. Both sides give him credit for the earnestness of his efforts to restore industrial peace, but the owners seem still convinced that an obligatory eight-hour day and the high rate of overtime pay demanded by the unions would practically result in driving many of the railroad lines of the country into bankruptcy, while the workmen will listen to no proposal of arbitration or mediation unless the principle of the eight-hour day is first conceded. It is not impossible, however, that some compromise may yet be hit upon which will end the present deadlock.

On the whole, the chief obstacle to a settlement is the attitude of the railroad managers and owners, and this is because President Wilson in the course of his negotiations with the labor leaders exprest his willingness to concede their chief demand, that the eight-hour day be granted without any arbitration of that issue. He proposed that the railroads try the experiment of granting an eight-hour day to test whether there would in fact be the financial loss to the stockholders which the railroad managers have predicted. On the other hand, he suggested that, if the short time which the unions demanded were

granted to them, the unions should drop their demand for an increased rate of pay for overtime, and that the Interstate Commerce Commission might allow increased freight rates to the railroads if experience should prove that without such increase they could not continue business. The working of the proposed plan would be observed and reported upon by a special body of experts appointed by the President. These suggestions of Mr. Wilson were not unacceptable to the unionists, but the railroad managers protest that they involve an abandonment of the principle of arbitration, since the labor representatives have refused to submit their claims unreservedly to an impartial tribunal. They also point out, not without reason, that it will be difficult to get the Interstate Commerce Commission to consent to an adequate increase of freight rates, in view of the protest that such action would probably arouse among the shippers.

Louis W. Hill, president of the Great Northern, is the most bitter opponent of President Wilson's compromise proposals. "If every other railroad of the country should accept the eight-hour principle," he declared, "we would stand out alone against it." He pointed out that southern railroads which had attempted to operate on the eight-hour schedule were now in the hands of receivers and insisted that he would fight to the last before such a fate should overtake his road. The majority of railroad officials are more willing to negotiate than Mr. Hill and

still hope for a basis of agreement. The railroad employees also are not unanimous in their determination to resort to a general strike if they fail to gain their full demands without it. More than 35,000 employees of the Pennsylvania lines east of Pittsburg have petitioned to Congress against a strike and in favor of arbitration.

## The Mexican Situation

The definite settlement of our difficulties with the de facto government in Mexico by joint conference between representatives of the two nations has been delayed by the refusal of Justice Brandeis to serve as one of the three American representatives. It is said that Chief Justice White advised Mr. Brandeis that his time would be fully occupied by his Supreme Court duties and that he had better decline the appointment. Secretary Lane of the Interior is the only one of the American commissioners who has accepted office. President Wilson is reported to be having great difficulty in finding men of the requisite ability who are willing to take part in such a delicate and dubious mission. It is remembered that all previous efforts to settle the Mexican question thru diplomatic agents, such as the A B C mediation and John Lind's unofficial embassy, have been futile. The threatened railroad strike has induced the government to suspend its order to send 25,000 more men from the State militia camps to the border because of the difficulty of moving supplies for such a

large force with the principal railroad lines of the country not in effective operation. The militia now at the border are somewhat impatient to return to the duties of civil life, since there appears little prospect of new border raids that the regular army cannot handle. General Funston is said to have sent a telegram to Washington, the exact wording of which is unknown, suggesting the withdrawal of American troops now on Mexican soil.

The longing of the militia to leave the border has been intensified by the unfavorable climatic conditions which they have had to face. After enduring a hot summer they have suffered the rage of a Texas storm which flooded the camping ground at Brownsville and destroyed a large amount of stores and equipment. The storm struck the Texas coast from Corpus Christi to Harlingen, a front of some 200 miles, and then swept inland. Ten persons were drowned by the wreck of the steamer "Pilot Boy" off Port Aransas, and crops to the value of millions of dollars were ruined by the hurricane.

The Carranza government issued a decree on August 17 providing that foreigners intending to acquire land con-

cessions for mines, oil, timber or fisheries must renounce all their treaty privileges as citizens of a foreign nation and assume the same obligations as native Mexicans. This step is part of the well-known policy of the de facto government to Mexicanize all the industries of the country.

#### Progress of the Campaign

Mr. Hughes has an advantage over his rival for the presidency in that he is no longer tied down to the duties of the Supreme Court, whereas Mr. Wilson is forced to spend all of his time at Washington while there are so many difficult public questions that demand his presence. President Wilson's active part in the Democratic campaign will probably begin with the formal notification of his renomination for the presidency which will take place September 2 at Long Branch, New Jersey. After his speech on that occasion, he will accept invitations to speak in several parts of the country, but it is announced that he will make no formal tour. In the meantime the managers of the Democratic campaign are kept very busy in Mr. Wilson's behalf answering charges brought by Mr.

Hughes against the record of the administration, particularly in regard to alleged spoilsmanship in the matter of appointments to the Federal civil service.

Mr. Hughes has been very active during the week in stumping the states of the Pacific coast, and everywhere his personality seems to have made a very favorable impression. His speeches are, in part, attacks upon the record of the present administration as weak and erratic in diplomacy and shortsighted in domestic politics, and in part a plea for more efficient administration, a return to a really protective tariff and a wise regulation of industry upon a national scale. Perhaps his most interesting statement of opinion was his emphatic dec-

laration at Tacoma in favor of settling all international controversies by judicial means. He said in part:

I desire to have this nation have a part in the international organization of peace. We want frequent conferences among the nations to establish conditions, to establish principles of international law, to make new rules in new conditions, to enlarge the area of international agreement. We desire a world court by which controversies susceptible of judicial determination may be determined.

We desire to take our part in the great world-function of securing world-peace by having matters submitted in the first instance to councils of conciliation, to courts, for the purpose of judicial determination.

In California, Mr. Hughes had the misfortune to arrive in the midst of a bitter factional fight between the regular Republicans, who supported Mr. Taft for president in 1912, and the Progressives, who left the Republican party under the leadership of Governor Hiram Johnson in 1912 and returned to it with him this year. The ex-Progressives complain that the regulars are monopolizing all the nominations and declare that there will be a third state ticket in the field this fall unless a more generous attitude is adopted by the Republican leaders. Mr. Hughes thought to satisfy both factions by declaring his neutrality in the local fight, but this disappointed the followers of Governor Johnson, who hoped that he would publicly endorse their claims.

#### Wilson Vetoes Army Bill

President Wilson startled Congress and the country on August 18 by vetoing the army appropriation bill, which had been the chief item of the legislative program of the administration. The measure will be immediately reintroduced into the House of Representatives and forced thru the House and the Senate with the least possible delay in a form which the President can approve. The President's objection was not to the substance of the bill, which he appears to regard as a satisfactory solution of the problem of adequate preparedness, but to a "rider" slipped into the measure by Representative Hay, chairman of the Military Committee of the House, which exempted army officers on the retired list from army discipline and liability to trial by court martial. This provision was vigorously opposed by military authorities on the ground that it would be destructive of all discipline, since the retired officers to whom exemption was extended are liable to service in time of war. The veto message declares in part:

The purpose of the articles of war in times of peace is to bring about a uniformity in the application of military discipline which will make the entire organization coherent and effective and to engender a spirit of cooperation and proper subordination to authority which will in time of war instantly make the entire army a unit in its purpose of self sacrifice and devotion to duty in the national defense. These purposes cannot be accomplished if the retired officers, still a part of the military establishment, still relied upon to perform important duties, are excluded, upon retirement, from the wholesome and unifying effect of this subjection to a common discipline.

#### THE DESCENT OF MR. HUGHES

The candidate and Mrs. Hughes visited the Leonard Copper Mine at Butte. Both of them worked an air drill 2000 feet underground and had a beautiful time.

While the army appropriation bill is being made over to satisfy the President, the naval appropriation bill, calling for an expenditure of over three hundred and thirteen million dollars, has been made ready for his signature. The House of Representatives accepted the conference report without a roll-call on August 18. The real test vote came on the Senate amendments to the shipbuilding program, which provide for a total of 157 new ships of all classes, including four dreadnaughts and four battle cruisers. On August 15 the shipbuilding provisions of the bill passed the House of Representatives by a vote of 283 to 51. The fifty-one little navy men included thirty-five members of the Democratic party, fifteen Republicans and the single Socialist in the House, Representative London of New York. The geographical distribution of the vote is curious and significant. With the exception of London of New York, Bailey of Pennsylvania, and seven other Representatives from the States of Ohio, Indiana, Illinois, Michigan and Wisconsin, all of the fifty-one who stood out against the naval increase came from states west of the Mississippi or south of the Ohio.

Besides bringing the **Busy Congress** army and navy appropriation bills to their final passage and investigating the advantages of the proposed purchase of the Danish West Indies, Congress is considering many other measures that form a part of this year's legislative program. On August 18, the House of Representatives agreed to the child labor bill in the form in which it left the Senate. As it originally passed the House the measure forbade the interstate transportation only of those goods in the manufacture of which child labor had been actually employed; as amended in the Senate, it prohibits shipment from state to state of any products whatever from an establishment which does not conform to the restrictions of the new bill. The measure, which becomes effective one year after it receives the approval of the President, bars absolutely the products of any mine or quarry employing children under sixteen, and the products of any mill, cannery, workshop or factory employing children under fourteen or employing children under sixteen more than eight hours a day or six days a week or at night.

On August 16, the Senate passed the bill extending greater self-government to the Philippines by a vote of 37 to 22. The vote was a strictly party one, no Republicans supporting the measure. The Clarke amendment, which designated a definite date for the relinquishment of the islands, has been abandoned, but the preamble still states that the American control of the Philippines will end whenever a "stable government has been established" and the Republican opposition centered its attack on the language of the preamble rather than on the actual provisions of the bill. By the Philippines bill both houses

#### WAVING A GREETING TO PARALYSIS BABIES

Mothers and fathers and brothers and sisters of the patients of the poliomyelitis patients in the City Hospital, Newark, New Jersey, are allowed to stand on the lawn and wave to the sick youngsters—but sometimes somebody's youngster is not at the window

of the Philippine legislature will be elected by popular vote and the size of the electorate is increased.

The government shipping bill, which passed the Senate two days later, was also carried by a strict party vote of 38 to 21. The bill creates a shipping board of five commissioners appointed by the president. This board is authorized to build, purchase or charter vessels for use in ocean commerce, and to organize one or more corporations with a capital stock not exceeding \$50,000,000, of which stock the government would hold the majority, to operate merchant vessels. The expenses in which the shipping bill will involve the government are to be defrayed by the issue of Panama Canal bonds. On August 19, the Senate passed the workmen's compensation bill for federal employes, granting a relief of two-thirds of regular wages thruout disability, medical attendance, and benefit to dependents in case of death.

**The Battle of the Somme** On another page of this issue we give a sketch map and description of the battlefield which has been chosen by the Allies for the crucial trial of strength. It was there explained that the next step to be taken by the British would be the straightening of their line at the angles occupied the villages of Thiepval on the north and Guillemont on the east. To these points the Germans have held tenaciously, but during the week the British have made progress toward taking them. A push north of Pozières put them in possession of a high ridge between Pozières and Thiepval, which will enable them now to shell Thiepval from the east as well as from the west. The reason why Thiepval was not

taken weeks ago with the other villages round about was because it was protected on the south by an elaborate system of entrenchments known as the Leipzig Redoubt. The British have taken some of these trenches and their new advance brings on three sides of it.

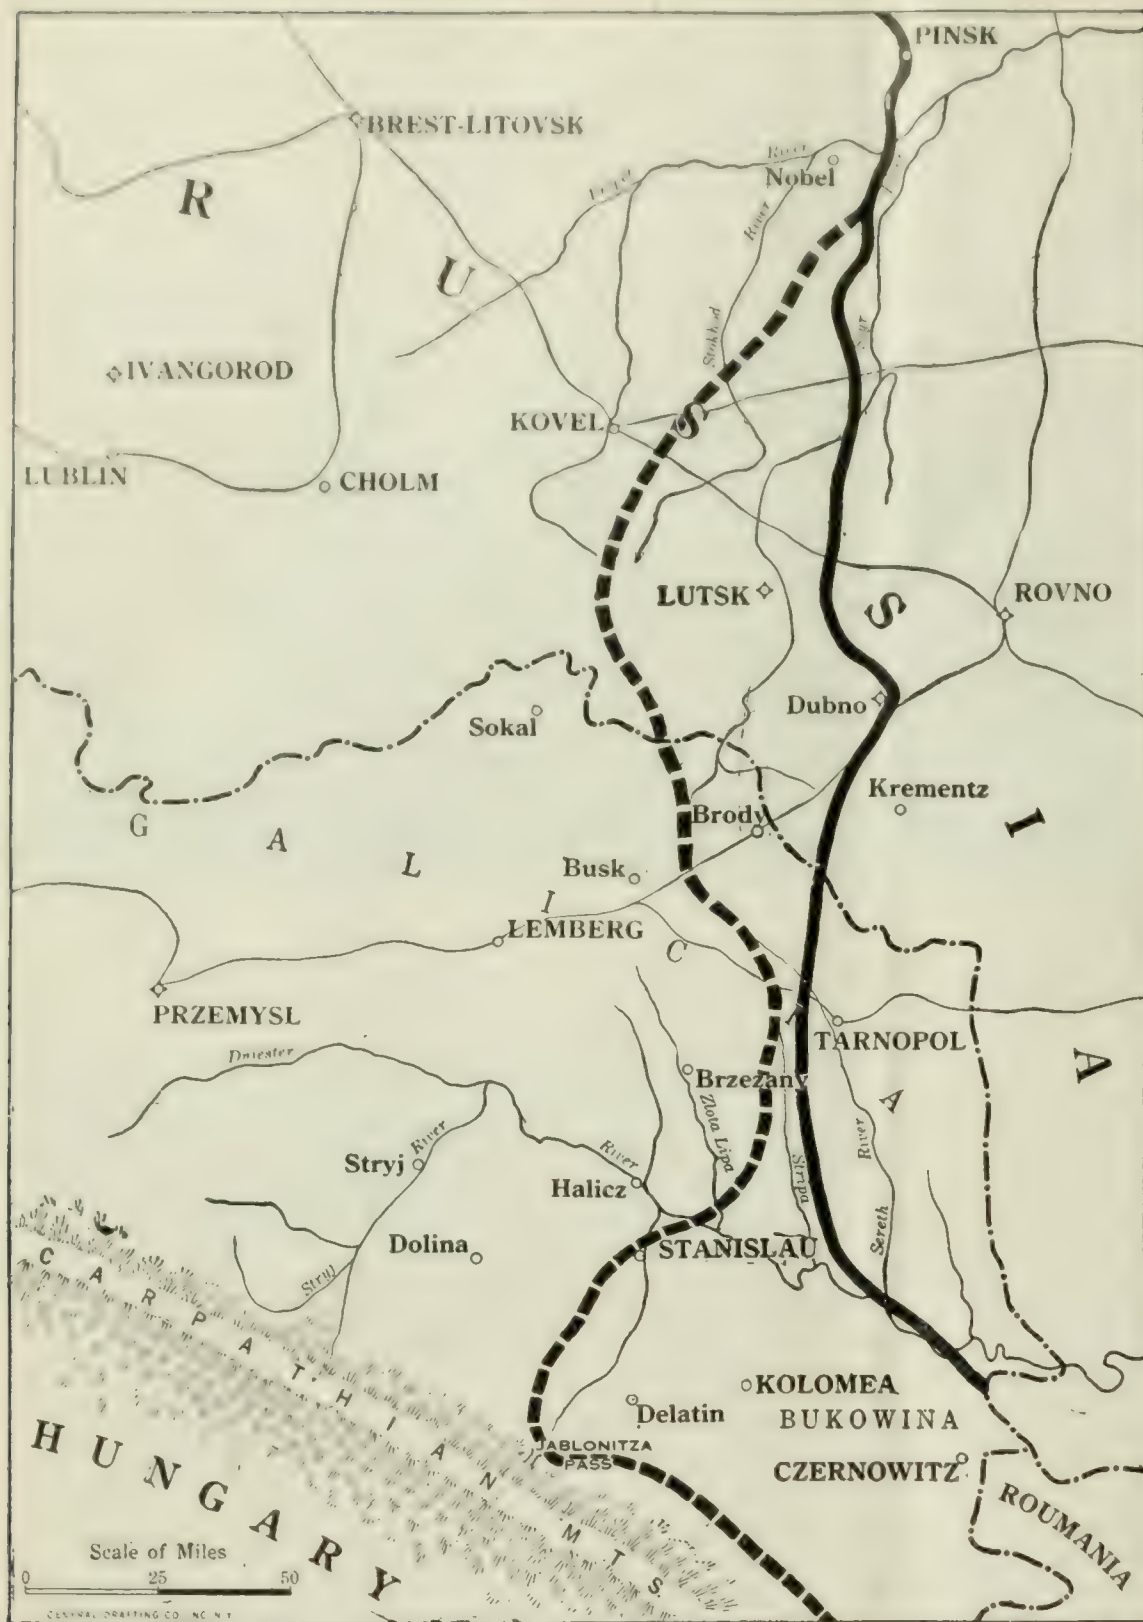

North of Martinpuich, on the road to Bapaume, there are a beet sugar refinery, an old stone mill and a brickyard, of no great value in themselves, yet several thousand men have given their lives for their possession and probably many thousand more will be sacrificed for the same object during the next few days.

The German reaction to the British advance in this sector was unusually slow in coming and when it came it was ineffective. Six times the German infantry charged the new British line north of Pozières, but without making a break in it.

On the 18th the French and British combined in a drive toward the east on both side of Hardecourt, the point where the two forces join. The gains were from 200 to 600 yards, bringing the British to Guillemont and the French to Maurepas. These villages lie respectively to the north and south of Combles, the most important town between Péronne and Bapaume. Each advance in this direction brings the French nearer to Péronne, on the north, from which side it may be attacked without the necessity of crossing the Somme River, which runs east of it.

The French counter attack in the Verdun region is making progress. The village of Fleury, on the hill next to Verdun, which the Germans took some time ago, has now been completely retaken by the French.

#### CLOSING IN ON LEMBERG

The dotted line marks the Russian front, and beyond that General Brusiloff has turned the Austrian line on the Dniester above Stanislaw. By crossing the Stokhod on the north and the Złota Lipa on the south, the Russians have broken thru the river barriers protecting Kovel and Lemberg. The capture of Jablonitza Pass in the Carpathian Mountains gives them access to Hungary. The solid line represents the Russian front before starting their great offensive the first of June.

#### The First Battle for Lemberg

History repeats itself, but rarely at such a short interval as in the present case. Two years ago on August 17 the Russians crossed the Galician border to take Lemberg and the Austrians fell back upon the same line of defense they now occupy, along the Złota Lipa River, forty miles east of the city. The same men are now in command of the Russian forces as were in 1914; Alexis Brusiloff and Nikolas Ruzsky. General Ruzsky led the Russian right, coming down the railroad from Brody. General Brusiloff led the left, coming up the Dniester River. Von Ruzsky has charge of the Riga sector, while Brusiloff has command in the south.

The position occupied by the Austrians, then and now, is naturally a strong one. It runs eight miles thru a

region of broken volcanic hills. Its right or southern end is protected by the Dniester River, its left or northern end is protected by the Bug River. It would be very hard to pierce such a position by a frontal attack, so Brusiloff is trying the same scheme that proved so successful before, that is, to cross the Złota Lipa River near where it empties into the Dniester and roll up the Austrian right. In 1914 this maneuver was carried out by the brilliant young Bulgarian general, Radko Dimitrieff, but he seems to have retired from active service in the Russian army since his country took the German side.

Brusiloff's army effected a crossing of the Złota Lipa on August 26, and his Cossacks, under Dimitrieff, made such a quick march northward that the Austrians were taken on the flank and thrown into confusion. Their retreat

was so hasty and disorderly that the Russians took 64,000 prisoners and trainloads of supplies. Lemberg was left undefended and a few days later the Russians entered the capital in triumph.

The question now is, how far will history repeat itself? Will the Austrians be able to hold the line in front of Lemberg any better than before? The odds against them are probably greater than ever. Both sides, it may be assumed, have profited equally by the experience gained in the two years of warfare. How they stand in the matter of munitions it is impossible to surmise.

General von Auffenberg, who as commander of the Austrian army was held responsible for the disastrous defeat before Lemberg, has been replaced by the redoubtable von Hindenburg, who has gone in person to Kovel to check the Russian advance. The line before Lemberg has been stiffened by the accession of as many German troops as can be spared from other parts of the Russian line or from the French front. The Kaiser himself has visited Kovel to inspire his troops by his presence. So it is evident that every effort is to be made to prevent a repetition of the humiliating rout of two years ago.

#### Russian Advance on Lemberg

The capital of Galicia is defended from attack from the southeast by three moats, the Sereth, the Stryk and the Złota Lipa rivers. These run southward to the Dniester River in parallel and about twenty miles apart. The Austrians as they fell back have tried to make a stand at each of these moat rivers in succession, but one by one the Russians have crossed them. The Austrians held on to the Stryk to the last moment and then had to retreat so rapidly that they had not time securely to establish themselves on the Złota Lipa River. They still hold the western bank of this river for most of its length, but lower down, near where it runs into the Dniester, the Russians have gained a footing on the right bank. What is still more threatening, they are working their way north from Stanislaw on the other side of the Dniester River. This brings them within a few miles of Halicz, on both sides of the Dniester, and if this town is taken the Russians will have a chance to advance up the railroad to Lemberg. As explained in the preceding paragraph, this was the way Lemberg was taken two years ago.

Besides this attempt of Brusiloff's to turn the right flank of the Austrian position, General Sakharoff is still attacking the center of the line and has made another advance along the railroad leading from Brody toward Lemberg.

Another Russian army is following up the railroad that leads from Stanislaw south thru the Carpathians into Hungary. This railroad finds its way thru the mountains by Jablonitza (or Jablonica) Pass, which the Russians

have just occupied. They now have a chance to invade Hungary from two sides, since they already have possession of the Bukovina on the east. But it is not probable that any serious attempt at an invasion of Hungary thru the Carpathians will be undertaken so late in the season.

What a serious blow has been inflicted upon the Austrians by General Brusiloff's offensive is shown by his report that from the time when the Russian movement was started on June 4 up to August 16 the four armies under his command have taken prisoner 7955 officers and 358,153 men. The munitions captured include 451 guns, 1396 machine guns and 363 mine and bomb throwers. The Austrian losses in killed and wounded we may assume to be much greater than the number taken prisoner. On the other hand, the Germans say that the Russian losses are frightful, and in proof of this they instance the 282nd Infantry Regiment as losing 7000 men since June.

### The Carso Campaign

Now that the Italians have taken Görz — or Gorizia, as we should begin to call it—they enter a new region, one famous in geology, the Karst or Carso. This is a high limestone plateau, bare rock, curiously carved and contorted, such as one sees among the foothills of our Rocky Mountains. The falling rain runs off it like a roof, except where it is caught in the cuplike depressions. In the bottom of some of these pseudo-craters soil has gathered in the course of ages, and here may be found grass, or even trees, but for the most part the Carso is devoid of vegetation. In ancient times this region was well wooded and now it has become the classic example of the evils of deforestation.

The Carso begins just beyond Gorizia and extends down behind Triest and on down the eastern shore of the Adriatic, thus forming a strong contrast with the western shore about Venice, which is low and sandy. The Italian armies on their way to Triest will have to pass over this barren plateau unless they follow the railroad that hugs the shore. At any rate, the Italians will have to occupy the Carso, since it dominates the shore, and it probably will not be an easy job to drive the Austrians from their rocky fastnesses.

It is reported that the Germans have taken charge of the defense of Triest. It is hardly likely that the Germans have any troops to spare for Triest, however great its extremity, so this probably means that German engineers have been sent there, as they were to Gallipoli to take charge of the work of fortifying the city for the anticipated siege. But Triest is more than twenty miles from Gorizia and until the Italians get Tolmino and secure a sufficient position on the Carso to protect their left flank they will not venture much further along the coast, even tho they may have the support of their fleet, which seems to have the

freedom of the Adriatic, while the Austrian fleet keeps to the shelter of Pola. The week has been spent in skirmishing among the hills on the edge of the Carso plateau southeast of Gorizia.

### The Macedonian Campaign

The French and British forces which have spent the winter and spring quietly in the Greek city of Salonica are now showing signs of movement and it is possible that an invasion of Serbia or Bulgaria is about to begin. Toward which frontier the attack will be directed is uncertain, because the Greek villages which the French are reported to have taken lie about Lake Doiran, in the corner where the Serbian, Bulgarian and Greek boundaries join. This corner it would be necessary to clear in any case before an advance was undertaken. The Allied troops about Salonica are supposed to number more than 500,000, including the Serbian army which escaped thru Albania and was reorganized on the island of Corfu. The Bulgars confronting them probably do not number half so many, and most of the Austrian and German troops which aided them in the conquest of Serbia have doubtless been withdrawn by this time to meet the Allied attack on the Somme or the Stokhod.

But the natural defenses of the Bulgarian and Serbian frontiers are so strong that the Bulgars may well be able to hold off a superior force. The only practicable entrance to Serbia is up the Vardar Valley, a narrow defile between steep mountains. Bulgaria is still better protected by the Belashitza Mountains, which form a continuous range over 3700 feet high. The only opening in this almost impassable barrier is the Rupel Defile, thru which the Struma River finds its way to the sea. But the Bulgars have taken possession of this pass with the tacit consent of King Constantine, so they are in a position to strike the right flank of the Allied army if it starts to move northward into the interior of Macedonia. They are now reported to have taken the offen-

### THE GREAT WAR

August 14—Chinese and Japanese soldiers clash in Manchuria over the arrest of a Japanese pedler. Russians occupy Jablonitza Pass in the Carpathians.

August 15—Italian dreadnought "Leonardo da Vinci" reported blown up in the harbor of Taranto with loss of 300 lives.

August 16—French take Greek towns about Lake Doiran, north of Salonica. Russians advance up the Dniester on both banks.

August 17—Portuguese army mobilized ready to join Allies. Belgians occupy eastern side of Lake Tanganyika, German East Africa.

August 18—French take Maurepas and British enter Guillemont, north of Somme.

August 19—British advance in Four-eaux Wood, Somme field. French take Fleury, Verdun field.

August 20—British light cruisers "Nottingham" and "Falmouth" sunk by German submarines in North Sea. Bulgars cross Mesta River toward Greece.

sive on the east by crossing the Mesta in the direction of the port of Kavala.

All of the Allied troops at Salonica are under the command of the French General Sarrail, formerly commandant of Verdun, but it appears that French, English and Serbs have each a separate section of the front, and that an Italian force has joined them.

Paul Thompson.

### READY FOR A BALKAN THRUST

Elaborate fortifications have been constructed about Salonica and to the north by the Allies in preparation for one more of the many simultaneous blows at the Teutonic allies. This is a tunnel to a gun shelter held just now by a colonial

# FROM STATE TO STATE

**ARKANSAS:** The cultivation of rice is becoming one of the most important industries of this state. Until a few years ago an extensive area lying north of the Arkansas River, east of the Ozark hills and west of Crowley's Ridge was supposed to be useless for agricultural purposes, but experiments in rice culture have met with such success that its population has been greatly augmented and its wealth increased. The industry now covers more than 100,000 acres (a small fraction of the area adapted to rice growing) and yields a crop of nearly four million bushels annually.

**CALIFORNIA:** In accordance with an act of the legislature the State Department of Engineering has gathered a large amount of data concerning the practicability of constructing canals to aid commerce in California. It is believed the state will adopt a policy of constructing ship and barge canals to interior points. According to the engineers, one of the most feasible propositions is a ship canal from Sacramento to the San Joaquin River, a distance of thirty-five miles. It is said that 80 per cent of the deciduous fruit raised in the state is grown within fifty miles of Sacramento, and that in the valley tributary to that city there are 3,000,000 acres susceptible of irrigation and intensive culture, of which only 23,000 acres are now irrigated.

**COLORADO:** As a means of giving an impetus to music in this state, a contest was recently held in Denver to find the best two voices, male and female, in Colorado. Nearly 500 singers competed. The voices of the two winners are to be recorded by a talking machine company, and from the sale of these records a fund is to be created for the musical education of worthy young singers of the state. The contest attracted wide attention; and, since it is to be continued as an annual affair, with elimination trials in all parts of the state, it is expected that interest in it will be sustained.

**DELAWARE:** Local option is not giving the satisfaction in Delaware that was expected of it. Of the three counties in the state, Kent and Sussex are "dry," while New Castle is "wet." Kent and Sussex say that the authorities of New Castle make no effort to restrict the shipment of liquors into their territory; and they threaten that unless the legislature enacts a stringent measure for preventing these shipments they will make a determined fight for statewide prohibition. On the other hand, the New Castle authorities say it is the duty of the "dry" counties to protect their own borders.

**IDAHO:** A theory has been advanced that the earthquake shocks recently felt in the neighborhood of Boise may be

due to the immense weight of water impounded by the Arrowrock Dam. The reservoir created by that dam, which is said to be the highest in the world, is estimated to contain not less than 200,000 acre feet of water. At 13,560 cubic feet to an acre foot and sixty-two and one-half pounds to a cubic foot of water, there are, according to this estimate, at least 544,500,000,000 pounds of water in the great artificial lake above Boise.

**ILLINOIS:** As a result of several largely attended and very enthusiastic mass meetings a permanent Public School League has been formed in Chicago for the purpose of breaking invisible government's grip on the public educational institutions of the city and of the state. The Woman's City Club and the Illinois State Federation of Labor are taking the lead. The claim is made that under recent rulings of the Chicago Board of Education the last safeguard of the civil service has been broken down and the merit system in the selection of public school teachers set aside under political, racial and religious pressure.

**INDIANA:** Under the leadership of Judge Henry Neil, of Oak Park, Illinois, an energetic campaign is being waged thruout Indiana on behalf of legislation for the preservation of homes and households by means of mothers' pensions. As a result of a series of meetings at which Judge Neil has pointed out the justice and good policy of pensioning mothers rather than devoting money to breaking up homes and building up an institution-bred citizenry, it is said that legislative candidates in many districts of this state are being put on record on this issue, and that it is extremely probable that the next legislature will pass a pension bill.

**MAINE:** The Cosmopolitan Club of Bath, aided by School Superintendent Flood and Instructor Corthell of the manual training department, has solved the 'question of interesting school boys in the preservation instead of the destruction of birds. Early in May the club organized a contest in the building of bird houses, open to boys of the seventh, eighth and ninth grades. A number of valuable prizes have now been awarded to the best of the young builders, and it is said that the interest of the boys of the town is so great that it would go hard with anybody whom they caught killing the birds.

**MARYLAND:** The Workmen's Compensation Act of this state provides that all employers subject to its provisions shall carry insurance, the purpose being to assure payments to injured employees. They may carry this in any of the approved insurance companies or in the State Accident Fund, which is virtually a

state insurance enterprise. Figures recently given out by the State Industrial Accident Commission show that the state fund has 1189 employer policy holders. This is about 10 per cent of the employers carrying insurance, tho twenty-eight insurance companies figure as competitors of the state institution.

**MASSACHUSETTS:** It may not be a complete refutation of the theory that large bodies move slowly, but it has taken the United States Government fifty-five years to consider reimbursing Massachusetts for money advanced by that state to equip troops and strengthen fortifications in 1861. The house committee on the Judiciary has actually made a report recommending the passage of a bill calling for an investigation of the matter by the Court of Claims and a report by that court to Congress.

**NEW JERSEY:** A new law which went into effect in this state July 1 provides that articles of food which have been held in cold storage for thirty days or more shall be conspicuously placarded and not advertised or represented as fresh. The law also requires cold storage plants to be licensed by the State Department of Health, to which they shall report monthly, instead of quarterly as heretofore, and simplifies some of the complicated conditions which in the past have made prosecutions difficult.

**NEW MEXICO:** Farmers thruout this state are making a determined fight on grasshoppers, which have appeared in large numbers this year. The State College, thru county agents, is giving aid by means of poisoned bait and hopperdozers. There are two types of hopperdozer machines, one requiring crude oil, kerosene or distillate, and costing from \$1 to \$2 a day for operation; the other, called the dry hopperdozer, is a trapping device with no operating expense. In actual field test last year one dry machine captured twenty bushels of grasshoppers in three hours.

**PENNSYLVANIA:** The special committee of the Pennsylvania Bar Association appointed to consider revision of the state penal laws has reported in favor of the abolition of county jails as places of confinement for convicted prisoners. It recommends in their stead the establishment of six industrial farms in appropriate sections of the state, where county misdemeanants can be provided with employment and compensation on the principle about to be put in force in the penitentiaries and reformatories under the Prison Labor Commission created by the last legislature.

**RHODE ISLAND:** Sixty per cent of the milk used in this state comes from Connecticut.

Since the people of Rhode Island need this milk and their state authorities have no power to prevent its adulteration before it crosses the line, appeal was recently made to the United States authorities for a rigid inspection. This has just been made, with the result that, tho no watered milk was found, analyses showed a bacterial count so high as to form a menace to public health. An effort is now being made to co-ordinate the work of the Rhode Island and Federal authorities to the end that dishonest dealers in Connecticut shall learn that it is cheaper to provide clean milk than to pay the price of prosecutions.

**SOUTH DAKOTA:** The recent pageant of Yankton, described as the largest and most significant dramatic entertainment ever given in this state, was organized by Joseph Mills Hanson. There were three episodes. The first, in verse, dealt with the dances, tribal rites, etc., of the Yankton Indians, with accompanying music evolved from Sioux themes. The second episode pictured the arrival of Pierre Durion, the first white resident of Dakota, in 1780; the council of Lewis and Clark with the Yanktons, the establishment of the first trading post, the purchase treaty with the Indians and their departure for the farther West. The last episode covered the salient features of local history since territorial government was established in 1861. Mr. Hanson has received a great deal of praise for his careful research and his skilful work.

**VIRGINIA:** Under the new oyster law which recently went into effect in this state public officials of trust may be removed for failure to enforce any statute. Police officials are therefore trying to enforce some almost forgotten statutes. One of these forbids work at any trade or calling on the Sabbath and makes it unlawful to perform any labor not absolutely necessary on that day. As a result hundreds of surprising arrests are being made. Among the most striking arraignments are those of a church organist, a florist who delivered flowers for the decoration of a fashionable church, a man who washed his automobile, another who supplied a motorist with gasoline, and the manager of a Turkish bath. In deciding what constitutes necessary labor the courts in different parts of the state disagree.

**WEST VIRGINIA:** The West Virginia Board of Trade has undertaken the task of raising a fund thru popular subscription in this state for perpetuating the memory of the late Henry Gassaway Davis in a practical way. The fund, which is forever to bear Mr. Davis' name, is to be devoted to making a complete survey of the state, the interest to be used year by year in keeping the survey up to date.

# THE WAGE-EARNER'S INNINGS

BY FREDERIC C. HOWE

COMMISSIONER OF IMMIGRATION AT THE PORT OF NEW YORK

**A** REMARKABLE, almost revolutionary, change is taking place in the relations of capital and labor as a result of the coincidence of expanding prosperity with the stoppage of immigration. For the first time in years there is a shortage, in some lines a famine, of labor. And there is practically no immigration to relieve the situation. For the four years immediately prior to the war the average annual immigration into the country was in the neighborhood of 1,200,000. About three-fourths of this came from southern and central Europe. It was for the most part unskilled labor, and the great bulk of it went directly to the cities and mining districts north of the Ohio and east of the Mississippi. As a result of immigration during the past twenty years over seventy per cent of the population of the industrial cities in this region is either foreign born or immediately descended from persons of foreign birth.

The war has almost stopped immigration. For the year ending June 30, 1915, the total immigration amounted to but 326,700. The outflow during the year was 204,074. The net addition to the population was but 122,626. For the year ending June 30, 1916, the total immigration was even smaller than that of the previous year. During this period 298,826 immigrant aliens were admitted to the country, while the outflow of emigrant aliens was 129,765. For the last two years immigration has been at a standstill. For the first time in a generation the inflow and the outflow have been nearly equal. We are no longer an immigrant country.

**T**HIS stoppage of immigration coincided with a rapid expansion in the demand for labor. The two million men normally out of employment have been largely absorbed. In the East and Middle West the demand is

in excess of the supply. Tens of thousands of men could find employment in skilled and unskilled work if they were to be had. The effect of this change in the relative power of employer and employee has altered the psychology of both. An employer of thousands of men in Philadelphia recently told me that his instructions were to keep his men at almost any price. Committees of business men have called at Ellis Island in real concern over present and future conditions. In one Western city a committee of employers has been formed to canvass the country for men, just as in ordinary times they canvass the country for orders.

**W**AGES have risen and continue to rise rapidly. In certain parts of the East and Central West unskilled labor is receiving from \$2.25 to \$3 a day, where a year ago it was receiving but from \$1.60 to \$1.75. In the iron and steel mills of western Pennsylvania and eastern Ohio wages of unskilled labor in December, 1915, were less than \$2 a day. Two ten per cent increases have been made in four months and wages are now \$2.43 for a ten-hour day. The men have since demanded an eight-hour day with the same pay. Skilled men are being paid premiums that would have been scouted as impossible two years ago.

There is a famine in servants. The men are well employed, and servant girls are marrying, staying at home, or finding positions in mills and factories. Hours of labor are being shortened to eight hours, and men familiar with the labor would assert that the eight-hour day will be nearly universal in five years' time if present conditions continue. Successful strikes are the order of the day; but far more frequent are the quiet settlements that are made to prevent a strike. Capital is reaping a harvest,

and the employer can afford the increase that is being made; while in addition he knows that if his plant shuts down he will have great difficulty finding men at any price when it opens again. There is no solidarity within the employers' associations when each member is competing with his associate for men.

Labor, too, has sensed the situation. The psychology of the industrial world has changed in the last twelve months. Labor is conscious of its strength. It has courage to fight. Even the foreigner who cannot speak our language has the feeling that in losing one job he is not jeopardizing his life. He knows that there is another job around the corner to be had for the asking. No longer does the man out of a job fix the wage of the man in a job. No longer does the man in the mill, the blast furnace or the packing house face a crowd of hungry men as he enters in the morning and leaves in the evening, waiting for a casual job of an hour or a day. The industrial bread line has disappeared, and with it the fear that dogs the thoughts of the worker and paralyzes even the union.

**S**UBSTANTIAL as have been the gains of the past few months, it is my opinion that the increase in wages has only begun. Men have been paying up their debts. They are accumulating a little savings. They are buying clothes and taking a breath. Moreover, the really effective influence making for higher wages has only begun to operate. That is the quiet strike of the individual worker who leaves one job for a better one. When this becomes operative, when the employer loses a few men today and a few more tomorrow, then he will begin to concern himself about wages and conditions. Then there will be wage increases for the purpose of holding men: a situation that has

THE UNSTEADY IMMIGRANT PROCESSION

The height of these figures is proportionate to the immigration totals of the last ten years. The black men represent immigrant aliens admitted; the white, emigrant aliens who left the country. The figures for the current year (ending June 30, 1916) are only 298,826 and 129,765, respectively, against 1914's totals of 1,212,486 and 303,332. In 1907, before the record of outgoing aliens was kept, immigration reached its high water mark, 1,285,349.

not existed for a generation. With this new psychology organized labor is likely to become more aggressive. It is taking advantage of the summer months. It will watch emergency contracts. We may expect a continuation of strikes and threats of strikes in great numbers.

This condition is likely to last for months or years unless the stoppage of the war should unsettle industrial conditions. But prosperity in America seems to be on a permanent basis, so far as many industries are concerned. Well-being is reaching to so many classes that secondary industries are beginning to feel the full effect of the prosperity. This will increase the demand for labor still further.

What is happening is not to be construed as a complete vindication of the contention that immigration is the cause of low wages. For the question is not nearly as simple as that. For many things modify the effect of immigration on the labor market.

But it does demonstrate that the wage scale is very sensitive to the law of demand and supply. When there are ten men seeking nine jobs, wages are low. When there are ten jobs seeking nine men, wages rise. For the greater part of a generation the former condition has prevailed. Now the situation is reversed. If it continues long enough, if labor becomes conscious of its power, if fear gives way to confidence and the assurance of steady employment, then we may expect labor to become more articulate in its demands than it has ever been before.

It is probable that the most substantial gain will be in the general shortening of the hours of labor. And this is a permanent gain. Advances in wages may be lost, but hours of labor are seldom lengthened, even when work becomes slack again. And with shorter hours, labor is likely to become articulate politically. It is likely to give more concern to its interests at Washington and in the

state legislature. Already there is a labor group in Congress of nearly twenty men that acts together on many questions. There is a quiet movement on foot to increase this delegation in the next Congress to fifty with the aim of holding the balance of power on economic and industrial questions. There is a possibility of a new group appearing in Congress like the labor group in the British Parliament. It will not be a Socialist group, but it will be class conscious. Should the next House of Representatives be evenly divided between the two old parties, such a group might lay the foundations for a real labor party in America: a party that thinks in terms of organized labor rather than socialism, and that makes common cause for advanced labor legislation, for government ownership of the natural monopolies, and for a program of social legislation like that of Germany and Great Britain.

*New York City.*

## A MINING TOWN—BUT DRY

**O**UT in Arizona is the first of the famous mushroom cities of the West to be raised on water alone. High and dry, five thousand feet above the level of the sea, surrounded by arid desert, in the prohibition state of Arizona, thrives the wonder city of Oatman, center of the greatest gold excitement in years.

Oatman may be said to be the most remarkable temperance exhibit ever produced. Absent are the saloon, the gambling hall and general lawlessness. Oatman has demonstrated what a really dry mining camp can do by turning back into shafts and tunnels the money usually passed over a bar.

Less than a year ago Oatman was a small camp with a population of about five hundred persons, most of whom were the employees of the Tom Reed and Gold Road mines. Both properties had been producing fortunes for years and still have millions of dollars of ore blocked out, but that fact had not been convincing enough to encourage outside capi-

tal risking development of surrounding prospects in an endeavor to reveal more paying ore bodies. One of the miners who worked in the Tom Reed was enterprising enough to form a company for the purpose of developing an adjoining property. His fellow-miners bought the stock he issued, contributing the money for the sinking of a five hundred foot shaft. Thus they discovered one of the largest and richest ore bodies that the world has ever known.

That started the stampede toward Oatman. There newcomers learned the real meaning of the first saloonless boom in all the history of gold mining. The first shares of stock sold

at just what two drinks would have cost, and, as there was no place to buy whisky, the stock had a big sale. The money that might have purchased liquor and poker chips was invested so wisely that, after the sensational rise from the price of two to the price of thirty-four drinks a share, there was no doubt that fortune was attained.

At present there are nearly two hundred companies in the field, and the town has a population of more than four thousand, which will probably double in the next six months. Additional strikes of ore have been made, and the possibilities of the camp appear more astonishing every

day. The miners of the district continue to be heavy investors and big winners. They enjoy the knowledge that it is their capital which has started wide development of a mining district now believed to be richer than the mother-lode of California. Money that might have gone for whisky went instead into work that presents the nation with a new treasure land.

A DRY MINING TOWN WHOSE POPULATION HAS INCREASED 1000 PER CENT IN A YEAR

# *The Independent-Harper's Weekly* NEWS-PICTORIAL

Two women pioneers—the first woman appointed to the Yale faculty, and the first woman to be nominated for Congress by one of the two great parties. Dr. Rhoda Erdmann, at the left, is to be a lecturer in biology in the graduate school at New Haven during the coming academic year. Dr. Erdmann is the daughter of a professor of history at Hamburg and received her education in Germany, coming to Yale as a research fellow in 1913. Dr. Eva Harding, of Topeka, Kansas, won at the primaries the Democratic nomination for Congress. She is making her campaign on a platform which includes anti-militarism, national prohibition and woman suffrage, mothers' and old age pensions, and a tariff for revenue only.

#### A BIRDSEYE VIEW OF THE BRITISH BATTLEFIELD

The British occupy the angle between the Somme and the Ancre rivers and are trying to drive the Germans back toward Bapaume. The dotted lines on the map show that they made considerable gains among the hills and woods north of the Somme during the first two weeks, but since then their progress has been slow. Just now they are engaged in driving the Germans out of the reentering angles in their line at Thiepval and Guillemont. The French hold the line running from Hardecourt south across the Somme. Their objective is the town of Péronne, which lies beyond the Somme and so below the right lower corner of this map.

## SEVEN WEEKS OF THE SOMME

ON the first day of July the Anglo-French offensive was launched. Preparations for it had been under way for nearly two years. As soon as the invasion had been checked on the Marne and it was realized that the French would not be able to drive the Germans back to their borders, Lord Kitchener started to raise an army to rescue France and Belgium. On June 5 last the cruiser that was carrying the Secretary for War to Russia was sunk off the Orkneys, but his task had been accomplished. More than four million men had been enlisted, trained and equipped. Half of them were in France ready for action as soon as General Joffre should call upon them.

Before the call came there had been considerable grumbling among the continental Allies at the apparent inactivity of the English. "Do they expect to fight this, like their former wars, by proxy?" began to be asked, and other French journals, more polite, reminded their gallant allies that they had promised to "begin the war" in the spring of 1915 and that the spring of 1916 had passed. But these sneers were doubtless unjustified, for it seems to have been decided in the joint conferences of the general staffs that Germany should be allowed to beat out her strength against the Verdun hills before the Anglo-French drive was started. After the German attack on Verdun had been carried on persistently for more than four months, and when it had reached the inner circle of forts about Verdun, the long-awaited signal was given and twenty miles of French and English soldiers sprang from their trenches to charge the German lines.

The attack was a great success at the start, as may be seen from the map. Within a fortnight both commanders were able to report an advance of two or three miles and the capture of over ten thousand prisoners apiece. The first and second lines of German defenses, consisting of a labyrinth of deep-dug trenches and bomb-proof shelters with barbed wire entanglements connecting the villages and woods, were in their possession, with more than a hundred heavy guns and a hundred and fifty machine guns.

But since then the advance of the Allies has been slow. In the last five weeks they have not gained as much ground as in the first five days, altho none of the fortifications now being fought for are so strong as those of the old German front. The counter-attacks are more frequent, and each village, hill or wood may change hands several times before it can be securely occupied.

At the present stage the battle of the Somme bears a disappointing resemblance to the German attack at Verdun and the French attack in Champagne. In both these cases the attacking party made their greatest gains at the beginning, and each succeeding week showed less and less advance, until finally it came to a standstill. Whether the Anglo-French attack on the Somme will peter out in the same way or will be carried forward with the same vigor as at first is the question of the day, perhaps the critical point that will decide the war. The modern method of entrenchment and the increased power of the artillery have enormously enhanced the strength of the defensive. It seems that a force well dug in and keeping up its com-

communications with the rear, so that it can receive ammunition and relief, can hold out indefinitely against greatly superior numbers. Ever since the opposing troops entrenched themselves in France and Belgium, in the fall of 1914, there has not been a case where either party has totally broken thru the enemy's lines or got the enemy on the run or cornered and captured an army. On the eastern front the fighting has been more of the old-fashioned sort, for the opposing forces are not so evenly matched. The Germans have been superior in artillery and organization, the Russians superior in numbers.

In the west the Germans also have been outnumbered and the odds against them has steadily increased, while in artillery the Allies are now a match for the Germans, and the factories of England and France can turn out ammunition faster than those of Germany. According to a German statement, the Allies are firing an average of a million shells a day on the Somme front. The Germans are more sparing of their ammunition, and concentrate their fire upon particular points instead of scattering it along the line.

For the numbers engaged we have to depend, of course, upon enemy estimates. According to a British authority the Germans had by July 18 brought up 115,000 men against the British front, and 72,000 against the French. A German general is quoted as saying that the Allied

forces outnumber the Germans six to one in the Somme sector. Certainly, if the British, as is supposed, have more than two million men in France, the number they are using is limited only by the maximum that can be conveniently employed on their nine-mile front.

The ground whereon the Great War is being decided is one of the famous battlefields of French history. It was called of old Santerre, the "bloody ground," but never was its name so true as today. In Péronne, now being bombarded by the French, two French kings have suffered imprisonment—Charles the Simple for six years in the tenth century and Louis XI for three days in the fifteenth century. The latter incident has more to do with today's events than it may seem to have, for King Louis was on a friendly visit to Charles the Bold of Burgundy at Péronne when he was imprisoned by his host on the charge of having stirred up the burghers of Liège to revolt, and he was not released until he had signed the Treaty of Péronne, which freed Flanders from France and so laid the foundation for independent Belgium. No human being dared remind King Louis of this humiliating experience, but, strange to say, the magpies took to singing "Péronne, Péronne" wherever he went until he recovered the town. To do this he was obliged to bribe the British to withdraw the army that had been sent in aid of the Duke of Burgundy. A payment of 75,000 crowns to

Edward IV and proportionate sums to his ministers won them over, and a match was arranged between Charles the dauphin and Edward's daughter. Neither king would trust the other—and with good reason—so the parents of the happy pair met on a bridge across the Somme with a strong wooden grill between them thru which they ventured to shake hands.

A few weeks ago the rulers of England and France met again upon the Somme, but this time there was no barrier of wood or distrust between them. The Kaiser was also on the Somme only a few miles away, but did not meet King George or President Poincaré.

Péronne, the Impregnable, which was a king's residence in the days of Clovis, is now a town of no importance. It had fewer than five thousand inhabitants before the war, and Bapaume, for which the British are fighting, was still smaller. Possibly Joffre selected for attack the Picardy section of the line because it did not involve the destruction of any of the great cities of France. Péronne before the war was ranked as a fortress of the third class, but this means little under the new conditions of warfare. In the first Franco-German war Péronne stood a bombardment of twelve days and then surrendered because of an outbreak of smallpox among the civil population.

In the present Franco-German war Péronne was lost and regained and lost again without much opposition. The British and French on their re-

treat from Mons tried to make a stand on the Péronne-Combles-Bapaume line, that is, the line they are now trying to reach. But General von Kluck swept on and Péronne was entered on August 25, 1914. The Germans looted the shops and burned down the Hotel de Ville, which contained a museum of irreplaceable relics. The rest of the town might have been destroyed if it had not been for a brave priest, Canon Caron, who did not flee with the city authorities, but remained behind to care for the wounded and to intercede with the conquerors. A week later the Germans retired from Péronne, but re-occupied it when they came to establish their permanent lines.

The strategic value of Péronne depends upon its situation just at the angle where the Somme River turns toward the east. The British lines used to extend clear down to the Somme, but now the French have been given the section between Hardecourt and the Somme, probably to enable them to approach Péronne along the north side of the Somme instead of having to cross the river directly in front of the town. The Somme runs thru swamps, but the ground north of it is high and hilly. This is the terrain occupied by the British and represented on the above map. The highest of the hills is No. 160, just north of Pozières, recently captured by the British. Langueval is almost as high, 154 meters, but from there the ground falls off toward the northeast, so the British will hereafter be fighting downhill.

The French on the right wing are holding about thirteen miles of front; the British on the left about nine. The French attack is conducted by General Fayolle under the direction of General Foch, commander of the Army Group. The British commander is General Haig, who replaced Sir John French last year.

Since Lord Kitchener's death there has been a change in the policy of the British censorship. Lord Kitchener was strongly opposed to allowing any correspondents at the front, so for the most part the press has been obliged to be content with the brief and dry despatches of the War Office supplemented at times by a descriptive article from the official "eyewitness." But when Lloyd George became Minister of War and the British offensive was started half a dozen good writers were allowed to go to the Somme and they have been sending in an abundance of copy telling of the marvellously complete preparations for the attack and giving personal incidents of the fighting from the men who return from the front.

The French, however, stick to the old system of official reticence so the ordinary reader is apt to get an exaggerated impression of the relative importance of the British share in the joint offensive. As a matter of fact, the French cover a longer front and have made greater gains than the British. The British have been fighting in more difficult country and against stronger forces and entrenchments.

## THE PATH TO PEACE

BY HENRY RUTGERS MARSHALL

**M**ORE than twenty centuries have passed since Euripides depicted the woes of "The Trojan Women"; yet their voices speak for us today as we hear the ghastly tales that reach our ears from the scenes of conflict in Europe and Asia. And as we listen our thought is turned to the pages of history, and to the myths that preceded history, where we find record of wars following wars in endless succession. As far back as we can read the story of human life we find man to have been a fighting animal, and such we find him today. Thus are we tempted to listen without dissent to those who tell us that war is a law of man's nature that has determined his advance, thru struggle, to what we, in our pride, call his greater civilization; and who ask us to abandon our hope of enduring

*Mr. Marshall is an architect who has lectured and written on philosophical and psychological subjects. He attempts here a simple statement of the fundamental psychological principles which may be said to underlie a world-wide movement to end war.—THE EDITOR.*

peace as a baseless dream. The law of man's nature thus discouragingly referred to is a law of inherited instinct. Instinctive activities are more or less immediate reactions to given stimuli reaching the individual from the world about him; activities that do not involve foresight, or judgment, or volitional guidance. If we bear this meaning in mind we are compelled to grant at once that the activities involved in war are fundamentally instinctive. The mere pres-

ence of a dangerous foe, the mere sight of one possessing what is ardently desired, leads the lower animal and the savage man alike to the combative attitude. As man has progressed the stimuli tending to initiate the instinctive reactions have become modified and elaborated, as have the modes of reaction in attack; but fundamentally they remain unchanged in the men of our own time. The characteristics that led to deadly contests between savage individuals have in the course of the ages been changed in their reference to relate to clan, and tribe, and national life; but the instincts that led to this strife have not been obliterated, nor even substantially curbed. We in our day flatter ourselves that we wage war in order to further policies which result from intelligent forethought and purpose; but as a mat-

ter of fact, we invent these policies in justification of warlike movements already begun, in order to give a semblance of reasonableness to acts which were unintelligently initiated, and which we begin to suspect were unworthy of rational beings.

But more serious than this is the fact that we very generally assume that enduring peace may be gained by rational appeals based on our recognition of the bitter suffering and economic disaster that war entails. The average man clings fondly to the notion that he is governed by reason; he fails to appreciate, as modern psychologists do, that an enormously huge proportion of his activities are instinctive. However, he tacitly acknowledges this fact, in one direction at least, in his ready acceptance of the view here considered that war is due to the nature of man, to the laws that govern his life activities. And his ever-recurring tendency to despair of enduring peace is due to the fact that he thinks of this law of Nature as an iron rule prest upon him from without.

But when we ask the careful student of science what he means when he speaks of a law of Nature he will tell us that law is no more than a term descriptive of the characteristics observed in Nature; and the philosophically minded biologist will tell us that if we describe warlike activities as expressions of a law of man's instinctive nature we are merely portraying the characteristics of man as he now exists; that if these characteristics change then the law of his nature must change.

THE question raised by the great crisis thru which we are passing is this. Granting that man inherits tendencies which lead him to fight when certain stimuli are given, is it true that he must always remain a fighting animal? Here we find ourselves turning again to the biologist for light; asking whether inherited instincts can be obliterated. He will tell us that nothing is more difficult to eradicate than an instinctive tendency; but will add that he finds in Nature cases where instinctive tendencies are curbed or inhibited, other cases where they cease to be operative because the stimuli are lacking which lead to their expression, and still other cases where their expression has come to yield another result than that which led to their establishment. In other words he tells us that there is no valid basis for the claim that because man is now a fighting animal he always must remain so.

Moreover, the emphasis on in-

stinctive activities in man's life must not lead us to overlook the equal significance of intelligent effort. Instinctive tendencies tell of the experience of the past. Our intelligent activities tell us of attempts to meet unusual situations in the present efforts looking to adaptation. But for intelligent control of our instinctive tendencies we could make no advance toward a better adjustment to the conditions of life. The effort to guide life by intelligence is in fact the certain sign that our instinctive tendencies are in process of modification.

The first indication in consciousness of any tendency to inhibit or modify any special mode of instinctive reaction must appear in the form of a revulsion from the results traceable to it, and in the appearance of an ideal of a change. The creation of an ideal of conduct thus indicates that we have discovered a means by which we may inhibit or modify the instinctive reactions to which this ideal refers. The very existence of the ideal of peace therefore indicates that we have actually initiated a process looking to the curbing of our fighting instincts, or to the modification of the reference of their expression, which gives hope that in the end the nature of man may be so changed that he can no longer be described as a fighting animal.

Thus we see the hollowness of the claim of those who would tell us that war is a necessity in the life of man; that we have no reason to hope for its disappearance; that our ideal of enduring peace is an idle dream. But the very facts which lead us to this conclusion force again upon our attention the tremendous power of those instinctive tendencies which we must modify if this ideal of peace is to be realized, and to ask whether we are keeping clearly before our minds the means necessary to bring about this modification. The fighting instinct is an endowment of the individual man; the activities of war have resulted from the collective use of his individualistic instinctive reactions to serve social needs in the past. If we are to gain the end we have in view we should surely aim, in the first place, to strike at the very roots of the evil; turning our attention to the modification of the fighting instincts as they appear in the individual.

We have already seen that instinctive tendencies may cease to be operative where the necessary stimuli are lacking. So we should endeavor to safeguard the individual from the stimuli which usually arouse and keep alive his fighting instincts. We are not awake to the

importance of this direction of effort. We encourage sport contests that involve physical contact under conditions that necessarily tend to arouse these instincts. We allow our boys to think there is merit in being ready to take umbrage and to fight their companions, forgetting that a higher degree of courage is involved where they restrain their fighting impulses under provocation, and face the risk of being called cowards. And in relation to the collective fighting of war, we see the same lack of appreciation of the direction our effort should take. We glorify the life of the soldier; we teach history as tho its one aim were to make record of battles, and of the heroes of battles. We lead our youth to look upon individualistic covetousness as a wrong; yet we overlook the fact that nationalized covetousness is the most potent incentive to war, and fail to teach that there is evil in national demands for commercial dominance or territorial expansion. We treat the nations as conscious beings and then applaud a patriotism which encourages national sentiments and national action that would be deemed dishonorable, dishonest, and preposterously aggressive if displayed by an individual man.

ALL this leads us to see that we cannot hope for the dawn of an enduring peace until we face the fact that we are dealing with instinctive traits that have become inimical to the interests of man as he has advanced; traits which we cannot hope to obliterate, but which nevertheless may be controlled, and must be controlled if we are to attain our end. We see that we have ground for optimism in relation to our ideal of peace; but we also see that if this ideal is to be realized we must avoid an irrational optimism that refuses to face the conditions we have to meet.

The lover of peace thus owes a deep debt to modern biological and psychological science. He is taught indeed that the advance of man toward the realization of the ideal of peace has been slow in the past, and bids fair to be less rapid in the future than he might wish. But, on the other hand, he is given new courage; for he sees that the rise and spread of the ideal of peace is itself an indication that man's instinctive combative tendencies are actually in process of modification. He has had pointed out to him the path he must traverse if he is to reach his goal, and is thus given full assurance that, if his courage does not fail, it will eventually be reached.

New York City

# AMY LOWELL—STORM-CENTER

BY LOUIS UNTERMAYER

AUTHOR OF "FIRST LOVE," "CHALLENGE" --- AND OTHER POETS"

IN spite of the reckless dramas of the printed page, most of our authors are a mild and complacent set of citizens. Few of them are fighters. And fewer still provoke a fight. Of this limited company, no individual has been more fought for, fought against and generally fought about than Amy Lowell. And she has been hailed and hooted not only in one role, but in the triple capacity of person, propagandist and poet. That quality which has aroused so much admiration and antagonism is most sharply pronounced in Miss Lowell as a human being. It is her amazing vitality coupled with her vigor of utterance; a force so clean-cut and compelling that it sweeps aside objections and objectors—one might almost include objects. She is a conversational dynamo, and the air about her crackles and snaps with energy. And it is this very positive quality that has caused so much opposition—especially among negative people; for nothing is so displeasing to the complacent, conservative mind as a person who tries to stir it up. And nothing is so characteristic of Miss Lowell as her power to arouse.

Which brings us to Miss Lowell, the propagandist. Here her manner is just as decisive and even more incisive. In "Six French Poets" she champions that remarkable group that embraces the massive Emile Verhaeren at one extreme and the perfumed and precious Albert Samain at the other. In her public lectures she has not only taken up the cudgels for *vers libre*, but she has wielded them lustily for all of the radicals in poetry, and for all the new tendencies in the other arts, as well.

Such an attitude has often been misconstrued as an attack on the past. Nothing, I believe, is further from Miss Lowell's purpose. The militant defenders of the past can afford to be less aggressive; antiquity is safely enshrined from depredations. No one can rob the sanctuary of Herick and Burns and Keats and the other idols. But the temple of Poetry is large; and the worshippers of the

established gods should not feel they are moved religiously whenever they rise to exclude and excoriate such figures as Robert Frost, James Oppenheim, Edgar Lee Masters and the imagists.

Copyright Moffett

AMY LOWELL

Miss Lowell is the sister of President Lowell of Harvard and Percival Lowell, the astronomer. James Russell Lowell belonged to another branch of the family, however

Mention of the imagists leads me abruptly to a consideration of Miss Lowell, the poet. Imagism was what might be called the second stage of her development. The first stage (*vide* "A Dome of Many Colored Glass," 1912) was a mixture of the imitative and exotic, with a noticeable trace of the freedom and color so pronounced in her later work. In "Sword Blades and Poppy Seeds" (1914) she attained a larger and more varied utterance with a definite indebtedness to the French *Symbolistes* and the Parnassian School. Out of these and other less literary influences grew her affinity with what is loosely called Imagism, with its insistence on "the creation of new rhythms," on "the absolute freedom in the choice of subject," on "the exact word" and finally on the production of poetry that is "hard and clear." It is not too much to say that Miss Lowell excelled most of the group in their own manner. And she has surpassed them, not only in form but in feeling; for she reinforced their strange and mobile cadences with an intensity which is too often lacking in the verse of these exceed-

ingly talented but often too cerebral poets.

A glance at her recent New England poems will show how far she has progressed beyond her imagist confrères. Even the three love-poems printed in this number (not her most representative work, by any means) suggest an emotion that impels the intellect, rather than an intellectual concept trying to urge an emotion. A more successful blend of fancy and feeling is revealed in that brilliant *tour-de-force* "An Opera House." This (with the lunch-room "study in whites") is part of a series called "Towns in Colour," which is an attempt to see the city, not as a market or a medley of people, but as a composition—an aural painting that takes sensations and sounds and breaks them into lines and dominant colors. That, of course, is a purely technical affair; the poetic value itself is more evident and needs no comment. For those unacquainted with Miss Lo-

well's other moods, with her skill in regular and rimed verse, her graceful whimsy and her humor, I would suggest reading "The Precinct. Rochester," "The Forsaken," "Music," "A Lady," and this brief "Epitaph of a Young Poet Who Died Before Having Achieved Success":

Beneath this sod lie the remains  
Of one who died of growing pains.

For Miss Lowell is, by all odds, the most vigorous and versatile of all the women poets in America today. Further than that, she has a pungency and power rare among present-day poets of either sex. Her work, as I have said elsewhere, mingles very curiously a delicate, feminine fantasy, a love of the dramatic and grotesque and a strong, almost square-shouldered virility. With all these and a sharp satire, she cuts thru common and tawdry surfaces to hidden and beautiful depths. It is a stirring achievement, and never so much so as when it rouses one to argument—in which it differs from the great majority of work that cannot rouse one at all.

New York City

# FIVE POEMS BY AMY LOWELL

## OPAL

*You are ice and fire,  
The touch of you burns my hands like snow.  
You are cold and flame.  
You are the crimson of amaryllis,  
The silver of moon-touched magnolias.  
When I am with you  
My heart is a frozen pond  
Gleaming with agitated torches.*

## THE CHARM

*I lay them before you,  
One, two, three silver pieces,  
And a copper piece  
Dulled with handling.  
The first will buy you a cake,  
The second a flower,  
The third a colored bead.  
The fourth will buy you nothing at all,  
Since it has a hole in it.  
I beg you, therefore,  
String it about your neck,  
At least it will remind you of my poverty.*

## MISE EN SCENE

*When I think of you, Beloved,  
I see a smooth and stately garden  
With parterres of gold and crimson tulips  
And bursting lilac leaves.  
There is a low-lipped basin in the midst,  
Where a statue of veined cream marble  
Perpetually pours water over her shoulder  
From a tilted urn.  
When the wind blows,  
The water-stream blows before it  
And spatters into the basin with a light tinkling,  
And your shawl—the color of red violets—  
Flares out behind you in great curves  
Like the swirling draperies of a painted Madonna.*

## AN OPERA HOUSE

*Within the gold square of the proscenium arch  
A curtain of orange velvet hangs in stiff folds.  
Its tassels jarring slightly when someone crosses the  
stage behind.  
Gold carring edges the balconies,  
Rims the boxes,  
Runs up and down fluted pillars.  
Little knife-stabs of gold  
Shine out whenever a box-door is opened,  
Gold clusters  
Flash in soft explosions  
On the blue darkness,  
Suck back to a point,  
And disappear.  
Hoops of gold  
Circle necks, wrists, fingers,  
Pierce ears,  
Poke on heads  
And fly up above them in colored sparkles.  
Gold!  
Gold!  
The opera house is a treasure box of gold.  
Gold in a broad smear across the orchestra pit:  
Gold of horns, trumpets, tubas.  
Gold—spun gold, twittering gold, snapping gold  
Of harps.*

*The conductor raises his baton,  
The brass blares out  
Crass, crude,  
Parvenu, fat, powerful,  
Golden.  
Rich as the fat, clapping hands in the boxes.  
Cymbals, gigantic, coin-shaped,  
Crash.  
The orange curtain parts  
And the prima-donna steps forward.  
One note,  
A drop: transparent, iridescent,  
A gold bubble,  
It floats . . . floats . . .  
And bursts against the lips of a bank-president  
In the grand tier.*

## THOMPSON'S LUNCH ROOM—GRAND CENTRAL STATION

### STUDY IN WHITES

*Wax-white—  
Floor, ceiling, walls.  
Ivory shadows  
Over the pavement  
Polished to cream surfaces  
By constant sweeping.  
The big room is colored like the petals  
Of a great magnolia,  
And has a patina  
Of flower bloom  
Which makes it shine dimly  
Under the electric lamps.  
Chairs are ranged in rows  
Like sepia seeds  
Waiting fulfilment.  
The chalk-white spot of a cook's cap  
Moves unglossily against the vaguely bright wall—  
Dull chalk-white striking the retina like a blow,  
Thru the wavering uncertainty of steam.  
Vitreous-white of glasses with green reflections,  
Ice-green carboys, shifting—greener, bluer—with the  
jar of moving water.  
Jagged green-white bowls of pressed glass  
Rearing snow-peaks of chipped sugar  
Above the lighthouse-shaped castors  
Of grey pepper, and grey-white salt.  
Grey-white placards: "Oyster Stew, Cornbeef Hash,  
Frankfurters":  
Marble slabs veined with words in meandering lines.  
Dropping on the white counter like horn notes  
Through a web of violins  
The flat yellow lights of oranges,  
The cube-red splashes of apples,  
In high plated épergnes.  
The electric clock jerks every half-minute:  
"Coming!—Past!"  
"Three beef-steaks and a chicken-pie,"  
Bawled through a slide while the clock jerks heavily.  
A man carries a china mug of coffee to a distant chair.  
Two rice puddings and a salmon salad  
Are pushed over the counter:  
The unfulfilled chairs open to receive them.  
A spoon falls upon the floor with the impact of metal  
striking stone,  
And the sound throws across the room  
Sharp, invisible zig-zags  
Of silver.*

## The Coming of The

### Specifications in Brief

**ENGINE**—Eight cylinder V-type, High-speed, High efficiency. **HORSE POWER**—S. A. E. rating 31.25; actual, more than 60. **COOLING**—Water. **RADIATOR**—Cadillac tubular and plate type. **IGNITION**—STARTING, LIGHTING—Cadillac-Delco, improved system. **LUBRICATION**—Automatic pressure feed. **CARBURETOR**—Cadillac. **CLUTCH**—Multiple disc, dry plate type. **TRANSMISSION**—Selective type sliding gear, three speeds forward and reverse. **AXLES**—Rear, Cadillac Timken, full floating; Timken bearings; Spiral type bevel driving gears. Front axle, drop forged, I beam. **DRIVE**—Tubular shaft. **BRAKES**—One internal and one external brake direct on wheels, 17 inch x 2½ inch drums. **STEERING GEAR**—Cadillac patented worm and worm gear sector type; 18-inch steering wheel, hinged to facilitate entrance. **FRAME**—Channel section. **WHEELS**—Wood, artillery type Timken bearings, fitted with demountable rims for straight side tires. **TIRES**—36" x 4½". **WHEEL-BASE**—125 and 132 inches. **TREAD**—56 inches (Option 61 inches.) **SPRINGS**—Front, semi-elliptic; rear, three-quarter platform. **CONTROL**—Center control. **GASOLINE SYSTEM**—Twenty gallon tank with gauge at rear. **STANDARD EQUIPMENT**—Cadillac "one-man" top; windshield; full lamp equipment; Gabriel Snubbers; Clock; Warner Autometer; Electric horn; Power tire pump; Foot rail; Robe rail; License tag holders; Tire carrier; Tool box with locks; Set of tools; Tire repair kit; Handy lamp. Universal key fitting tool box; ignition and lighting switch and tire lock.

**T**HERE is one thought in connection with the coming of this new Cadillac which we would like you to grasp at once.

With the advent of this car, the Cadillac "Eight" enters upon its third successive season, with no radical change in the basic principles of its design.

This is perhaps the first time such a thing has happened in motor car development, and you will quickly see its significance as applied to the Cadillac.

Quite properly, we believe, the World has always looked to the Cadillac Company for advanced ideas, improved practice and progressive principles.

The fact, therefore, that the Cadillac car has proven itself beyond the need of radical change, is, in itself, too impressive and too illuminating to call for comment.

It does not by any manner of means imply that the Cadillac process of refinement had come to a conclusion.

In a multitude of ways this is a better, finer Cadillac than any which has preceded it—the subject of unremitting research and scientific betterment in scores of details.

What the absence of radical change really means is that the underlying principles of Cadillac V-type eight-cylinder construction have been proven fundamentally sound by the performance of 31,000 cars.

CADILLAC MOTOR CAR CO.

# New Cadillac

It means that the Cadillac Company, with resources at its command probably superior to those possessed by any other motor car plant in the world, has arrived at the deliberate judgment that the *kind* of a motor car which it is now building represents a higher degree of efficiency than any other in existence.

It means that this is the joint judgment of every expert mind associated with this Company. It expresses the judgment of 31,000 owners who cannot conceive of any respect in which Cadillac principles could be changed to their advantage.

The new Cadillac conforms to the finest Cadillac traditions, down to the least and last of details—and it advances them still more closely toward perfection.

It is a beautiful car to look upon.

The superior riding qualities, with which you are familiar, are enhanced and intensified.

The driving ease of last year and the year before, accentuated by the longer wheelbase of the new car, is more marked than ever.

It is doubtful if motoring can give rise to a situation which can successfully challenge Cadillac powers.

The old feeling that it is folly to seek further—the old sense of security that the Cadillac represents the uttermost in a motor car—will come over you more strongly than ever.

We are serenely confident of the exhilaration and enthusiasm which you will experience on the occasion of your first ride in this unusual car.

## Body Styles and Prices

The Type-55 Cadillac will be available with a complete variety of body styles, as follows:—

Open cars, 125 inch wheelbase; Seven Passenger with disappearing auxiliary seats \$2080. Four Passenger Phaeton \$2080. Two Passenger Roadster with two passenger disappearing rumble seat \$2080. Four Passenger Close Coupled Roadster \$2080.

Convertible styles, 125 inch wheelbase; Seven Passenger with Cadillac body (Springfield type) \$2675. Four Passenger Victoria (convertible) \$2550.

Enclosed cars, 125 inch wheelbase; Four Passenger Coupe \$2800. Five Passenger Brougham \$2950.

Enclosed cars, 132 inch wheelbase; Seven Passenger Limousine \$3600. Seven Passenger Landaulet \$3750. Seven Passenger Imperial \$3750. Prices include standard equipment, F. O. B. Detroit. Prices are subject to advance without notice.

DETROIT - MICHIGAN

# PUTTING A SMILE IN THE WAR

## MORE OR LESS CHEERFUL CARTOONS FROM EUROPEAN PAPERS

M. J. M. in *Le Petit Miroir* (Paris)

### LOOKING ON THE GOOD SIDE

"The good thing about that shell is that now we can see what's going on at the neighbor's."—Here is a kindly comment on the little adjustments that follow in the train of the armies. It is a more whimsical optimism than that usually ascribed to imperturbable John Bull

A. E. Hume in *The Passing Show* (London)

### IN THESE HARD TIMES

"What for does Donald tak' sic lang strides noo o-days?" "He says it disna wear oot his shoes sae quick."—The traditionally canny and frugal Scotchman is the natural butt of the cartoonist who wants a humorous illustration of the wave of economy that is helping England to finance the war

A. E. Hume in *Today* (London)

### PREPARED

Dentist: "W—what the—who—" Muffled Voice: "I thought you said I was to come prepared for gas."—Not so far from plausibility now; if schoolboys and stay-at-homes have their gas masks, surely a soldier should always be ready

De Amsterdamer (Amsterdam)

### THE EUROPEAN QUADRILLE

"Take your places for the chain dance, please!" (English troops go to Russia, Russian to France, Japanese to England, French to Serbia, etc.)—The figure in the background, the master of ceremonies, looks like Papa Joffre, generally regarded as the Allies' generalissimo

F. Houd in *Le Petit Miroir* (Paris)

### THE OBLIGING MIRROR

Le Marquis von Gasterplott: "It's nonsense for our enemies to say that we're dying of hunger; I have quite an enviable embonpoint." The whole fabric of German self-confidence is quietly satirized by thus poking fun at the German claim that there is no danger of famine. The contrast in speed between this and the next cartoon is significant

Mucha (Moscow, late of Warsaw)

### A DIRE DILEMMA

German Michel: "O Gott!!! whatever can I do? If we eat the potatoes the pig will die of hunger, and if the pig eats the potatoes we shall die of hunger!!!"—Perhaps this is too grim to be classed as humorous, but its savage irony is the sort of thing the Allied public outside of France and England seems to like

## MICHIGAN—A STATE OF HEALTH

To give every person in the state who is physically run down an opportunity to come to a free clinic for examination—that is the plan of the Michigan State Board of Health in its somewhat unique tuberculosis survey. A year ago the Legislature appropriated \$100,000 for this purpose, and during the past eight months a small company of health workers, consisting of several physicians, twelve nurses, a speaker, a housing survey expert and a newspaper man, has been at work in eighteen of the eighty-three counties of the state, arousing the people of the state to an appreciation of the necessity of undergoing examination, holding clinics in centrally located places, visiting the homes of all persons diagnosed as tuberculous, giving lectures in schools, churches, before city councils, boards of supervisors, chambers of commerce, conducting surveys of housing conditions in the cities, contributing material about the campaign and the disease to the newspapers.

During these first eight months of the two-year survey nearly 8000 persons have presented themselves for examination, more than forty per cent of whom were found affected with tuberculosis. Figuring five to the family, the nurses have reached some 16,000 persons affected with the disease or directly exposed to it with information on how to take care of themselves.

The survey is being conducted county by county, and on May 31, 1917, when it closes, every county will have been visited. But the State Board of Health aims to make this campaign but a preliminary to a still more extensive one. It aims to arouse the people of the state during these first two years to a vivid realization of the necessity of making a fight against tuberculosis on a scale as large as the problem involved. The plan is to establish in each county a thoroly equipped full-time county health department, in each county a similar department for the city, so that eventually the state's public health organization will be as complete as its public school organization is at present, to organize open-air schools in all cities, to create in each county a system of free weekly clinics conducted by local physicians, an adequate visiting nurse service in each county and city, to have at least one tuberculosis sanatorium built for every 100,000 of the population, to encourage the manufacturers of the state to make their industries safe, and to take other steps for the elimination and prevention of the disease.

An ambitious program; but the result of the work of the past eight months makes Michigan believe that it can be carried out during the next decade. Michigan today has the second lowest tuberculosis death rate in the registered area of the United States. She is ambitious to have the lowest death rate from this disease; and still more important, she is laudably anxious to lead the nation in all public health work.

## The Alert

Are Natural  
Oat Lovers

They Crave  
Animating Foods

One who expends vitality craves something to replace it. So active people—and active races—are the great oat consumers.

And youth is the oat-food time.

But youth lasts longer than it used to. And the use of oat-food is vastly increasing—at least the use of Quaker Oats.

The oat is the energy-creator.

It is the great phosphorus-supplier.

It is the perfect food, supplying all we need save fat. And cream adds that.

In right form—as in Quaker Oats—it is Nature's most delightful cereal.

# Quaker Oats

*The Cream of this Vim-Food*

Quaker Oats attained its fame by making oats doubly-delicious.

All the oats used to go in an oat food—the puny and plump together.

We make a rigid selection. Two-thirds of the oats as they come to us are considered unfit for Quaker.

This brand is made of the rich, plump grains. Thus it stands unique in flavor and aroma.

Quaker Oats is oat food made exquisite. In Europe and Asia it is the food of the palaces. In America all folks can afford it, for it costs no extra price.

Ask and you'll get it.

**10c and 25c per package**  
**Except in Far West and South**

## A \$2.50 Aluminum Cooker

Made to our order, extra large and heavy, to cook Quaker Oats in the ideal way. Send us our trademark—the picture of the Quaker—cut from the fronts of five Quaker Oat packages, or an affidavit showing the purchase of five packages of Quaker Oats. Send to us with the trademark or affidavit, and this ideal cooker will be sent to you by parcel post prepaid. We require the trademark or affidavit as assurance that you are a user of Quaker Oats. The trademarks have no redemption value. This offer applies to United States and Canada. We supply only one cooker to a family.

Address The Quaker Oats Co., 1708 Railway Exchange, Chicago

(C-62)

# THE SAGE OF POTATO HILL

## ED. HOWE'S THOUGHTS ON MEN, WOMEN & THE WORLD

THE Germans might have known that they could not avoid teaching their rivals the art of fighting. A particularly capable man in business may have things his own way for a time, but soon others learn his secrets, and they proceed to equal him. In nearly every town in this country where there is a particularly capable factory or business house, a rival has been built up beside it, and in many cases the imitation is more vigorous and prosperous than the original.

Whoever violates the law must run the risk of punishment. If there is no punishment, such violations are encouraged. It is not just that I am ordered about by a policeman, or bow to a judge, if another man may take away a policeman's club, or mash the hat of a judge. If rioting is forgiven when indulged in by a particular class of men, then we should see that another form of it is forgiven: rioting of honest citizens who attack rioters. Every man knows he must guard his private rights; he should finally learn that he must also guard his public rights.

The writing men, particularly those of an independent turn, object to the "Puritan Spirit." When parents insist on their children being brought up according to good rules, that is the Puritan Spirit. It is the Puritan Spirit that insists upon rigid morality. It is to be regretted that the Puritan Spirit does not assert itself oftener than it does; we can easily forgive its excesses.

I have never been able to understand why the filthy story is popular. I avoid such things as I do an offensive pile of offal. Some of the best literature cannot be read because of its filth; some noted names in literature have little to their credit that is clean. I want to get dirt of every kind into the sewer as soon as possible, and not preserve it in books, pictures or tradition.

Most people believe the religious liberty of today came thru what we call the Reformation. If the religious liberty we enjoy is worthy and desirable, to the freethinkers is mainly due the credit. They had the assistance of the Catholics and Protestants, who attacked the doctrine of each other, but Voltaire is actually a greater hero of religious liberty than Luther.

I lately called at a home where I believe I was welcome, and where I had been invited, but was compelled to leave speedily because of the bad behavior of a child, which made so much noise that conversation was impossible; and, in

addition, kicked me as well as his parents. If you are bringing up your children properly, I congratulate you.

Several of my acquaintances, people of reasonable intelligence, have formed a "Fools' Club," and are investigating their follies. I have been invited to join, and think I shall accept. Might I have avoided some of the follies which harmed me yesterday? Would not a candid investigation of my follies be more beneficial to me than an investigation of the genius of Shakespeare?

Those of us who have "trade" and votes are cruelly imposed upon by tradesmen and candidates. Be a good shopper. You must constantly be on the defensive; politely but firmly. You have certain things coming to you by right; it is your fault if you do not get them. It is not discreditable to the people to say they must be watched; they were made that way.

When a man shows signs of being a great genius, I sometimes think he should either be put in jail, or compelled to give bond to keep the peace; for a great genius often seems to be as much of a pervert, and as dangerous, as a man who hasn't half sense.

I don't need to attend a Fourth of July celebration in order to remember the blessings of freedom or the duty of patriotism; indeed, the usual Fourth of July celebration rather disgusts me because of the careless crowd, the dust, the noise, and the speaking.

The art masterpieces were produced centuries ago; the great books are old books, as are the great orations. But the greatest business men are living today; the commercial chiefs of old were amateurs compared with their competitors today.

I hope I am not vicious, but I found pleasure today in hearing a moving picture patron say Willie Collier is funnier than Charley Chaplin. I have nothing whatever against Mr. Chaplin, but like to see the big prizes passed around.

American flour has been made so fine and white that it is not as good as a coarser and darker flour would be. We have, in short, improved flour too much. In many other things we smart Yankees are too smart.

I don't care for gossip; I rejoice that thousands of indiscreet persons escape

without my hearing of their indiscretions, providing they have been sufficiently scared to make them more careful in future.

"Men," I heard a woman say lately, "all dress in uniform." And I have been thinking of the saying ever since. My clothes are strangely like the clothes of all other men.

What is the best piece of writing you ever read? I give this distinction to Macaulay's essay on Bertrand Berere, the greatest scoundrel of the Reign of Terror in France.

If we are able to avoid an injustice, and do not, we should submit to it quietly rather than acknowledge our cowardice and lack of efficiency.

The Armageddon stunt is justifiable for those who make a profit out of it; the fault lies with us followers who take the battle seriously.

This much may be said about the enthusiasm of people: They praise friends as lavishly and untruthfully as they abuse enemies.

Full-size compliments are often paid women, but men rarely hear them. A compliment for a man usually has a sting with it.

When about half the people believe one thing, and the other half another, it is usually safe to accept either opinion.

I sometimes think that while I have very bad luck in getting into trouble, I have fairly good luck in getting out.

I object to performing the Indignant Citizen act to assist a politician who will be as extravagant as his opponent.

The leaders in every false theory make a profit, while followers lose their time and their money.

About the only amusement old people have is to listen to the young compliment each other.

Hero worship is a bad habit; an overgrown soul is one of the worst of diseases.

Don't borrow money and believe the man you owe will forget about it.

Some men write only when they have something to grumble about.

## The New Books

### A BRITISH REPUBLICAN

H. G. Wells has spent half his life writing historical novels about the future, and the other half as a scientist trying to forecast the trend of social forces; in either case the day he lives in is always tomorrow. No one will be surprised, therefore, that his latest book is called *What Is Coming?* and that its subject matter is not the usual discussion of the causes of the Great War but a consideration of its probable effects. Few are so well equipt for the task. Mr. Wells is not only a professional student of the future but a very clear-sighted observer of the world about him; one of the few eminent European thinkers whom the war has left wholly sane. It is true that he does not write as a neutral; he is ardently on the side of the British and their allies, but he cautions his readers that "if we are wise we shall treat no man and no class—and for the matter of that no nation—as either steadfastly malignant or steadfastly disinterested." He admires the Germans not only for their constructive statesmanship in peace, but also for the quickness with which they comprehended the changed character of war and abandoned fighting in open battle for the strategy foretold by Bloch more than fifteen years ago, the war of entrenchment and indefinite deadlock. "The Germany of the Hohenzollerns had its mortal wound at the Marne; the Germany we fight today is the Germany of Krupp and Ostwald."

But Mr. Wells sides with the Allied powers as a good republican; he will admit Germany to full fellowship with other civilized nations only when freed from the autocracy which tends forever to drag her into mad imperialist adventures. His own political ideal "is the United States of the World, a union of States whose state boundaries are determined by what I have defined as the natural map of mankind." Everything, however hallowed by age, which conflicts with this desirable consummation must be destroyed. He complains most bitterly of the legal complexities and intertangled "rights" which prevent things from being done in "the clearest, cleanest, least wasteful, most thorough manner"; indeed he is as intolerant of the tradition-loving legal profession of Great Britain as he is of the Hohenzollerns. The war itself, in his opinion, will have one incidental good effect, however it may result, for in the presence of such a mighty crisis the antiquated and inefficient methods which contented the British people in the easy days of peace will no longer be possible. The end of the war will find

### The Value of Sanatogen to the Man who Works His Brain

"Without albumen, no life; without phosphorus, no thought"—so runs a famous saying.

True, the healthy body gets enough albumen and phosphorus from the daily food, but an overtaxed brain and nervous system will run short of these vital substances because the demand outruns the normal supply. Then we have fatigue, depression—and worse, if nothing be done.

It is then that Sanatogen is of splendid aid. Combining purest albumen and organic phosphorus in chemical union, Sanatogen takes to the fundamental sources of nervous and mental efficiency just the elements needed. It supplies these elements quickly and without strain upon digestion, giving the depleted cells real nutriment, real sustenance and no false stimulation.

The result of this is well epitomized by Sir Gilbert Parker when he writes, "Sanatogen to my mind is a true food- tonic, giving fresh vigor to the overworked body and mind." And by Arnold Bennett, who tersely reports, "The effect of Sanatogen upon the nervous system is simply wonderful."

It is good to remember that the medical profession has set the seal of approval upon the value of Sanatogen—no less than 21,000 doctors have written letters endorsing its value.

Should not the knowledge of these facts create the conviction that *Sanatogen will also help you?*

Grand Prize, International Congress of Medicine, London, 1913.

Sanatogen is sold by good druggists everywhere, in sizes from \$1.00 up

# Sanatogen

ENDORSED BY OVER 21,000 PHYSICIANS

**FREE

OFFER**

On request we will send a 25-gram Sample Package of Sanatogen, also Richard Le Gallienne's booklet, "The Art of Living," telling of Sanatogen's kindly help.

Address The Bauer Chemical Co., 26 R Irving Place, New York.

### The Independent Investor's Service

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

## TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

## The GLEN SPRINGS

WATKINS, N. Y.  
ON SENECA LAKE  
Wm. E. Laflingwell, Pres.  
OPEN ALL THE YEAR

A Mineral Springs HEALTH RESORT and HOTEL, known as THE AMERICAN NAUHEIM. In Private Park with miles of graded walks for Oertel hill climbing. On the Southern Tier Highway, all macadam. Attractive and well-kept Golf Course, Miniature Golf, Clock Golf, Tennis, Motoring.

THE ONLY PLACE IN AMERICA WHERE THE NAUHEIM BATHS ARE GIVEN WITH A NATURAL BRINE

**THE BATHS** are directly connected with the Hotel and complete in all appointments for Hydrotherapy, Electrotherapy and Mechanotherapy. FOUR MINERAL SPRINGS. The Bathing Springs are similar to the waters of Bad Nauheim, in the proportions of Calcium Chloride and Sodium Chloride, but are about five times as strong. The Radium Emanation from Brine Spring No. 1 averages 68 Mache Units per liter of water and is due to Radium Salts in solution.

Unsurpassed advantages for the treatment of Heart, Circulatory, Kidney, Nutritional and Nervous Disorders; Rheumatism, Gout and Obesity.

### Sanford Hall, est. 1841

Private Hospital  
For Mental and Nervous Diseases

Comfortable, homelike surroundings; modern methods of treatment; competent nurses. 15 acres of lawn, grove, flower and vegetable gardens. Food the best. Write for booklet.

Sanford Hall, Flushing, New York

Europe converted to science and socialism.

One of the most interesting things in the book is the author's confident prediction of the future greatness of Russia, a country with which he is well acquainted by study and travel. While France is recovering from the losses of the war, while Germany is still sulking over her defeat, and Great Britain is trying to make up her mind "whether she is a 'Crowned Republic' or a Germanic monarchy," Russia and the United States of America may step to the front.

The United States constitutes a modern country, a country on an unprecedented scale, being organized from the very beginning on modern lines. There is only one other such country upon the planet, and that, curiously enough, is parallel in climate, size and position: Russia in Asia. Even Russia in Europe belongs rather to the newness that is American than to the tradition that is European; Harvard was founded more than half a century before Petrograd.

Because of the gigantic possibilities of Russia and the rapid progress to be expected so soon as she acquires a decent government, Mr. Wells urges all Americans and Englishmen to become acquainted with Russia and, if possible, to learn the language. He advises his countrymen, mindful of their imperial responsibilities, to "place Russian and Hindustani upon at least an equal footing with Greek in all university and competitive examinations."

What Is Coming? by H. G. Wells. Macmillan. \$1.50.

### THE BUSINESS OF THE BOSS

The fashion of blaming the economic inefficiency of the nation upon the ignorance and selfishness of the "working classes" seems to be dying out, for the leaders in the scientific management movement are giving their attention to the ignorance and shortsightedness (it is not selfishness when you find it in people of power and authority) of the industrial autocrats. In the Page Lectures of 1915, delivered before the seniors of the Sheffield Scientific School—young men in training for industrial management—Mr. H. L. Gantt challenges the authority of the mediocrities who are thrown into positions of power thru circumstances that bear no relations whatever to their native capacity or training. The qualifications for leadership are considered in terms that place much more responsibility of a moral or social nature upon the managers than we have been accustomed to expect.

The responsibility to the workers for adequate instruction, for the standardization of work, for opportunity to earn suitable pay, for healthful surroundings, etc., are discussed primarily as problems of efficient management, altho, as every one now knows, the right thing "pays." There is an illuminating chapter on "production and sales," in which the bookkeeping method of measuring "efficiency" is contrasted with more modern views. Altho these lectures are address to those who are to take part in *Industrial Management*, they contain a great deal of value to

those who are being managed—indeed, it is the bias toward democracy and the rights of the workers that makes Mr. Gantt's views particularly significant.

*Industrial Management*, by H. L. Gantt. Yale Univ. Press. \$1.

### THE THREE F'S

As the American child must master the three R's, and the German girl the three K's prescribed by the Kaiser, the English public school boy devotes his time to the three F's—flogging, fighting and fagging—at least that is the impression gained from works of fiction, from "Tom Brown at Rugby" to the latest story of English school life.

The Great War reflected in the life of an English school gives Eden Phillpotts an opportunity to write in *The Human Boy and the War* one of the most refreshing books of the year. The boys of Merivale school are natural, mischievous and lovable. The heart of a boy is a mysterious and shadowy covert for his feelings and not every author has the gift of sympathetic interpretation of its elusive moods. Mr. Phillpotts knows his boys and we live thru their eager interest in the war with them. There is less of slang and swearing than in *David Blaize*, by E. F. Benson, altho here, too, we have fine types of English lads, with their fights and friendships, cricket and "footer," work and dreams. But, as always, in reading descriptions of public schools in England, we wonder why boys should be beaten by their masters and each other in every chapter. English girls, for the most part, grow up into fairly decent human beings without being flogged; and so do American, French and German boys.

*The Human Boy and the War*, by Eden Phillpotts. Macmillan. \$1.25. *David Blaize*, by E. F. Benson. Doran. \$1.35.

### SHORT STORIES AND NOVELS

*Davenport*, by Charles Marriott, is interesting in two ways: psychically, as a study of a man with a dissociated personality; and, from a literary point of view, as a novel of excellent character drawing and unusual and distinctive style. (Lane, \$1.35.)

W. H. Hudson's *The Purple Land* quite lives up to its splendidly suggestive title, also to its subtitle, *Adventures in South America*. It is full of action, full of life and color, full of strange, picturesque people, and it is written with artistic simplicity and great charm. (Dutton, \$1.50.)

Pat Candler, the author of *Testore, the Romance of an Italian Fiddle Maker*, says that the story came to him in dreams. It reads that way. It is a jumble of seventeenth century romance and adventure, the result, apparently, of much reading of similar, and better, books. (Dutton, \$1.35.)

The curious primitive life and strange, wild counter of the Kirghiz Steppes are described by E. Nelson Fell, who lived with the *Russian and Nomad* for eleven years in charge of the works of a mining company. The book contains a wealth of interesting and unique material not skillfully handled. (Duffield, \$2.)

*The Lightning Conductor Discovers America* is like all the Williamsons' novels, sugarcoated characters spread with romantic jam, served on china plates, over-painted with scenery. This time the scenery is Long Island and New England, de-

### If You Did This From Early Morning Until Sundown

—if the life you lived was the healthful active life Nature intended—you wouldn't suffer from constipation.

But that sort of life is impossible for most of us. We hurry, worry, over-eat and under-exercise.

The results—constipation, periodic or chronic—and the use of laxatives which aggravate and confirm the constipation habit.

NUJOL is a safe and effective means of relieving constipation, and so getting rid of the headaches, nervousness, and depression which constipation causes. It is not a laxative but acts in effect as a simple internal lubricant, softening the contents of the intestines and facilitating normal bowel movements.

Your druggist has NUJOL. Refuse substitutes—look for the name NUJOL on bottle and package.

Sold in pint bottles only.

## Dangerous Headaches

What is more exhausting than headaches? Yet a headache is "only a symptom." It is in the conditions back of headaches—the conditions by which headaches are caused—that the real danger lies. High blood pressure, auto-intoxication, eye-strain and worse disorders cause headaches. To be rid of headaches, you must get at their cause. How to do this is explained in a new book, "Headaches and How to Prevent Them"—by Dr. W. H. Foley, a Neurologist who has had years of experience in treating all kinds of cases involving headaches.

You may get relief by following the teachings of Dr. Riley's book. No drugs. Only natural means—diet, exercise, rest and sleep. We send this book for your FREE examination. All you do is ask for it. (See the coupon.) If not satisfied with the book return it at our expense. Your examination costs you not a penny. If you keep the book you remit only \$1.25. Not a large book but—worth its weight in gold to the headache sufferer.

Special advantages offered in Music, Expression and Household Art. High elevation, mild climate, delightful scenery. Beautiful thirty acre campus. Riding, Tennis, etc. Miss Lillian M. Hosen, Secretary, Ooltewah, Tenn.

scribed in glowing terms, sprinkled with a good deal of guide-book information. (Doubleday, Page, \$1.50.)

### FOR REFERENCE

*Who's Who in America* is invaluable. The issue for 1916-1917 contains about 23,000 biographic notes with addresses. The geographical index shows names from the world over as well as from every state and territory and the dependencies. (Chicago: Marquis, \$5.)

In spite of Sir John Murray's death last July, his monumental work, *The Oxford Dictionary*, continues to come out. The latest section of the tenth volume covers the words from Turndun to Tzirid, both of which most people would find it difficult to define. (New York: Oxford Press, 85 cents.)

Sargent's *Handbook of American Private Schools*, of which a second edition of the 1916 issue is out, is an admirably careful and intelligent guide. Its information is reliable, and disinterested, and its lists include special schools, camps, teachers, agencies, school periodicals and all sorts of allied information. (Boston: Porter E. Sargent, \$2.)

A dictionary of business terms is sure to contain a curious hotchpotch of information. But *What Every Business Woman Should Know*, by L. C. Kearney, does put in handy compass many useful facts, as a table of time differences, and definitions under such headings as Financial, Insurance, Legal, Railroad Terms. (Stokes, \$1.60.)

A very useful bibliography has just been compiled by S. B. Ball, of the Newark Public Library, *1600 Business Books*. Such books have not been easy to find, and this tells the man in any business at a glance what directories and reference books and special works there are to meet his particular need. (White Plains, New York: Wilson, 75 cents.)

### BORN OF THE WAR

There is too much of purely personal interest in Marie Van Vorst's *War Letters of an American Woman*, tho when she writes of the patients she knew in the hospital at Neuilly she draws realistic and tragic pictures. (Lane, \$1.50.)

If George Sylvester Viereck set out to emphasize as characteristic of the race just those reported qualities that make the Prussian so detested, he has admirably succeeded in the facile rimes of his *Songs of Armageddon*. (Kennerley, \$1.)

Robert Herrick has written a little book, the story of *The Conscript Mother* and her son, between whose covers lies all the spirit of Italy at war and the spirit of those mothers whose boys go to fight for their country. (Scribner, 50 cents.)

*For England*, by H. Fielding-Hall, is a collection of stirring poems and sketches of the war as it affects the people at home. Some of the theories which the author advances will meet with violent opposition, but they will also stimulate thought. (Houghton, Mifflin, \$1.50.)

*The Book of Belgium's Gratitude*, made up of articles on England's aid to the Belgian refugees and wounded and of drawings in line and color by Belgian artists, is an uncommonly beautiful compilation, and quite worth the price, which by the way, goes to Queen Mary for further charitable work. (Lane, \$2.)

In *The Lusitania's Last Voyage*, Charles E. Lauriat, Jr., one of the survivors, gives a vivid but unimpassioned narrative of his experiences. His statement of what he saw is "diametrically opposite" in many respects to the findings of the British Court of Investigation, which are reprinted in the volume, together with a German defense. (Houghton, Mifflin, \$1.)

### ROANOKE COLLEGE

64th Year

For Men. Courses for Degrees; also Commercial Course. Library 25,000 volumes. Mountain location. Six Churches; no bar-rooms. Expenses small. Catalogue free. Address The President, Salem, Va.

### PACIFIC THEOLOGICAL SEMINARY

An undenominational, union school of religion. Admits both sexes and all denominations. College graduation required for regular course leading to B. D. degree. All privileges of University of California open to qualified seminary students. Term begins August 21, 1916. Address, President C. S. Nash, Berkeley, California.

# The Market Place

## A NEW BRITISH LOAN

Formal announcement of the new British loan of \$250,000,000 was made on the 16th by J. P. Morgan & Co., managers of a syndicate which includes twelve prominent banks and banking firms. Great Britain issues gold notes having a term of two years and bearing interest at 5 per cent. Syndicate subscriptions, at 98, were so large that the books for them were closed two days later. Offerings to the public are to be made at 99. It is provided that the notes may be redeemed in one year at 101, or in two years at 100½, with accrued interest. They are secured by the deposit with a trust company in New York of \$300,000,000 worth of bonds and stocks. These are in three classes: first, \$100,000,000 of those issued by American corporations; second, \$100,000,000 of Canadian Government bonds, with bonds and stock of the Canadian Pacific railroad; third, \$100,000,000 of the bonds or other obligations of Argentina, Chili, Norway, Sweden, Switzerland, Denmark and Holland. Any depreciation of value during the term is to be made good by additional securities, in order that the excess above \$250,000,000 shall at all times be 20 per cent. The proceeds of the notes will, of course, be expended here for war supplies.

This loan makes the total of foreign borrowings in the United States since the beginning of the great war nearly \$1,600,000,000, the greater part of which is distributed as follows: Great Britain and France, \$1,020,000,000; Canadian Government, provinces and cities, \$235,000,000; Russia, \$117,000,000; Italy, \$41,000,000; South America, \$105,000,000. The borrowings of the British Government at home and abroad now amount to more than \$10,000,000,000. It is expected that a new Russian loan will soon be negotiated.

The news about this loan of \$250,000,000 exerted a favorable influence in the stock market because American stocks and bonds worth \$100,000,000 are to be part of the security and, therefore, will not be sold on our Stock Exchange by the British Government, which, under the mobilization plan, has become the owner of them. For some time past the continuous sale here of American securities by Great Britain has put restraint upon prices and, in some instances, prevented a natural upward movement. Many believe that restraint due to such liquidation prevented an advance in the price of the

**The Pennington School** An efficient school at moderate cost. Prepares for college. Instruction in all branches of learning. Swimming pool, all modern equipment. Write for catalog. FRANK M. DANIEL, D. D., Headmaster, Box 80 NEW JERSEY, Pennington.

Steel Corporation's common shares immediately after the remarkable net earnings of the June quarter were made known, with the declaration of an extra dividend. It may be that liquidation was checked a short time before the loan was announced. A promise of relief was seen when it was ascertained that American stocks and bonds worth \$100,000,000 which might otherwise have been thrown on the market were to be tied up as security. The price of steel shares, which remained in the neighborhood of 86 for some time after the extra dividend was granted, rose to 92 1/4 two days after announcement of the loan. And the British Government may be a buyer instead of a seller until the arrival here of a quantity of American stocks sufficient to satisfy the requirements of the loan agreement.

### THE STOCK MARKET

On the New York Stock Exchange last week there was a noticeable revival of activity, transactions rising to about 3,600,000 shares from 2,100,000 for the week immediately preceding. Considerable net gains in that week, in spite of the unfavorable crop report and the vote of the railroad employees for a strike, were followed by irregularity, although the general tendency of prices was upward. Railroad shares, as a rule, were firm and showed but little change. There was hope of a peaceful settlement of the wage controversy by the mediation of President Wilson, and investors were not ready to believe that there could be a strike affecting all the roads in the country.

War order shares gained owing to new contracts and a prevailing conviction that American munitions of certain kinds would be needed for perhaps a year to come. Shares of copper companies were supported by reports about large purchases by the Allies. Thruout the week, however, the course of the market was governed mainly by the railroad wage dispute. Uncertainty caused both hope and fear, the net result being that no considerable change was shown, although the increase of business done was so marked that the total for three successive days was nearly 2,400,000 shares.

### STEEL

Steel mills are striving to satisfy a great demand, both foreign and domestic. Consumers in this country find it difficult to obtain what they need, even by the payment of bonuses. There is evidence that more than 3,000,000 large shells have been ordered in the last two weeks. The weight of a shell in the sizes now sought is from 300 to 400 pounds. Reports in trade journals are to the effect that recent purchases of shell steel amount to 750,000 tons—500,000 to go abroad and 250,000 to be used by manufacturers of shells in this country. Among the new orders is one for 2,500,000 cartridges, although it was asserted by officers of the British Government a week or two ago that English factories were making all that were needed.

Your chance to be somebody, to hold a position of responsibility, to have an income that will provide every comfort of life, is within your reach.

Just one thing keeps you from finding it, grasping it: you're not prepared. Through the door of opportunity big jobs are waiting in every field of work. But only trained men will get them. Don't play blindman's buff with your future! Start today and train yourself to do some one thing better than others.

You can get that training in spare time through the International Correspondence Schools, just as others have done for twenty-five years—just as more than 130,000 ambitious men and boys are doing right now.

Choose your own career. The I. C. S. will train you for the position you want in the work you like best. And you need not lose a day or a dollar in your present occupation.

Tear off that blindfold!

Your chance is here. The time to start is now. The way is to ask the I. C. S. to show you what they can do for you. Mark and mail this coupon—it costs nothing, but the evidence it will bring you will open your eyes.

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4522, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

## THE INDEPENDENT

### A Weekly Living Text Book

In introducing The Independent into schools throughout the land we have met with only one real difficulty. Teachers generally admit the desirability of current literature and recognize the suitability of The Independent for that purpose, but they do not always know how to go about it. To introduce such an unconventional method of instruction into an established curriculum is not always easy, so it is no wonder that teachers sometimes prefer to wait until convenient methods for use have been worked out elsewhere. Here they are:

(Check the pamphlets desired. This will not place you under any obligation.)

☐ The Independent—A Living Weekly Text-Book. This brochure gives the experience of teachers who are using The Independent in connection with subjects mentioned below.

☐ How to Use The Independent in the Teaching of Civics. This brochure is of special interest to teachers of Contemporary History, Current Topics, Current Events, Current History, Civil Government, Law and Economics.

☐ The Teaching of Oral English. An address by Frederick H. Lee at the New York State Convention of English Teachers.

☐ How to Use The Independent in the Teaching of English. This brochure is of special interest to teachers of Oral Composition, Supplementary Reading, Public Speaking, Dramatic Instruction, Extensive Speaking and Oral Expression.

☐ Journalism as an Aid to History Teaching. An address by Dr. E. B. Brown at the New York State Convention of History Teachers.

☐ Sample of "Lesson Plans."

☐ Sample copy of The Independent

## Insurance

Conducted by

W. E. UNDERWOOD

### THE ENDOWMENT POLICY

For the man who has not reached middle life and can afford it, endowment insurance is an excellent security in which to invest a reasonable amount of money each year. In order to appreciate this fact, it is necessary for him to remember that it is a combination of life insurance and savings and not just pure life (or death) insurance. Hence, to measure its value to him fairly, its double purpose must be considered and comparisons with simple life insurance must be avoided.

As the restrictions in the first sentence of this article indicate, not all insurable persons, nor even a large majority of them, should use this form of insurance service; nor am I prepared to say that it should be employed exclusively by any of them. For those qualified, however, it possesses advantages that are not inherent in other forms of thrift. To illustrate: A man 35 years old contracts on the same day to buy a house worth \$10,000, borrowing the money at 5 per cent, that is \$500 a year, and a 20-year endowment costing a premium of \$467. If he dies within a year from that day he will have had the use of that home at a cost of \$500, plus the taxes and fire insurance expense; on the endowment his family will have \$10,000 in cash, which cost \$467, a sum \$33 less than the interest on the mortgage. His family owns the endowment and still owes \$10,000 on the home.

Now let us assume that the man will live beyond the period of 20 years, as seven in ten will, and that he is unable to pay more than the interest on the home and the premium on the endowment. We can see that at the end of the twentieth year, paying each year \$33 less on the endowment than on the home, he is to have \$10,000 in cash from the endowment and will still owe \$10,000 on the home. He has lost nothing in either case, for the money expended in interest, taxes and insurance, about \$650 a year, may be regarded as rent. But he has made no progress there, while with the endowment, upon an expenditure of less money per annum, he has, during every minute of the twenty years, been worth \$10,000 either dead or alive.

This is not, and it should not be so construed, as an argument against the acquisition of homes and in favor of endowment insurance; it is presented only as an illustration as one of the peculiar advantages possessed by life insurance when combined with savings under one contract.

## 6% Investment

Combining the Strong Features of Both Real Estate and Industrial Bonds

1. Secured by first mortgage upon land and buildings, located in five important cities and ample to fully safeguard the investment.
2. Obligation of old established, well-known company with large net earnings and successful record in manufacturing a necessity.

### DIVIDENDS

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Convertible Four and One-Half Per Cent. Gold Bonds.

Coupons from these bonds, payable by their terms on September 1, 1916, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

## AMERICAN TELEPHONE AND TELEGRAPH COMPANY

Convertible Four Per Cent. Gold Bonds.

Coupons from these bonds, payable by their terms on September 1, 1916, at the office or agency of the Company in New York or in Boston, will be paid in New York by the Bankers Trust Company, 16 Wall Street.

G. D. MILNE, Treasurer.

## OFFICE OF FEDERAL MINING AND SMELTING CO.

32 Broadway, New York, August 16, 1916.

A dividend of one (1/2) per cent. on the Preferred stock of this company has to-day been declared, payable September 15, 1916, to stockholders of record at the close of business on August 29th, 1916.

R. HOYT, Secretary.

## MERGENTHALER LINOTYPE CO.

New York, August 16, 1916.

A regular quarterly dividend of 2 1/2 per cent. on the capital stock of Mergenthaler Linotype Company will be paid on Sept. 30, 1916, to the stockholders of record as they appear at the close of business on Sept. 5, 1916. The time for books will not be closed.

FREDERICK J. WARBURTON, Treasurer.

# MR. PURINTON'S EFFICIENCY QUESTION BOX

299 Mr. E. J. S., Wisconsin. "You say 'get a future where you are, and get it in mind, or get out.' I cannot afford to get out and dabble. I want a definite ideal before I will even consider making a change. (a) Where may I obtain literature on landscape gardening as a profession? (b) How may kleptomania be cured?"

A definite ideal is the architectural plan for any permanent life success. Congratulations on your adoption of this truth. (a) Apply to Efficiency Publishing Company, Woolworth Building, New York. (b) Consult the department of psychiatry in any standard medical school or large hospital. Write the editors of medical journals, also of popular health magazines, and consult their respective advertising pages for announcements of special sanatoria treating mental and nervous diseases. Your physician should know the best medical journals; names of health magazines have been frequently mentioned in these columns.

300. Mr. Q. M., Virginia. "I am engaged in office work and would like to study advertising in spare time. (a) What authority do you consider the best? (b) What correspondence school? (c) What authors' style would you advise me to study whose language would tend to efficient advertising? (d) What do you consider the easiest and most practical way of increasing one's vocabulary?"

(a) We never declare anybody or anything "the best." Ask Efficiency Publishing Company, Woolworth Building, New York, for list of modern books. (b) Write for prospectus to International Correspondence Schools, Scranton, Pennsylvania; to Powell School of Advertising, 432 Fourth avenue, New York; to Universal Business Institute, 17 Madison avenue, New York; to American College of Advertising, 81 East Madison street, Chicago. (c) Elbert Hubbard, Arthur Brisbane, Herbert Kaufman, Frank Crane. But don't imitate any of these—merely note their good points, and the secrets of their power in type. (d) See Question Box Answer to Mr. J. B. W., Missouri, No. 185, December 6, 1915.

301. Mr. E. S. M., Illinois. "I desire information as to the sources of concrete data on proper ratio of productive to non-productive labor and material in different types of factories and foundries. Where could I learn the standardized results from machines, men, and operations? The waste in our factory seems excessive, but I want facts before starting any arguments."

Various books on scientific management, cost accounting, shop practice and factory organization, by such industrial engineers as Taylor, Gilbreth, Gantt, Webner, Tyrrell, Goings, and Emerson, would give you such facts as you desire; also valuable help in many related lines. Apply to Efficiency Publishing Company, Woolworth Building, New York, for list of standard books.

302. Mr. N. C. J., Michigan. "I am a college student, with a special fondness for mathematics. Have been told one of the new and promising fields is that of accountancy, as independent profession or in connection with a large firm. Will you kindly give names of representative schools and books?"

Walton School of Commerce, People's Gas Building, Chicago; Bennett Accountancy Institute, Farragut Terrace, Philadelphia; Universal Business Institute, 17 Madison avenue, New York; Pace and Pace, 30 Church street, New York; La Salle Extension University, Chicago. Write also Felt and Farrant Manufacturing Company, North Paulina street, Chicago, and C. E. Sheppard Company, 303 Hudson street, New York. Two modern books, Nicholson's "Cost Accounting," and Dickinson's "Accounting Practice and Procedure," both from the Ronald Press Company, 25 Vesey street, New York.

303. Mrs. M. G. L., Washington. "I have in mind a new printed card suitable for certain stores that I have visited. There are cards for Christmas and New Year, birthdays, etc., but none for the occasion in view. (a) Should my designs or ideas bring so much cash, or a small royalty? (b) How can I prevent the appro-

priation of these ideas by firms to which I submit them? (c) To what firms could I offer the suggestions, for placing on the market?"

(a) Royalty basis usual; and preferable if your idea is good, as a small percentage on large number of sales would bring you more than you could expect in cash before card was published. Get different firms to make offers, and compare, before accepting any. (b) Obtain copyright yourself, in advance of submitting to art publishers. Write the Register of Copyrights, Congressional Library, Washington, D. C., for copyright rules, blanks, and special information applying to art reproductions. (c) Don't offer suggestions till you ascertain if they will be considered. Apply to these firms: Charles S. Clark Company, 141 West Thirty-sixth; American Art Specialty Company, 500 Fifth avenue; Arts and Crafts Society, 119 East Nineteenth; Raphael Tuck and Sons Company, 122 Fifth avenue; Knickerbocker Art and Publishing Company, 1476 Broadway; C. E. Bucklin Company, 1269 Broadway; all of New York.

304. Miss E. F., New Jersey. "Please tell me how one can get summer engagements for a small orchestra, of three to five pieces? To whom should one write for such engagements? We feel sure that we would make a success if we could only get a start, and would much appreciate any information you can give."

Write Redpath Lyceum Bureau, 33 West 42nd street, New York, for details of Summer Chautauquas. Look in New York Sunday papers for advertisements of nearby summer resorts, and apply to hotel managers or amusement proprietors. Obtain a chance for a "try-out" in some "amateur night," and profit by the criticisms. Enroll with several booking firms listed in the New York Red Book (Classified Telephone Directory available at any large New York hotel or drug-store)—see heading "Musical and Lecture Agencies." Before hunting engagements, have your local musicians criticize you unsparingly; and don't seek opportunity until your work is the finest you can make it.

305. Mr. A. R. W., Washington. "Ordinarily a man forty years of age is delivering his best licks to his life work. Possibly I may have drifted longer than the average young man, and tho I have made every effort permitted by conditions as I found them, I have not yet been able to decide what my life work should be. Will you help me?"

It is a man's business to make conditions—don't mope around while they "permit" him to do this or that. You need backbone; read books like Marden's and Haddock's. You need impetus; join a local club of live business men, and two or three national efficiency organizations. You need hard work; spend an hour a day longer on your present job than you have to. You need discipline; force yourself to do without some of the pleasures and luxuries you most enjoy. You need a "punch"; take boxing lessons. You need vocational science; write Efficiency Press Syndicate, Woolworth Building, New York, for a list of authorities in character analysis, and find what you are good for. Look for my article on "Choosing a Life Work," to appear shortly.

306. Miss B. K., New Jersey. "I am compelled to use my eyes on close work nearly all day, and am suffering in consequence from weakness, pain and inflammation of the eyes. No organic trouble, just overstrain. Doctor says I must stop work, but I can't afford to. Could I not learn to rest and save the eyes without giving up my salary, on which my family depend?"

If your doctor is an experienced graduate oculist or optometrist, better take his advice—we never interfere with expert medical opinion. But you can save your eyes, by a number of simple measures.

Get nine hours of sleep, in a well-ventilated room with all shades down. Have all home lamps hooded or shaded scientifically. Work in perfect light—direct over left shoulder, with no counter-glare on page. Hold erect posture while working, to keep congestion out of eyes. Rest frequently by long-distance glances. Apply cold

compresses at home—see good book on hydrotherapy or physical culture. Learn how to relax the nerves completely.

Obtain eye-shade from Featherweight Eye-shade Company, Merchantville, New Jersey; and harmless eyewash tonic from reliable druggist.

307. Mr. J. C. R., South Carolina. "My father was a drunkard, mother died when I was four years old. I am now nineteen. Am inclined to be despondent, erratic, unpleasing to my friends and myself. I have a sour look on my face, and speak shortly. Am doing my best to correct these faults, and am finding it hard. Never dissipate except in overeating, which I am trying to stop."

We admire your strength of character. It is unusual, in a man so young. You probably inherit your tendency to overeat from your father, and your sadness and nervousness from your mother, who died, as you say, mostly from grief and abuse. You can, we believe you will, overcome heredity.

Obtain my article "The Efficient Optimist" from The Independent of November 22, 1915, and study it, act on it, live it. Be much with children, guide their play, perhaps teach a Sunday-school class. Learn to excel in some athletic game. Help to organize a boys' club, such as the Boy Scouts or a branch of the Big Brothers. Find the work you were born to do, and do it. Undertake some kind of social service. Be friendly. Find the good in people. Count your blessings often. Breathe deep, stand straight, hit the game hard.

308. Mr. A. L. T., Ohio. "For several years I have conducted a grocery store with fair success, in a city neighborhood that cannot support comfortably more than one grocery. Lately another grocer, a stranger, has opened a store on the next block and is taking away some of my best customers. This does not seem fair. How can I meet such competition and hold my trade?"

Never complain about competition. It's good for you. If you are the best in your line you won't have competition; and if you aren't you ought to have. I suspect you have had a monopoly too long—you needed a healthy jolt.

Why is the new grocer taking your custom? Why were you content, all these years, to achieve only a "fair success," when you should have been awake nights planning how to build a permanent telephone trade forty blocks in all directions?

Ask one of your lost customers why she went away. You will probably find your competitor's store cleaner, goods fresher and better, prices lower, service faster, delivery surer, clerks pleasanter, or other features more satisfactorily modern than yours. Learn success from your rival. Take a magazine like *Good Storekeeping*, another like the *Housekeeping League Periodical*, a couple of trade journals—and wake up!

309. A pastor in Connecticut. "As a minister approaches sixty years of age, he appears to be a less desirable man in his profession. What else can he do? I read proofs; where can I get employment at proof-reading, or anything else that would afford a decent living?"

The leading churches—Methodist, Baptist, Presbyterian, Episcopal, and others—are now raising each a large pension fund for retired pastors. The national ministers' aid bureau of your denomination should be consulted regarding your problem.

Surely among your old parishioners are publishers, editors, writers, or printers. Ask them how to find your opportunity as proof-reader. Last your application also with every local newspaper, printer and publisher.

Why not use extracts from your old sermons, as regular contributions to nearby city papers, or a newspaper syndicate featuring psychology and uplift articles? Rev. Frank Crane in the New York *Globe* and Rev. Thomas B. Gregory in the New York *American* are examples of former preachers now successful writers. Note the practical sermons of "Uncle Ben" in *Good Weekly*, Williamsport, Pa., and similar features in most Sunday newspapers. Your best, and largest, work should be ahead of you.

### REMARKABLE REMARKS

SENATOR TILLMAN—The Pitchfork is buried.  
DAVID LLOYD-GEORGE—The nippers are gripping.  
PRINCESS TROUBETZKOY—Why not have a trial engagement?  
S. S. MCCLURE—All talk of peace efforts now is pure idiocy.  
DR. SUN YAT-SEN—Japan is now supreme in the Pacific.  
JOHN DEWEY—In times of peace it is possible to idealize war.  
G. STANLEY HALL—Retrogression is a means of regeneration.

CHAMP CLARK—"Duty" is the sublimest word in our vernacular.

CHARLES E. HUGHES—We are all working-men in this country.

ANNETTE KELLERMANN—Do not go out into the water too far.

PROF. IRVING FISHER—Any study of health is a study of wealth.

FRANCIS A. KELLOR—We are the great adventure of the twentieth century.

MRS. CHARLES E. HUGHES—I accept Mr. Hughes' opinion as my own.

ROMAIN ROLLAND—Whoever may be the victor, Europe will be the victim.

CARDINAL GIBBONS—I have an abiding faith in the endurance of the Republic.

ARTURO GIOVANNITTI—The Steel Trust—America's fore-hell of Europe's torture pits.

GENERAL PERSHING—Villa can never again become a serious factor in Mexican affairs.

VANCE McCORMICK—The Wilson campaign is positive; the Hughes campaign is negative.

LADY DUFF-GORDON—You may wear a four-cornered hat with entire propriety this autumn.

GENERAL HAIG—Those who have looked to us for victory will have their patience rewarded.

SAMUEL UNTERMEYER—As now constituted the New York Stock Exchange is a sinister influence.

PRESIDENT SILAS EVANS—Every bullet, whether it be a dum-dum bullet or not, is a dam-dam bullet.

ADMIRAL DEWEY—Those who make the charge that the navy is demoralized are guilty of falsehood.

GENERAL JOFFRE—The moment is approaching when the military power of Germany will crumble.

DAVID JAYNE HILL—Our first line of defense is not, as we are sometimes told, our navy; it is our diplomacy.

ADMIRAL FISKE—The dangerous enemy of the United States is not Germany or Japan; it is the American politician.

CARDINAL FARLEY—It is very doubtful if the description of crime in minute and suggestive detail has any social value.

EMPEROR WILLIAM—God's blessing in Germany's fields has rewarded the farmers more bountifully than we dared to hope.

SECRETARY LANE—I do not measure my Americanism by what this country has done for me, but for what I have done for it.

SECRETARY DANIELS—When this war ends I hope that this Republic can invite all the Secretaries of the War and Navy

and State and other officials of the big navy nations to a conference to try to find some plan by which all will agree to stop this competitive navy building.

WILLIAM ARCHER—The odd thing is that the music hall seems to have killed a genuine vein of lyric faculty in the English people.

CLARK HOWELL—The people of the South are in better condition than they have been at any time during the past half century.

WILLIAM R. WILLCOX—The legislative record of the Democratic administration proves the hollowness of the Democratic pretense of fidelity to the principles of the Civil Service.

PROF. M. M. METCALF—The horse is a most grotesque, outlandish animal, a one-toed beast with a head as long as a barrel, a stiff inflexible animal that can't even lie down, much less roll over, without an awkwardness beyond belief.

### A BRITISH CHARGE

The moving of pins from point to point on the map does not give us any idea of what is really happening on the battlefield. For that we must turn to some of the pen-pictures supplied by the war-correspondents who since Lloyd-George succeeded Kitchener in the War Office are allowed to go to the front. This is how the charge at the ridge of Thiepval on the afternoon of August 21 looked to the eyes of the most famous of living war correspondents, Frederick Palmer:

Now, out of the British trench appeared a row of khaki tinted mushrooms, the steel helmets the British soldiers wear, then their heads and shoulders and full forms as the charge went over the parapet. Every man was in full equipment with all its details visible, every figure uniform with all others to the last item. As they moved across the field of dead grass briskly and steadily the ominous, wicked staccato of German machine guns coming into action was heard. No machine gunner could live at his post in that trench.

The British line opened to go around shell craters or other obstacles and then closed up. Occasionally a figure dropt and was lost in the grass. Right into the face of that curtain of death from shells going only a few feet over their heads, they were moving. Then, suddenly as it was laid, the curtain of shell fire lifted. Not a single shell out of the thousands had burst short.

Now the British were going over the German parapet, their bayonets glistening in the sun. As they descended into the trench, the earth seemed to have swallowed them up. Little clouds of smoke from bursting bombs rose from the trench. There was hot work proceeding out of sight in the burrows.

One after another, as if they were coming to the top of stairs, heads and shoulders appeared out of the trench. Each German had his hands up and in file, the prisoners moved past a Briton standing on the parapet. These Germans, who had not waited to be bombed out of their dugouts, but had surrendered, came legging it at top speed back toward the British first line trenches.

What about the Germans who had fled back toward the German support trench? A light machine gun the British had put up rattled into their backs. Ahead of them was the British curtain of fire, now lifted on to the German support trench. They seemed to disappear into the earth, some shot down, some wounded, others seeking security in shell craters. Few will survive.

One figure alone holds the stage for a fraction of a minute there in that lifeless space around them. Tall and bold, a German officer stands on the edge of a communication trench.

## From Father to Son

Today, if a man is born with a silver spoon in his mouth, it is usually Gorham-made.

This is not a travesty on an old saying, but the modern version of that saying which is literally true.

Americans have been using Gorham knives and forks and spoons for years and years, and thousands of them in use today were inherited from the original owners.

That proves the dependability of Gorham craftsmanship under the hardest possible test, for in the last analysis, *length of service means strength of service* in silverware.

And that is the sort of service you want in any and all silverware you buy – the service which survives the wear and tear of usage, combining the resistance of silver metal with the integrity of Gorham manufacture.

Sold by leading jewelers everywhere, bearing this Gorham trade-mark, which establishes the authenticity of its Gorham origin—

THE APPOINTMENT TO PUBLIC OFFICE OF A MAN WHO IS FIRST AND FORE-  
MOST A BOLD LEADER IS PARDLESS TO MAKE PRESIDENT WILSON'S  
CHOICE OF DR. MOTT AS ONE OF THE MEDICAL COMMISSIONERS PAR-  
TICULARLY SIGNIFICANT AS GENERAL SECRETARY OF THE INTERNATIONAL  
COMMISSION OF THE Y. M. C. A. AND LEADER OF THE WORLD STUDENT  
CHRISTIAN FEDERATION AND THE STUDENT VOLUNTEER MOVEMENT, HE HAS

ONE MISSION ON A BASIS OF WORLD STATEMANSHIP, HELD AMERICANS  
TO THINK INTERNATIONALLY, AND GAINED A BROAD SYMPATHY WITH ALL  
SOUGHTS WHICH OUGHT TO FIT HIM ESPECIALLY FOR SUCH A TRYING  
MISSION OF CONCILIATION AND RECONSTRUCTION, AND ADD A VALUABLE  
EDITOR, IN THE WORK OF THE COMMISSION, TO SECRETARY LACEY'S AD-  
MINISTRATIVE EFFICIENCY AND JUDGE GRAY'S INTERNATIONAL EXPERIENCE.

## THE REAL SERVICE OF MR. HUGHES

THE United States is a very fortunate nation in many ways. One of them is that each of its recent political leaders of really national prominence had some one contribution to make to the common conscience that was peculiarly his own. In the constant criticism of our public men for what we do not approve in their acts we are apt to overlook their actual achievements. Mr. Bryan may have been mentally blind to the principles of a sound currency and morally blind to the obligations of the civil service, but he is still gratefully remembered for the courage with which he championed new causes when they were new. Reforms such as prohibition, woman suffrage, and direct legislation, which he supported for years when they were heresies, he has now the pleasure of seeing written into the party creeds almost everywhere. Mr. Roosevelt may have been—well, all the things that he has been called, but he too made his gift to the American ideal, a gift that no one else could have made. It is hard to define in words just what this contribution was, but we all recognize that by the end of his first term the political atmosphere in every part of the country was fresher and wholesomer than it had been since the days of Lincoln. He put the force of his electric personality behind reforms that had lingered in the shades of academic groves, or modestly burgeoned in select circles of New England Mugwumps, or appeared in the platforms of third, fourth and fifth parties struggling to be visible to the naked eye somewhere on the Kansas prairies. He made reform human, and therefore popular. He discovered the Romance of Righteousness.

Mr. Roosevelt's successor was not quite so fortunate as himself in dealing with domestic problems in such a way as to rouse the enthusiasm of the electorate; his best plans failed for the lack of "steam" behind them. But Mr. Taft did one thing for us that was of almost incalculable importance. Mr. Bryan insisted on peace, Mr. Roosevelt insisted upon a peace prepared and protected, but Mr. Taft was the first to insist on a peace *organized*. He thought in international terms more consistently than had his predecessors, and he was the first head of a great power that ever declared a willingness to arbitrate every question, even that of national honor. Now he is the leader of the one constructive and hopeful peace movement that has arisen since the war began, also endorsed by Roosevelt, Wilson and Hughes, the League to Enforce Peace. Whether negotiating reciprocity with Canada or framing treaties of arbitration, he always kept before him the idea of the United States as a part of the world and not a Robinson Crusoe island "entirely surrounded by the Monroe Doctrine."

Mr. Wilson's record is also imperfect; sometimes his course has been at once stubborn and vacillating. But he has contributed a quality of idealism that neither the blundering good will of Mr. Bryan nor the opportunist sagacity of Mr. Roosevelt nor the judicial conservatism of Mr. Taft could have done. He has brought to the tasks of statesmanship a scholar's mind and a scholar's conscience. No President has excelled him, if any has even equaled him, in the lucid analysis and statement of a problem. He not only told Germany that she was in the wrong in the questions of submarine warfare, he made all the world see *why* Germany was wrong. He has forced a sometimes reluctant Congress to abandon every

tempting act, such as the Panama Tolls exemption, which might by any chance have tarnished the national honor. Even his most criticized policy, "watchful waiting" in Mexico, has at least been distinguished by a delicate consideration for the dignity of a weaker nation and an unselfish desire to help a people who cannot help themselves that is in amazing contrast to the national egotism and greed which is regarded as a matter of course in all old-world diplomacy.

And now Mr. Hughes is a national figure. If he is elected President, he too will blunder. But if we mistake not he will add something to our moral heritage that no one else has yet given; the conscience of the engineer, the feeling that, in public matters at least, inefficiency is a mortal and not a venial sin. His criticisms of the tariff policy and of the foreign policy of the present administration might have been made by any one; right or wrong, they are not his individual contribution to American politics. But in singling out for special emphasis in his speech of acceptance something so remote and colorless to the average citizen as a national budget, Mr. Hughes placed the community under an enormous debt to his courage and insight. These administrative reforms which seem so dull are really more important to our national welfare than half the party creeds on protection, preparedness, dissolution of the trusts, the retention or relinquishment of the Philippines, and other topics that easily attract the voter's attention and enlist his enthusiasm. The simple fact is that our government, superior to the political systems of other countries in a thousand other ways, is by European standards glaringly inefficient; that we waste hundreds of millions of dollars every year by the spoils system, the pork barrel and by sheer slovenliness of Congressional procedure, and that the time is fast coming when our surplus wealth will no longer serve as an offset to our unscientific public methods. And we are glad to see that Mr. Hughes is really rousing the nation to meet these unpalatable truths, and that he is making efficient administration as popular a slogan as Mr. Bryan ever did peace, or Mr. Roosevelt reform, or Mr. Taft internationalism, or Mr. Wilson humanity.

## CANADA'S SOLUTION OF THE RAILROAD PROBLEM

THE threatened tie-up of the entire transportation system of the United States because the representatives of 400,000 workers and the representatives of 622,000 stockholders could not agree upon the principle of the eight hour day, raises the question whether the 100,000,000 people of the United States have any rights which capital and labor are bound to respect.

Apparently, they have not, for the Newlands act of 1914, our most advanced law dealing with industrial disputes, is severely limited in scope, is permissive rather than compulsory, and cannot go beyond efforts at conciliation.

It is no wonder, then, that the United States Board of Mediation created under this act has completely failed in the present crisis; and even the President of the United States, with all the weight of his authority, has been able to do no more than *invite* the disputants to the White House and give them his best advice.

As conciliation and voluntary arbitration can be summed up as a universal failure, is it not time for the

country to assume a heroic mood and compel capital and labor to settle their differences by law rather than by war? Fortunately, in attempting to frame legislation to meet this end, we have three great precedents from which to choose. We refer to the so-called Peace Protocol adopted in the Garment Industry of New York City, the Canadian Industrial Disputes Investigation act, and the New Zealand Industrial Conciliation and Arbitration act.

The Peace Protocol in the Garment Trades of New York, first established in 1910, provides for the judicial settlement of all disputes that may arise between the parties, each side relinquishing the right to strike or lockout. While there is no force to compel either side to abide by the decisions of the Board of Arbitration, there has been no instance where the decision has not been carried out in good faith while the protocol was in force. Moreover, there is a law of the state of New York by which, if any two parties to a dispute agree to arbitrate their differences, either can file the award with the proper authority and then it will be enforced by the courts. While this privilege has never yet been resorted to its existence makes compulsory arbitration possible under the protocol.

The Canadian Industrial Disputes act of 1907 is applicable to any industry having more than ten employees. It provides that whenever either side makes application for the establishment of a board of conciliation and investigation consisting of three members, it is unlawful for any employer to cause a lockout or any employee to strike, pending the investigation and report of the board. There is nothing, however, in the act to prevent a strike or lockout from taking place after the dispute has been investigated and the report published. So far there have been 177 applications for the establishment of the board, of which 158 were granted by the government. In all of these 158 cases, except nineteen, the findings of the investigation board were carried out as tho they were arbitral decisions. In other words, since 1907, when the act went into effect, there have been only nineteen strikes or lockouts in all Canada in the industries affected by the act.

The New Zealand Industrial Conciliation and Arbitration act of 1894 provides for the incorporation of associations of employees and workmen and for the creation in each dispute of a joint conciliation board elected by each side, with an impartial chairman, to which a dispute may be referred, a strike or lockout being thenceforth illegal. If either side refuses to accept the award of the conciliation board, it may be appealed to a court of arbitration, consisting of two persons representing both sides and a judge of the Supreme Court. At first all cases were required to go to the board of conciliation, but, as it became evident that cases of importance would be appealed to the final court anyway, it is now permissible to carry a dispute direct to the arbitration court. The award of the court is enforceable by legal process, and financial penalties up to \$2500 are recoverable from defaulting associations or individuals.

This act has been so universally successful that New Zealand has become known thruout the world chiefly as "the country without strikes." The Australian states have since adopted similar laws.

American trade unionists, while generally more favorable to arbitration than their employers—tho not so in

the present railroad controversy—strenuously object to any form of compulsory arbitration. John B. Lennon, treasurer of the American Federation of Labor, said some years ago in *The Independent*:

We believe in arbitration if it be voluntary. We do not believe it to be the province of the government to interfere or so commence to take part in the settlement of trade questions, believing that neither Congress nor the State Legislatures have the technical knowledge relating to the different crafts. We object to compulsory arbitration as the introduction, in a degree at least, of a system of slavery; as, if compulsory, it must be followed by penalties which would probably make it a penal offense for a man to quit work or to continue if a board of arbitrations should have decided against him.

The employers also object to compulsory arbitration, but on different grounds. They have found by experience that the workers take every opportunity to demand more pay and less hours, and that arbitration boards tend to grant these demands.

But, despite the opposition of both employers and employees to compulsory arbitration, we must have some sort of sanction for industrial law if we are ever to have industrial peace, just as we must have some sanction for international law if we are ever to have international peace.

Of the three measures here considered, the peace protocol plan would only be effective, in the last analysis, if industries engaged in interstate commerce should be compelled to establish a protocol of a prescribed character, the decisions of whose courts should be enforced by all the power of the state. This may or may not be practicable.

If the railroads, however, have not the statesmanship to adopt a peace protocol suited to their needs and such as the people will approve, then the very least our Congress can do is to adopt the Canadian plan, which compels a reference to arbitration before a strike or lockout can occur, just as the League to Enforce Peace would compel, by force if necessary, the nations to take their disputes before a court or council of conciliation before resorting to war. The history of the Canadian act shows that in most instances this would be sufficient to insure industrial peace.

The New Zealand plan of compulsory arbitration and compulsory enforcement by the state of the decision of the court is the goal of industrial evolution, and must prevail in the end. But probably this country is not yet ready for such a radical step. Conditions in the United States are far more complex than in New Zealand.

All things considered, the Canadian Industrial Investigations act furnishes the model that it would be wisest for the American people to adopt at this moment, if industrial anarchy is to be avoided and industrial peace is to be sought.

## THE BEST USE FOR A BIG NAVY

EVER since the old Mohonk days, when Edward Everett Hale used to say it was just as necessary to have a Secretary of Peace in the Cabinet as a Secretary of War, there have been various attempts made to have Congress provide other ways of assuring peace than by military appropriations. From time to time bills have been introduced for this purpose, and we believe it was Congressman Hobson who proposed that a small percentage of every annual military appropriation be devoted to the peace movement. It was not, however, until

the Taft administration that anything tangible was attempted. Then Congress unanimously authorized the creation of a Peace Commission in the following resolution:

Resolved, etc.: That a commission of five members be appointed by the President of the United States to consider the expediency of utilizing existing international agencies for the purpose of limiting the armaments of the nations of the world by international agreement, and of constituting the combined navies of the world an international force for the preservation of universal peace, and to consider and report upon any other means to diminish the expenditures of government for military purposes and to lessen the probabilities of war.

"Provided, that the total expenses authorized by the joint resolution shall not exceed the sum of \$10,000 and that the commission shall be required to make its final report within two years from the date of the passage of this resolution.

Mr. Taft, it was understood, offered the chairmanship of this commission to Mr. Roosevelt, but Mr. Roosevelt had just returned from his big game hunt among the crowned heads of Europe and he had evidently learned from the Kaiser and others that any efforts by the United States toward peace would be unwelcome in Europe at that time. For some unaccountable reason Mr. Taft never sought further and the Peace Commission died stillborn.

Once again Congress has acted. Do the American people realize that the great navy bill which it has just passed contains a unique provision which is a distinct and signal triumph for peace, and which may have a vital bearing on the future?

It is as follows:

Upon the conclusion of the war in Europe, or as soon as it may be done, the President of the United States is authorized to invite all the great governments of the world to send representatives to a conference which shall be charged with the duty of suggesting an organization, a court of arbitration, or other body, to which disputed questions between nations shall be referred for adjudication and peaceful settlement and to consider the question of disarmament and submit their recommendations to their respective governments for approval.

The President is hereby authorized to appoint nine citizens of the United States, who, in his judgment, shall be qualified for such duty to be representatives of the United States in such a conference. . . . The President is authorized to fix the compensation of the commissioners. . . . A sum of \$200,000 is appropriated to carry into effect this provision.

If at any time before the appropriations authorized by this act shall have been contracted for there shall have been established, with the coöperation of the United States of America, an international tribunal or tribunals, competent to secure peaceful determination of all international disputes, and which shall render unnecessary the maintenance of competitive armaments, then and in that case such naval expenditures as may be inconsistent with the engagements made in the establishment of such tribunal or tribunals may be suspended when so ordered by the President of the United States.

It is quite evident that this provision of the naval bill is nothing less than a demand on the part of Congress for the President to summon the nations of the world to a conference after the war is over for the purpose of forming a League to Enforce Peace. And if this is accomplished then the President shall have power to stop any further building of ships provided in the naval bill. The provision, in short, looks to the federation of the world, and the outcome of federation, which is disarmament.

The passage of this provision, moreover, lends color to the rumor that has come to us that European nations have intimated to our government that they are ready to enter a League to Enforce Peace when the war is over,

and further that the upbuilding of a great military establishment by this country, if authorized and under way, will be all that is sufficient to make our voice carry at the council table, but that, as far as Europe is concerned, our program need never be carried out.

## TWO WILSON APPOINTMENTS

PRESIDENT WILSON had occasion the other day to appoint two Federal judges in this city. One of these appointments was most creditable.

Judge Charles C. Hough, who is elevated from the District to the Circuit Court, has already proved himself to be one of the most upright, learned and able judges on the Federal bench. His promotion will hearten all citizens who believe in rewarding merit in the public service. The appointment is all the more praiseworthy because Judge Hough is a Republican.

Martin T. Manton, who was selected to succeed Judge Hough on the District Court bench, is known chiefly as the partner of Burke Cochran, and as the lawyer who defended the murderer Becker before the Court of Appeals.

## TALK TO THE POINT

THE curious whirligig of Mexican-American relations has for the second time thrown the whole subject into the hands of civilian conferees, after the men of war have twice played an inconclusive part in straightening out the muddle. Whether the conference soon to assemble will leave things in better shape than they found them remains to be seen, but the course of our Mexican adventure thus far justifies a somewhat restrained optimism.

The Vera Cruz expedition failed of its avowed purpose, but it helped to oust Huerta. The Niagara Falls conference denied to the United States the satisfaction it claimed for an international insult, but it strengthened Pan-American relations. The military movements which culminated in the sending of the Guard to the border failed to catch Villa, but did almost completely stop the outrageous assaults on the people of the frontier. Slowly, and none too coherently, we stave off an actual catastrophe and even make some concrete gains. The new conference ought at least to strengthen the better understanding between Mexico and the United States which has been brought about partly thru President Wilson's persistently disinterested and friendly attitude and partly, no doubt, thru the object lesson of the troops at the border.

The conferees are well chosen. The Mexicans are substantial men: one of Carranza's most trusted political associates, a minister of communications, and the president of the Mexican National Railways. Secretary Lane is a level-headed administrator and ought to grasp Mexico's domestic needs clearly. Judge Gray has had much experience on international and industrial tribunals. Dr. Mott is one of the broadest and most devoted Christian leaders in the country, and in numerous journeys around the world has built up a vigorous international mind. The secretary of the commission, Professor Rowe, is one of our ablest authorities on Pan American problems. If common sense, and tact, and sympathy can help Mexico these men will get results.

The conferees have no authority to act—only to think

and talk together. They are burdened first of all with the fretful insistence of Carranza that our troops must leave Mexico before anything further is done. But it is their opportunity to thresh out the whole Mexican situation, and to discover what concrete steps can be taken by our government to help Carranza in his apparently sincere efforts to build up Mexico no less than to check him in his arrogant indifference to his international obligations.

The one thing the American people demand from the conference is that it shall deal frankly and forcefully with the problem. We must not leave Mexico without a tangible guarantee of Mexico's good behavior. It would be a sad failure if we should leave Mexico without a tangible contribution to her reconstruction.

### IF THE KINGS SHOULD GO

THE Kings must go: so we predicted when the war began, and now that the war, after two years of more destructive fighting than mankind ever saw before, is approaching its maximum extent and dreadfulness, we repeat the prediction.

Kings are causes of war in the same sense that those who strike the match, or apply the fuse, or press the button, are causes of conflagrations and explosions when combustibles or explosives have been accumulated. They are also causes of war in the sense in which men who sign contracts, promissory notes, wills and death warrants are causes of business activities, transfers of property and executions. Kings, in a word, are responsible and initiating causes of war. They were responsible and initiating causes of the war that is raging now. There were, as there always are, coöperating causes, diffused, general, inarticulate, but they did not get together until Kings made the connections at their own switchboard, and for their own purposes. They make war to turn progress, which they cannot halt, to dynastic account, which is easy.

Progress distributes wealth, knowledge, and power in widening zones. It prepares the people for republics and democracies. It threatens royal houses. War gives the excuse of necessity for encroachments upon liberty, for requiring unquestioning obedience to authority, for increasing royal revenues, for subordinating civic to militaristic interests. The present war is a Hohenzollern war, to save the Hohenzollern house against a rising tide of middle class and proletarian power. We said this two years ago, and we repeat it now. Tens of thousands of readers in neutral and in the warring nations who did not believe it then are now fully convinced of its truth. The evidence of it is too clear, too abundant, too overwhelming to be denied.

How soon the resistless flood of popular power, rising again to full hight after the war is over, will sweep the Kings into oblivion, we do not venture to guess. The data upon which to base a well considered forecast are not yet at hand. But on another, related, question certain interesting speculations may be indulged.

If the Kings should go at no distant date what things in consequence might happen? Presumably the Kings, with all their responsibility for evil, perform a function in the existing social order. What is it? And is there any way, now obvious, to get their function performed when Kings go into the discard?

There is an answer to these questions, and it runs something like this: Dynasties live for the future. Aristocracies live for the next generation. Republics live for the time being. Democracies live from hand to mouth.

Mr. H. G. Wells is fond of the word "muddle." In his latest books he uses it at every turn, and at every turn the use he makes of it is legitimate. It is the one word that tells the truth that he is proclaiming. The English-American civilization of today is a more and more democratic civilization, and, also, it is "muddle." It is planless, unorganized, wasteful, and, above all, regardless of the future. Policies are shaped to get the quickest immediate returns for the least possible present cost. And why not? What particular person, family, group, or class is there in a democracy to profit by plans and expenditures for future realization? What family, group, or class, then, in a democracy has a lively motive to forecast the future and to plan for it?

In human history thus far just three institutions have vigorously asserted the future-regarding propensity. The aristocratic or noble family does so. Still more vehemently the dynasty does so. In a general and somewhat variable way the church has done so. For that provision for the future which hitherto has conserved resources, planned cities, and beautiful country and town, the world has been indebted chiefly to dynasties. When the Kings go who or what shall take over the function of providence, and keep democratic mankind from sinking deeper and deeper in "muddle," as it more and more lives from hand to mouth?

### DISTANCE LENDS ENCHANTMENT

IT is the business of critics, teachers and librarians to distinguish good books from poor. This is not an easy thing to do and there is great liability to error. But to tell an old book from a new one does not require any brain power, so this method of discrimination is often substituted for the more difficult. The easiest way to get a reputation as a connoisseur of wines is to order by the date of the vintage on the principle that the older they are the better. A reputation as a connoisseur of books can be acquired in the same way. So it happens that the books that are ignored or prohibited in our generation are recommended or required in the next. An amusing instance of this has come to light in the "History of the New York Public Library," recently published. Joseph Green Cogswell, who secured the founding of the Astor Library, writes six weeks after the opening in 1854, to George Ticknor about the success of the new institution:

Everything goes on very smoothly. The readers average from one to two hundred daily and they read excellent books, except the young fry, who employ all the hours they are out of school in reading the trashy, as Scott, Cooper, Dickens, *Punch*, and the *Illustrated News*. Even this is better than spinning street yarns, and as long as they continue perfectly orderly and quiet, as they now are, I shall not object to their amusing themselves with poor books.

"The young fry" of today are compelled to read such "poor books" as Scott, Cooper and Dickens in school—and how they hate them! Fifty years from now some of the "trashy" books they are now "amusing themselves with" "out of school" will be incorporated into the curriculum as hard labor. But which of them? That is the question.

# THE STORY OF THE WEEK

**The Railroad Strike Menace** The threat of 250,000 railroad men to tie up the entire system of overland transportation in the United States and thus put the whole country in a virtual state of siege has eclipsed in interest all other news during the week, even to the war in Europe and the presidential campaign. President Wilson has committed himself to the principle of the eight hour day, thereby gaining the support of the railroad brotherhoods but at the same time losing that of the railroad officers. He is accused of abandoning the cause of arbitration and of seeking votes by conceding without investigation the principal demand of the unions. Failing to obtain any concession of the eight hour day from the railroad managers or of the principle of arbitration from the brotherhoods, President Wilson has turned to Congress. He requests Congress to amend the laws relating to the Interstate Commerce Commission by directing the commission to take into account wage rates when fixing freight charges, and also empowering the Board of Mediation and Conciliation to investigate any railroad dispute while enjoining both sides to refrain from declaring a strike or a lockout until the merits of the case have been ascertained. A similar law now exists

in Canada. It differs from compulsory arbitration in that it does not force the contending parties to accept the decision of the arbitrator but simply penalizes any attempt to break the industrial peace while the cause of dispute is still under investigation. In this respect it may be compared to the international arbitration treaties which aim to avert war by providing that neither party shall take hostile action until a year has elapsed from the beginning of the controversy. President Wilson hopes that such legislation will satisfy the railroad officers and induce them to concede the eight hour day.

Another labor dispute, less extensive but of very great importance from the principle involved, is the shut-down of four foundries in Bridgeport, Connecticut, and the prosecution of labor leaders for ruining the business of the foundries by incessant strikes. The employers demand from the workers full compensation for all damages suffered in the shut-down. If the courts should decide that losses resulting from strikes can be recovered from labor unions by legal action, a precedent will be established that will cripple unionism in every part of the country until the decision is reversed. The case is almost identical with the Taff Vale Railway judgment in England in which the court held that trade union funds were liable to costs and damages for any action of their agents when such action caused loss to other persons. This decision did more than anything else to bring into existence the British Labor Party and its effect was later annulled by Parliamentary legislation.

the Spanish-American war and on the Hague Court of Arbitration. Dr. John R. Mott is one of our most widely known religious leaders. He is acquainted with all countries of Protestant missionary activity, but he is most familiar with China, to which country President Wilson selected him as minister in 1913. He refused the office, but it is now evident that the President was determined that if he could not use Dr. Mott's knowledge of foreign conditions in one way he would in another. The joint commission will meet within a few days, probably in New England.

General Pershing and General Funston are said to be both of the opinion that the time has come to withdraw American troops from Mexican soil, so it is very probable that the American commissioners will be instructed not to contest the Mexican demand for immediate evacuation of the country. General Pershing reports that Villa is now in hiding in the State of Durango and that his prestige has been so shaken by his failure to overthrow the Carranza government or to defeat the American army of occupation that he will never again be a serious factor in Mexican affairs. Nevertheless, the troubles of the de facto government are not yet over, as the news comes that Yaqui Indians have attacked and destroyed 200 regular infantry in the State of Sonora. The most encouraging sign of the return of comparative peace is the announcement that regular municipal elections will be held thruout Mexico on September 3, the first step toward the restoration of civil rule.

OVER JOHN BROWN'S BODY

This tablet was unveiled on August 23 at John Brown's farm at North Elba, near Lake Placid, New York, in memory of the man who tried to end slavery almost single-handed. It is fastened to a great boulder where John Brown was accustomed to sit and read his Bible, and where he is buried with twelve of his band

**Mexican Commission Chosen** President Wilson has had a very hard time finding two other men of equal merit to serve with Franklin K. Lane, Secretary of the Interior, as the American members of the joint commission to arrange with Mexico for the withdrawal of American troops, the safety of the United States border and the general pacification of Mexico. Justice Brandeis refused to serve on the plea of Supreme Court business, and other men of prominence were equally unwilling or unable to accept the nomination. The delay was the more awkward because the Mexican members of the joint commission, Finance Minister Luis Cabrera, Ygnacio Bonillas and Alberto Pani, had been selected some weeks ago. The two additional Americans finally chosen for the commission are Judge George Gray of Delaware and John R. Mott, general secretary of the international committee of the Young Men's Christian Association. George Gray, ex-Senator and former judge of the United States Circuit Court, served on the joint high commission at Quebec at the end of

SHE FLEW OVER NIAGARA

Miss Norma Mack, daughter of the Democratic leader Norman E. Mack, was a passenger the other day in Lieutenant I. A. Rader's aeroplane when it maneuvered over the brink of the great cataract

## ANYWHERE IN EUROPE

The boys on the border are not inclined to take their troubles too seriously, judging by this (copyright) cartoon by Corporal C. Le Roy Baldrige which appeared in the *First Illinois Cavalryman*, published at Brownsville for the men of that regiment.

**Closing Days of Congress** Congressmen who are busy with the final stages of the heaviest legislative program in many years still find time to discuss the campaign and the merits or demerits of President Wilson and Mr. Hughes. Thought of the coming fall election has tightened party discipline and thereby given the President much greater power over his fellow Democrats in Congress. Besides holding up the session by insisting upon a change in the Army bill, President Wilson is forcing thru his Shipping bill, and he has defeated the attempt to revive the Immigration bill, in spite of the fact that many Democrats in both houses are much more enthusiastic about the restriction of immigration than they are about a government purchased merchant marine. On August 21, ten Democrats joined the Republicans in the Senate to place on the calendar the Immigration bill containing the literacy test. On the following day, after sounding the President, five of the rebellious senators voted to give the Revenue bill precedence, altho it is still possible that the Immigration bill may be brought up again later. President Wilson again showed his independence of Congress by vetoing an act authorizing cities and towns to acquire unreserved public lands for municipal purposes. This veto pleased the Progressives and all champions of the conservation policy, because it was feared that the bill might make possible inroads upon national forests.

The Army bill, shorn of the provision exempting retired officers from the jurisdiction of courts martial, passed both houses without delay, altho Senator Underwood, of Alabama, endeavored to have an additional provision inserted to prevent the enlistment of boys under twenty-one without the consent of the parents or guardians. The only important "unfinished business" which is certain to be taken

up is the Revenue bill. Altho the Democrats will probably meet the extra expenditures due to the Mexican situation and also the purchase price of the Danish West Indies, in case the treaty is approved by both countries, by bond issues, still the high cost of the administration's preparedness program must be met and new and increased direct taxes are the result. Senator Penrose made a vigorous attack upon the revenue policy of the administration and proposed as a preferable alternative a return to a high protective tariff. He held that direct taxation should be left almost wholly to the states, whereas customs duties were the appropriate resource of the Federal Government. He added that the Democrats had conceded the entire case of the protectionists by favoring duties to protect the infant dyestuff industry. Senator Underwood, altho defending the principle of national direct taxation against the Republican attacks, led an insurgent minority in opposition to certain provisions of the Revenue bill. As a consistent Democrat he opposed the grant of protection to the dyestuff industry, and he attempted to amend the income tax provisions by lowering the exemption limit by \$1000, thus making the tax apply to all single persons with incomes of more than \$2000 a year and all married persons with incomes of more than \$3000 a year. The amendment was defeated by 31 votes to 19, only four other Democrats supporting the proposed change.

**Sale of Danish Islands Uncertain** The sale of the Danish West Indies to the United States is meeting with unexpectedly strong opposition in both countries. In Denmark the feeling of the Landsting, or upper house of the national parliament, is that no action should be taken until the sentiment of the Danish people on the subject has been tested

in a new general election. This would mean a delay of about three months in the negotiations, and so to avoid the necessity of holding the election Premier Zahle proposed that a coalition ministry be formed from all the parties to carry the projected treaty thru parliament. The plan was wrecked by the opposition of the Socialists, who would only consent to enter a coalition government with regard to that one issue and stipulated that the new government would make no change in the defense policy of the nation. To this the other parties of the opposition could not agree, and so it is probable that a general election will be held. King Christian is striving hard to bring about a coalition government and has addrest an eloquent plea to the party leaders to join hands.

On August 24 the Landsting voted in committee by thirty-nine votes to seven not to proceed with the sale of the Danish West Indies until after a general election. The adverse vote was not unexpected after the failure to form a coalition government and may mean only a postponement of the session. But there is a plentiful crop of rumors to the effect that many persons in Denmark desire to put off the negotiations until after the close of the Great War because of the present delicate international situation, altho it is far from clear just what danger is apprehended.

Senator Borah, as a member of the Foreign Relations Committee of the Senate, is leading the fight against the transfer of the islands in our own Congress. He insisted that \$25,000,000 was a most exorbitant price to pay for one additional harbor in the Caribbean and added that "if we knew the amount of money Denmark had sunk in those islands in the last few years we would realize that the purchase price will look small before we get thru spending money there." Several senators

## THE FIRST UNITED STATES ARMY HOSPITAL TRAIN

A ten-coach train left the Pullman shops recently for the Mexican border. It was built especially for hospital service, and has a service car, here shown, for first aid and surgical work, six cars for patients, with iron cots replacing the usual lower berths, a standard Pullman, a baggage and library car, and a kitchen. It will be used to carry men from the field to base hospital.

The Passing Show, London

### THE CRIPPLE ALLIANCE

While the Allies are apparently bending their united efforts to the elimination of Austria from the Alliance, the Allied cartoonists are getting particular satisfaction out of the plight of the Triple Alliance

have expressed some apprehension at the number of concessions allowed by the treaty to private Danish corporations which have vested interests in the West Indies, and it is probable that Secretary Lansing will be called upon for a full statement of what these are and what they imply.

**Islanders Favor Cession** However great the opposition to the projected treaty may be in the Danish Parliament or the American Congress, there is now no doubt whatever that it meets with the enthusiastic approval of the islanders themselves. An unofficial ballot was held on August 15 in the island of St. Croix, which has less than twenty thousand inhabitants. The result of the vote was most striking, 5000 voters approving the change of rule and only eleven opposing it. The local legislature for the Danish West Indies passed the following resolution:

As constantly recurring sale negotiations paralyze all enterprises in St. Thomas and great depression, with a public deficit and private misery, has already been caused by the war and by disappointment from the Panama Canal, the mother country is earnestly requested to hasten the present negotiations and implore not to reject the sale unless the entire nation demands it and be willing to take the consequences afterward.

Another encouraging feature of the situation is the emphatic declaration of Foreign Minister Von Jagow that neither he nor any other German minister would object to the sale. "Germany," he said, "is not antagonistic to anybody's intention as to the distribution of sovereign rights in these parts of the world." This statement is of especial interest because it is commonly believed that German diplomacy

and court influence have on more than one previous occasion prevented Denmark from transferring to this country her transatlantic properties.

**Big Brother to Hayti** Hayti, the country which so long enjoyed the unenviable reputation of being the least stable of all the revolution-ridden nations of Latin America, has for several months been a virtual protectorate of the United States. Our treaty with that republic gives the United States control over public finances and also the right to intervene to restore order in case of future outbreaks. American marines are now policing the country and have so thoroughly suppressed all revolutionary movements that on August 24 Secretary Lansing and the Haytian Minister to the United States signed a protocol providing for the organization of a competent police force under American direction which will make possible the ultimate withdrawal of the marines.

The police force will be modeled more or less after the Philippine Constabulary. The two thousand or more men on the force will all be native Haytians, but they will be officered by Americans, and the head of the system will be an American major of marines. As soon as efficient native officers can be trained they will replace the Americans, and in time Hayti will stand on its own feet again. Until the constabulary is fully trained the marines will continue as an army of occupation to enforce internal peace in the distracted country. It is suggested that similar bodies, also under American officers, may be organized in other Caribbean republics.

Mucha, Moscow, formerly of Warsaw

### AN ENDLESS JOB

Willy: "As soon as I sew up one place I burst open in another. And you?"  
Franz: "Oh, I am so much sewn up that I can't tell which is my suit and which are the patches"

**The Battle of the Somme** Last week showed less change in the situation than any in the two months since the British and French began their push. The fighting, however, has not slackened and both the Allies continue to make slight gains. The British have taken 700 yards of the trenches of the Leipzig Redoubt that protects Thiepval on the south and are now within a thousand yards of that village.

On the eastern side where the two armies join their common objective is Combles, on the Péronne railroad, and about a mile and a half ahead of their present front. The British are fighting for the village of Guillemont, north of Combles, and the French for the village of Maurepas, south of Combles. The French have had better success and during the week have not only taken complete possession of Maurepas, but have extended their lines two hundred yards beyond it. In this latest advance they came near catching Prince Eitel Friedrich, the second son of the Kaiser, who commands the first division of the Prussian Guards at this point. He had barely retired from the front when the French guns were raised to throw their curtain of fire behind the German troops holding the outskirts of the village.

The Germans assert that the worst is over on the Somme and that the British and French have lost so heavily that they will not be able to continue much longer their desperate assaults of the German lines. They estimate the British losses at 400,000 or more and claim that their own are much less.

The fighting in France is not confined to the Somme region, but extends as far as Verdun and beyond. For

thirty miles along the front south of the Somme the French subjected the German lines to an intense bombardment for a day and a night last week. At Verdun the struggle for the ridge of Thiaumont and the village of Fleury has continued for several weeks with varying fortunes.

The French have executed a woman spy, Félice Pfaad, at Marseilles. This is the third woman executed for espionage in France, so far as known, the others being Margarete Schmidt at Nancy in March, 1915, and Otilie Moss at Bourges in May, 1915.

#### Rumania Declares War

The participation of Italy in the Salonica expedition will bring the Italian troops for the first time into collision with the German forces assisting Bulgaria. Accordingly Italy has declared war against Germany from August 28. This completes the rupture of the Triple Alliance, which was based upon separate treaties between the three states. So the outbreak of war between Italy and Austria-Hungary did not necessarily involve a break with Germany, and neither country wanted this because the financial relations between the two had been so close that a formal declaration of war would bring embarrassment and would not be of any military value, since the two countries were not within reach of one another.

The declaration of war by Italy will then not make any great difference in the situation, but the entrance of Rumania into the war will have an importance far beyond the numbers added to the Allied forces. Curiously enough, the report that Rumania had mobilized her army and was about to join the Allies came first from German sources.

The Rumanian Council of Ministers has decreed an extraordinary credit of \$120,000,000 for military purposes and appointed a director of munitions. King Ferdinand of Rumania, altho a Hohenzollern, is said to have refused a request of the Kaiser to give a private audience to Duke Albrecht of Mecklenburg, who was coming to Bucharest on a special mission in regard to the attitude of Rumania, and a declaration of war against Austria followed.

A glance at the map will show that Rumania holds the key to the Balkan situation. Now that she is with the Allies her troops are in a position to cooperate with the Russians in Bukovina by crossing the Carpathians simultaneously with them for an invasion of Hungary. Or Russian troops, said to have been assembled in Bessarabia for the purpose, could be carried across Rumania by rail and take the Bulgars in the rear while they are engaged before Salonica. Caught thus between two forces, either alone outnumbering the Bulgarian army, probably Bulgaria could be cut in two and thus the connection between Constantinople and Vienna would be severed. It is doubtful if the advance of the Russians into Galicia and Bukovina that has given the war party in Rumania the upper hand. But that advance seems to have

been checked, temporarily at least, for the Russians have made little perceptible progress in the last two weeks, so Rumania might have hesitated and adopted a waiting attitude again until Russia gave further evidence that her strength is not yet exhausted.

#### The Bulgarian Invasion of Greece

The Bulgarian army is evidently under German management for it is following the favorite German plan of the anticipatory offensive. While the world was expecting the Anglo-French drive on the French front to start in the spring, the Germans forestalled it by attacking Verdun in February. So while the British and French at Salonica were preparing for the invasion of Bulgaria the Bulgars got ahead of them by invading Greece. The Allied despatches at first represented this movement as merely raids of Bulgarian irregulars, but it is now evident that it is a well considered and very skilful stroke of strategy, that has quite disconcerted the plans of the Allies.

By advancing down toward the sea to the east and the west of Salonica the Bulgars have secured positions on both flanks which will prove annoying if not dangerous whenever the Allies begin their movement into the interior. Three railroads run out from Salonica. The middle one that goes up the Vardar River was to be used by the Allied troops for their advance into Serbia. The other two run respectively to the west and east and both of these are now in the possession of the Bulgars.

The western railroad was undertaken with the intention of connecting Salonica with the Adriatic at Durazzo,

but owing to the disturbed state of Albania it was never extended beyond Monastir, which is just over the boundary in Serbia. The Bulgars took Monastir last year and now they have advanced down the railroad nearly half way to Salonica. The Serbian troops which had been stationed along the border opposite Monastir were compelled to evacuate Florina and fall back. Since then the Serbs have made furious attempts to regain their lost positions but without much success. If the Bulgars can hold this ground it will cut off the Italians who are at the Albanian port of Avlona from coöperation with the Italians at Salonica.

On the east the position occupied by the Bulgars is still stronger. They entered Greece on May 29 thru the Rupel Defile by which the Struma River makes its way thru the Belashitza range to the sea. This gave them possession of Demirhissar and other Greek forts along the Struma, down which last week they advanced to the sea. The Greek garrisons were under instructions from their government to surrender their forts on the approach of the Bulgars but in some cases they refused to yield and held out almost to the last man. But the demobilization of the Greek army, which the Allies forced by means of the blockade has made it impossible for the Greeks to offer any substantial resistance however much they hate to see the Bulgars regaining territory which they took from them in the second Balkan war.

The Bulgars have also crossed the Mesta River on the east and pushed down toward the coast, where they have seized the forts of Kavala without opposition. The British attempted to stop the advance of the Bul-

THE IRON RING ABOUT AUSTRIA-HUNGARY

The Bulgars are attacking on the west, and the Russians on the east, while on the south a joint force of all the Allies at Salonica is preparing for the invasion of Bulgaria and Serbia. Rumania holds the key to the Balkan situation and has finally broken her policy of neutrality and declared war on Austria.

A WAR MAP OF MACEDONIA

As the Allied forces were getting ready for an advance up the Vardar River and by Lake Doiran into Serbia and Bulgaria, the Bulgars anticipated them by taking the offensive on both flanks. On the left of the Allied line south of Monastir the Bulgars pushed back the Serbs. On the extreme right they have crossed the Mesta River and taken the forts of Kavala. Entering Greece by following down the Struma River they occupied the Greek port of Demirhissar and seem likely to take Seres

gars with detachments of cavalry but these were driven in and now the Bulgars have control of the whole region from the Struma to the eastern boundary of Greece and from the Bulgarian border to the Aegean. They have then virtually in their possession nearly a hundred miles of the railroad running from Salonica to Constantinople tho apparently they have not tried to occupy the chief cities of this district, Seres, Drama and Kavala. The population of the territory occupied by the Bulgars is more Bulgarian than Greek, or at least it was before the Greek massacres of four years ago thinned out the Bulgars.

**The Balkan Imbrolio** It looks as tho the Allies had been again outwitted in the Balkans by the action of Bulgaria. Altho the troops of the eight nationalities congregated at Salonica outnumber their opponents about three to one, it will take some time to dislodge the Bulgars from the new positions they have seized on the right and left of their proposed line of advance, and a second winter campaign in the Balkan mountains is an undertaking they may well shrink from.

The Allied force at Salonica is estimated at six or seven hundred thousand. It consists first of the British and French troops sent a year ago last October at Joffre's insistence to aid Serbia, but which arrived too late for that purpose. These have been reinforced from France and England and augmented by the Serbs and Montenegrins who escaped thru Albania when their countries were overrun by the Austrians. There is also said to be an Albanian contingent and Italy, which refused to join in the previous Balkan expedition,

has now sent troops to Salonica. A body of Russians were landed at Salonica three weeks ago, altho the news of their arrival has been concealed up to the present. It is said that the Russians number 80,000 and have been brought in part from France and in part from the Persian Gulf. The mere presence of the Russians may serve as a deterrent upon Bulgarian activity, for Bulgaria was, at the start, a *protégée* of Russia and the Bulgars will not have the same zest for fighting Russians as they have for fighting Serbs and Greeks. In fact, some Bulgarian officers, notably Radko Dimitrieff, who led the Bulgarian forces to victory against the Turks four years ago, volunteered for service in the Russian army at the beginning of the war. The invasion of Macedonia by the Bulgars has so incensed the Greek people

that the pro-Ally party of ex-premier Venizelos may carry the coming election in spite of the determination of King Constantine to maintain neutrality as nearly as he is allowed to.

The Allies have from the start used Greek territory as tho it were their own for belligerent purposes, altho Greece is, like Belgium, under a guarantee of independence and inviolability. The Greek islands were employed as bases for the attack on Gallipoli and the Allied forces have displaced the Greek troops in spite of the protests of the Greek Government. King Constantine takes the position that he cannot refuse the Bulgars the same privileges of occupying Greek territory as the Allied Powers have insisted upon. But this argument, however logical, is not likely to prevail with his people when they see the Bulgars occupying the port of Kavala, which was one of the main objects of contention in the second Balkan war of three years ago.

#### THE GREAT WAR

August 21—Rumanian army mobilized. Bulgars attack on Struma River.

August 22—British within 1000 yards of Thiepval. Indecisive fighting on the Stokhod River and in the Carpathian Mountains.

August 23—French advance beyond Maurepas. "Deutschland" returns to Bremen.

August 24—Zeppelins bombard London. British auxiliary steamer sunk in North Sea by German submarine.

August 25—Russians again take Mush in Armenia. Germans again active in Champagne.

August 26—Turks attack British sixteen miles east of Suez. Italians consolidate their new positions about Gorizia.

August 27—Italy declares war on Germany. Rumania on Austria. Bulgars occupy Kavala forts.

**"Deutschland" Reaches Bremen** The city of Bremen and as many people as could get there turned out to wave flags and cheer as the German merchant submarine, the "Deutschland," came up the Weser River under her own power. A vessel carrying Count Zeppelin, Herr Krupp von Bohlen, the Grand Duke of Oldenburg, Finance Minister Helfferich, and other distinguished men escorted the submarine to her berth. Wealthy citizens of Bremen made up a purse of \$25,000 for Captain König and the Medical Faculty of the University of Halle conferred upon him an honorary degree for carrying German medicines to the outside world.

#### THE GIBRALTAR OF AMERICA

The harbor of St. Thomas is one of the finest in the West Indies, and situated as it is opposite Porto Rico, on the other side of the passage leading to the Panama Canal, it has great strategic importance

## THREE SAINTS OF THE CARIBBEAN

### SNAPSHOTS AT THE DANISH WEST INDIES

BY EDWIN E. SLOSSON

**T**WENTY years ago I cast my vote in favor of the annexation of the Danish islands, and ever since I have been curious to see what it was I voted for.

When McKinley was elected he received a cablegram of congratulation signed by sixteen prominent residents of St. Thomas and urging him to carry out the clause in the Republican platform providing for the purchase of the islands. But he was not able to do this nor was Roosevelt in 1902, for the treaty he negotiated was lost thru the dilatoriness of our Senate.\* The Great War brought the question again to the front, for Germany is the country chiefly interested in the islands and Germany is preoccupied with more pressing matters at the moment. More than a year ago I heard from what seemed an authoritative source that the Danish West Indies were to be ceded to Great Britain or France in exchange for Schleswig, which was to be taken away from Germany. Our only chance to forestall this infringement of the Monroe Doctrine would be to buy them ourselves before the war was over. My curiosity, pent for twenty years, could no longer be restrained, so in July, 1915, I embarked with my son on the "Guiana" for St. Thomas. A few months later Mr. Roosevelt

took the same boat. It is not often one has a chance to get ahead of Roosevelt.

St. Thomas is next neighbor to our own Porto Rico, within sight of it, in fact. The Quebec line of steamships from New York heads straight for it and reaches it in about five days. By what I thought at first was a rare piece of luck, we happened to come on a holiday, July 14. The pavilion on the hilltop was gay with flags and paper lanterns and there was a sound of revelry by night. Afterward I found that it would have been more remarkable if I had struck the place when it was not a holiday. For the natives of the Danish islands are excessively patriotic. Apparently they celebrate the national holidays of all countries with complete impartiality: the Fourth of July in honor of the country that wouldn't adopt them; the Fourteenth of July because it is celebrated in Martinique, and it would never do to let the French negroes get ahead of them; the birthday of the King of Denmark because the islands belong to him; the birthday of the King of England because the islands once belonged to him; the birthday of the German Emperor in honor of the Hamburg-American line; and the birthdays of all the royal families, I presume, as well as many local and impromptu holidays of their own. They also are very scrupulous about observing the Sabbath, at least in its negative aspect.

St. Thomas is noted for three

things; its bay, its rum and its bay rum. The bay rum flows hence into every barber shop of the world and there are as many only genuine original makers of it in Charlotte Amalia as there are Farinas in Cologne. The rum is distilled from molasses and consumed locally in large quantities. The bay is a beautiful one, large enough to hold more ships than fly our flag, and perfectly safe—unless a hurricane blows in the wrong direction.

The bay is almost entirely surrounded by hills close to the water's edge and in the middle is the city of Charlotte Amalia, banked like Pisa on the tiers of a natural amphitheater, the houses mostly yellow stucco with red tile roofs, set in gardens of tropical trees. The flags of the various consulates were flying from the masts, and as soon as we caught sight of the stars and stripes, above the palms, we made straight for it. Here we found America represented by Mr. C. H. Payne, a colored man from West Virginia, whose efficiency is sufficiently shown by the fact that he has held the post for fifteen years in spite of changes of administration. When he found out what we most wanted to see, the new harbor works, he took us in a carriage around the bay and up a hill upon the further side where we could look down upon the docks which the Danish West India Company is constructing. A new basin has been dredged out to a depth of thirty feet and the shallow shores filled in, adding considerable

\*I gave something of the history of the fifty years of negotiations for the purchase of the islands in a former article, "Our Lost Bargain," in *The Independent* of December 27, 1915. Other articles on the Danish West Indies will be found in *The Independent* of August 21, 1916; March 2, 1916; January 19, 1909; May 22, 1902; and February 6, 1902.

ably to the scanty arable land of the island. The roof was being put on a long warehouse and two big tanks for fuel oil were finished but unfilled. Two traveling cranes ran along the docks, by which coal can be unloaded directly from the ships and stored in heaps. But coaling is still done in the old way, not by steam-power but by woman-power. An endless chain of negro women stride up the gangplank each with an eighty pound basket of coal on her head. This is kept up all day long, some two hundred baskets at a penny a piece. "They say the natives are lazy," remarked the consul drily, "but I don't call that laziness, exactly."

But the Danish company has so far got nothing out of the million or more it has sunk in the harbor. The Quebec liner does not come up to the new dock but stands out in mid-harbor and sends its freight ashore in lighters. The English oil company, the Eagle or Pearson Syndicate, and the the Standard Oil Company of America do not use the Danish storage tanks, and yet the Danish Government, anxious to maintain its monopoly, refuses them permission to erect their own. The Hamburg-American company has its own docks on the other side of the harbor from those of the Danish company. We can see two of their big boats, the "Wasgewald" and the "Calabria," interned, or rather sheltered, like those in New York harbor, while the war shall last.

In the afternoon we drove in the opposite direction, a mile or two beyond the town along the shore, until we came upon a man sitting on the grass under a mahogany tree and reading *The Independent*. That, I thought, was introduction enough—I stopped the carriage and announced myself as the author of the article he was reading. Under certain circumstances this would have been dangerous, for many a reader has expressed a desire to have "the man

that wrote it" within reach of his arm or hearing of his tongue. But this reader was not of the sort to take an unpleasant advantage of the unexpected opportunity. He was a kindly man and a Christian, in fact a Moravian missionary, the Rev. A. B. Romig. He displayed the cardinal virtue of hospitality by taking us down to the shore of Nisky Bay and feeding us on unfamiliar fruits. Now, to eat a mango gracefully requires more practise than I have had. Lady Brassey, of the "Sunbeam," used to say that it had to be eaten in a bathtub. The skin of a mango is thick and seems to be soaked in turpentine. The inside does not taste so bad, something like raw pumpkin but more squashy. The milk of a green coconut is good to wash it down. The Reverend Romig can cut open a coconut with a sharp flint without using language unbecoming to the cloth. I would not have believed it possible but I saw him do it.

Then he showed us his church, a big building finished in native mahogany. It seats three hundred, and is often filled on Sunday. Here, the week before, had been held a service in honor of John Huss, burned at the stake five hundred years before. "The blood of the martyrs is the seed of the church," and never was there a more striking example than this, that here in a world of whose existence he did not dream, a race which he probably had never seen, should gather for worship in the church he founded.

On the hill back of the church and manse are the graves of the Moravian missionaries who have lived and labored here. The dates on the cement tombs reach back into the seventeenth century and I read among the birthplaces inscribed upon them the names of Germany, Austria, Greenland, Denmark and Antigua, for these devoted men and women know no barriers of race or climate.

St. Thomas is dry territory—in

A FRUIT WOMAN OF ST. THOMAS

the climatological not the temperance sense. The tourist who comes to the island expecting to see a jungle of tropical vegetation like the geography pictures of the Amazon valley will be disappointed at sight of landscape reminding him more of Arizona. There is a fringe of coconut palms along the shore but on the hill slopes are the tree cactus, prickly pear, yucca and century plant common to arid America. There are no rivers for irrigation, or, in fact, any water supply except cisterns. It rains two or three times a day in the summer and it rains hard. The rain comes without warning and pours down savagely for ten minutes and then stops as suddenly as it came. Rainbows are endemic. But I must refer to Kingsley again for a description of a tropical shower:

A window in heaven above was suddenly opened; out of it, without the warning cry of "Gardylloo!"—well known in Edinburgh of old—a bucket of warm water, happily clean, was emptied on each of our heads; and the next moment it was bright again.

The next of the Danish islands that you come to as you go down the Caribbean chain is St. Croix. You may pronounce it the way you have always wanted to, Saint Croyks, for that is how the natives pronounce it and they ought to know. Or if you stick to the principle of priority of nomenclature you may call it by the name Columbus gave to it in 1493, Santa Cruz. Columbus by that time realized that he was up against a harder proposition than any man since Adam, for giving names to all these islands was as bad as naming all the animals in creation. So he lumped the little ones all together and

MARKET PLACE IN ST. CROIX

The tree overhead with dry pods that are always chattering in the breeze is, for some reason unknown to the author, called the "Women's Tongues Tree."

called them the "Virgin Islands." There were eleven thousand of the virgin martyrs of Cologne, so he was sure that there would be saints enough to go around. But Santa Cruz he thought big enough to have a name of its own. It is more than twice the size of St. Thomas, tho that is not saying much, since it is only nineteen miles long and five miles wide. There is no harbor on St. Croix to compare with that of Charlotte Amalia on St. Thomas, or Coral Bay on the third of the islands, St. John. So when we wake up the next morning after leaving St. Thomas we find our steamer, the "Guiana," anchored in the roadstead about a mile off Frederiksted. The cargo, largely kerosene and corn meal, is being taken ashore on lighters and dumped on the open dock in the sun.

This lack of a safe harbor hurt the chances of the island for annexation in 1867, for after the treaty had been negotiated Admiral Palmer and the Reverend Charles Hawley were sent on the American frigate "Monongahela" to inspect the islands and confer with the natives as to plans for improvement. But unluckily, at this psychological moment, there came the biggest earthquake that the islands have ever experienced and a tidal wave 60 feet high "landed" the American commission, ship and all, on the shore at Frederiksted. This gave to the opponents of the measures then pending for the purchase of the Danish islands and Alaska a chance to sneer at Secretary Seward for wasting good American dollars in buying "icebergs, hurricanes and earthquakes." But Seward's judgment has been vindicated in both cases, for Alaska is now paying five hundred per cent annually on our investment, and the \$7,500,000 which the Senate refused to pay for St. Thomas and St. John in 1867 was a small part of what these two good harbors would have been worth to us in 1898 when we were hunting for Cervera's fleet without a Caribbean port to serve us as a naval base.

St. Croix has the advantage over St. Thomas in possessing more arable and less arid land. From the ship we can see a sugar mill across a level stretch and as soon as we land we walk out to it thru a long avenue of beautiful ceiba trees, the trunks of which are flanked with flying buttresses to support the wide spread of the branches. The plowing is worth seeing. It seems that it takes eight oxen, three negroes and a white overseer on horseback to run one plow and they have to stop for rest in the middle of the furrow at that. The West Indies sugar business was

nearly ruined by the bounty-fed beet sugar of Germany which ousted the cane sugar from the English market. But now with the German competition shut off and with the American tariff wall lowering they are prospering once more. Wages in St. Croix have doubled in the last few years. That is to say, workmen used to get fifteen cents a day and now get thirty. But the cost of living has gone up so that even with this munificent wage they are discontented and the young folks of both sexes are flocking to the United States and to Porto Rico and San Domingo since these have come under American control. Our senators may refuse to annex the soil of the Danish islands, but the people are annexing themselves at a rapid rate. Their places are being filled by negroes from the lower islands, largely Barbadians, so there is a constant flow up the chain of the Antilles. This seems to be in accordance with Gresham's law, for the change of population is not for the better. The natives of the Danish islands are a friendly, self-respecting, peaceable and well behaved class of colored people and they talk better English than the natives of the British Islands—I mean, of course, the British West India islands.

The Danish Government has been trying to displace English by Danish as the language of the islands, but the effort has had little effect except to increase the dislike of Danish rule. The language of a people cannot be changed by merely requiring the upper grades to study Danish for three hours a week. But many of the natives speak English, Danish and Spanish with a smattering of French.

If the Americans take over the islands the first thing to be done will be the starting of some agricultural and trade schools like those in the Philippines and an agricultural experiment station. The Danish Planta-

tion Company has spent large sums in St. Croix, particularly in trying to cultivate cotton, but much of the money was wasted for lack of scientific and practical direction.

The Danish islands used to be the favorite resort of American pleasure seekers, but in recent years the Bermudas have taken their place. Under American management they would again attract tourists. The bathing is the finest I have ever had, fine white sandy bottom and water agreeably warmed, better than the Lido on the bar outside Venice.

In 1902, when the purchase of the islands was under consideration, speculators bought up all the land they could get, but lost out on it when the upper house of the Rigsdag defeated the treaty by a tie vote. The renewal of the proposal to purchase has caused a similar boom. It is quite evident that "Barkis is willing." Financial Minister Brandes at Copenhagen recently received a telegram signed by twenty-one planters of St. Croix saying: "All the planters are highly in favor of a conveyance to the United States." The Governor of the Danish West Indies telegraphed to the home government that at two meetings called to consider the proposition, including men and women of both races, the vote was 4727 in favor of sale to the United States and only seven against. Since these mass meetings comprized about a sixth of the entire population of the islands there is no question of the public sentiment. It will be a great day for the islanders when "Old Dannebrog" is hauled down and "Old Glory" hauled up. Yet they have no hard feelings against Denmark. She has been a well-meaning tho somewhat absent-minded ruler. But geographically, linguistically and economically the islands belong to the United States instead of Denmark.

After having seen them I am sure I voted right in 1896.

# THE AERIAL COAST PATROL

A SYSTEM OF DEFENSE FOR OUR SEABOARD

BY JOHN HAYS HAMMOND, JR.

TODAY the ocean does not separate us from the other continents, but rather it joins us to them, forming a high road for invasion over which troops can move thirty times faster than over land. The points for landing need not be harbors or protected beaches, points which we would think of for the landing operations of an invader. The Japanese in their war with Russia landed an army corps and its equipment on the open, unprotected beach at Pi-tzu-wo. These landing operations were carried out in the face of a strong sou'easter, and considering that forty transports had to unload, the magnitude of the operations is astonishing.

OUR five thousand odd miles of coastline present a great vulnerable stretch of territory protected only by the existence of a fleet now fourth among those of the powers. The distance of our coast line from the enemy's territory should not be measured as the breadth of the Atlantic or Pacific, for no nation would attempt operations with such extended lines of communication. Hawaii in the Pacific or some of the West Indies in the Atlantic would form the stepping stone of the invasion. From these points, once secured, the enemy would approach our shores, screening the purpose of his movements with swift cruisers and scouts and by sweeping before him our scouting planes with battle planes accompanying the fleet.

The purpose of the invader's forces is not to bombard our coast towns, nor to carry out any useless raiding expeditions, but it is to meet our fleet under such circumstances as are most favorable to him. Thanks to the coast defenses, the important coastal cities are self-protecting and the United States fleet is allowed a complete mobility. It would not be long therefore before the opposing naval forces met to dispute the mastery of the seas. At this great moment, millions would be voted in Washington for the construction of new battleships!

If we should win, the war would probably be over; should we lose, the war would have just begun. The fragments of our beaten fleet would be driven back upon their bases, where they would be blockaded and muzzled like the Russians at Port Arthur. Once the seas were cleared, the enemy's transports would put to

*Mr. Hammond, whose father is a mining engineer and publicist of world-wide experience, is the inventor of a coast defense torpedo controlled by wireless energy from the shore, and devised the scheme of aerial coast patrols which has been adopted in several states and recommended for national adoption. He is a member of the advisory board to the United States Naval Board of Inventors.—THE EDITOR.*

sea, and it is then that the great system of an aerial coastal patrol would begin to function.

The operation of the aerial coastal patrol as planned by me in June of last year was a system to warn our land forces of the operations made by the enemy for the purpose of landing troops.

To meet suddenly an enemy's landing operations on our coasts, it is necessary that we have forces of a specific character and of defensive ability to counter him. With the first signals from an aeroplane warning of landing operations at a given point, preparation could be made to send by railroad to that point special high angle fire artillery mounted on railroad trucks. This artillery, situated at a predetermined distance from the point of landing, would deliver great bursts of shrapnel over the landing parties of the enemy. Supported by this fire and in direct vision of the landing forces, there should be companies of machine guns that have been carried to the scene of action, either by armored motor cars or specially constructed motorcycles. Each machine gun is supposed to be the equivalent in firing value of fifty rifles. The effect of landing operations against shrapnel shot from 12-inch mortars, and against the deadly fire of entrenched machine guns, would be practical annihilation for the landing forces.

At this time a general concentration of the aeroplanes patrolling the coast could be made at the point of landing. This concentration would be for the purpose of overpowering the enemy's air craft and thereby prohibiting him from knowing the extent of our reinforcements. The chief factor in prohibiting the enemy from obtaining a strong entrenched foothold upon any part of our coast is the factor of the length of time required for us to concentrate at that

point sufficient men and artillery to arrest the landing operations.

While this matter would have great importance to the heavy artillery on railroad trucks, and on motor drawn caterpillar wheels, tho situated away from the fire of the ships, the matter of the time of arrival would have a special significance to those troops meeting the enemy at close range with machine guns. It would be necessary for these troops to choose such protected positions as to be safeguarded from the shells of the ships supporting the landing forces, and therefore they would desire to entrench themselves as strongly as possible.

To bring these necessary forces to the scene of the enemy's landing, there should be a number of points of mobilization for men and guns, and these points should be situated at certain intervals along the coast, so as to be as nearly equidistant as possible from the various feasible landing places in their zone. Thus, each center of mobilization could tell to the minute how rapidly it could concentrate its force at any point. Forewarned, as the land forces would be by the broadly scattered coastal patrol, it would be possible for them almost always to anticipate the landings of the enemy, and prevent the landing of any appreciable force.

WE have an immense coast, but also an immense railroad system. In the case of invasion, it is necessary for us to take the initiative, so as to concentrate our limited forces at the hour which would be the most opportune for their use. With an enemy army of half a million trained men fully equipped and landed in the United States, it would take years for us to dislodge them. The sacrifice in blood and property would be stupendous.

Certain people have imagined that a system of aerial coastal patrol was an endeavor to supplant certain functions of the navy. This is not the case, for the navy, using hydro-aeroplanes operating from ships, would form the first line of patrols. These patrols would be feeling for the enemy in the first stages of the invasion. After a definite fleet action had taken place, the system of coastal patrol would unquestionably prove a tremendous factor in the national defense.

# HAYNES

*"America's Greatest 'Light Twelve'"*

Weighing only 100 pounds more than the Haynes "Light Six"—standing out from other twin sixes as the only "LIGHT Twelve," and in a class by itself as to upkeep economy—

—delivering more than 70 horsepower with its master motor—

—this new Haynes product is achieving a popularity which rivals that of the Haynes "Light Six."

The new car embodies every improvement of modern automobile engineering. The foremost advances in motor construction have been supplemented by the latest in motor car conveniences.

Wire wheels, cord tires, shock absorbers and seat covers are standard equipment.

The body design is entirely individual in grace and beauty. It is the same distinctive, full streamline body that has been so popular in the Haynes "Light Six."

#### Haynes "Light Six" Prices:

Model 46—5 passenger Touring Car	-	\$1489
Model 46—4 passenger Roadster	-	1489
Model 47—7 passenger Touring Car	-	1589

ALL PRICES F. O. B. KOKOMO

# Haynes quality through and through yet priced at \$1985

\$1985 is a very low price for a car of the beauty, practicability and economy of the Haynes "Light Twelve." The more you compare it with other twin sixes the more apparent its value will be.

The "Light Twelve" motor is of V-type, valve-in-head construction. The intake and exhaust valves are operated by a single camshaft. The carburetor, placed in the middle of the V, insures an equal distribution of fuel to all cylinders.

The engine works with the same efficiency and precision as the "Light Six."

The motor is 2 3-4 x 5-inch bore and stroke and is equipped with aluminum pistons.

With vibration practically vanquished—with an even flow of power from the twelve purring cylinders—hesitating not for sand or hills—you will find this car a new delight in

driving and riding without the penalty of excessive upkeep expense.

Deliveries are being made on the "Light Twelve." A very limited number will be built during 1916. See your dealer at once.

## The Haynes "Light Six" of the new series

is more complete and desirable than ever, with seat covers, aluminum pistons, gipsy curtains and other added refinements. The engine is the same light, high-speed, 55 H. P. motor, developing more power than any other engine of comparative bore and stroke—and of notable flexibility and snappiness in the get-away.

The maintenance expense of this car is so remarkably low that it's economy to buy it in preference to many cars of lower price and less attractive performance.

See the Haynes dealer at once for full information and a thorough demonstration.

## MR. HUGHES'S TRIP

BY JACOB GOULD SCHURMAN

MR. HUGHES began his continental campaign at Detroit on August 7, and he is due in Buffalo on his return from the Pacific on September 6.

Mr. Hughes's opponents profess to believe that his tour has not accomplished its object. But the success of his midsummer campaign is amply attested by the telegraphic news reports of the very Democratic journals which seek in their editorial columns to criticize and belittle the candidate and his speeches. And the special correspondent of *The Evening Post*, which is maintaining an official neutrality between the presidential candidates, writes to his paper that Mr. Hughes's achievements are regarded "as making one of the most remarkable records of successful campaigning of any presidential candidate in recent years." And he significantly mentions that Mr. Hughes has been "displaying all the old-time power of convincing utterance that made his two campaigns for Governor memorable in the history of New York State."

Mr. Hughes has been making several speeches a day (sixteen one day in California). Reported in brief extracts every morning in the New York papers, the successive fragments may sometimes give the reader the impression of repetition. But it must in fairness be remembered that Mr. Hughes has necessarily much the same general message to deliver everywhere.

Mr. Hughes went out to win the West: the daily newspaper reports prove that he has been doing it. Those who saw the man at close range, those who heard his speeches, those who shook hands or talked with him were charmed by the heartiness of his manner, his expansive good nature, his friendliness, his sympathetic responsiveness to every human interest. This in itself was no slight gain; for the report had gone abroad that Governor Hughes, who had indeed shown in office a stern and inflexible sense of public duty, was personally cold and forbidding. There never was a greater caricature of a man so sociable, companionable, and genuinely human as Charles E. Hughes.

Another notable result of Mr. Hughes's tour is that it revived in the public mind his record as Governor of New York. For the last six years he has been shut up in the Supreme Court out of public sight

and hearing, and in the meantime millions of schoolboys and schoolgirls who knew nothing of Governor Hughes have become voters. They have now learned the sort of official he was, the kind of administration he gave New York State, and the way in which he led and responded to public opinion.

## HUGHES'S RECORD

THE people of the West are enthusiastic over the man and his record. They highly approve of his single-eyed devotion to the public interest and his strict conception of every office as a public trust. They admire his courage and his fearless independence of bosses, political machines, and financial and all other special interests. And they know, when he criticizes the lax administration in Washington, the unfit appointments, the blight of partizan politics and the waste of public money, that Governor Hughes himself set and maintained the highest administrative standards in New York State, that he made appointments only on the basis of merit, and that he insisted on the strictest economy, honesty and efficiency in the public service.

Mr. Hughes has made a hit with the women voters out West as well as the men voters. And the women voters in the suffrage states have never before taken such a keen interest in a presidential contest. They want the vote for women all thru the Union, and they seek it by means of an amendment to the federal constitution. Mr. Hughes favors the proposed amendment; Mr. Wilson is opposed to it. And the women voters are eager to help elect Mr. Hughes.

There is another contrast between the two candidates which Mr. Hughes's tour is impressing on the country. The Republican candidate is politically stable and trustworthy; everybody knows where he stands. The people who see and hear him feel instinctively—what, indeed, his record proves—that he is not the man to advocate one thing today and a different thing tomorrow. It is impossible to associate political expediency with the name of Governor Hughes. If he ever changed his views on any subject his reasons would assuredly convince the public, too. But that cannot be said of President Wilson's numerous and amazing reversals of policies in the last three years. Who can tell where a leader with such

changeable convictions might lead us in the next four years if he were again elected President?

## SAFETY FIRST

AND the great question now before the American people is one that concerns their future. Are the honor, interests and prosperity of the nation, and the rights of American citizens at home and abroad, safer in the hands of the Republican party, under the leadership of Charles E. Hughes, or of the Democratic party, under Woodrow Wilson? Who will most promptly and determinedly assert and maintain the national rights? Who will most sanely and effectively protect American industries and American standards of living against the ruthless competition which the European nations will set up against us at the close of the present war? Who would be the safest and wisest spokesman of America—the guardian of her rights as well as the exponent of her ideals—in the coming world-conference for the reorganization of international relations?

President Wilson must be judged by the record he has made. Mr. Hughes has held up that record to his Western audiences. They agree with him that the honor, rights, and interests of the nation have not been properly maintained. They rose and cheered his declaration that, anti-militarist tho he was, he would not, if necessary, shrink from war for the defense of the honor and rights of the United States. But Mr. Hughes was equally positive that our only danger of war during the last three years has lain in President Wilson's failure to act promptly, firmly, and consistently when American rights were menaced or even violated. The people of the West seemed to be of the same opinion. They also emphatically approved Mr. Hughes's criticism of President Wilson for not protecting the lives and property of Americans in Mexico and for interfering with the domestic concerns of the Mexican people.

Mr. Hughes talked everywhere of our present munition-made prosperity and the need of putting American business and industry on a sound basis at the close of the war. Perhaps none of Mr. Hughes's arguments for the return of the Republicans to power made a stronger and deeper impression on the West than his program of economic preparedness.

## HAS MR. HUGHES ANY CASE?

BY NORMAN HAPGOOD

**M**YSTERY envelops the collapse of Hughes. A newspaper in the West offers gold prizes to anybody who can make him say anything comprehensible. Papers that once supported him have backed away as they waited vainly for some constructive stand. Yet in the past he showed intellect, courage and distinction. What is the answer?

(1) It is rumored, tho I know nothing of the truth of this rumor, that the President of the United States finds the explanation in the now famous phrase, "100% candidate."

(2) Another eminent gentleman, high in councils of state, told me he thought the cause lay further back: "when I was on the bench I was 100% Judge." In those six years, according to my friend, Mr. Hughes hardened into a state of mind in which he could not understand the American people.

(3) A prominent editor, supporting Hughes, said to me: "It is good politics for him to talk a lot but not say anything. Votes that change, change to Wilson. Hughes's business is to rely on the fact that the Republican vote is normally higher than the Democratic, and play very safe."

(4) An explanation that is at least shrewd is offered by *The Bellman*, of Minneapolis. It says: "someone has given the unfortunate gentleman what in the vernacular is known as 'the wrong steer.' It is shrewdly suspected that Col. Roosevelt may be responsible. That gentleman would probably not be utterly heartbroken if Mr. Hughes failed of election, thereby giving him a free field four years hence."

(5) Another guess is this, and it is my own: Hughes is a good lawyer. He presents a case well. But who can present a case well when the case has no foundation? It is a well-known adage in the law that if you have no case your safest course is to abuse the opposing side.

If any reader can send me an explanation more plausible than any of those five, I will send him a year's subscription to *The Independent*.

RIP VAN WINKLE

**D**URING the six years that Mr. Hughes was shut off on the supreme bench, many things happened. This whole nation read the newspapers and magazines. While it read, it thought. The era of muck raking, having served its valuable purpose,

passed away. Hughes was governor during this muck-raking era. With all the extravagance, wastefulness, bad appointments and graft that marked various state departments, unknown to him, he accomplished a stirring service along the line of mere personal independence and moral reform. I freely admit that without Roosevelt, Bryan, Folk, and Hughes, without the moral sermons and crusades, Wilson would have been impossible. The country would not have been ready for him. He has done the actual building.

As this magazine goes to press, Mr. Wilson has been wrestling with a mighty strike problem; appointing a Mexican commission; signing a child labor bill; even as a rapid accumulation of deeds has crowded every month of his administration. If words are to prevail against such deeds, they must not be empty and empty and cowardly words, or words entirely out of date.

wow! wow!

**I**HATE to take up space with such a question as whether, if you rake the whole administration field, you can find a few cases of imperfect appointments. I should dislike to go back over Hughes's administration in New York and point out how little he knew about choosing men. But as long as he insists, let us say a few words about Wilson, frankly.

When the President took office he needed Mr. Bryan in his cabinet, to help him fix his control on the party, and to pass his great controversial measures. Mr. Bryan was loyalty itself. Few men would have asked so little. When he and the President disagreed, he yielded, until his real work was done, and his peace-at-any-price convictions made him so uncomfortable that he left the cabinet. He frankly does not share the civil service views that the President holds strongly. He asked to have only Democratic Consuls named. The President said, on the contrary, appointments should be by promotion from the bottom up. Mr. Bryan then asked that at least Democrats should have the posts of Consul Generals. The President replied that those posts also must go by promotion. In South America there are three very important positions, the representatives to Brazil, Chile and Argentina. The ambassador to Brazil when Wilson came in was a Republican. He is still in office. The ambas-

sador to Chile was a Republican. He was kept in that office until the President needed him for still higher work. Having troubled Mexico on his hands, he selected for ambassador this Republican from Chile for his known experience in Latin countries. In Argentina he wished to keep the Republican, but as Mr. Garrett refused to stay he put in his place one of the most distinguished citizens of Boston. Mr. Hughes makes much of Mr. Bryan's Sullivan letter, but naturally does not stress the fact that the administration refused to stand by the Bryan view.

Chairman McIlheny of the Civil Service Commission appointed by President Roosevelt says, "the principles of the civil service law have been admirably carried out in letter and in spirit by President Wilson's administration."

President Eliot, speaking before the Civil Service Reform League, about the Consuls, declared, "the administration's record in this respect is, therefore, without blemish from the point of view of civil service reform."

COMIC

**W**HEN McKinley was President, Mark Hanna's private physician was made Consul at Nuremberg, and when Mr. Hanna was ill he required that this physician should have leave of absence to go to Aix-les-Bains to watch his case. John Hay, in a private letter, wrote, in 1898: "I could not appoint even my private secretary, as Mr. Sherman wanted me to appoint his; nor my confidential clerk, as a friend of the President's from Canton had the place." After naming other gross cases, he adds: "The President is not to blame. The pressure is so cruel that he must use these offices to save his life."

Mr. Hay deemed Henry White the best diplomat in the service and Mr. Taft removed Mr. White to make room for Mr. Herrick. Mr. Wilson, in spite of his unequalled problems, has advanced, not to perfection, but to a point beyond any heretofore reached on the road that leads away from cheap partizan appointments.

PLEASE

**I**N order that I may have time to use the material, will the readers of *The Independent* please write me at once their opinion of why Mr. Hughes talks and talks and never says a thing?

# TWO NEW POEMS OF SAPPHO

TRANSLATED BY MARION MILLS MILLER

## TO ANACTORIA

*Of all that the world holds, some deem the fairest  
A brace show of horsemen; others praise as rarest  
Footmen a-march, or a fleet to battle movéd—  
I, my beloved.*

*Love is the best, as I shall prove you clearly:  
Helen, whose portion was all that women dearly  
Prize, tho the flower of Greece had passed before her,  
Chose her adorer,*

*Ilium's prince, and wrecker of its honor,  
Paris; and, spell of Passion strong upon her,  
Parents and child dear abandoned for the stranger,  
Daring all danger.*

*Easily Desire the will of woman moldeth  
If near things and dear things lightly she holdeth;  
So thou neglectest (for, sister, I must chide thee)  
The rare girl beside thee:*

*Whose soft footfall sets my heart a-bounding  
Wilder than when the clarions are sounding;  
Whose bright face hath power more to charm me  
Than Lydia's army.*

*Well do I know that the world as it is fashioned  
Grants not the best, yet, when hopelessly impas-  
sioned,  
To turn to the old love—the loyal love—is better  
Than to forget her.*

## HYMN TO HERA

*Hera, the mighty, bring to my dreaming  
Phantom the fair, a woman in its seeming,  
That to the kings came in answer to their praying  
When winds delaying*

*Kept them at Troy tho taken was the city.  
First they embarked from Scamander, but his pity  
Zeus restrainéd, and the godhead jealous  
Held them from Hellas.*

*Then were they fain to call on thee, and holy  
Zeus, and Thyone's lovely child. So, lowly,  
Thee I beseech to grant me, Lady gracious,  
To do the things precious—*

*Pure things and fair—again as in the olden  
Days when I taught to dance and sing the golden  
Girls of Mitylene, sweetheart and vestal,  
On thy day festal.*

*So, as the longing sons of Greece, by grace of  
Thee and thy fellows, gat them from their place of  
Exile, O Hera, whose favor is unfailing,  
Speed my home-sailing!*

# SAPPHO'S SONGS OF EXILE

BY MARION MILLS MILLER

THE rubbish heap at Oxyrhynchus, Egypt, in which papyri containing in more or less fragmentary form many hitherto unknown writings of ancient Greek authors began to be discovered about twenty years ago, has been slowly yielding up its treasures since that time; and these, by the patient and painstaking labors of classical scholars, have been deciphered and the omissions supplied by shrewd conjecture, based on careful measurement of spaces as well as on context, and the restored works published, one by one, to the world.

Among the most eminent of these scholars is Professor J. M. Edmonds, of Jesus College, Cambridge, England. He has written two articles for *The Classical Review* on the restoration of a number of the fragments, the first appearing in the *Review* for May, 1914, and the second in the issue for June, 1916, presenting the Greek text as completed, and a literal English translation of the same.

To lovers of poetry the most valu-

*Recently two poems of Sappho, equal in poetic values to her famous "Hymn to Aphrodite," have been given to the public after careful restoration of the fragments in which they were found in Egypt. We herewith present the first metrical translations from them by Dr. Miller, the translator of the former poems of Sappho and "The Sicilian Idyls of Theocritus," and editor of "The Greek and Latin Classics." Dr. Miller's theory of the proper rendition of the Sapphic meter will doubtless raise some controversy.—THE EDITOR.*

able of these manuscripts is Papyrus 1231, which contains two poems by the greatest lyrist of the ancient world, Sappho, called "The Tenth Muse" by her enraptured countrymen, and extolled and imitated by the purest poets of her order in other lands from the Roman Catullus to the English Swinburne.

For centuries it has been one of the fondest hopes of literary men as

well as linguistic scholars that lost songs of this supreme "Poetess of Passion" would be discovered, since there remained, out of the wreck of time, only one of her poems in its entirety, "The Hymn to Aphrodite," and another almost complete, that which is familiarly known from the translation by Ambrose Philips, appearing in *The Spectator* in 1711, as: "Blest as the Immortal Gods is He." Only fragments of the other poems were extant, and these are very brief, owing to the fact that they were largely recorded by the ancient grammarians merely as specimens of Aeolic dialect.

The loss of the other poems is chiefly attributed to St. Gregory of Nazianzus, Bishop of Constantinople in the fourth century A. D. This zealous churchman, desirous of replacing earthly with heavenly love among his flock, remorselessly hunted out and destroyed erotic writings in general and Sappho's songs in particular. He substituted for them religious plays; and it is some consolation

© Underwood &amp; Underwood Studios, N. Y.

## Give us a Great President for a Great Crisis

THESE are days that demand true greatness at Washington. And for the critical days that are to come after the war, we shall more than ever have need of a great executive.

Charles E. Hughes is the man.

His record as a great Governor of New York State proves it.

This is his record in brief:

When the gas investigation began in New York City, Hughes, unknown to the public and unheard of in politics, was the one great lawyer whose freedom from corporation entanglements made it possible for him to perform brilliant service for the people.

In the insurance investigation, by sheer intellectual power he mastered intricate technicalities, fought his way through the confusing defenses of experts, and almost single-handed brought the gigantic insurance companies to justice and reform.

Public admiration of his fearlessness as an investigator brought him the Republican nomination for Mayor of New York, which he instantly waved aside because it might impair his uncompleted insurance work.

Elected Governor, he put new life into every branch of government, and brought into office a great group of the strongest and most expert administrators that had ever served the State.

When he dared to attack race-track gambling, he risked his whole political future in an enterprise which his political advisers told him was hopeless. He won. Race-track gambling was suppressed. He was re-elected.

He battled with the bosses for direct primaries, ballot reform and the short ballot.

He devised and created the great public service commissions which took the railroads out of politics and drove the "Black Horse Cavalry" out of Albany. His idea of public service control has since been followed by many other States.

He advocated and helped to bring about the enactment of a Workmen's Compensation Law, the first of its type in the Union.

This law has been the basis for subsequent legislation in New York and other States.

He did not fear popular clamor. His veto of the uncapped but popular 20-a-mile railroad rate bill shows that.

Finally, he never made a deal. He never traded appointments for measures. He appointed men to office for merit only. He never removed a man from office for political or personal reasons. Had he stooped even occasionally to the use of patronage to reward friends and to punish enemies, his victories would have been quick and easy—but he never stooped. He could have easily undermined the power of his political arch-enemy by a single threat to the unprotected State Capitol employees, yet every workman who did his duty remained secure in his job. He never appointed a Republican because he was "deserving," in Bryan's sense of the word.

Politicians of both parties sneered, fought, called him "cold," "impractical," and "theorist," and succumbed to him. Here was a new type of man. They did not understand him. Apparently the people did, for they trusted him.

Thus did the magic name of Hughes become a name to conjure with in New York State politics for years thereafter. To say a man was a "Hughes man" has had a special meaning in New York State; to say that a measure was favored by Hughes has given it at once a standing that nothing else could. Democrats, Progressives and Republicans have used the name of Hughes to win support for men and measures.

Today Hughes is saying:

"I propose that every man I put in charge of an important department shall be a man eminently fit to discharge the duties of that department."

"I don't care, if I'm elected President, what becomes of my personal political fortunes."

This is the same Hughes who made his performances tally with his promises when he was Governor of New York State. Can there be any doubt that he will do likewise when he becomes President of the United States?

### Enroll in the National Hughes Alliance

It is a union of men of all parties. The Hughes Alliance is not the Republican party; it is not a party at all. Whatever your political creed, you can join the Alliance without cutting loose from your own party. There are no dues; no pledge to support any party platform or any candidate except Hughes. After you enroll, we will send you literature with which you can convince your friends. Women may enroll, with the Woman's Committee through the National Alliance. If you are willing to contribute to the support of the Alliance campaign, make your checks payable to A. W. Shaw, Treasurer.

W. CAMERON FORBES (Mass.), Pres.,  
PHILIP J. MCCOOK (New York), Vice-Pres.,  
A. W. SHAW (Ill.), Treasurer,  
ARTHUR F. COSBY (New York), Sec'y,  
WILLIAM J. NORTON (Ill.), Asst. Sec'y.

## NATIONAL HUGHES ALLIANCE

Fill in and send this ENROLLMENT COUPON

To the Secretary of the National Hughes Alliance,  
511 Fifth Avenue, New York.

I hereby enroll as a member of the Hughes Alliance. I pledge myself to work and vote for the election of Charles E. Hughes.

Name .....

P. O. Address .....

to lovers of literature that he thus laid the foundation stone for modern drama, since in all European countries monastic compositions known variously as "mystery" and "miracle" plays formed the seed of the great art which flowered in Shakespeare, Lope de Vega, and Goethe. Nevertheless the immolation of "the sweet singer of Lesbos," even for the marvelous man of Stratford, has ever seemed a piteous sacrifice that will not be remedied until all of her poems are found—an expectation not so hopeless as it once seemed.

The two poems of Papyrus 1231 are akin in mood. As indicated in the text, they were both written when Sappho was in Greece, filled with homesickness for her native Ionian isle and her girl pupils there—for the poetess conducted in Mitylene what would now be called a "young ladies' seminary," specializing in "literature, music, and dancing."

I present herewith translations of these "Songs of Exile" in as near an approach to the original "Sapphic meter" as a language permits in which accent (time and force) is the rhythmic principle, and not so-called classic "quantity," which is a misnomer, since it contained the qualitative elements of pitch and timbre (phonetic quality) as well as the quantitative elements of time and force. The many attempts at repro-

SAPPHO

From the bust in the Galleria Geographica, Vatican. Reproduced from *Sappho and the Islands of Lesbos*, by Mary Mills Patrick (Methuen)

ducing purely classic measures in English may be successful from the Greek-Latin point of view (tho I doubt it), but they are certainly lamentable failures from the English standpoint, forcing as they do the unavoidable accent in rendition upon syllables naturally unstressed.

Dropping the technical language of physics we here add a literary exposition of the relation of English verse to classic meter, particularly

the Sapphic measure. In his admirable brochure on "Sappho and the Sapphic Metre in English" (published 1916 by Charles Whittingham & Co., London), Edwin Marion Cox, an American physician now practising in London, after discussing the various English translations and imitations of Sappho from Elizabethan times to the present, says:

Some writers, especially the earlier ones, emphasize the disadvantages of English as a language into which to translate Greek poetry, the inference being that English *as a language* is unsuitable. It is not really that English is an unsuitable or inferior language for the expression of poetic conceptions, but that it is *different*, and that the transfer of perfection in one language into another is not within the bounds of possibility. Approximation is all that even genius can hope for. An important point to remember in considering the construction and metre of the Sapphic poems is that we may take it for certain that they were always delivered in the form of a recitative or chant, and that they were nearly always accompanied by music on one or more of the stringed instruments for which Lesbos was famous at the time when Sappho lived.

In my translations I have introduced the element of rime (harmony of phonetic quality, or timbre) to compensate somewhat for this loss of chanting recitative. This has compelled a few paraphrases of the Greek expressions, altho the sentiment remains faithful to the original.

New York City.

## SAVE GASOLINE

BY ALBERT L. CLOUGH

AT a rapidly increasing rate, during the past thirty years or so, the world has learned to use and depend upon the gasoline engine in much of its work and in much of its play. It has adopted, with amazing rapidity, the motor truck, the stationary gasoline engine, the farm motor and the power dory to perform its tasks, and the pleasure car, the motor cycle and the power launch for recreative purposes. Quite lately it has learned to do its fighting by gasoline power, by means of motor transports, armored cars, armed launches, aeroplanes and dirigibles.

This comparatively sudden and still increasing rush to use gasoline for so many utilitarian and pleasure purposes on land and water and in the air, wherever motive power in small units is required, has created a serious drain upon the petroleum supply.

The recent doubling of the price of gasoline is the very tangible evidence of this and, without going into the statistics of gasoline production and consumption and after allowing fully for the influence of other factors, it must in fairness be conceded that the rise in price is primarily the result of the action of the laws governing supply and

demand. It is thus evident that unless a greatly increased supply of "gas" or some equivalent fuel is soon forthcoming or unless there is a marked slowing down in the rate of use of liquid fuel, or both, a disastrous crisis in the internal combustion motor field is likely to occur.

The same condition of affairs exists the world over, but is felt perhaps more acutely just now in the United States, where gasoline has hitherto flowed like water and has been used—if not wasted—with the utmost prodigality in the same lavish manner in which other great national resources have been expended. Europe has, for a long time, labored under what to us would seem almost prohibitive gasoline prices, and has learned to get along with a much more restricted and far more economical use of petroleum fuel.

In this country it seems to have been assumed that every one could continue to use gasoline at a low price and at an increasing rate indefinitely, and thus the awakening to a realization of the fallacy of this assumption has been particularly abrupt and painful.

There is always the possibility that new supplies of crude oil may be dis-

covered, but the brightest prospects for an early increase in the available supply of petroleum fuel lie in the general adoption of processes for obtaining a larger proportion of fuel of gasoline quality from each barrel of crude, and in the adoption of kerosene as a substitute for gasoline. If the so-called "cracking" processes can be improved, cheapened and applied to all the crude, a large increase in the output of fuel of gasoline quality should result, and this would be of great advantage, as no changes would be required in existing carburetors and motors, since it possesses qualities similar to those of ordinary gasoline. The "cracking" process, it should be understood, is one which chemically breaks up the less volatile constituents of petroleum into compounds of more readily volatile character.

Distillates of kerosene quality form a large proportion of crude oil and the supply of them is therefore quite abundant, but, on account of the difficulty of converting them into gas, they have hitherto been very little use as motor fuel. Specially designed and specially heated vaporizers are required in the utilization of kerosene and some

slight modifications in existing motors may prove to be necessary, but there is every reason to hope that successful kerosene carburetors may soon be placed upon the market and that commercial cars, power boats, farm engines and stationary power motors may soon be largely operated upon this fuel. Probably the users of pleasure cars will be rather backward in adopting it.

Long continued wastefulness in the use of gasoline has been an important influence in hastening the impending crisis, and means for checking this waste are, at last, being sought. Attempts are being made to improve the economy of the existing type of motor, but no important results are, as yet, in sight. From the economic standpoint, the pleasure car and the speed launch have been and are the most prodigal as to waste of fuel; the commercial car, the farm motor and the power engine being far more economical in their performance and more productive of tangible benefits.

It is to be expected that the increase in fuel cost will automatically restrict the use of pleasure cars and boats and so reduce consumption slightly to relieve the situation, but the economy of the pleasure car must be improved or the fuel shortage will the sooner become acute.

Some present-day five-passenger cars consume a gallon of fuel for each six miles of travel, while others run twenty-four miles on each gallon. Cars of both classes can travel all roads as fast as the law allows. Cars of the former class are very large, heavy and luxurious, with immense reserves of power and extremely smooth running motors. Those of the latter class are light, small and less luxurious, with small engines of less smoothness and flexibility. If the drain upon the fuel supply is to be lessened so that there may be gasoline enough to "go around," cars of the latter type must generally be used in the future. Indeed, small cars with very small high-speed motors were long ago generally adopted in Europe, for economic reasons. At all events, there are strong indications that the "Age of Gasoline" has passed the thoughtless heyday of its youth and is about to settle down into its more conservative and calculating but perhaps more useful middle age.

Manchester, New Hampshire

### PEBBLES

Things seem to be settling down in America. Last week there was a powder explosion due to natural cause. *London Opinion*

"How much is this plum?"

"Ten cents a peck."

"Shure, pebat do yez think I am, a barnd?" *Lampoon*

"I am out of work, sir, and —"

"See here, my man, I gave you fifty cents last week."

"Well, sir, you've earned more since then, haven't you?" *Puck*

"My daughter," said the father, "has not been accustomed to all the luxuries of wealth."

"Yess," replied the count, bristling up. "Zat es what I am." *Christian Register*

## Which Woodwork Do You Prefer?

## THE NEW BOOKS

### ENGLAND'S BIT

*England's Effort*, by Mrs. Humphry Ward, is not only a capable display of Great Britain's physical might, but a revelation of the spirit behind it which had lain, not dead or decadent, but merely dormant. Mrs. Ward shows that somewhat of the spirit of France has descended upon the English people, and, tho less demonstrative, a united patriotism has been kindled among them.

The deep inner conscience of England is, at last, becoming articulate. Two impressively significant examples of it come to hand in *The Soldier Boy*, by C. Lewis Hind, and *Halt! Who's There?* by the author of "Aunt Sarah and the War." Herein rise the voices of England's great spiritual teachers, such as Wesley, Wilberforce and Manning. Herein glows that light of faith which the real England has never abandoned, never ceasing to burn brightly in Scotland and Ireland, and for the maintenance of which, as truth revealed itself to separate minds, the land has time and again been scarred by conflict. In these books are presented a unity of this spirit, a tolerance and sympathy one toward the other of different classes and religious convictions, which assuredly indicate that England has awakened to other things than material gain.

*England's Effort* by Mrs. Humphry Ward. Scribner. \$1. *The Soldier Boy*, by C. Lewis Hind, *Halt! Who's There?* by the author of "Aunt Sarah and the War." Putnam. Each 75 cents.

### THREE POETS

When Dr. Bailey leaves his fame as an agricultural expert, his experiment stations and his text-books behind him, and goes roaming the fields, he comes back to us with such essays as "The Holy Earth," and such melodious, carefree words as fill *Wind and Weather*. He belongs to the older, may we say the more natural, school of poetry, but he can set down an instant's impression as well as the reformers.

A few quick years, some sense of range and gyve

Some retrospect, some look ahead—  
Is it the normal state to be alive  
Or is it normal to be dead?

Tramping along *The Road to Everywhere*, Glenn Ward Dresbach sees things with the eyes of a poet and describes them with graceful craftsmanship. Now and again he can be whimsical as in *Fireflies*.

The fireflies are cynics small  
That tiny lanterns carry.  
To see if they can find at all  
An honest fairy.

A young Hindu scholar, Dhan Gopal Mukerji, studying at American universities, has written *Rajani*, a book of "songs of the night." The spirit and the music of his own language, Bengali, have overlapped the English meter. The

work is thoroly Oriental in spirit and in that mystic air of being unfinished.

The honey-colored moon  
Washed in silver;  
The stars, luminous clusters of  
Grapes hung from invisible vines.  
Ah, were I a daring mariner,  
I would sail on the barge of the moon  
To the far island of God's mirth,  
Where they drink star-wine  
And dance to the music of the spheres.

*Wind and Weather*, by L. H. Bailey. Scribner. \$1. *Road to Everywhere*, by G. W. Dresbach. Badger. \$1. *Rajani*, by Dhan Gopal Mukerji. Elder. \$1.

### THE TEACHER'S BOOK SHELF

Once the teacher had a well defined task. He, or she, taught facts, such as are set down in text-books. Responsibility was rounded by examination papers. Now there is nothing entering the life of a boy or girl, man or woman, that the teacher is not expected to influence, and to that end books many and various come from the presses.

*The Teaching Staff*, with Cleveland teachers as its text, raises searching questions as to length of service, "in-breeding," training before and after appointment, marriage, salary. Plumbers, in Cleveland, by the way, average \$1219, then come in due course bricklayers, policemen, plasterers, firemen, painters, carpenters, molders, machinists, before teachers, who average \$791. The teacher in relation to the powers that be is dealt with in *Public School Administration*. A future volume will consider teacher and principal. This treats of Superintendent and School Board, giving more space to city problems than to those of state, county or village.

*The Reorganization of Our Schools* is a somewhat technical statement of a scheme for radical changes in our system. Dr. Sanders writes from experience in Germany and in the United States, of the east, but mainly of the more radical west. An interesting handbook of that significant experiment in democratic education, *The Gary School*, by Mr. Bourne, contains references to former articles on the subject, and a discussion of the leading principles, the actual operation the comparative cost, etc. Principal Morgan, of Edinburgh, considers the relation of *Education and Social Progress* as they appear in Scotland, and brings out the same points that concern this side of the water: pre-trade training, defectives, wider use of the school plant, public health. *The History of Education in Virginia*, by C. J. Heatwole, is a full account of the growth of the whole system from the grammar school, with the grave two-race problem, to the technical and teachers' schools and State University. J. H. Baker's *American University Progress*, dealing mainly with possible improvements in our colleges, considers also the reorganiza-

tion of the entire school course. Economy of time is a main object in changes proposed, responsibility to social service and efficiency is studied, and in the appendix are the latest results of extended inquiries into issues vital to the schools today.

"First catch your child" is the theme of *Child Accounting in Public Schools*, where, again with Cleveland for example, the need and the methods for keeping an accurate census are explained. What the children are when you get them is told in *The School and the Immigrant*, by Dr. Miller, of Oberlin. He writes briefly and well of some fifteen race groups, and of our part in helping to preserve the languages and national characteristics of these new comers.

Dr. W. H. Dooley argues that our army of *Ne'er-do-Wells* is mainly recruited from the ranks of children whose needs the school fails to understand and meet. His remedy is largely the increase of part time and continuation schools. *The Measurement of Intelligence*, by L. M. Terman, is a revision and extension of the Binet-Simon scale and is invaluable for teachers and those having to do with sub-normal or unusually gifted children, and with vocational guidance. The instructions for tests are for each year up to fourteen, with those for "average" and "superior" adults.

What to teach and how to teach it are questions that call for endless advice. Somewhat after Samuel Smiles's sturdy common sense is *Reaching the Children*, by H. C. Krebs, with its suggestions as to self-government, false ideals, etc. "Every teacher faces the danger of having her work turn gradually into a lifeless routine," say the editors of *How to Teach the Fundamental Subjects*. They account the best safeguards an inspiring supervisor (not to be had for the need) and, which is more practical, knowledge of methods used elsewhere. English, Mathematics, Geography, History and Civics are the studies considered. Dr. Freeman's *Psychology of the Common Branches* is a most important study of what is known of the psychology of learning to read, write, spell, calculate. Further chapters deal with studying the sciences, history and the arts. *The Socialized Recitation* tells how one school has vitalized the routine work in elementary subjects. The issue still lives between Froebel as priest and Froebel as prophet. Dr. Kilpatrick has effectively related for the general educator *Froebel's Kindergarten Principles* as they have significance to our present needs. The *Playground Book* gives singing games, folk dances and many suggestions for simple school athletics.

Health as an integral part of education and the ten types of work needed to effect this are set forth in Dr. Ayres's *Health Work in the Public Schools*. He advises that matters of school health should be under the school authorities. Dr. Bigelow's *Sex Education* is the most satisfactory text that has appeared in this field. It is very

## Our Kitchen Is Equipped With Guns

Puffed Wheat and Puffed Rice are made for you with this unique equipment.

These bubble-like grains, thin, fragile and flaky, are actually shot from guns. And a hundred million steam explosions have occurred in every kernel.

### Prof. Anderson's Way

Puffed Grains were invented by a famous food expert—Prof. A. P. Anderson. This process was invented to break up the food cells, and make every atom of the whole grain feed.

So he seals the grains in guns. Then applies an hour of fearful heat. The moisture in the grain—inside of each food cell—is thus changed to steam.

The guns are then shot, and the steam explodes. Each food cell is blasted. The result is the grains as you see them—airy, toasted bubbles—eight times normal size.

And the result is that taste—like toasted nuts—which millions of folks enjoy daily.

Puffed Wheat	Except in	12c
Puffed Rice	Far West	15c
Corn Puffs—Bubbles of Corn Hearts—15c		

### Scientific Dainties

Puffed Wheat means whole wheat made wholly digestible. So with Puffed Rice. Digestion is made complete and easy. Not an element is lost.

You regard them as food confections. You like them with sugar and cream. You mix them with fruit, use them in candy, scatter them over ice cream. You float them in bowls of milk or cream, because they are fascinating.

But the best fact is that every food cell feeds. Every scientific man will recommend them to you.

There are so many uses for such foods as these that you should keep all three Puffed Grains on hand.

## The Highest Choice

DO not let it be merely a question of initial cost when you make your choice of pianos. The matchless music of the Steinway has lifted it above the "price" atmosphere for all time.

It is true, the Steinway does cost a little more. But no one who owns a Steinway has ever a shadow of regret for the price paid. It is but little higher than the cost of other pianos, and the Steinway carries within its perfect mechanism the guarantee of a satisfaction beyond all price.

For more than three-score years it has been the ideal of the greatest music masters of their day. So the Steinway must command your respectful attention before your choice is made.

## There Is a Big Job Open As ACCOUNTANT

Big salaries are paid. Modern business methods demand the skill of the trained accountant. The profession is new. Men are needed. You can get the training you need right in your home—directed by men high in the profession.

Write Today for our Free book and find out about the opportunities that await you. No obligations. Write today. The book is free. American School of Correspondence, Dept. A2486, Chicago, Ill.

comprehensive, goes beyond most such books in having a clear biological foundation, and is sufficiently conservative, and at times vague, to avoid offense.

Dr. Klapper's *Teaching of English* carefully outlines a plan of oral and written work in English composition and grammar for both elementary and grammar grades. Many illustrations of the pupils' exercises show the aim and possibilities of the method. In the hands of a wideawake teacher results should be obtained equal to the best given in the book. This year brings the second edition of Miss Bolenius' well known book on the *Teaching of Oral English* in the high school. With her characteristic enthusiasm she describes her methods of obtaining from the pupils correct posture, good voice and clear enunciation with talk of value and interest. She applies the methods to the study of ancient history, not commonly a lively topic, but made intensely alive by her handling. Her book is worth the study of history as well as English teachers.

Macmillan. \$1.25. *Teaching of English*, by P. Klapper. Appleton. \$1.25. *Oral English*, by E. M. Bolenius. Lippincott, \$1.

## FOR AMERICANS

A full discussion of the truly brave doctrine of non-resistance versus force is to be had in John Haynes Holmes's *New Wars for Old*. (Dodd, Mead, \$1.50.)

We wish every one, whether advocate or opponent of military preparation, might read Norman Angell's essay, *Dangers of Half Preparedness*. It is a plea for a definite foreign policy, publicity in foreign relations, justice and common sense in dealings with other nations. (Putnam, 50 cents.)

*The Case for the Filipinos*, by Maximo M. Kalaw, is an argument for the complete independence of the Islands; claiming that the Filipinos are quite as fit for self government as the Cubans, whom we permitted to form a republic of their own, and quoting numerous American writers and speakers to substantiate the claim. (Century, \$1.50.)

*The Heritage of Tyre*, by W. B. Meloney, ably discusses our shipping problem. The causes of our present condition are analyzed. The remedies proposed are the repeal of the recent seaman's act; the creation of a marine board such as governs the British merchant marine; the encouragement of investment in American ships. (Macmillan, 50 cents.)

"Preparation [for defense?] will tend to make the struggle as brief as possible, and

reduce the cost in life and treasure to the lowest possible limit. Our people have never entered into war with any of these assurances," says General Wood, probably as sound a writer as any, in his abstract of *Our Military History*. Our quotation is an abstract of his abstract. (Chicago: Reilly and Britton, \$1.)

*Their True Faith and Allegiance* is a serious study of the attitude of our German citizens. The spirited introduction is by Owen Wister. Gustavus Ohlinger considers not only the recent incidents of the pro-German propaganda, but the general influence of the German paper, the German professor and the emphasis on the German language in the public schools. (Macmillan, 50 cents.)

## THEOLOGY AND RELIGION

Prof. Walter M. Patton, of Carlton College, has written a fine introduction and expository commentary to *Israel's Account of the Beginnings* contained in the first eleven chapters of Genesis. The notes are scholarly and show critical acumen and wide reading. (Boston: Pilgrim Press, \$1.)

In *Foundations of Christian Belief* Prof. Francis L. Strickland sets forth a well reasoned view of fundamental Christian truth. These studies in the philosophy of religion are based upon modern science and broad philosophical knowledge, but his exposition is clear and readable. (Abingdon Press, \$1.50.)

*What Happens After Death?* is a symposium by a score or more writers, mostly English, who discuss immortality from angles as different as those indicated by the names of A. C. Dickson, Max Nordau and Annie Besant. The Great War has already brought this theme into greater religious prominence. (Funk & Wagnalls, 75 cents.)

*The Higher Individualism*, by Prof. Edward S. Ames, a volume of sermons delivered in Appleton Chapel, Harvard, is characterized by clear thinking, moral fervor, and high ideals of social service. Philosophical and religious knowledge, and insight into character are brought to bear effectively on each subject. (Houghton, Mifflin, \$1.10.)

Prof. John Wright Buckham's *Mysticism and Modern Life* is a fine résumé of the essence and forms of mysticism, its value and contribution to religion. He regards the mystic element as a normal and healthy part of every rich and full religious experience. Its danger lies in excess, isolation, occultism and anti-social tendencies. (Abingdon Press, \$1.)

In *Poverty the Challenge to the Church*, John S. Penman contends that poverty is less the result of individual failure than of economic and social maladjustments. It is a part of the mission of the Church to dispel the ignorance that makes present conditions possible, and to relate the ethics of Jesus to economic and industrial problems. (Boston: Pilgrim Press, \$1.)

The "Profane Baccalaureate" entitled *The Pillar of Fire*, by Seymour Deming, is addressed to the youth of our land who are just leaving the college portals. It is surely aflame with enthusiasm for a new social order, but there is evident more of the heat of anger with present institutions than light for guidance into the Land of Promise. Yet it is a book well worth reading. (Boston: Small, Maynard, \$1.)

In the faith that certain *Persistent Public Problems* are only relatively persistent, Arthur O. Taylor gathers the views of twenty prominent sociologists and economists on poverty and social righteousness, emphasizing "what is feasible in social life" and also harmonizes with applied Christianity. Aside from any prejudices as to the solution of these problems here is a useful compilation of important papers. (Boston: Scientific Standard Service, \$2.)

# MAZDA

"Not the name of a thing, but the mark of a service"

## MAZDA Service—a systematic research for making good lamps better

### The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.
